|                                     | Senate action   | House action  |
|-------------------------------------|---|---|
| (b) Natural Gas                     | Energy Cte. to hear testimony from Adm. June 7, 13, 14.   | Energy Subcte. hearings scheduled May 12, 13, 17, 18; Subcte. mark-up scheduled June 7-9; Commerce Cte. mark-up scheduled June 28-30.             |
| (c) Supply (Coal Conversion)        | Energy Prod. and Supplies Subcte. hearings on strategic reserves June 9, 10; Coal Conversion mark-up on S. 977 June 15, 16.   | Energy Subcte. hearings scheduled May 25-27; Subcte. mark-up schedule June 15-17; Commerce Com. mark-up scheduled July 11-13.                     |
| (d) Public Utilities                | No action scheduled.  | Energy Subcte. hearings scheduled May 19, 20, 23, 24; Subcte. mark-up scheduled June 10, 13, 14; Commerce Com. mark-up scheduled June 23, 24, 27. |
| Tax provisions (S. 1472, H.R. 6831) | Referred to Finance Cte. Subcte. on Administration of the Int. Rev. Code to hold hearings June 6 and June 27 on the Administrative difficulties of anticipated energy tax revenues. | Ways and Means Cte. hearings from Adm. May 16-17; from general public May 18-June 1.  |

### THE LEGISLATIVE WORKLOAD AHEAD

Mr. ROBERT C. BYRD. Mr. President, looking down the road and contemplating the very sizable workload that confronts the Senate between this date and the hoped-for October 8 adjournment, I call attention to the fact, as everyone knows, that, following the Memorial Day holiday, there will be only 4 workweeks prior to the July 4 Independence Day nonlegislative day period, following which there will be only 4 workweeks prior to the August recess, which is mandated by law.

When the Senate reconvenes on September 7, there will be only 4½ weeks prior to the hoped-for October 8 adjournment date. All of this adds up to a total of only 12½ weeks in which Senate floor sessions will be held between the Memorial Day holiday, upon which we are about to enter, and the hoped-for October 8 adjournment.

Aside from the energy bills which have been made top priority, and which will involve some controversy and require some time, there is a very heavy workload of other measures, many of which must be enacted before the Senate can adjourn for the year, and a good many of which will be time-consuming.

I shall cite just a few examples:

S. 1523, the housing authorization bill; S. 252, the Clean Air Act; S. 1529, rivers and harbors; H.R. 6262, international financial institutions; S. 1520, bilateral development assistance; H.R. 6689, foreign relations authorization; 13 regular appropriation bills which fund every Department of the Government; the September budget resolution, which is mandated under the Budget Reform Act; water pollution legislation: social security financing; a Canadian pipeline treaty, in all likelihood; Mexican and Canadian prisoner exchange treaties, in all likelihood; minimum wage legislation; S. 717, the mine safety bill; S. 1538, the black lung bill.

By no means, however, do the foregoing constitute the exclusive list. I merely cite these few measures to indicate the nature of the extremely heavy workload ahead. There may also be a SALT Treaty and there may be a Panama Canal Treaty before the session ends.

These are just a few of the major legislative and executive matters which lie

ahead of us before the Senate's work will end this year.

In view of the situation we are up against, Mr. President, it will be absolutely necessary to have some lengthy daily sessions and some Saturday sessions if we are to make the October deadline. Obviously, the October target date will depend upon our success in dealing with this workload.

Keeping in mind that energy legislation is of the highest priority, at some point not too far down the road—soon, as a matter of fact—it will be necessary to stop committees from meeting during Senate sessions—except the first 2 hours of a Senate session, but not after 2 o'clock p.m. in accordance with the Stevenson resolution, enacted earlier this year.

Of course, there are certain committees that have standing authorizations to meet without consent: the Committee on Appropriations and the Committee on the Budget. And there are other committees that will need to be given consent. Of course, any Senator may object to such consent. But they are the committees that will deal with the energy legislation: Senator Jackson's Committee on Energy and Senator Long's Committee on Finance.

I feel it necessary to strongly urge all Members to keep themselves available as much as possible for Senate floor action from here on out. It will just not be possible to hold up Senate floor action because of the absence of Members. I urge my colleagues, most respectfully, therefore, that all Members keep this necessity in mind before committing themselves to engagements that will otherwise take them away from the floor during workdays, evenings, and Saturdays included. Saturday sessions will be held to the barest minimum. I cannot say at this time when such Saturday sessions will have to occur, but obviously, at some point between now and October, some Saturday sessions may be unavoidable. Of course, the likelihood increases as the Senate nears a nonlegislative day period, naturally.

During the first 5 months, and in accordance with my commitment at the beginning of the session, I have meticulously sought to avoid rollcall votes prior to 12 noon and, whenever possible, to avoid convening the Senate prior to 12 noon. As a matter of fact, only seven roll-

call votes have occurred prior to noon to date this year, and the Senate has, to date, convened prior to 12 noon only 28 times out of 81 days of session.

Of the remaining 53 days of session, the Senate has convened at noon 18 times and has convened at hours subsequent to the noon hour 35 times—which is something quite unique, may I say, Mr. President? During the past 20 years, the Senate has convened subsequent to the hour of noon only four times. During the past 10 years, the Senate has convened subsequent to the hour of noon only twice. The Senate, this year, however, to date, already, has convened subsequent to the noon hour—subsequent to the noon hour—35 times; often at 1 o'clock p.m., 2 o'clock p.m., 3 o'clock p.m., 4 o'clock p.m., and so on. I have tried to live up to my commitment as best I could, but the time has come, now, when the Senate will have to come in prior to noon more often to deal with the calendar workload.

Mr. President, in closing, I express my appreciation for the absolutely splendid cooperation that I have received from the distinguished minority leader. He has been most understanding and helpful and supportive. It has been a pleasure to work with him and with the distinguished minority whip (Mr. STEVENS).

Mr. STEVENS, by the way, is the ranking member on my Appropriations Subcommittee on the Department of the Interior and he is, in fact, my right arm in the conduct of committee hearings and the handling of the bills that pass through that subcommittee.

I also express my gratitude for the fine cooperation that all Senators have given to date. Without this cooperation, the leadership is "bound in shallows and in miseries." But with that kind of cooperation, the Senate has been able to make a fine record thus far.

I respectfully ask the indulgence, the understanding, the patience, and the continued cooperation of all Senators with the leadership when the necessity arises for the leadership to schedule measures at times which will, perhaps, inconvenience individual Senators, but which will be necessary for the convenience of the Senate—and, therefore, all Members thereof—in meeting the hoped-for October adjournment.

I yield the floor. I say to the very, very distinguished Senator from Minnesota,

former Vice President of the United States, and a truly great American, I thank him for his indulgence and his patience. I have been trying to say a few things here that will explain the reasons for scheduled nonlegislative day periods, what the responsibilities of Senators are, and Members of the House, in the utilization thereof, and why we have to have them.

I have also stated for the record the enumeration of the bills and resolutions that have been enacted by the Senate already this year. In so doing, I have also pointed out the workload that is ahead of the Senate, calling attention of Senators to the fact that we are going to be busier down the road, as far as Senate floor activity goes, than we have during the first 5 months.

May I say in closing, referring to my friend, the distinguished Deputy President pro tempore of the Senate, that I value the very strong support that he has given to me throughout the days of this session. I value the advice and counsel that he has given. He has been a pillar of strength for the leadership and I am very grateful for it.

The PRESIDING OFFICER. The Chair recognizes the senior Senator from Minnesota.

#### TRIBUTE TO THE MAJORITY LEADER

Mr. HUMPHREY. I thank the Chair.

First, I commend our majority leader on his report of the Senate to the Nation and to add that, in my many years here, in the Senate, I have never had the privilege of working with a leader that was so considerate of the Members of this body and was so willing to consult with his colleagues on both sides of the aisle as the distinguished Senator from West Virginia, our majority leader. I say that with great sincerity.

It has been a joy to work with you, Senator BYRD, and I believe that we are going to have a splendid record by the time we are through with this 1st session of the 95th Congress.

Of course, we all know, those of us that serve in this body, that you judge a Congress by the two sessions of the Congress. We shall have a very heavy workload the balance of this year, with the emphasis upon needed energy legislation and what some people call the routine items of legislation, which, in fact, are anything but routine; for example, the appropriations bills, which are highly contentious; the number of bills that are reauthorizations of existing legal authority; and besides that, we have, as the majority leader has pointed out, a standing number of new pieces of legislation that need to be enacted.

I think the Senate should know that our majority leader has met repeatedly with the chairmen of the committees of the Senate. He has met with the Policy Committee more often than I can ever recall. He has also convened the conference of the majority party on more occasions than at any time in my experience.

I mention that because I have been here—with the exception of 4 years as Vice President, when I was the Presiding Officer, and 2 years when I was sent

home to pasture as the result of the election of 1968—every year since 1949.

I have seen a number of leaders, we have had some great ones, and each one in his own way put his stamp or imprint of his style and character upon this body.

The Senator from West Virginia, without a doubt, is the most prodigious, hard-working, efficient, able and considerate leader that this Senate could ever have.

I mean that and I want him to know it.

We also appreciate the cooperation, of course, of the minority because without it this body cannot operate. We cannot operate in a constant stage of political war. It is impossible.

Likewise, we need to know how to cooperate between the executive and the legislative.

By and large, I think that has worked well. It is inevitable that there will be differences. That is the nature of our system. That is one of those unique purposes, to have the ventilation of ideas and not to have a sense of unanimity when there are really differences of view.

This is what we mean by a separation of powers. This is what we mean by the three branches of the Government, the checks and balances.

I realize that at times the so-called arguments between majority and minority, the arguments between executive and legislative, seem to make the headlines. But that is the nature of our system. It is one of competition. At times it becomes one of confrontation. But most of the time, it is one of constructive cooperation.

It takes a great deal of patience to be a legislator and it must take a great deal of patience to be a President, working with a strong-willed legislative body.

But today I am convinced we have an extraordinarily able President who wants to work with us. I know we have leadership in the Senate and the House that will walk the extra mile to accomplish the common good and the common goals of the administration.

#### EXPRESSION OF THANKS TO SENATOR MATSUNAGA

Mr. President, I also want to express my thanks to the present Presiding Officer of the Senate for a statement he made earlier today.

I was not here at that moment, but word has reached me that the distinguished Senator from Hawaii (Mr. MATSUNAGA) had some nice things to say about me on my birthday.

He recalled our trip to Korea together. He recalled how I rescued him from being snatched away, so to speak, and taken off with the Japanese delegation.

That is one of the good acts of my life and out of that has come a great friendship.

I say to the Senator how pleased I am to see him here in this body. He makes a fine looking presiding officer. He has distinction, quality, all of those characteristics that make us proud of him as he presides over this body.

The PRESIDING OFFICER. The Chair will state this, that he does not think so, but what is his opinion against the opinion of the senior Senator from Minnesota.

Mr. HUMPHREY. Again, may I say that the Senator from Hawaii has shown his unusual capacity to make sound judgment.

#### TRIBUTE TO THE MAJORITY WHIP

Mr. ROBERT C. BYRD. Will the Senator yield?

Mr. HUMPHREY. Yes.

Mr. ROBERT C. BYRD. I thank the distinguished Senator from Minnesota.

I also want to take occasion to thank the distinguished majority whip (Mr. CRANSTON) who has worked very closely with the leadership, with the Deputy pro tempore, the President pro tempore, and with the majority leader.

In all of our conferences with the chairmen, the policy committee, and in our party conferences, the majority whip is able, he is diligent, he is cooperative and most helpful. I want to express my gratitude and my commendations with respect to ALAN CRANSTON's work as the majority whip.

#### TRIBUTE TO SENATOR INOUE

I also want to thank DAN INOUE, who is the secretary of the Democratic Conference, who, too, does a fine job. He is chairman of the Intelligence Committee, also, and is also a very able member of the Appropriations Committee, and works there very diligently.

#### BIRTHDAY GREETINGS TO SENATOR HUMPHREY

Finally, I want to congratulate the distinguished Senator from Minnesota (Mr. HUMPHREY) on his birthday, which occurred earlier this week.

Mr. HUMPHREY. No. It is today.

Mr. ROBERT C. BYRD. It is today?

Mr. HUMPHREY. Today.

Mr. ROBERT C. BYRD. Well, today.

Edmund Burke, I believe, said:

Providence raises a nation to greatness through the virtues of her great men.

I think that HUBERT HUMPHREY, a truly great American, has added much luster to the greatness of America.

I want to say that in all my years of service with Senator HUMPHREY I have found him to be a man who is clean on the inside and clean on the outside; a man who neither looks up to the rich nor down on the poor; a man who is considerate of widows and orphans and old people; a man who is too generous to cheat and too industrious to shirk and who believes in working for his share of the world's goods and letting other people work for theirs.

He is truly an American gentleman.

Mr. HUMPHREY. I want to thank the leader very much. It is generous of him.

#### SENATE ACHIEVEMENTS—THE MINORITY VIEW

Mr. HATCH. Mr. President, I would be somewhat remiss if I did not take this opportunity, on behalf of the minority, to thank the distinguished majority leader for his kind words concerning the minority and its cooperation and the minority leadership and their cooperation. I am sure that they feel equally as impressed with the great work and service that our distinguished majority leader has rendered to the Senate during this term, thus far.

I wish to give some perspectives of a freshman Senator who has only been in the Senate 5 months now.

Anyone who thinks that this body is not a hard-working body should follow the majority leader around for a day, or any number of us Senators, including the distinguished Senator from Minnesota. I have seen him everywhere. In fact I have seen him more sometimes than I wanted to see him. Not really. But you have been everywhere in this Senate and you take your duties seriously.

And our majority leader, I think, could not be any better. I have been impressed with many of the late nights we have been here. That has been a good experience. I believe in that. I think we can accomplish great things together. I believe that the minority has deep respect for the leadership on both sides. And you have our cooperation and our desire to cooperate in every way that we can in those matters that are beneficial to this country. We will have differences, as our wonderful Senator HUMPHREY has said. But that is the way this country became great and is great because of differences in the refinements that occur as a result of this great legislative process with the right to debate.

#### BIRTHDAY GREETINGS TO SENATOR HUMPHREY

I wish to say a couple words about my dear friend and colleague who is presiding over the Senate, HUBERT HUMPHREY. Today is your birthday.

The DEPUTY PRESIDENT pro tempore. That is correct.

Mr. HATCH. I just want to let you know that I hope that you have many, many more birthdays and many in the service of this country because again, in the perspective of a freshman U.S. Senator and as a minority, a Member of the minority, as a Republican, I want to tell you I believe you are one of the greatest men who has ever sat here. I think that you are not only a man of great integrity but a man of great depth, foresight, ability to forensically tell it the way it is in many ways, and I think a person in whom I have a great deal of confidence and for whom I have a great deal of love. That is not to say that we agree on everything together. As you know we disagree on many things. But I know one thing: You are a very sincere and dedicated public servant, and I give you great credit for that.

Last but not least I wish to say a few words about JOHN STENNIS. He is not here, and that is just fine with me. But I have learned to know Senator STENNIS in the Senate prayer breakfast every Wednesday morning, and he is truly a statesman and one of the great leaders here in the Senate.

And I think I would be remiss again if I did not mention that inasmuch as we are about to recess for this short recess. I feel it is an honor to serve with you men. I hope we will have many years together within which we can cooperate for the benefit of this great country in many ways that none of us contemplated up to now.

With that, I simply give my respect to you and again thank you on behalf of the minority.

The DEPUTY PRESIDENT pro tempore. May the Chair just very briefly say a very sincere and heartfelt thank you,

distinguished Senator, who is my friend. I appreciate your words.

Mr. HATCH. Thank you.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator.

I feel that our new Members are to be congratulated. We have found them to be hard-working on both sides of the aisle, and they add a new perspective and a new dimension. We are the better for the contributions that are made by our new Members. I am very grateful for the kind words that have been stated by the distinguished Senator from Utah, and I am glad that he also mentioned our colleague Mr. STENNIS.

Mr. STENNIS had been in the Senate quite a while when I came to the Senate, and I found him to be an inspiration to me. Here is a man who looked like a Senator, talked like a Senator, acted like a Senator ought to act, and he is one of the men for whom I will always have the greatest of respect and admiration.

Mr. President, I am going to put in a final quorum. If no Senator indicates by telephone that he wishes to have the floor we will shortly recess.

I suggest the absence of a quorum.

The DEPUTY PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I thank the distinguished majority leader for reiterating the arrangement and sequence of events. As one Member on this side said after reviewing that list this morning, "Gosh, that may take 2 or 3 days." [Laughter.]

I think that is, however, a very, very good precedent, to try to arrange the sequence of events, and I was pleased to work with the majority leader in trying to do that, so that the Members on both sides of the aisle could have a good accounting of what the agenda would be. Even though we do not have agreements for time limitations and the like, I think it serves everyone's good purposes to know in advance what the agenda is going to be.

I agree with the majority leader that in view of the circumstances, and the possibility, although it may be a remote possibility, that the housing bill will be finished before we are qualified to turn to the Clean Air Act, we would find some other business to turn to, and I would join him in that ambition.

#### HAPPY BIRTHDAY TO SENATOR HUMPHREY

Mr. President, I take this opportunity, now, to congratulate the distinguished occupant of the chair—the Deputy President pro tempore, Mr. HUMPHREY—on an important time, and that is the celebration of this natal day, his birthday. I am sure I speak for every single Member on this side of the aisle when I not only wish him a happy birthday and many happy returns of this day, but to say that we look forward to celebrating with him today and on other birthdays.

I watched with great interest on the Today show this morning as they presented the distinguished Deputy President pro tempore with a birthday cake. He seemed to enjoy that celebration, as we did vicariously while watching it.

So, Mr. Vice President, we share with you your joy on this occasion.

The DEPUTY PRESIDENT pro tempore. The Chair wishes to express appreciation for the Senator's kindness.

Mr. HATCH. Mr. President, I am sure you will be interested to know at this time that a number of our Republican pages wish to enter into the RECORD the following statement:

We the Republican pages of the U.S. Senate respectfully wish Senator Humphrey a happy birthday.

Karlis Streips, Mark Jaffe, Kim Brower, Steve Karbowski, George Cartagena, Velda Davies, James Westbrook, Mark Robertson, Bob Fourtellotte, Paul Pacheco, Grady Jordan, David Tulanian.

The DEPUTY PRESIDENT pro tempore. The Chair surely wants to express his thanks to his wonderful young friends. I wish each of you, at your time, a happy birthday as well.

Mr. ROBERT C. BYRD. Mr. President, I feel that is a very generous and thoughtful thing for the Republican pages to do. We have not seen that occur previously, I do not believe, in my 19 years in the Senate; and I am not going to recess the Senate until the pages on the Democratic side have had an opportunity to do likewise. [Laughter.]

I think it is a remarkable and very thoughtful and considerate thing for the Republican pages to do. They certainly have set a fine example. It just goes to show what fine young people we have here in the Senate, helping us to help our constituents.

Ah, great it is to believe the dream  
As we stand in youth by the starlit stream,  
But greater still to live life through  
And find at the end that the dream is true.

The DEPUTY PRESIDENT pro tempore. The Chair forgot to note this morning that the majority leader is also a poet. He has so many talents.

Mr. BAKER. Mr. President, if the Chair will permit—

The DEPUTY PRESIDENT pro tempore. Yes.

Mr. BAKER. We would like to take note that the Democratic leader not only is a poet of great keenness and accuracy, but he is also a musician of great accomplishment.

I would like to say, just to underscore the remarks of the majority leader, that I was not aware the Republican pages were going to do that, and I congratulate them on their thoughtfulness. It was not a prompted thoughtfulness; they did it on their own.

The DEPUTY PRESIDENT pro tempore. The Chair recognizes the distinguished Senator from West Virginia for whatever time he would like to use, as he awaits the results of the commission just a few moments ago.

#### THE VIRTUOSO

Mr. ROBERT C. BYRD. Mr. President, the distinguished minority leader has a

continuing event down in his great State of Tennessee. It is the Grand Old Opry.

Going back to my boyhood years in the coal mining towns of southern West Virginia, when all that we had for recreation was the radio—I can remember the first radio I ever saw, which was on the occasion of the second Dempsey-Tunney prize fight. I was disappointed because Dempsey did not win. I have told our former colleague John Tunney that, and I told his father, Gene Tunney that on one occasion. I went away that night 50 years ago a disappointed lad because Jack Dempsey did not win. I was also disappointed because I did not get to listen to the fight. There was only one set of earphones for that radio.

Later we were fortunate enough to have electricity in our house, and we finally were able to get a radio. I believe it was an old Philco, Atwater Kent, Majestic, or some such, and on Saturday nights we would listen to the Grand Old Opry. There was the solemn old judge, and there was Roy Acuff, and Uncle Dave Macon, the Fruit Jar Drinkers, and Arthur Smith and his Dixieliners. I will never forget Arthur Smith and his Dixieliners and how he would play "Listen to the Mockingbird" on the violin.

This brings to mind a story that I read in yesterday's great Washington afternoon paper, the Evening Star, which said Washington people were going to get tired of Senator BYRD's renditions of "Rye Whisky" and "The Cumberland Gap."

Well, for the benefit of that distinguished and able reporter, those two tunes do not constitute my total repertoire. The next time, I hope that gentleman will just walk up to me when I have that violin, so that I will know he is present, and I will dedicate to him Arthur Smith's number, "Listen to the Mockingbird," or I will play for him "Sally Good'in"; or "Turkey in the Straw"; or "Will the Circle Be Unbroken?" or President Carter's favorite selection, "Amazing Grace"; or that old fiddling tune called the "Forked Deer"; or the "Mississippi Sawyer"; or "Soldier's Joy"; or the "Arkansas Traveler"; or "Old Joe Clark"; or "Fire in the Mountain"; or the "Black Mountain Rag"; or "Bill in the Low Ground"; or "Chicken Reel"; or "Swing Low, Sweet Chariot"; or "When You and I Were Young, Maggie"; or the "Old Time Religion"; or the "Roving Gambler"; or "Cottonseed Joe"; or the waltz, "Over the Waves."

I could go on, and I could just fiddle on and on and on and on. It is the only hobby I have, Mr. President, and I do not confine it to the two tunes, Rye Whisky and Cumberland Gap, as I shall demonstrate, upon the next occasion that I play in this great city.

Let me say further that I always carry my fiddle with me—or almost always—but I never take it into a crowd unless I am invited to do so, and when they invite me to come, I play what I want to play. If I want to play Rye Whisky, I play Rye Whisky; if I want to play Little Brown Jug, I play Little Brown Jug;

if I want to play Old 97, or She'll Be Coming Round the Mountain, I play those tunes. I am my own vocalist, and I charge no fee for my music.

I am ready to play anytime, anywhere, and almost anything on that violin. It used to be that I would bore people with classical music. I had some little exposure to Beethoven, Bach, Mozart, and Chopin; and I used to hear about Fritz Kreisler.

But, Mr. President, as the most famous fiddler ever to come out of West Virginia, I always tell the people of West Virginia that they have always had, five friends: God Almighty, Sears Roebuck, Carter's Little Liver Pills, the Democratic Party, and Robert C. Byrd. [Applause.]

So, to the able and fine reporter who said that the people of Washington would soon get tired of hearing Rye Whisky and the Cumberland Gap, I have listened to those tunes now for almost 50 years I have been playing on that fiddle.

Incidentally, I have more than one fiddle. I have several violins. They have about all been given to me over the years. An auctioneer once gave me a violin. I go here and go there in West Virginia and the people give me violins. They know I like to play, and they like to hear my renditions. I have been playing around with the violin for 49 years and I have not yet gotten tired of listening to Rye Whisky and the Cumberland Gap—especially when I play them.

I say all this in the best of humor, but let the Record not leave the impression that I can only play those two numbers. I want the Record to be clear.

Mr. BAKER. Mr. President, I am sure all of us have profited by the recent story in the Washington Star, which has unleashed a torrent of retaliation. I commend the distinguished majority leader. I listened in rapt attention as he recited his earliest experiences with radio and the Grand Ole Opry, which, of course, originates in Nashville, Tenn.

I would share with the Chair and with my colleagues in the Senate the fact that the distinguished majority leader is not only a great public servant, and obviously a great musician with an extensive repertoire, but he has also been invited to perform at his pleasure at any time on the Grand Ole Opry.

I want to say further, Mr. President, that if and when he accepts that invitation, it would be my pleasure to take him to my State, to assure him of safe conduct, to present him to that distinguished audience, and to make sure that a lot more people will hear him now than heard him then. The only regret and fear I have is if the entire country is regaled with his musical prowess we might lose him from the field of public service to the field of entertainment.

Mr. ROBERT C. BYRD. I thank the distinguished Senator.

I would say, in closing, that I am sure the people of the United States would not begrudge my earning a salary of \$57,500 as a Senator for playing "Rye Whisky" and "Cumberland Gap."

The DEPUTY PRESIDENT pro tempore. We accept that judgment. I think that would be unanimous.

Mr. ROBERT C. BYRD. We may hear some objections to the salary being paid to me as a Senator, but when it comes to playing that fiddle, they tap their feet and they will not object to that salary for a good mountain fiddler.

HAPPY BIRTHDAY TO SENATOR HUMPHREY

Now, Mr. President, on our side of the aisle, our Democratic pages, not to be outdone by the fine Republican pages, wish to join their Republican page friends in most respectfully wishing a happy birthday to Senator HUMPHREY.

This greeting is signed Jeff Dickerson, Cindy McNair—you know, there is an old tune I play called "Get Along Home, Cindy" [laughter]—Estelle Grant—and there is another one I play, "There's More Pretty Girls Than One" [laughter].

Oh, I must say to the Senator in the Chair, the distinguished presiding officer is celebrating his birthday today. If it is the good Lord's will, the day after tomorrow my wife and I will celebrate our 40th wedding anniversary, which recalls this little story to mind:

I could not afford any candy and chewing gum when I was a lad going to high school. I wore blue denims because I had nothing else. They had patches in the rear. There was a boy in my class whose name was Julius Takach. His father was a grocerman. This was back in the thirties, the depression. Julius would always bring to school some candy and chewing gum from his father's grocery. I always made it a point to be the first to greet Julius at the schoolhouse door upon his arrival, because he would always give me a handful of candy and chewing gum. But I did not chew the gum, and I did not eat the candy. When the classes changed, I gave that candy and chewing gum—of course, I did not tell her I had gotten it from Julius Takach; I let her feel I had bought it—I gave that candy and chewing gum to my high school sweetheart. That is what you call courting your girl with another boy's bubble gum. [Laughter.]

On Sunday she is going to enjoy her 40th wedding anniversary with that same boy who used to give her the candy and the chewing gum when the classes changed at school a long time ago. Now to continue reading the names of pages: Paul Souler, Al Motivans, Bob Bean, Steve Miller, Todd Manzi, Bob DeConcini, Perry O'Neill—that is a familiar name—Keith Macy, John Harris, David Watson, Brooks Mosely, John Mobley, Bill Norton, Edward Hartzog, and Justin Biedeman.

I thank all of the Democratic pages. The DEPUTY PRESIDENT pro tempore. May I say to the leader how grateful I am to the Democratic pages for their good wishes and to our young friends on the other side, the Republican side. I consider this a high honor. There is only one other high honor I had, and I thought it was almost the best, when I was made an honorary student of Georgetown. I have many honorary degrees, but to be made an honorary

student, that is something. Now to be wished a happy birthday by this young group, bright, scintillating, active, charming, brilliant young people, makes me feel 10 years younger. I would like to be 15 years younger. I thank the pages very much.

Mr. ROBERT C. BYRD. Mr. President, I join with the distinguished Deputy President pro tempore in thanking our pages.

#### PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene at 12:30 p.m. on Monday, June 6. The two leaders will be recognized under the standing order, after which there will be a period for the transaction of routine morning business of not to exceed 30 minutes with statements limited therein to 5 minutes.

Upon the conclusion of routine morning business, the Senate will take up the housing bill, S. 1523. There is a time agreement on that bill and rollcall votes will undoubtedly occur on Monday, June 6. It is possible and certainly hoped that the action by the Senate will be completed on that measure that day. If not, the continuing action will go into the day of Tuesday.

Upon the disposition of the housing bill but not before Wednesday, June 8, the Senate will take up the Clean Air Act, S. 252, on which there is also a time agreement.

Following the Clean Air Act, the Senate will take up S. 1340, the bill authorizing appropriation for ERDA. Following the disposition of that measure the Senate will take up the bill, H.R. 5262, an act to provide for increased participation by the United States in the International Bank for Reconstruction and Development. That will be followed by the bill to amend the Foreign Assistance Act of 1961, S. 1520.

Following the disposition of S. 1520, the Senate will take up S. 1160, a bill to amend the Foreign Assistance Act of 1961 and the Arms Export Control Act. Then the Senate will proceed to the consideration of H.R. 6689, to authorize fiscal year 1978 appropriations for the Department of State. That will be followed by H.R. 6179, an act to amend the Arms Control and Disarmament Act.

Upon the disposition of that measure the Senate will take up the bill, S. 717, the mine safety bill. That will be followed by S. 1529, the omnibus rivers and harbors bill. Then the Senate will take up S. 1539, a bill to authorize appropriation for fiscal year 1978 for intelligence activities, and that measure will be followed by S. 208, the Urban Mass Transportation Act.

These measures, Mr. President, have by unanimous consent on yesterday been locked in as to the sequence in which they will be taken up. It is the understanding, however, that if on Monday, June 6, the Senate were to complete action on the housing bill, I have assured the distinguished minority leader—and he has in turn assured me of no objection, in view of the fact that the Clean

Air Act will not come up until Wednesday—that other measures cleared for action will be taken up in the interlude on Tuesday.

We thought it would be helpful if Senators would know the order in which these very important measures will be called up, and they can then plan accordingly.

This does not mean, of course, that other measures—including conference reports—may not be cleared for action and brought up at any time while we are working our way through the above-listed items.

#### RECESS UNTIL 12:30 P.M., MONDAY, JUNE 6, 1977

Mr. ROBERT C. BYRD. Now, Mr. President, to close this moment of high drama, I move, if there be no further business to come before the Senate, and in accordance with the provisions of House Concurrent Resolution 229, and out of further respect and admiration for the distinguished American whose birthday is today, HUBERT HUMPHREY, that the Senate now recess until the hour of 12:30 p.m. on the day of Monday, June 6, in the year of our Lord 1977.

The motion was agreed to; and at 12:49 p.m., the Senate recessed until Monday, June 6, 1977, at 12:30 p.m.

#### NOMINATIONS

Executive nominations received by the Senate May 27, 1977:

##### DEPARTMENT OF DEFENSE

Antonia Handler Chayes, of Massachusetts, to be an Assistant Secretary of the Air Force, vice Juanita Ashcraft, resigned.

##### DEPARTMENT OF JUSTICE

Virginia Dill McCarty, of Indiana, to be U.S. attorney for the southern district of Indiana for the term of 4 years, vice James B. Young, resigning.

James K. Robinson, of Michigan to be U.S. attorney for the eastern district of Michigan for the term of 4 years, vice Philip M. Van Dam.

#### CONFIRMATIONS

Executive nomination confirmed by the Senate May 27, 1977:

##### EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Eleanor Holmes Norton, of New York, to be a member of the Equal Employment Opportunity Commission for the term expiring July 1, 1981.

##### DEPARTMENT OF JUSTICE

Robert L. Wright, of Kentucky, to be U.S. marshal for the western district of Kentucky for the term of 4 years.

##### DEPARTMENT OF DEFENSE

Robert L. Nelson, of the District of Columbia, to be an Assistant Secretary of the Army.

The above nominations were approved subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

##### IN THE AIR FORCE

The following officer to be placed on the retired list in the grade indicated under the

provisions of section 8962, title 10, of the United States Code:

##### To be lieutenant general

Lt. Gen. Walter T. Galligan, ~~xxx-xx-xxxx~~ FR (major general, Regular Air Force), U.S. Air Force.

The following officer, under the provisions of title 10, United States Code, section 8066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 8066, in grade as follows:

##### To be lieutenant general

Maj. Gen. Benjamin N. Bellis, ~~xxx-xx-xxxx~~ FR (major general, Regular Air Force), U.S. Air Force.

The following officer to be placed on the retired list in the grade indicated under the provisions of section 8926, title 10 of the United States Code:

##### To be lieutenant general

Lt. Gen. Sanford K. Moats, ~~xxx-xx-xxxx~~ FR (major general, Regular Air Force), U.S. Air Force.

##### IN THE ARMY

The following-named officer to be placed on the retired list in grade indicated under the provisions of title 10, United States Code, section 3962:

##### To be general

Gen. William Eugene DePuy, ~~xxx-xx-xxxx~~ Army of the United States (major general, U.S. Army).

The following-named officer to be placed on the retired list in grade indicated under the provisions of title 10, United States Code, section 3962:

##### To be lieutenant general

Lt. Gen. Henry Everett Emerson, ~~xxx-xx-xxxx~~ Army of the United States (major general, U.S. Army).

##### IN THE NAVY

Vice Adm. Edwin K. Snyder, U.S. Navy, for appointment to the grade of vice admiral on the retired list pursuant to the provisions of title 10, United States Code, section 5233.

Adm. Daniel J. Murphy, U.S. Navy, for appointment to the grade of admiral on the retired list pursuant to the provisions of title 10, United States Code, section 5233.

##### IN THE MARINE CORPS

The following-named officers of the Marine Corps for permanent appointment to the grade of major general under the provisions of title 10, United States Code, section 5780:

|                    |                    |
|--------------------|--------------------|
| Warren R. Johnson  | William B. Fleming |
| Calhoun J. Killeen | Charles G. Cooper  |
| Edward J. Megarr   | John K. Davis      |

The following-named officers of the Marine Corps for permanent appointment to the grade of brigadier general under the provisions of title 10, United States Code, section 5780:

|                       |                         |
|-----------------------|-------------------------|
| Alexander P. McMillan | Dwayne Gray             |
| Vincente T. Blaz      | Albert E. Brewster, Jr. |
| David B. Barker       | Richard A. Kuci         |
| William A. Scott, Jr. | Ernest C. Cheatham, Jr. |
| Lawrence R. Seamon    | John V. Cox             |
| Thomas R. Morgan      | George B. Crist         |

The following-named officer of the Marine Corps Reserve for permanent appointment to the grade of major general under the provisions of title 10, United States Code, section 5911:

Hugh W. Hardy

The following-named officers of the Marine Corps Reserve for permanent appointment to the grade of brigadier general under the provisions of title 10, United States Code, section 5911:

John B. Hirt

Kenneth W. Weir

## IN THE AIR FORCE

Air Force nominations beginning Lee F. Bernhard, to be colonel, and ending Raymond E. P. Zimmerman, to be colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 13, 1977.

Air Force nominations beginning Randy D. Abele, to be second lieutenant, and ending Anthony Zych, to be second lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 13, 1977.

## IN THE ARMY

Army nominations beginning John C. Avampato, to be colonel, and ending Earl L.

Lucas, to be lieutenant colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 13, 1977.

## IN THE NAVY

Navy nominations beginning Albert J. Werr, to be lieutenant commander, and ending Richard N. Wiernik, to be lieutenant commander, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 13, 1977.

Navy nominations beginning George B. Foley, to be permanent lieutenant (j.g.) and temporary lieutenant, and ending John V. O'Connor, Jr., to be ensign, which nomina-

tions were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 13, 1977.

Navy nominations beginning Roy Vernon Aasen, to be lieutenant, and ending Marcella Rose Zettler, to be lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 13, 1977.

Navy nominations beginning Philip J. Aarons, to be ensign, and ending Kenneth M. McDonald, to be commander, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 24, 1977.

## HOUSE OF REPRESENTATIVES—Wednesday, June 1, 1977

The House met at 12 o'clock noon. The Reverend Henry B. Luffberry, D.D., pastor, St. Paul's Lutheran Church, Washington, D.C., offered the following prayer:

Lord of time and eternity, the ancient psalmist prayed:

*So teach us to number our days that we may apply our hearts unto wisdom.—Psalms 90: 12.*

Since the convening of the 95th Congress 148 days have passed—days bright with challenge and achievement, days shadowed by disappointment and frustration. Help us evaluate honestly our progress, measuring humbly each completed task. Drive us in solemn conscience toward purposes not yet accomplished, missions perhaps not even realized. Fashion our days, Lord, into years of useful service to our citizens, our country, and our Creator. Amen.

## THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

## MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 521) entitled "An act to amend the John F. Kennedy Center Act to authorize funds for the repair of leaks."

The message also announced that the Senate had passed with amendments, in which the concurrence of the House is requested, bills of the House of the following titles:

H.R. 5101. An act to authorize appropriations for activities of the Environmental Protection Agency, and for other purposes;

H.R. 6010. An act to amend title XIII of the Federal Aviation Act of 1958 to expand the types of risks which the Secretary of Transportation may insure or reinsure, and for other purposes; and

H.R. 6138. An act to provide employment and training opportunities for youth.

The message also announced that the Senate insists upon its amendments to

the bill (H.R. 6138) entitled "An act to provide employment and training opportunities for youth," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. NELSON, Mr. CRANSTON, Mr. HATHAWAY, Mr. RIEGLE, Mr. WILLIAMS, Mr. RANDOLPH, Mr. PELL, Mr. KENNEDY, Mr. JAVITS, Mr. HATCH, Mr. CHAFEE, Mr. SCHWEIKER, and Mr. STAFFORD to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 275. An act to provide price and income protection for farmers and assure consumers of an abundance of food and fiber at reasonable prices, and for other purposes;

S. 682. An act to amend the Ports and Waterways Safety Act of 1972, to establish a program of oil pollution research, and for other purposes;

S. 1060. An act to amend the Act of February 9, 1821, to restate the charter of The George Washington University;

S. 1062. An act to amend section 441 of the District of Columbia Self-Government and Governmental Reorganization Act;

S. 1063. An act to amend the District of Columbia Self-Government and Governmental Reorganization Act;

## COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,

May 27, 1977.

Hon. THOMAS P. O'NEILL, JR.,  
The Speaker, House of Representatives,  
Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the permission granted on May 26, 1977, the Clerk has received this date the following messages from the Secretary of the Senate:

That the Senate passed without amendment House Concurrent Resolution 162;

That the Senate agreed to the amendment of the House of Representatives to the amendment of the Senate numbered 7 to the bill H.R. 5040; and

That the Senate agreed to the amendment of the House of Representatives to the

amendment of the Senate numbered 2 to the bill H.R. 5308.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, JR.,  
Clerk, House of Representatives.

## DISCHARGING COMMITTEE ON POST OFFICE AND CIVIL SERVICE FROM FURTHER CONSIDERATION OF HOUSE RESOLUTION 36, HOUSE RESOLUTION 532, HOUSE RESOLUTION 533, AND HOUSE RESOLUTION 534, AND REFERRAL OF THOSE RESOLUTIONS TO COMMITTEE ON INTERNATIONAL RELATIONS

Mr. NIX. Mr. Speaker, I ask unanimous consent that the Committee on Post Office and Civil Service be discharged from further consideration of House Resolution 36, House Resolution 532, House Resolution 533, and House Resolution 534, and that such resolutions be referred to the Committee on International Relations.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

## PROVIDING FOR CONSIDERATION OF H.R. 6970, MARINE MAMMAL PROTECTION ACT AMENDMENTS

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 594 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 594

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 6970) to amend the Marine Mammal Protection Act of 1972 with respect to the taking of marine mammals incidental to the course of commercial fishing operations, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Merchant Marine and Fisheries, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Merchant Marine and Fisheries now printed in the bill as an original bill for the purpose

of amendment, and all points of order against said amendment for failure to comply with the provisions of clause 7 of rule XVI are hereby waived. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER. The gentleman from Missouri (Mr. BOLLING) is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Mississippi (Mr. LOTT), pending which I yield myself such time as I may consume.

Mr. Speaker, this is an entirely normal 1-hour open rule. The committee amendment recommended is to be considered as an original bill. There is a minor waiver on germaneness, and it provides for a motion to recommit with or without instructions.

Mr. Speaker, there was no controversy over the rule before the Committee on Rules. I understand that there is some controversy over the bill, however.

I therefore reserve the balance of my time, Mr. Speaker.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as stated by the gentleman from Missouri, House Resolution 594 is a 1-hour, open rule providing for the consideration of H.R. 6970, the Marine Mammal Protection Act Amendments of 1977. The rule makes in order the consideration of the committee substitute now printed in the bill as an original bill for purposes of amendment. Points of order are waived against portions of the legislation relating to requirements placed on foreign-flag vessels for failure to comply with clause 7 of rule XVI—the germaneness rule. Last, the resolution allows for a motion to recommit with or without instructions.

There was testimony before the Rules Committee, when this rule was being considered, to the effect that the U.S. tuna fleet has been idle since November of last year. Fifty thousand people are estimated to be out of work because a Federal judge interpreted the Marine Mammal Protection Act to mean that zero porpoise or dolphin could be taken incidental to the catching of tuna.

I am advised that the legislation soon to be before us is designed to alleviate this hardship by authorizing an incidental taking of marine mammals at a level of 78,900 for 1977 and 1978 and on a prorated basis in 1980. An observer program is provided which places an observer on all vessels of 400 tons or more from October 1, 1977, to March 31, 1979. A \$32 per dolphin fee is charged for each dolphin killed in excess of the industry kill factor, and such funds are to be used to help pay for the observer program.

The projected cost to the Federal Government for fiscal year 1978 for this legislation is approximately \$5 million.

Mr. Speaker, I am aware of some amendments that may be offered to the legislation under the 5-minute rule. However, I know of no objections to this rule; and I urge its adoption at this time.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

#### PROVIDING FOR CONSIDERATION OF H.R. 6967, PEACE CORPS AUTHORIZATION FOR FISCAL YEAR 1978

Mr. DODD. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 600 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

##### H. RES. 600

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 6967) to authorize appropriations for the Peace Corps for fiscal year 1978. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on International Relations, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Connecticut (Mr. DODD) is recognized for 1 hour.

Mr. DODD. Mr. Speaker, I yield 30 minutes to the gentleman from Mississippi (Mr. LOTT) for the purpose of debate only, pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 600 provides for the consideration of H.R. 6967, an act authorizing an appropriation of \$81 million for the Peace Corps for the 1978 fiscal year. The bill also authorizes to be appropriated for this fiscal period such sums as may be necessary for increases in salary, pay, retirement, and other employee benefits authorized by law.

House Resolution 600 is a simple open rule, providing for 1 hour of general debate.

Mr. Speaker, as an ex-Peace Corps volunteer, and I understand there are only two of us in the Congress, I would like to express to this House my sense of how vitally important the Peace Corps continues to be in today's world.

The Peace Corps remains one of this Nation's most noble endeavors in international relations, and it continues to deserve the support it has received from

Congress, and from the House International Relations Committee.

In the 16 years since it was founded by President Kennedy to inject "a torch of idealism" into the international development effort, the Peace Corps has weathered the same international forces that vastly altered the idealistic values of 1961.

The early Peace Corps tapped an American commitment to voluntary service in the name of national optimism, with its rising expectation for what dedicated Americans could accomplish both at home and abroad.

And despite dramatic changes in the world political environment since 1961, and a realization by this country that there are appropriate limits to even its great powers and capabilities, the mission of the Peace Corps to promote better understanding among the peoples of the world retains its unique importance.

The Peace Corps is one of the few U.S. Government programs abroad which places Americans in direct contact with the full social, economic, and cultural spectrum of citizens of other nations.

While other U.S. foreign policy efforts seek to improve conditions for the poor in developing countries, many Peace Corps volunteers are in daily contact with the poor as advisers, coworkers, and friends.

While cultural and educational programs encourage greater communication among nations, the Peace Corps reaches those individuals least likely to participate in traditional exchange efforts.

Mr. Speaker, like many other Federal programs, the Peace Corps is undergoing a period of reevaluation and revitalization under the new administration. It is expected that many improvements will be forthcoming.

The amount of money authorized in this bill—\$81 million—is the same amount authorized by Congress for fiscal 1977. But it is an amount which it is expected will provide some support for this revitalization effort—especially in the area of an active and aggressive volunteer recruitment program.

Mr. Speaker, I urge adoption of the rule in order that this measure can be considered, and I urge my colleagues to overwhelmingly pass H.R. 6967 to allow the worthy programs of the Peace Corps to continue.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the distinguished gentleman from Connecticut, a former Peace Corps volunteer in his younger days, has outlined the terms of this rule. It is simply a 1-hour, open rule providing for the consideration of the bill H.R. 6967, the Peace Corps authorization for fiscal year 1978.

The legislation authorizes \$81 million for the Peace Corps in fiscal year 1978 plus such sums as may be necessary for increases in salary, pay, retirement, or other employee benefits.

Mr. Speaker, I am concerned mainly about two aspects of our consideration of this bill. First of all, there is significant confusion as to just what the administration requested for the Peace Corps in

fiscal year 1978. I am told that when the authorizing committee finally got the request it was for \$74.8 million. Yet, the committee apparently as arbitrarily authorized \$81 million plus. I have not been able to discern to this day just who wants what.

Second, I did not find any provision in the legislation to aid in having our Peace Corps direct its efforts toward helping foreign nations help themselves. I believe this should be the goal of our contributions abroad in this area, but year after year all we do is just give the organization more money and hope it promotes some goodwill for us internationally.

Mr. Speaker, I certainly would hope these and other questions are addressed during the debate on this bill. I reserve the balance of my time.

Mr. DODD. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. HILLIS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 333, nays 2, not voting 98, as follows:

[Roll No. 292]

| Mr. Stratton with Mr. Martin.                   |
| Mr. Scheuer with Mr. Marlenee.                  |
| Mr. Michel with Mr. McKinney.                   |

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

#### ANATOLY SHARANSKY CHARGED WITH TREASON IN U.S.S.R.

(Mrs. FENWICK asked and was given permission to address the House for 1 minute and to revise and extend her remarks and include extraneous matter.)

Mrs. FENWICK. Mr. Speaker, Members of the House, I have just received a most sad message from my office. Mr. Anatoly Sharansky, who perhaps is known to many Members, has been accused of treason in the U.S.S.R., for which the penalty is 10 years to death.

Mr. Sharansky happens to be Jewish, but he was concerned with the problems of Catholics, Lutherans, Baptists, and others in the Soviet Union. For example, he did all the translating for Yuri Orlov in the work of the committee which monitored compliance with the Helsinki Accord in the U.S.S.R.

I would like to direct the attention of the House to this brave man, who has

done much for human rights in the Soviet Union.

There is little that we in the Congress can do, but certainly at the very least we owe him the tribute of our attention and concern.

#### MAKING TECHNICAL AND MISCELLANEOUS AMENDMENTS TO PROVISIONS RELATING TO HIGHER EDUCATION IN EDUCATION AMENDMENTS OF 1976

Mr. FORD of Michigan. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 6774) to make certain technical and miscellaneous amendments to provisions relating to higher education contained in the Education Amendments of 1976, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 12, strike out all after line 24 over to and including line 2 on page 13 and insert:

(40) (A) The first sentence of section 493 (a) of such Act is amended by—

(i) striking out "part A or C" and inserting in lieu thereof "subpart 2 of part A, part C, or part E";

(ii) striking out "either" and inserting in lieu thereof "any"; and

(iii) striking out "in lieu of reimbursement for its expenses during such fiscal year in administering programs assisted under such part" and inserting in lieu thereof "for the purposes set forth in subsection (c)".

(B) The second sentence of such section 493 (a) is amended by adding before the period at the end thereof a comma and the following: "plus (C) the principal amount of loans made during such fiscal year from its student loan fund established under part E".

(C) Section 493(b) of such Act is amended to read as follows:

"(b) The aggregate amount paid to an institution for a fiscal year under this section may not exceed \$325,000."

Page 17, lines 17 and 18, strike out "(16), (19), and (20)" and insert: "(17), (20), and (21)".

Page 18, line 3, strike out "(19)" and insert: "(20)".

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

Mr. BUCHANAN. Mr. Speaker, reserving the right to object, would the gentleman explain the amendments?

Mr. FORD of Michigan. Mr. Speaker, will the gentleman yield?

Mr. BUCHANAN. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. Mr. Speaker, H.R. 6774 contains technical and miscellaneous amendments to provisions of the Education Amendments of 1976 (P.L. 94-482) which relate to higher education. These amendments include corrections of typographical errors, effective dates and corrections in the agreed-upon text of the original legislation.

H.R. 6774 was reported unanimously by the Education and Labor Committee and was passed by this body on May 9 by a vote of 382 to 1.

The two additional amendments added by the other body are both technical in nature.

The first contains language, suggested

by the Department of Health, Education, and Welfare as technical assistance to the Congress, which will assure that administrative cost allowances for the national direct student loan program will be treated in the same fashion as those for the supplemental educational opportunity grant program and the college work-study program, as intended by the conferees on Public Law 94-482.

The second amendment merely corrects a misnumbering of paragraphs in the effective date section for the various provisions of the guaranteed student loan program.

Mr. BUCHANAN. Mr. Speaker, in light of the fact, as I pointed out earlier on the floor, that this was a very long conference, and we had many areas of disagreement which were worked out, we need the technical amendments, and these are purely technical.

In view of that fact and the explanation of the gentleman, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

A motion to reconsider was laid on the table.

#### AUTHORIZING APPROPRIATIONS FOR FISCAL YEARS 1978, 1979, AND 1980 TO CARRY OUT COMMERCIAL FISHERIES RESEARCH AND DEVELOPMENT ACT OF 1964

Mr. MURPHY of New York. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 6206) to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out the Commercial Fisheries Research and Development Act of 1964, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 2, line 19, after "Act:" insert: *Provided*, That the Secretary shall give a preference to those States in which he determines there is a commercial fishery failure or serious disruption affecting future production due to a resource disaster arising from natural or undetermined causes in providing funds to States from the amount in clause (2) of this subsection.

Mr. MURPHY of New York. Mr. Speaker, the purpose of H.R. 6206, which passed the House on May 10, is to increase the funding for Federal-State efforts in research and development under the Commercial Fisheries Research and Development Act.

Mr. Speaker, on May 17, the Senate concurred in the House bill, with a Senate amendment to section 4(b) of the bill. Under section 4(b) of the bill as it passed the House, there would be authorized to be made available in the form of grants \$3 million per year for fiscal years 1978, 1979 and 1980 to the Secretary of Commerce for use in assisting those States in which there has been a commercial fishery failure due to a resource disaster arising from natural or undetermined causes.

The Senate amendment to the bill would authorize grants to the States, not only when a commercial fishery failure has occurred, but also when there has been a serious disruption affecting future production due to a resource disaster arising from natural or undetermined causes.

Mr. Speaker, I think this is a good amendment in that it broadens the provision to allow for financial assistance in the event of an impending disaster. In essence, the amendment would permit the use of 4(b) funds in advance of the actual loss of resources, when, for example, it can be demonstrated that damage to the fishery is predictable.

An example of the recent resource disaster occurring on the Atlantic coast that would probably be eligible for funding under the provisions of the Senate amendment has to do with the very low ocean oxygen content in a vast area south of Long Island and east of New Jersey which adversely affected the standing stock of surf clams. Another example occurred in the Chesapeake Bay, which resulted from this winter's extremely cold weather in the Eastern United States, causing serious damage to oyster stocks and blue crabs. Also, it is now known that last winter's prolonged cold weather wiped out the entire overwintering spring crop of white shrimp from North Carolina to northeastern Florida. If a similar cold water condition appears probable for next winter, the affecting States might jointly apply under the amended provisions of 4(b) for disaster funds to ease the economic disruption and provide substitute fisheries.

On the Pacific coast, funds might be applied for now in California in the face of certain obvious impacts of lack of rainfall. The recent drought is certain to have a devastating effect on salmon, striped bass, shad, and other anadromous species. It could be very useful to apply the funds now to save those fish instead of waiting until the drought has made its impact and then applying for funds to restore the fisheries.

Mr. Speaker, the Senate amendment is germane to the bill and it did not result in an increase in the cost of this program to the Federal Government.

I urge the House to concur in the Senate amendment to H.R. 6206.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

A motion to reconsider was laid on the table.

#### MARINE MAMMAL PROTECTION ACT AMENDMENTS

Mr. MURPHY of New York. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 6970) to amend the Marine Mammal Protection Act of 1972 with respect to the taking of marine mammals incidental to the course of commercial fishing operations, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from New York (Mr. MURPHY).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 6970, with Mr. MONTGOMERY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from New York (Mr. MURPHY) will be recognized for 30 minutes, and the gentleman from Michigan (Mr. RUPPE) will be recognized for 30 minutes.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the Committee on Merchant Marine and Fisheries has reported H.R. 6970 to the House in an attempt to resolve the tuna-dolphin controversy and get thousands of unemployed fishermen, cannery workers, tuna boat repairmen, and others back to work.

The bill was reported out of committee with nearly unanimous approval. It represents a good faith compromise position between those concerned about continuing protection for dolphin populations and those who want to insure the continued economic viability of the \$1 billion tuna industry—from the 1,000 small bait boats employing 1,550 fisherman to the destroyer-size purse-seining vessels to the 13,000 cannery employees.

I am convinced that this bill accomplishes both important goals. The tuna-dolphin controversy results from fishing practices which make use of the little understood relationship between yellowfin tuna and certain species of dolphin. Commercial tuna purse seiners use dolphin to spot large schools of tuna. The fishermen herd the dolphins, enclose them with nets, and thereby catch the yellowfin tuna which swim beneath and behind them. Unfortunately, a portion of the dolphins captured in the net become entangled and expire.

A significant percentage of the U.S. tuna catch is landed in association with dolphin. This process, pioneered by the U.S. fleet, has led to a substantial increase in the yearly harvest of yellowfin tuna.

Over the past year, the tuna fleet has been in disarray as a result of judicial interpretations of the Marine Mammal Protection Act. This year the Department of Commerce has promulgated regulations which will cause severe economic hardship for the industry, and may very well work to the detriment of the dolphins.

The 1977 regulations provide for a quota of 59,050 dolphins. Most importantly, the regulations totally prohibit any intentional setting on the eastern spinner dolphin which is vital to the economic well-being of the American fleet.

We would all like to get the dolphin quota down to zero, but this is simply not possible to do overnight without putting the American tuna fleet out of business.

The American fleet has developed and pioneered all of the equipment advances over the last few years that have led to dramatic reductions in dolphin mortality. The current regulations would end this progress by making it impossible for the fleet to operate.

However, the fleet is not the only party suffering from the current regulations. In addition to the fishermen, an estimated 20,000 workers have been unemployed as a result of the restrictive 1977 regulations. Thousands more are scheduled to join the unemployed and yet additional thousands will go on reduced hours and reduced paychecks. These workers are primarily from minority groups, women and heads of households—people that can ill afford to wait months for Washington to pay attention to their plight.

The hardest hit area is Puerto Rico with thousands of unemployed cannery workers adding to an already unacceptably high unemployment rate.

The basic problem here is that while the American fleet has demonstrated its concern for dolphins, the foreign fleet has not. Foreign fishermen are estimated to kill 2½ times per set the number of dolphins taken by American fishermen.

The ultimate irony of the current regulations is that while they purport to protect the dolphin, they may very well condemn them. If the U.S. fleet cannot fish because of the regulations, you can be sure that the foreigners will. As the foreign share of the tuna catch increases, dolphin mortality will inevitably increase.

Although H.R. 6970 would increase the quota in 1977 over that now in effect, it establishes incentive and penalty provisions designed to encourage the industry to reduce dolphin mortality.

The bill would do the following:

First. It would provide a quota of 78,900 dolphins in 1977, including 6,500 eastern spinners. This represents a significant reduction from the 300,000 level of 1972 and the 96,100 level recommended by the administrative law judge for this year. National Marine Fisheries Service scientists testified that this quota would permit two of the populations of the three major species subject to purse-seining to increase by 103,000 this year—eastern spinner and offshore spotted. The third species would suffer an insignificant decline—whitebelly.

Second. H.R. 6970 would provide for the same quota in 1978 except that the Secretary could reduce the quota if new fishing technology made a reduction feasible or if the populations had suffered in 1977.

Third. The bill would establish a 100-percent observer program on all large tuna vessels and would require the tuna fleet to pay a \$2 million incentive fee to the Government. A portion of this fee will be returned to those masters with the lowest mortality rates; another portion of the fee would go to pay the operating

expenses of the research vessel that the industry is required to provide to the Government under the bill. The research vessel will investigate methods of reducing dolphin mortality.

Fourth. The legislation would provide the Secretary with the authority to revoke the fishing certificate of any master whose mortality rate exceeds the industry rate by 100 percent. It also would charge the owners of tuna vessels \$32 for every dolphin taken in excess of the fleet-wide average.

Fifth. Finally, the bill would restrict the transfer of any purse seine vessel to foreign registry unless the transferee posts a performance bond and agrees to fish according to U.S. standards.

As you can see, H.R. 6970 is not an industry bill, an environmentalist bill, or an administration bill: It represents the considered judgment of the Merchant Marine and Fisheries Committee which originated the Marine Mammal Protection Act.

The bill's provisions are carefully balanced to provide the needed scientific information and to encourage the technological innovation necessary if we are ever to attain the near-zero dolphin mortality rate which we all desire.

Mr. RUPPE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of H.R. 6970, a bill which provides urgently needed relief for the U.S. tuna industry and, at the same time, insures that eastern Pacific porpoises are given the greatest protection possible. Without this bill, there are no winners, just losers. With this bill, the long-term prospects for both the porpoise population and the U.S. tuna industry are measurably enhanced.

Extensive hearings conducted by our committee have indicated time and again that the 1977 regulations promulgated by the Department of Commerce could cripple the U.S. tuna industry. The regulations prohibit the industry from setting on a species upon which it heavily depends—the eastern spinner porpoise. Moreover, the overall quota of 59,050 will shut down industry fishing well before the season's end and the fleet as a whole could lose more than \$31 million of catch. If the situation is not changed quickly, the U.S. tuna industry may not survive.

It should be noted that as to long-term prospects of the porpoise the foreign tuna fleet kills porpoises at a rate that is 2.5 times higher than the U.S. fleet. They most certainly fish where our boats have previously fished.

The bill we are considering today will allow the tuna industry to fish with a quota of 78,900 porpoises—a level which will allow the industry to survive. However, this quota does not, I repeat does not, endanger the porpoise populations. Under an aggregate 78,900 quota, the stocks in question will actually increase in the next year and a half. The population of the offshore spotted porpoise will increase by 139,000—an increase of almost 4 percent. The eastern spinner porpoise stocks will grow by 52,000 in the next year and a half—an increase of 5.3 percent.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. RUPPE. I am privileged to yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, I believe in order to understand the "numbers game" we have to understand how we arrived at these numbers.

This morning at 11 o'clock I talked with the fisheries expert in La Jolla, Calif., who works at the Government lab that is responsible for determining these figures. They are in the process and will be for the next 2 weeks of trying to establish more precise figures on the dolphin populations. We are only dealing with the lowest level "guesstimates" of marine fisheries results. We do not have an idea of where the dolphin are in the Pacific Ocean. We have some idea of where the dolphin are in just the areas that we have fished in the past, but we are getting indications there are many more dolphin in other areas.

Also we are trying to find out if any of those species are endangered. I asked about the endangerment of these species and the answer was no, in no way is any species endangered.

Again I want to thank the gentleman from Michigan for the balanced presentation he is making. Again I want to emphasize that we are dealing with the very lowest level of figures as to the dolphin population.

Mr. RUPPE. Mr. Chairman, I thank the gentleman from New York. I want to say at this point in time that I believe the chairman, the gentleman from New York, has put in a tremendous amount of time into trying to resolve this issue. It is a difficult one to resolve because the tuna fishermen are rather hard liners on one side and then we have the environmentalists on the other who certainly feel most keenly about this matter. As I say, it has been a difficult issue to resolve. I believe the gentleman from New York (Mr. MURPHY), the chairman, has taken the initiative to tackle this question.

The third species of porpoise taken in association with tuna, the whitebelly spinner, will remain in a healthy state almost 28.5 points above the danger level for the population. H.R. 6970 authorizes the Secretary of Commerce to reduce the overall quota in 1978 and in the first quarter of 1979 if she finds that such a reduction is required because of new information regarding the size or health of the porpoise populations or if she finds that a lower quota can be achieved because of new gear technology. This language, which has been largely overlooked or ignored by many groups commenting on this legislation, provides an effective mechanism for reducing the annual quota.

In addition to this language, H.R. 6970 contains several other important provisions designed to protect and conserve porpoise populations. First, H.R. 6970 calls for a full observer program on tuna-boats of 400 tons or more beginning no later than October 1, 1977, and extending through March 31, 1979. Such a program will provide valuable data regarding the population dynamics and inci-

dental mortality of eastern Pacific porpoises. Data that, I believe, has been sadly lacking in the past.

Second, the industry will, as a condition of obtaining a permit to fish for tuna taken in association with porpoise, pay a fee of \$2 million to be used, in part, to provide a tuna vessel for the sole purpose of scientific research. Such research promises to increase greatly our understanding of fishing procedures, gear, and porpoise behavior. This type of basic research is absolutely critical if continued progress is to be made in reducing porpoise kill.

Third, H.R. 6970 contains an incentive program for skippers to reduce porpoise mortality. Skippers who are proficient in saving the lives of porpoises will be financially rewarded.

Fourth, an amendment I offered calls for the removal of careless skippers from the fleet. This provision stipulates that any skipper whose porpoise kill rate is twice as high or higher than the industry kill rate will be denied a certificate of inclusion for all or part of the next fishing season.

Fifth, the owners of vessels whose porpoise kill rate exceeds the industry kill rate will be financially penalized. An amendment I introduced, which was adopted by our full committee, calls for a vessel owner to pay \$32 per porpoise for each porpoise caught in excess of the industry average. Although the original amendment I offered provided for a fee of \$32 for each porpoise mortality, the committee felt it would be more appropriate to levy the fee for porpoises killed in excess of the industry average. Under either proposal but essentially under my amendment vessels will have a strong financial incentive to minimize their kill of porpoises.

A critical provision of H.R. 6970 centers on the international aspects of the tuna-porpoise problem. This bill requires the Secretary of Commerce and the Secretary of State to commence bilateral and multilateral international negotiations with nations engaged in fishing on porpoise. The purpose of these negotiations is to effect agreements to place observers on foreign vessels engaged in fishing for tuna in association with porpoise.

Mr. Chairman, in conclusion I can only reiterate the need for H.R. 6970. Without this legislation, the already substantial unemployment in the tuna industry will grow worse and the price of tuna to the consumer will probably increase. However, under the terms of H.R. 6970, porpoise populations will probably increase by a total of 211,000 animals in the next year and a half. For the third species of porpoise taken in association with tuna, the population will remain well above the danger level for the population. H.R. 6970 therefore represents a balanced piece of legislation and I urge its adoption.

Mr. YOUNG of Florida. Mr. Chairman, will the gentleman yield?

Mr. RUPPE. I yield to the gentleman from Florida.

Mr. YOUNG of Florida. Mr. Chairman, I would like to take this opportunity

to state that unless it is considerably amended, I am opposed to the legislation before us today to amend the Marine Mammal Protection Act of 1972, and I will continue to oppose future legislation that in any way weakens the provisions of that act. My own bill, H.R. 1383, introduced on the opening day of this Congress and the previous Congress, amends the act to prohibit the issuance of general permits which authorize the taking of marine mammals in connection with commercial fishing operations; a provision which serves only to strengthen the provisions of the Marine Mammal Protection Act of 1972.

The subject of marine mammal protection, Mr. Chairman, is one with which I am very familiar. I first introduced my bill in 1974, and during the past 4 years, I have read a great deal of material offering viewpoints on both sides of the issue. I have also personally answered well over 1,000 letters from my constituents on the subject. In all this time, my opinion that the act is justified, has not been changed; and it has been firmly substantiated by many noted authorities.

In May of 1976, Judge Charles Richey submitted a decision ordering a complete ban on the taking of porpoises by the tuna industry in connection with the commercial fishing industry. In a suit brought by the Committee for Humane Legislation, Judge Richey ordered the Department of Commerce to revoke all permits to the tuna fleet which permit "the incidental killing of porpoises unless and until such killing is not to the disadvantage of the porpoises and is otherwise consistent with the intent of the Marine Mammal Protection Act of 1972."

In considering the suit brought by the Committee for Humane Legislation, the court agreed that the primary purpose of the Marine Mammal Protection Act is to protect marine mammals and that the act was not intended as a "balancing act" between the interests of the fishing industry and the mammals.

In handing down his decision, Judge Richey said:

The Marine Mammal Protection Act does not direct the defendants to afford porpoises only that amount of protection which is consistent with the maintenance of a healthy tuna industry. The interests of the marine mammals comes first under the statutory scheme, and the interests of the industry, important as they are, must be served only after protection of the animals is assured.

The Court continued:

Since the two year grace period [provided when the Act was passed] expired on October 20, 1974, the only limits the agency has placed on the general license to take marine mammals have concerned certain gear and fishing techniques; the agency has never set a limit [as mandated by the Act] on the number of porpoises which can be taken, despite the fact that incidental porpoise mortality during this period has been on the rise.

It is now nearly a year later, Mr. Chairman, and still nothing has changed. The tuna fishing industry has not only dragged its feet in complying with the law, it has engaged in a great

many theatrics to convince the American people that it cannot comply. Periodic threats, directly or indirectly, from the industry have been made to convince the public that if the tuna fishermen are forced to comply with the Marine Mammal Protection Act, the price of tuna fish will rise "out of sight." It has been suggested that the only recourse for the industry is to sell its ships to foreign interests which do not have such strict requirements, and we all know that to substantiate these claims, fleets of tuna boats have stayed in port to deliberately effect a temporary squeeze on the consumer.

The fact is that none of this is necessary or justified. By the fall of last year, improved net designs and new behavioral techniques for releasing porpoises from the nets, resulted in almost perfect porpoise safety records for some boats. One ship, observed by scientists throughout a single fishing trip in October and November, encircled 45 schools of porpoises and tuna, caught over 1,000 tons of tuna and caught and released unharmed 30,233 porpoises with a mortality of only 16. Under this improved system, the porpoises are able to wait safely in the center of the net and then go quietly out of the net opening like cattle going through the gate. Obviously, all it takes to solve this problem is a little effort and a little caring on the part of the tuna fishermen.

In a letter to the editor of the New York Times, Karen Pryor and Philippe Vergne, biologists with the Porpoise Rescue Foundation, and Warren Stunitz, program manager of the tuna/porpoise behavior study at the University of California, all of whom traveled with the expedition in October/November of last year, stated:

The American fishermen by now are highly motivated to adopt the new net designs and techniques. They are well aware of the need to preserve the porpoises, and the new techniques are far safer for the crew, more efficient and cost effective. The fishing industry, however, seems reluctant to defend itself on the basis of the new capability, perhaps lest regulations become even tighter before every boat has acquired the new gear and mastered the new techniques.

Such reasoning, Mr. Chairman, is based on emotion or temperament, not logic or justification. I understand that the legislation before us today is intended to be a compromise between two highly emotional points of view, and it is a fact that compromise is frequently the only solution to many problems that come before us in this Chamber. In this case, however, it is not only unjustified; it is unnecessary. The tuna industry has behaved badly. It has defied the law, and even now, when the solutions to the problem are clearly available in the form of improved equipment and techniques, readily available to all concerned, it continues to refuse to obey the law. The penalty of taking the necessary precautions to avoid willing porpoises unnecessarily is really only the necessity of waiting 2 minutes after each set of the net to allow the porpoises that are waiting in the bottom of the net to surface for

air, at which time they can be liberated. We all have a right to demand that the tuna industry invest that extra 2 minutes before making its catch.

Mr. Chairman, the bill we are considering now fails to establish any incentives for conscientious operators who are attempting to minimize the kill of porpoises, and gives a great deal of license to those operators who simply do not care. It allows a level of mortality that is higher than the level allowed in any year since the Marine Mammal Protection Act was passed in 1972, and it puts the Congress of the United States in a position of backing down from its responsibility to the preservation of marine mammals—a species we have a chance to save before it reaches the "endangered" status—because of pressure brought to bear by an industry on which only very reasonable demands for precaution have been made.

I urge my colleagues to resist falling into the comfortable pattern of compromise on this issue, and to exercise the courage of conviction that this body was justified in passing the Marine Mammal Protection Act of 1972, and is justified today in demanding that the provisions of that act be heeded.

Mr. MURPHY of New York. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. LEGGETT), chairman of the Subcommittee on Fisheries and Wildlife Conservation and the Environment.

Mr. LEGGETT. Mr. Chairman, H.R. 6970 seeks to resolve the tuna-dolphin controversy, which concerns one of the most serious and challenging problems addressed by the Marine Mammal Protection Act of 1972—the unwanted killing of thousands of dolphins incidental to commercial tuna fishing operations in the Pacific Ocean. The solution to this problem has been actively sought by the Federal Government, the tuna industry and conservation organizations for the past decade. Progress has been made, but much more needs to be done.

Some background to this problem is helpful in putting the issues addressed by H.R. 6970 in perspective. Tuna fishermen have known for a long time that yellowfin tuna in the eastern tropical Pacific swim beneath and behind groups of certain species of porpoise or dolphin. The reason for this association between tuna and dolphin is unknown. Since dolphins are larger and more active on the sea's surface than tuna, fishermen have for many years located tuna by searching for dolphin. More recently, they have developed a fishing technique called purse seine fishing on porpoise. As part of this technique, high-powered speedboats herd groups of dolphin into large purse seine nets much like cowboys herd cattle. The yellowfin tuna follow the dolphin and both are trapped when the net is closed or pursed around them. On some sets, over a thousand dolphins may be encircled.

Dolphins are air-breathing mammals. They are killed when they become trapped in the net, cannot surface to breathe, and suffocate. Others die from shock or physical injury. Last year, over

100,000 dolphin were killed by the U.S. purse seine fleet of 117 vessels.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from New York.

Mr. MURPHY of New York. I thank the gentleman for yielding.

We have heard so much about physical injury of dolphin. I observed two settings on dolphins, of 1,000 in one instance and of 1,500 dolphin in the second instance.

In neither instance was there any serious injury. There were two drownings in just one of the sets. So in the setting on 2,500 animals, there were two kills both of which resulted from drownings. In my conversations with the captains in this fleet, I was told the serious injury factor is virtually a fraction of a percent.

So we are not dealing with serious injury. We are dealing with the resolving of the problem of nets and net technology and we have made great strides since the last statistics. If we enact this legislation, within 1 year we will have cut dramatically into this problem.

Mr. LEGGETT. Maybe the gentleman from New York can give us statistics on the tons taken and the kill per ton on the sets that he observed.

Mr. MURPHY of New York. The kill per ton was zero in the one set and it would be in the hundreds on the second set because of the very small proportion. The problem of course occurs with the breakdown of equipment and this is one of the areas that we are resolving in cooperation with the American Tuna Boat Association and with the National Marine Fisheries Service experts who are working in concert to bring these numbers down. We know definitely that they will be brought down.

Mr. LEGGETT. Is it the observation of the gentleman that these particular sets he saw were set up for him to look at or is it his impression that these kinds of kill rates can be achieved over a period of time with proper training and gear?

Mr. MURPHY of New York. They do not set up on 1,000 porpoises in the middle of the Pacific Ocean just for play because they are dealing with the situation inside the agreed-to fishing area where those dolphin have been fished before, and as we know these animals are very intelligent. Only the finest type of equipment can possibly encircle them.

We are making much progress now and if this legislation is enacted as is, I think we will resolve the problem for this industry as well as the environmental concerns.

Mr. LEGGETT. I would say the chairman has taken an extraordinary interest in this problem that certainly has vexed myself, as chairman of this subcommittee. We have held two dozen hearings in the field and in Washington on the tuna-porpoise issue over the past several years. We knew we had a tough bill when we made the compromises we made in the 1972 act. We knew we had more work to do and that is why we are back here.

I would ask one additional question of the gentleman. If we pass this bill as such

will we probably be back here in another 2 years to make another fix?

Mr. MURPHY of New York. Based on the requirement of this legislation that there be a research vessel funded by the industry and with the backing of the National Marine Fisheries Service experts on that vessel I am certain we will have resolved this problem. The fleet has now equipped itself with the Medina nets and the Bold Contender nets on the vessels involved. The fleet has been out about 10 days and the statistics show dramatic reduction in kills, but we must have the experience through this season in order to see certain technologies that the vessel and scientists can develop. I am certain if we have that, we will be able to resolve this problem and the Marine Mammal Protection Act will properly reflect what it is intended to reflect.

Mr. LEGGETT. This bill merely allows the taking of spinners for a 2½-year period. If there is to be any take of eastern spinners after that point, that will require additional legislation?

Mr. MURPHY of New York. Yes, but this limits the take to 6,500.

Mr. LEGGETT. I understand that.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I would ask, under the present law how many porpoises were killed last year?

Mr. LEGGETT. They estimate there were a little over 100,000 last year. We tried to take only 72,000.

Mr. CARTER. Even after the judicial decision 100,000 were killed?

Mr. LEGGETT. And that compares with 300,000 before the bill was enacted in 1972.

Mr. CARTER. Mr. Chairman, I think it is a tragedy beyond compare that this highly intelligent mammal is being killed.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, this statistic of over 100,000 was arrived at this way. There were observers on some vessels and based on the figures from just certain vessels they extrapolated those figures through the fleet. The 100,000 may well have been over 100,000 or much less than 100,000.

The CHAIRMAN. The time of the gentleman from California (Mr. LEGGETT) has expired.

Mr. MURPHY of New York. Mr. Chairman, I yield 2 additional minutes to the gentleman from California.

Mr. LEGGETT. Mr. Chairman, if I could recapture part of my time, I would say we only observed like 8 to 10 percent of the cruises. There was a large kill on a few boats; so we extrapolated those figures. The large kill was not well represented. It could be that last year we only took 60,000 porpoises. On the other hand, maybe we took 120,000. That is why the Murphy bill requires observers on every trip, so we do not have this confusion when we come back in about 1½ years.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield further?

Mr. LEGGETT. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, I would like to point out a statistic to my distinguished colleague, the gentleman from Kentucky. There are 1.8 million white-tailed deer in Kentucky; tens of thousands in the State of Kentucky went deer hunting last year. Would the gentleman express himself on that situation?

Mr. CARTER. Mr. Chairman, if the gentleman will yield. I do not kill any deer at all. But a deer is a bovine animal which over the years has been used for food and it does not have the mental acuity of a porpoise, nor does it have the human characteristics.

Mr. LEGGETT. Mr. Chairman, I would say on that point these mammals, of course, are used for food by the Japanese and the Japanese ate 70,000 of them last year. We do not plan to do that. We want to get the incidental kill numbers down to 10,000. I think we can.

Mr. Chairman, in the past few years, I have received thousands of letters from all over the country expressing concern that this killing of dolphin be ended as soon as possible. Some tuna fishermen have made significant, even heroic, efforts to save those dolphin which become trapped in their nets.

I believe that both the tuna fishermen and the general public share the same goal of reducing dolphin losses to insignificant levels approaching zero as soon as possible. There has been a continuing and emotional controversy, however, over how to achieve this goal.

During the past few years, the Subcommittee on Fisheries and Wildlife Conservation and the Environment has held several lengthy hearings on the problem. Based upon the extensive record of these hearings and those conducted on H.R. 6970 by the full Committee on Merchant Marine and Fisheries, I believe that substantial progress has been made. Data indicates a better than 60 percent reduction in dolphin mortality since the act was passed in 1972.

This reduction has been accomplished with the benefit of substantially improved fishing gear and methods developed by both industry and Government experts. Last year one vessel, the *Elizabeth C.J.* achieved a dramatic reduction in the number of dolphin killed during an experimental cruise. A total of 20 vessels using the new fishing techniques and equipment tested during this experimental cruise also achieved remarkable reductions in mortality. I am convinced that the long-term solution to this problem is to develop new fishing gear and methods which will not kill dolphin.

Efforts to find a way to reduce dolphin losses, however, have been frustrated recently with problems and disappointments. At the beginning of this year, a confusing series of court orders struck down earlier Federal regulation and left the fleet out at sea with no legal authority to kill any dolphin. As a result, most of the fleet returned to port. Over 1,500 fishermen were left idle. This extraordi-

nary disruption of fishing not only caused serious economic harm, but interrupted the testing and development of new fishing gear and methods by the fleet to reduce dolphin mortality.

At the present time, the fleet is fishing under a new permit which limits the number of dolphin which can be killed this year to 59,050. This quota does not allow the taking of any dolphin from the eastern stock of spinner dolphin because this stock was found to be "depleted" under the act. Fishermen, however, must be able to take some of these dolphin if they are to be able to catch their normal harvest of tuna. Spokesmen for the administration, tuna industry, and a few conservation organizations agree that some eastern spinner dolphin should be allowed to be taken and that the total quota should be adjusted. H.R. 6970 would provide such an adjustment on a temporary basis provided that the size and health of the affected populations of dolphin are not adversely affected.

During the interim period provided by the bill, a vessel would be used to conduct basic research on new fishing gear and methods and Government observers would be placed aboard each tuna vessel so that complete information can be gathered on dolphin losses. By the end of the interim period in April 1979, we should be in a much better position to determine how we can achieve the goal everyone shares of reducing dolphin mortality and serious injury to insignificant levels approaching zero.

I expect that progress in reducing dolphin mortality will continue under H.R. 6970. To insure that this occurs, the bill would establish a new system of economic incentives to individual skippers to reduce killing. Penalties would also be imposed against those vessels with excessive rates of kill. The bill also attacks the threat to dolphin from foreign fishermen. This threat is becoming increasingly more serious as foreign fleets grow in size and adopt our method of fishing "on dolphin." H.R. 6970 directs that international agreements be negotiated to insure that foreign fishing is subject to control and regulation consistent with U.S. standards. It also would place restrictions on the transfer of U.S. vessels to foreign countries to insure that U.S. standards are satisfied after the vessel is transferred. The potential transfer of the U.S. fleet to foreign countries is recognized by conservationists as potentially disastrous. If the fleet goes foreign, our ability to end the killing will be undercut, if not destroyed.

H.R. 6970, in short, offers a comprehensive and balanced solution to this controversy. I urge its passage.

Mr. RUPPE. Mr. Chairman, I yield 5 minutes to the gentleman from New Jersey (Mr. FORSYTHE).

Mr. FORSYTHE. Mr. Chairman, I rise in support of H.R. 6970.

Mr. Chairman, in the late 1950's the U.S. tuna fleet began to develop a new fishing technique. This technique utilized a net known as a purse seine. By the late 1960's the U.S. fleet consisted primarily of vessels equipped with this net.

One result of this new technology was

that the U.S. tuna fleet became the most efficient tuna fleet in the world. Another result was the death of thousands of porpoises which became entangled in the nets.

During this same period the improvement of our environment became a national goal. We became aware that industrial progress is often accompanied by environmental degradation.

It is these two forces—the technological achievement of an industry and the national commitment to a better environment—which have collided in the so-called tuna/porpoise controversy—and it is this controversy which has resulted in H.R. 6970—legislation which attempts to strike a balance between the concerns of the industry and the concerns of the environmental community.

Under H.R. 6970 the 1977 National Marine Fisheries Service quota for incidental porpoise mortality will be increased from 59,050 to 78,900. However, in evaluating these numbers, there are certain things we must bear in mind.

First, this increase in the quota represents just over three-tenths of 1 percent of the total population of the three major species of porpoise involved in the tuna fishery. Second, the populations of two species—the offshore spotted dolphin and the eastern spinner—will increase by 3.8 percent and 5.3 percent in the next year and a half.

In regard to the third species, the whitebelly spinner, the population may decrease by 1.5 percent under the terms of H.R. 6970. But this figure should also be placed in perspective. The whitebelly spinner population is presently at 80 percent of its preexploitation population. If the lower bound of a species' optimum sustainable population is 50 percent of the species' preexploitation population, then the whitebelly spinner is presently 30 points above this level. Under H.R. 6970 it will remain 28.5 points above the lower bound of its optimum sustainable population.

Thus, under H.R. 6970 we will be meeting the conservation objectives of the Marine Mammal Protection Act. The porpoise populations involved will remain healthy and will continue to be a significant functioning element of the marine ecosystem. In fact, in two instances the populations will increase substantially.

While protecting and enhancing the porpoise populations of the Eastern Pacific, H.R. 6970 also provides relief to the U.S. tuna industry. If the Congress fails to act, the U.S. fleet will lose approximately \$31 million in 1977. This loss equals more than a quarter of a million dollars per vessel. At the same time, the price of tuna to the consumer could increase approximately 12 percent with a total cost to the consumer of approximately \$86 million. These figures clearly illustrate the severe economic impacts which will befall the U.S. tuna industry and the consumer if the present regulations remain unchanged.

Already more than 5,700 cannery workers have been unemployed and it is anticipated that within the next few

months, an additional 4,600 cannery workers will be unemployed. However, these figures underestimate the true employment impact of the current regulations because they do not include the number of individuals in related industries which have been and will be unemployed as a result of the current crisis.

Mr. Chairman, after evaluating all of these facts, the Committee on Merchant Marine and Fisheries reported H.R. 6970. This legislation will eliminate the unemployment that now pervades the tuna industry. H.R. 6970 will also protect and enhance the porpoise populations of the world.

In balancing the interests of the tuna industry and of the environmental community, H.R. 6970 provides for a reduction in the annual quota. Under the bill the Secretary is authorized to reduce the quota if she determines that such a reduction is possible because of new gear technology or if she determines that the size or health of the population requires such a reduction.

H.R. 6970 also establishes a system of rewards and penalties to further reduce porpoise mortality. The legislation provides for a fee of \$32 per porpoise for every porpoise that is taken in excess of the industry average. At the same time the legislation provides for an incentive payment for those tuna skippers whose porpoise kill rate is substantially less than the industry average. Further, H.R. 6970 requires that any skipper whose porpoise kill rate is more than double the industry average will have his permit removed until such time as he completes a training program and demonstrates a significant improvement in his ability to reduce porpoise mortality.

Mr. Chairman, H.R. 6970 represents a balance between the two forces which have collided to create the tuna/porpoise controversy. It is a compromise legislative package and I urge its adoption.

Mr. RUPPE. Mr. Chairman, I yield 3 minutes to the gentleman from Washington (Mr. PRITCHARD).

Mr. PRITCHARD. Mr. Chairman, I would first of all like to compliment Chairman MURPHY on his commitment to resolving the tuna/porpoise issue before us. For a considerable time now, the administration has been reluctant to act on this matter. And, it is not an easy issue to resolve. We still have very little scientific data on the actual population levels of many of these species of marine mammals which we are discussing here. Also, there is a lack of reliable data on the actual "industry kill" of porpoise and also questions about the actual economic effects on the industry given the requirement of further porpoise mortality reductions.

Therefore, we must indeed direct more research efforts at these uncertainties. But, research and a better and more accurate understanding of marine mammal populations takes time and, neither Congress nor the administration can be expected to come up with a complete solution at this time. Any legislation which is passed must be an interim measure to be updated as better information becomes available. Ultimately the National Marine

Fisheries Service should have considerable administrative discretion on these matters. But, Congress must act. As our chairman has pointed out, it is very costly for this country to have its tuna fleet at anchor. I think it is commendable that our chairman has decided to join the issues at this time and even though the controversy is high, in the course of our deliberations we have made significant progress, and recently, both the administration and the Senate are also moving on this issue.

Mr. Chairman, I support this measure. I have high hopes that we can accept some amendments which I think will strengthen it and make it a better bill. I think the industry can live with these amendments.

One of them, which I will be offering, will be to reestablish the Ruppe amendment as it was offered in the committee, which is to make a flat \$32 charge on each porpoise that is taken. This amendment will be coming up after the McCloskey amendment, and I will discuss it at that time.

But I do want to compliment the chairman. I think it is almost disgraceful that this Congress did not move on this issue earlier. I think we have done a disservice to the country and to the tuna industry because we have been so slow, and I am delighted that we are finally getting to it.

Mr. RUPPE. Mr. Chairman, I yield 7 minutes to the gentleman from California (Mr. McCloskey).

Mr. McCLOSKEY. Mr. Chairman, I take this opportunity to discuss some amendments which I would like to offer to the chairman's bill. I think it is fair to point out that until April 28 of this year, just about a month ago, the tuna industry did not want any legislation to be enacted. It is to the chairman's credit that he finally focused attention on this problem and has reported out a bill to relieve the tuna industry from one basic problem, the fact that the Marine Mammal Protection Act of 1972, requires that if a species were found to be depleted, none of that species could be taken. Since the eastern spinner population, was found to be depleted, it is literally impossible for the tuna industry to set on any porpoise. Recognizing that dilemma, H.R. 6970 allows 6,500 eastern spinner to be taken in order to permit this billion dollar industry to proceed. The question now comes as to what balance we should strike between the protection of porpoises, as provided in the Marine Mammal Protection Act, and our desire to keep this industry in business.

Mr. Chairman, let me call the committee's attention to one fact and one fact alone. Five years ago, in 1972, the industry was killing over 300,000 porpoises a year. When we enacted the Marine Mammal Protection Act in 1972 we gave the industry a 2-year moratorium to devise the means and methods to reduce the killing of porpoises. And last year, 4 years later, they killed roughly 100,000 porpoises. The courts said, properly, "This does not meet the test of the statute of near-zero mortality, and we in-

struct the industry to take steps to meet that goal."

The fishing of tuna on porpoises is no mystery. The fishermen use nets some 4,000 feet long and 360 feet deep. If a school of porpoises is discovered, speedboats encircle that school of porpoises with their nets and the purse seine is drawn tight, catching the tuna underneath the porpoises. All but 10 boats of the U.S. tuna fleet now have been equipped with the fine mesh at the top of the net to save the porpoise's life.

So we have every anticipation that the porpoises killed this year will be substantially below the number killed last year.

Now let me call the committee's attention to the Department of Commerce figures: Of 54 observed trips last year by American tuna fishing boats, the 20 best skippers killed an average of 52 porpoises per trip. We know that there may be somewhere around 350 trips this year.

If the entire tuna fleet is required to meet the standard of those 20 best skippers, there will be less than 20,000 porpoises killed next year.

The question that is really involved with the amendments to the Murphy bill is this: Should we increase the quota set by the Government from 59,000 to 79,000 porpoises, or should we reduce the quota?

Mr. Chairman, the first amendment I will offer contains this provision: Instead of the 59,000 that the present administration regulations permit and instead of the 79,000 that the Murphy bill provides, I reduce that quota to 69,000 porpoises. If the 20 best boats can kill at an annual rate of less than 20,000, with a quota of 69,000 porpoises, we are allowing the U.S. tuna fleet to kill more than 3 times as many porpoises as the good skippers have demonstrated may have to be killed.

This is not any longer a matter of gear, because all but 10 boats have the necessary gear. If the best skipper can set the purse seine as close as he wants and can back his boat, using speedboats, and can hold open the chute at the opposite end, there is no reason why all or nearly all the porpoises cannot be saved. But that runs counter to what you and I as fishermen would want to do. We know that if we can go out and catch a thousand tons of tuna in 12 weeks, we can make ourselves a lot of money; if it takes us 14 weeks, we can make some money; if it takes us 16 weeks, we break even; but then if it takes 20 weeks, we lose money.

There is no commercial fisherman who is not under the incentive to collect those tuna as rapidly as he can, and the devil take the porpoises if they cannot get out.

What we want to do in this bill is to give a reasonable quota so that the tuna industry can survive, but we want to penalize those skippers who kill more porpoise than they should and we want to give a reward to those who kill less. We can do that in this bill if we accept these amendments.

There is a second principle involved, and the question is this: Who should pay for the costs of this full observer program? Let there be no mistake. We are not putting these observers on every boat to obtain better information, although

that is one benefit of the program. We are putting observers on every boat because we cannot trust the word of the tuna skippers. And why not? Because on the 54 observed trips last year they reported 4 times as many porpoises killed as on the unobserved trips. It transcends belief that the skippers on unobserved trips killed only one-quarter of the porpoises killed on observed trips. So as a matter of law, to protect the porpoises, we put an observer on every boat.

But does that mean that the U.S. taxpayer should pay the cost of policing the tuna industry?

Mr. Chairman, the second amendment would merely transfer the cost of the full observer program from the taxpayer of the United States to the tuna industry, and that cost is roughly \$4.5 million. This tuna costs roughly 30 cents a pound to catch, and it was stated in testimony before us that this would increase the cost about 1 cent per pound. That would increase the cost of U.S. tuna from 30 cents to 31 cents a pound.

Foreign tuna already costs 8 to 10 cents more, so this will not put the American tuna industry at a disadvantage if we put this cost burden on the industry.

Mr. Chairman, there is a third amendment, an amendment to require that if boats are transferred to foreign flag, the consent of the transferee must be obtained to meet American standards. We have 14 U.S. tuna boats that have applied for transfer to a foreign flag. It is proper that they do that, but certainly, if we are going to protect the U.S. tuna industry, we should not encourage foreign competition to be able to compete at an advantage and to fish without meeting American standards.

Mr. MURPHY of New York. Mr. Chairman, I yield 4 minutes to the Resident Commissioner from Puerto Rico (Mr. CORRADA).

Mr. CORRADA. Mr. Chairman, I rise today to express my strong support for H.R. 6970. This legislation provides short-term relief to the beleaguered U.S. tuna industry while simultaneously insuring that all species of porpoise are given rigorous protection.

The need for this legislation has been dramatically demonstrated in the last 6 months. While the tuna boats were tied up in the docks because of unrealistic Government regulations, the economies in many areas of the country suffered dire consequences.

The importance of tuna fishing to the area I represent is tremendous. In Puerto Rico the tuna industry directly employs 6,630 canning workers with an annual payroll of \$34.6 million. Another 12,801 workers are indirectly employed. The reports from individual tuna canning plants in Puerto Rico are frightening. In Ponce the National Packing Co. has laid off 2,000 of its employees. In Mayaguez, Starkist has laid off 250 workers and the remaining 1,900 workers have been employed on a reduced work-day basis in the month of May. I have been informed that the Neptune Packing Co. had sufficient supplies to employ its 506-person workforce for only 1 more week, after which 75 per-

cent of the workers would be laid off. Bumble Bee, another tuna plant in Puerto Rico, has sufficient supplies to keep less than 400 of its 1,346 employees at work in the coming months. The combined layoffs and reduced working hours represent a 47 percent reduction in tuna industry employment in Puerto Rico.

If the present crisis continues, I anticipate that some 6,630 tuna factory workers in Puerto Rico will be laid off. Unemployment in Ponce and Mayaguez, the second and third largest metropolitan areas in Puerto Rico, will soar since tuna industry employees represent approximately 40 percent of the work force in these cities. Unemployment compensation to those previously employed, directly and indirectly, in the tuna industry will equal \$4.1 million per month. Annually, direct and indirect payroll losses would total about \$95.5 million and unemployment assistance would amount to \$49.2 million.

For the mainland United States, the closing of Puerto Rico's tuna plants would mean an annual loss of 221 million pounds of highly nutritious tuna—about 41 percent of the entire U.S. production—with a value of \$226 million. Such a decrease in supply will result in sharply-increased prices for consumers.

Mr. Chairman, I have just described the impact of the overly restrictive 1977 regulations on Puerto Rico. Similar impacts will be felt up and down the west coast of the United States. But I ask you, is this sacrifice of an industry and of thousands of jobs necessary? The facts clearly argue that the answer to this question is "no." The porpoise population will be protected under H.R. 6970 and in two cases will increase. At the same time, H.R. 6970 will reverse the trend of unemployment within the tuna canneries. Without this legislation, areas such as the one I represent will be immobilized by widespread unemployment and therefore I urge that this bill be enacted.

Mr. RUPPE. Mr. Chairman, I yield 2 minutes to the gentleman from California (Mr. BURGNER).

Mr. BURGNER. Mr. Chairman, I thank the gentleman for yielding.

The best thing we can do, Mr. Chairman, to preserve the dolphin or the porpoise and at the same time protect a vital industry is to pass this bill without major amendment.

If we fail to pass it, Mr. Chairman, the foreign fleet will take the porpoise 2½ times faster than we have been taking them.

For the first time, Mr. Chairman, we are going to have an observer on every boat, that is, the ones over 400 tons, so that we will not any longer have to guess about the taking of the mammal. Furthermore, we are asking the industry to pay rather heavily for this surveillance and to provide its own research boat. If there are careless captains, they will be penalized; and that is proper.

Mr. Chairman, I think we should remember that the porpoise kill has dropped rather dramatically, and this is all to the good. As recently as 1972 it was 306,000, estimated. Last year it was

103,000, estimated; and this year, under this bill, it will be 78,900, and very possibly even less than that.

Mr. Chairman, we are not sure that the porpoise is truly an endangered species. However, the passage of this bill and the passage of time, of a year or so, will really give us the answer to that question.

Mr. Chairman, the committee report says that even by taking 6,500 eastern spinners, "with virtual certainty, the population of that species will increase"—will increase, not decrease.

Therefore, Mr. Chairman, this is a compromise bill. It is not an industry bill. It is not an environmentalist bill. It is a compromise. It is the one thing that will permit us to fix reductions in the taking of porpoise, and within a year or 2 years we will know exactly where we stand so that we can further refine the legislation.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. BURGNER. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, I believe the question of depletion must be carefully analyzed. To respond to the gentleman from California (Mr. McCloskey), biological depletion means that there are more deaths than there are births.

The CHAIRMAN. The time of the gentleman has expired.

Mr. RUPPE. I yield 1 additional minute to the gentleman from California.

Mr. MURPHY of New York. But depletion, as defined in the act, means in general that the species has fallen below its optimum sustainable population. In other words, there are, under existing conditions, more births than deaths so that we are not facing biological depletion as some people would have us believe.

The eastern spinner under the 6,500 quota that we are placing will increase by 36,000 at least.

So, Mr. Chairman, let us be correct semantically: We are not dealing with an endangered species or a depletion of the species in the pure terms of depletion as defined in the act.

Mr. BURGNER. I thank the gentleman.

Mr. GOLDWATER. Mr. Chairman, will the gentleman yield?

Mr. BURGNER. I yield to my colleague, the gentleman from California.

Mr. GOLDWATER. Mr. Chairman, I rise in support of H.R. 6970. I feel that our distinguished colleague from New York (Mr. MURPHY) has fashioned an acceptable and reasonable interim compromise on the tuna/porpoise controversy until new studies can give us the needed information on porpoise populations as well as mandating that the tuna industry achieves new fishing technology as soon as possible.

While I support the basic goal of the Marine Mammal Protection Act to save the porpoise from extinction, I do not want to see the entire tuna industry destroyed. The act was never intended to force the American tuna fleet to cease fishing, nor does the act prohibit purse seine fishing on porpoise.

As a practical matter, the American tuna fisherman is very much aware of

the need to preserve the porpoise population because tuna are often found in close association with the porpoise. In fact, 14 years before the marine mammal protection act became law, and before most of the tuna boats had converted to purse seining, an American tuna boat captain developed the "back down" procedure which releases 95 percent of the encircled porpoise. Also, the medina panel, a fine mesh net panel, was developed by an American captain before the act became law.

The industry has, and is continuing to invest large sums of money in research and equipment to reduce porpoise deaths. Too often this effort goes unnoticed by those who advocate the strictest possible interpretation of the act.

Tragically, we are forcing our tuna fleet out of the ocean while foreign-flag seiners continue to catch tuna and destroy porpoise. These regulations do not apply to foreign countries who, I am told, kill approximately two and a half times more porpoise. Nor have these countries made any significant contribution to reducing porpoise kill, as has the American tuna industry.

I cannot believe that anyone in the Congress wants to purposely destroy the American tuna fishing industry. Yet, unless we act, there is no question that 30,000 Americans directly affected by this problem are going to seek other means of employment. And, millions of Americans in the lower income bracket who depend on a relatively inexpensive source of protein—tuna—will be victimized.

This bill is a balanced approach to the current crisis within the tuna industry, and I urge my colleagues to support it.

Mr. BURGNER. Mr. Chairman, I thank both the gentleman from California (Mr. GOLDWATER) and the gentleman from New York (Mr. MURPHY) for their contributions. Passage of this bill will help solve this major problem.

Mr. MURPHY of New York. Mr. Chairman, I yield 2 minutes to the gentleman from New York (Mr. BIAGGI).

Mr. BIAGGI. Mr. Chairman, I rise in support of H.R. 6970. This bill, which has been hammered out by the Merchant Marine and Fisheries Committee, represents a sensible approach to the tragic tuna-porpoise problem. I say tragic, because the current situation, as Mr. MURPHY has pointed out, is counterproductive from every point of view. As is widely acknowledged, the crippling of the U.S. tuna fleet, which we are currently facing, will help neither the porpoise nor the industry. Thousands of jobs will be affected—witness the layoffs of cannery workers in California and Puerto Rico, and the fishermen who were idled. Yet the porpoise will not be helped by such job losses.

H.R. 6970 provides for a meaningful reduction in mortalities—a reduction of approximately 25,000 below the mortality level in 1976. Under the bill, the stocks of porpoise will increase by at least 97,000 in 1977 alone. Furthermore, the bill provides for acceleration of research in porpoise mortality reduction through the requirement that the industry provide \$2,000,000 for a tuna vessel dedicated to research.

I believe the various amendments which Mr. McCloskey has stated he will introduce on the floor, should be summarily rejected. These amendments would destroy the delicate balance contained in this legislation, which was achieved by the committee after extensive deliberation. Furthermore, through such provisions as the automatic "ratcheting down" of the quota, these amendments would serve only to exacerbate the crisis, rather than resolve it. There is currently not enough information available to support any such provision at this time. I believe the provision for a 2-year observer program should provide enough information to allow the Congress to make better judgments on long-range approaches to the act. Let us not pass so-called long-range solutions in a vacuum.

In addition, I take particular exception to the Pritchard amendment, which would impose a \$32 penalty for each porpoise killed by tuna fishermen. H.R. 6970 contains the amendment I authored, which sets a far more reasonable penalty of \$32 for each porpoise killed in excess of the kill rate. The adoption of the Pritchard amendment would be fatal to the U.S. tuna industry.

Those who allege that H.R. 6970 is anti-environmental clearly miss the point. Environmental interests were given extensive consideration by this committee. Important provisions, suggested by environmentalists, were adopted in this legislation. The importance of reducing the dolphin mortality rate is recognized in this bill. Many of the supporters of this bill including myself have been strong supporters of legislation to protect our ocean mammals. My vote in support of H.R. 6970 does not in my mind violate my earlier positions.

This legislation does not represent the alpha or omega. Yet when one considers the alternatives to not passing H.R. 6970—namely the continued paralysis of the important tuna industry—support becomes even more compelling. The balance between industry, environmental and consumer interests are there in H.R. 6970. Any of the proposed amendment will shatter the balance and destroy the bill. Therefore I urge support for H.R. 6970 as reported.

Mr. RUPPE. Mr. Chairman, I yield the final 3 minutes of debate to the gentleman from Kentucky (Mr. CARTER).

Mr. CARTER. Mr. Chairman, I wonder how we can increase employment if the porpoise take is lessened. If we diminish the number of porpoise taken, how are we going to increase the amount of the tuna take? Actually, as we understand it, yellow-fin tuna follow porpoises, and they throw the net around all of them, and they try to release, hopefully, the porpoises.

I want to say this about porpoises. The first time I saw them many years ago in Florida, they were highly trained animals. They could play basketball. They are highly intelligent animals and lovable. They have a constant grin or laugh upon their faces. I also saw them on troop ships in both the Atlantic and the Pacific, and they were considered harbingers of good weather and of good luck as hundreds of them leapt over the

waves throughout the Atlantic and the Pacific.

Some of our psychologist friends have checked the intelligence quotients of some of these animals and it is as high as 168. Actually it is much higher than the average of that of us humans. I would hate very much to shoot a porpoise to kill it. To shoot a highly intelligent mammal such as this is the utmost in cruelty. I should think that methods could be developed to diminish the number of porpoises that are taken. In fact, I do not think any should be taken. As far as I am concerned, I would do without tuna rather than see this highly intelligent, lovable animal decimated as it has been and as it is being done at the present time. I have heard some say that it is not being decimated, but we know from the figures and by the statements of some of the men who have spoken here today that certain species are. While it is stated that the catch of porpoises will be diminished this year to some 79,000, it is difficult to accept this.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MURPHY of New York. Mr. Chairman, I yield 2 minutes to the gentleman from Hawaii (Mr. AKAKA).

Mr. AKAKA. Mr. Chairman, I rise in support of H.R. 6970. The Committee on Merchant Marine and Fisheries has fashioned a reasonable compromise between the demands of environmentalists and the tuna industry.

We are all interested in protecting dolphins. I wish that we could prevent all dolphin mortality tomorrow. I also wish we could end poverty, ignorance, and war. Some goals are simply not achievable overnight.

The U.S. tuna fleet has dramatically improved its performance over the last several years. In 1972 the fleet was estimated to take some 300,000 dolphins; last year they took an estimated 100,000. Because of advances developed by our fishermen, 99.2 percent of the dolphins captured in the net are now released safely. These hard facts belie any charge that the fleet has not made an honest effort to reduce dolphin mortality.

We should continue to reduce dolphin mortality, and H.R. 6970 would insure that. But if we require more of the fleet than they are physically capable, the effect will be disastrous for both the dolphins and the fleet.

The cruel irony of the Marine Mammal Protection Act is that it is only effectively enforced against American fishermen. Foreign fishermen have a mortality rate far in excess of the U.S. rate. If we force our fleet out of business, foreign fishermen will gladly take up our share of the tuna and more than our share of the dolphins.

The gentleman from California has proposed an amendment to reduce the quota to 34,000 by 1980. While I agree with this goal there is simply no information in the record that this can be achieved.

The industry is using the fine-mesh system for the first time this year. It has only been used experimentally heretofore. The National Marine Fisheries Service has stated that it does not be-

lieve the fleet will have immediate success with the new gear. A period of intense experimentation by individual skippers will be required.

H.R. 6970 offers a more realistic and practical reduction in the quota. Assuming the fleet will take the traditional volume of yellowfin tuna on dolphin—approximately 110,000 tons—the 78,000 quota in H.R. 6970 would force a fleet-wide mortality per ton of 0.7 dolphin. Such a mortality per ton would represent a significant reduction from the 1976 rate of 1.1 dolphins per ton of tuna caught.

Under H.R. 6970 the Secretary could reduce these numbers even further in 1978.

We all want to see an end to dolphin mortality. Wishing the problem away will not accomplish that aim.

I urge passage of H.R. 6970.

Mr. MURPHY of New York. Mr. Chairman, I yield 1 minute to the gentleman from New Jersey (Mr. HUGHES).

Mr. HUGHES. Mr. Chairman, section 2 of the Marine Mammal Protection Act states that the purpose of the act is to insure that the marine mammal populations of the world will be maintained in a healthy state and will continue to be significant functioning elements of the marine ecosystem. H.R. 6970 is fully consistent with that objective.

There are three species of dolphins which are taken incidental to commercial fishing operations for tuna. Under the terms of H.R. 6970, each species will be maintained at a healthy level. In fact, for two species the population will actually increase under H.R. 6970. In the case of the offshore spotted dolphin, the population will increase by at least 139,000 or 4.2 percent over the next 2 years.

For the second species, the eastern spinner, the population will probably expand by 72,000 animals over the next 2 years—an increase of 5.3 percent. Although much attention has been focused on the eastern spinner dolphin because it has been designated as depleted, the simple fact is that H.R. 6970 will permit this population to increase by approximately 5.3 percent by the end of 1978.

The environmental defense fund, which represents several other environmental groups, and the Marine Mammal Commission have both recognized this fact. When the 1977 regulations were being considered, both groups stated that 6,500 eastern spinners could be taken without any adverse impact on the species. The administration bill, which permits the taking of up to 6,500 eastern spinners, also recognizes that the language of H.R. 6970 will not harm the population.

As to the third species of dolphin involved in the tuna fishery, the whitebelly spinner, H.R. 6970 permits a minimal reduction in the overall population. In considering this fact, we must bear in mind that as a general rule the danger level for a population is when it is at 50 percent of its maximum population. As of today, the population of the whitebelly spinner is at 80 percent of what was once its maximum population. Under H.R. 6970 the population will decrease by a maximum of 1.5 percent. Assuming this

reduction actually occurs, the population will still be 28.5 points above the danger level.

Mr. Chairman, it is clear that H.R. 6970 is consistent with the overall purposes of the Marine Mammal Protection Act. The population of the three major species of dolphins involved in the tuna fisheries will be maintained in a healthy state. In at least two instances the population will increase by a substantial amount. In my opinion, H.R. 6970 represents a balanced environmental measure that protects and enhances the marine mammal populations involved while simultaneously preventing the massive unemployment that will result if the Congress fails to act. Therefore, Mr. Chairman, I urge my colleagues to support this legislation.

Mr. MURPHY of New York. Mr. Chairman, I yield the balance of my time to the gentleman from California (Mr. VAN DEERLIN).

Mr. VAN DEERLIN. Mr. Chairman, it is not surprising that those of us from southern California and particularly those of us from the home of the tuna industry, San Diego and San Pedro, should feel strongly that this legislation must be enacted, without amendment.

From small beginnings a half century ago, we have seen these free enterprisers hack out an industry which has meant jobs for themselves and for thousands of cannery workers. We have seen them fight off many a threat from outside the United States: First, in the early days after World War II when favorable quotas on the import of Japanese fish permitted a competition which our boat owners felt was unfair and—with this probably many of the Members are more familiar—there were then the unending difficulties that were experienced before worldwide adoption of the 200-mile limit, when our men from southern California, fishing on the high seas, were put upon by the nations of western South America. Our fishermen spent time in jail, they had shots fired across their bow, they were taken captive, and they were forced to pay fines and stiff penalties.

The newest threat to our tuna fleet comes not from foreign shores, but from fellow citizens here at home.

The gentleman from New York, Chairman MURPHY, has put his finger on the principal point to be made here. It is that there is no way of saving porpoise by imposing penalties only on our own fishermen. There is no way, with legislation we enact in this House, that we can regulate what is done by foreign fishermen.

As was noted by Dr. Kenneth S. Norris, deputy director of the Center for Coastal Marine Studies at the University of California, Santa Cruz:

If the fleet goes foreign, no amount of American indignation can be expected to save the porpoises. The very activism of the conservation community will have sealed the fate of the eastern Pacific porpoise populations.

Mr. REUSS. Mr. Chairman, the Marine Mammal Protection Act, in my judgment, requires amendments to make sure that porpoise kills by tuna fisher-

men are reduced steadily and at a sensible rate—without harming the industry. I intend to support those amendments.

The need for strict standards is obvious. One recent report on the tuna industry found such appalling figures as 505, 326, and 1,041 porpoise killed in single sets of the tuna nets. These numbers must be reduced.

While the present bill sets standards, they are too lax. That happened because of the haste in which it was drafted. According to the minority report from committee, the bill was invisible until an hour before the convening of the markup session. What amendments were made to it were hastily drafted and often inconsistent.

While decidedly improved during markup, H.R. 6970 remains an inadequate piece of legislation. Many of its provisions will be operative for only 1 year, even though the bill terminates on March 31, 1979.

Mr. UDALL. Mr. Chairman, I rise in support of the package of amendments to H.R. 6970 offered by my good friends from California (Mr. McCloskey) and Washington (Mr. Pritchard) on behalf of the administration. It is unfortunate that the bill as reported by the Committee on Merchant Marine and Fisheries did not embody these protective provisions. Without them, we face the possible destruction of the Marine Mammal Protection Act of 1972 over which we labored so hard and which has proven so effective in saving the endangered cetacean population.

On controversial proposals before this body over the years a favorite saying often has been that the Senate will save us if we fail to do the right thing. On this occasion, I suspect that many of my colleagues really want stronger protection for these beautiful, intelligent animals but are confused about the contents of the bill reported to the floor, hesitant to vote against the supposed expertise of the committee of jurisdiction, and just hopeful that if H.R. 6970 passes without strengthening amendments the Senate will once again correct our error. That would be a nice easy solution to our problem here today, but it does not relieve us of our responsibility to do everything we can to improve the Marine Mammal Protection Act so that endangered species are protected rather than depleted further, which would be the result if these amendments are not adopted.

The fishing industry has operated successfully under the provisions of the act with gradually improving technology resulting in lower porpoise takes. Only a few operators have failed to comply. Yet they have set the standard that will prevail for fear that further demands on the tuna fleet might drive them to foreign registry. Such a threat is unlikely to materialize because the negative impact of such a course far outweighs any potential benefits.

The committee has not offered a bad bill but it is inadequate. It has omitted some important protections that we ought to include. While setting the kill quota for porpoises at a figure 20,000 higher than that currently in effect, the bill also has no provision for a gradual

reduction in that quota but maintains the highest level for over 2 years; it makes no special provision for protecting the most endangered species, the Eastern Spinner; it does not require observers on transferred vessels nor does it impose an importation ban on foreign-caught tuna by boats not complying with MMPA standards. While the committee bill wisely includes the observer program on domestic boats, it has the Government bear its entire cost. These costs could and should be shifted to the industry through the permit system contained in the amendments.

The committee's bill provides a \$32 penalty per porpoise taken in excess of the fleet quota. However, since this fee is tax deductible, its value as a deterrent or to building the observer fund is negligible. Instead, we should adopt the amendments which would penalize the killing of any porpoise at a rate of \$32 plus increasing the penalty to \$100 for the highly vulnerable Eastern Spinner. Only with these kinds of penalties will there be any incentive to avoid the taking of porpoises.

We are being pressed to take prompt action on a bill which was rushed through committee because the fleet had been idle and many cannery workers laid off. The fact is that the tuna fleet deliberately refused to sail in an effort to force an easing of restrictions on the porpoise. Canneries, therefore, were forced to rely on expensive imported tuna and the prohibitive costs necessitated laying off workers. Yet the fleet has now put to sea for voyages of many months, presumably operating under current regulations, belying the need for precipitous action by the Congress. We do need to come to a resolution of this problem, but we need not do so with such haste that we fail to consider all the consequences of our work.

However, since the bill is now before us, we must take all possible steps to insure that the purposes of the Marine Mammal Protection Act will be carried out without being further diminished.

I would like to see all of the amendments accepted but I want to reiterate that the most important is the first which provides for progressive annual reduction in the taking rate to levels approaching zero. To have any effect whatever, we must include the so-called ratcheting provision to reduce the kill quota 50 percent by 1980 and another 50 percent by the following second year. H.R. 6970 contains no such mandate and will simply allow the fishing industry to procrastinate its compliance with the act, a fact that presents ever increasing dangers to the cetacean population.

Another vital factor to be considered is the virtually untenable position that will be imposed on our negotiator at the International Whaling Commission meeting later this month with Japan and the Soviet Union. We cannot adopt a double standard of management procedures for porpoises to benefit the U.S. tuna fleet while at the same time demanding strict adherence to those same procedures by other nations to protect depleted whale stocks. The U.S. Commissioner to the IWC must be able to retain his credibility in pushing the

whale protection issue. This he cannot do if we fail to include in this legislation ratcheting and penalty provisions to protect the eastern spinner dolphin.

The same old arguments rage here today—can we save the environment and still have jobs and healthy industry? I say we can and we must. We must adopt legislation that is as sound environmentally as it is for management practices. Adoption of these amendments will not result in a bill punitive to the tuna fleet, but failure to adopt them will be punitive to the porpoise.

As with all other endangered species, land and waters, once they are gone we cannot recover them. Their numbers are finite and their fate lies with us here today. If we fail to protect them, we have failed ourselves and our children and generations to come.

We must provide incentives to the industry both to continue improving its technology which, to its credit, has occurred almost to the point of making our action unnecessary. We can hope that in a few years depleted stocks of dolphins and whales will be replenished. But this will not happen under the current system which allows the same old methods to be used, methods which neither encourage better technology nor reduced kill rates through strong penalties.

I urge my colleagues to consider carefully the consequences if we merely go along today, failing to act when we have an opportunity presented so graphically. No amount of handwringing, no clear hindsight, no action by the Senate will save a porpoise today. We must act now and we must act decisively.

Mr. BONKER. Mr. Chairman, any amendment of the Marine Mammal Protection Act of 1972 has been viewed as an action that should not be taken by the Congress. However, amendment is necessary to strengthen the intent of the law and to assure that the provisions of it are realized fully.

To say no amendment is needed or desired is to say that we are ready to accept the turmoil of the past few years that has erupted into court tests and boycotts by industry, consumer, and conservation interests.

Without amendment, we would continue to rely on suspect data. However, that need not be the case. One of the proposed amendments contained in H.R. 6970 provides for observers on each tuna harvest vessel. That person would not only collect data on the number and types of porpoises taken, but also would monitor constantly the activities of the master and crew to insure full compliance with the law.

These data, gathered by actual observation, would end the necessity of the Department of Commerce relying on extrapolated figures of mortality to determine yearly quotas. They would allow evaluation of new fishing techniques and gear that have been developed to lower porpoise mortality. They would also end much of the aura of uncertainty that surrounds the continuance of several species of porpoise and the tuna harvest industry.

I feel great strides have been made by the industry in attempting to reduce porpoise mortality. I feel also that conser-

vationists, in concert with the Congress, have been instrumental in keeping porpoise mortality at the center of the conscience of America. So, if the 100-percent observer program had been in place during the last harvest year, no further amendment to the law would be necessary.

That was not the case, however. So we have a situation in which the Department of Commerce set one mortality quota level, the administrative law court suggested another, and the tuna industry requested yet another. The result was confusion. Since one section of the regulations issued by Commerce contained a total prohibition of mortality of eastern spinner porpoises, the tuna industry felt compelled to tie up to the docks and refused to go fishing again until the regulations were eased.

I do not know whether the industry could have fished without fear of fines and seizure if they had taken eastern spinner porpoises. But I do know that all the scientists who testified before the committee advised that this particular species intermingled with the other species and possibly could suffer mortalities during the pursuit of tuna.

In the midst of charges and countercharges, the Merchant Marine and Fisheries Committee met to hear these same scientists declare that there could indeed be a mortality quota allowed on eastern spinner and the species would still be able to sustain its present level of population. This despite the fact that it was officially listed as depleted.

The 100 percent observer program contained in H.R. 6970 would eliminate most of these problems and provide an accurate data base. Then, after 2 years of observed harvest, the Department of Commerce will have irrefutable data on which to base its mortality quotas. The observers will also serve the industry by reporting on the effectiveness of new types of gear and different fishing techniques that have proved efficient and productive.

The amendment to allow 78,900 porpoise mortalities is coupled with both an amendment for industry to provide \$2 million for the operation of a research vessel, and an amendment that gives the Secretary of Commerce discretionary power to lower the quota any time any development indicates such a necessity. Since constant progress by the industry in the development of better gear and fishing techniques has been claimed without argument by any party, a lowering of the quota could be ordered before the interim term of H.R. 6970 ends. In any case, the research vessel, in conjunction with the observer program, will help us explore all areas of concern.

I believe the compromises offered by H.R. 6970 will allow us to continue to have a profitable tuna fishing industry and still reduce the number of porpoise mortalities to a level that allows each species population to maintain strong growth patterns.

And most importantly, we will have set the stage for future decisions to be determined from an actual data base

rather than from data that are arrived at through partial observation and extrapolation.

Mr. BROOMFIELD. Mr. Chairman, I rise in opposition to H.R. 6970, the bill to amend the Marine Mammal Protection Act, as it was reported from the Merchant Marine and Fisheries Committee.

The committee bill represents another round in the ongoing tuna-porpoise debate which should have been settled with the passage of the Marine Mammal Protection Act of 1972.

With the passage of the 1972 act, Congress set as national policy the protection and preservation of the porpoise and the other marine mammals such as whales and seals. This goal was to be accomplished by steadily lowering the permissible level of incidental mortality of porpoises caught during tuna fishing. The ultimate goal is a zero incidental mortality.

Today, the committee asks us to reverse this policy of conservation. We are asked to raise the level of permissible incidental kills for the rest of 1977 to about 79,000 porpoises—almost 20,000 over the currently regulated level of 59,000 allowable porpoise deaths. The committee-proposed figure is far too high, especially when we are given no assurance that the committee level will go down again in compliance with the 1972 law.

The National Marine Fisheries Service has found that present technology exists to allow for compliance with the law. With the use of fine mesh nets or the bold contender system, porpoise kills can be reduced dramatically. Presently, many tuna boat skippers are meeting the near-zero mortality goal. There seems little reason to believe that all skippers cannot meet this same goal within a few years.

Mr. Chairman, presently, the United States is one of the leaders in encouraging other nations to join in protecting marine mammals. We are encouraging the Japanese and the Soviets to adhere to strict "management procedures" in trying to save the whale. We are encouraging our neighbors in Latin America to help protect the porpoise. We have passed a resolution to encourage the Canadian Government to help save the harp seals.

One cannot help but wonder how our negotiators can persuasively advocate these policies to other nations if we, in Congress, undermine our own Marine Mammal Protection Act. Passage of the committee bill indicates that we do not take our own policies seriously, so why should other nations.

Mr. Chairman, for these reasons, I oppose the committee proposed bill to amend the Marine Mammal Protection Act of 1972, and I strongly urge my colleagues to join me in this opposition.

Mr. BOB WILSON. Mr. Chairman, I rise in support of Chairman MURPHY's bill, H.R. 6970, and urge its passage in the strongest of terms. An industry is dying while we debate and time is absolutely critical to its survival.

Because of language the Congress included in the Marine Mammal Protection

Act of 1972, our tuna fishing industry has almost been driven out of business.

Late last year, the fleet was forced to suspend operations entirely in the face of conflicting court decisions. Two U.S. district courts, through differing interpretations of the act, placed the fishermen in the middle of a legal tug of war, where obedience to one court would violate the ruling of the other. The only course of compliance to keep within the law was to quit fishing, which the fishermen did.

The argument has been made that this is a fishermen's strike, that they have purposely imposed this economic hardship on themselves to force the Congress to bend the law to their advantage. Nothing could be further from the truth. The fact of the matter is that, in addition to the legal confusion of last year, they were forbidden to fish at all this year until mid-April, when the National Marine Fisheries Service issued its fishing permit for 1977. Prior to that time, no permit, no fishing. Then, when the permit was finally issued, the regulations it contained made conditions so restrictive that not only did fishing become uneconomic, but that disobedience to the regulations—even though accidental—was punishable by criminal penalties and jail sentences. Therefore, to avoid these penalties, not to mention incurring extra expenses by going to sea when the prospect of even a break-even trip was small, the fishing boats remained in port.

What the situation boils down to is this: From the conflicting court orders of last year, the withholding of the permit by the Government and the excessive regulations that accompanied it when it was ultimately issued, most of our fishermen have not drawn a paycheck in something like 7 months.

This enforced idling of our tuna fleet has resulted in a ripple effect that has, is, and will continue to be felt for months to come. Of course, the first to feel the crunch were the fishermen themselves. Next came the cannery workers, for without fish to can, plants were forced to shut down and employees either laid off or placed on shortened work weeks.

This effect is spreading throughout all of the business whether closely or peripherally associated with the tuna fishing industry—the contractors, investors, shipbuilders, warehousemen, engineers, scientists, net weavers, soy bean oil suppliers, steel and paper workers, wholesalers, retailers—workers across our entire Nation.

The final ripple will hit the already suffering consumer, who will face price increases of 20 to 50 percent unless relief is granted. Tuna will no longer be a common food on America's tables, but will be priced right out of the market. And not only will the average consumer be affected, but also the nutrition programs that we have instituted for our elderly and disadvantaged which depend on tuna as an inexpensive source of protein.

On the other hand, the question rises, "What of the porpoise? If the fishermen go back to sea, won't this lead to irreparable damage to the stocks of these friendly animals?" I think not. I believe

the only chance that the porpoise truly has is to get our fishermen back to sea. The porpoise is the fisherman's friend and ally. For years he has practiced porpoise conservation. The existing techniques and gear to reduce porpoise mortality were developed prior to the adoption of the Marine Mammal Protection Act. But our own efforts in the area of porpoise conservation ended when our fleet stopped fishing.

We must bear in mind that we are not the only nation in the world that fishes for tuna. Other nations also purse seine for tuna, only they have no restrictions placed upon them whatsoever as far as killing porpoises is concerned. We are the only country in the world that has any interest in saving the porpoise, but as a result of governmental action, all progress in that direction has ceased.

H.R. 6970 is the legislation that is needed to both provide relief and jobs for some 30,000 people and to continue our conservation efforts. In its present form it provides for a limited taking of porpoise, but it also places upon the industry a responsibility for its actions—a heavy responsibility, but one the industry can shoulder. If any further burdens are added to this responsibility, the net effect will be to worsen an already dire situation—that is to say, hammering the final nails in the tuna industry's coffin.

I urge your support of H.R. 6970 in its present form. By no means is it an "industry" bill as some have charged, for it contains extremely stringent conservation provisions. It is a reasonable and just measure. It will put productive people back to work in these times of unemployment.

Mr. Chairman, H.R. 6970 is the best possible short-term solution we have to this problem. Without it, we will wipe out a major part of our domestic fishing industry, along with tens of thousands of badly needed jobs. With it, our citizens can go back to work and continue to supply the tables of America with an inexpensive, wholesome and nutritious food.

Let us make this happen here today.

Mr. ANDERSON of California. Mr. Chairman, this tuna-porpoise problem has seen much emotional "heat," and some factual "light."

Not one of us here wants to legislate the killing of animals, especially a mammal like the beautiful and intelligent porpoise.

As the author of the 1972 Marine Mammal Protection Act, which H.R. 6970 amends, I am very concerned about passing a bill that is both a long term solution, and a fair compromise.

Many of us view this bill as an interim solution to the tuna-porpoise controversy. Its aim is to allow a traditional American industry to go back to work, while we in Washington try once again to negotiate a lasting answer.

Mr. Chairman, this is not an administration or industry bill. It is a bill that should make the environmental community happy, since it penalizes and regulates fishermen, in exchange for the right to fish. It is important to realize that the goal here is to encourage a reduction in the annual taking of porpoise

by U.S. fishermen—a goal even the fishermen agree with.

Let us keep in mind that the tuna fishermen, not the government, pioneered porpoise saving practices. The "Medina" panel, fine mesh netting, and a boats backdown maneuvers were in use by tunamen before the government became involved. Now, H.R. 6970 mandates that the tuna fishermen donate a boat to the Government for pure research purposes, ante-up \$2 million to be used for the payment of the operating expenses of the research vessel, and for rebating of incentive payments to captains whose individual kill rate is equal to or less than 50 percent of the total kill of all fishermen. In addition, captains will pay a \$32 per porpoise fee for each porpoise killed in excess of the industry kill factor.

Besides the financial burden, captains are subject to a government suspension of their permit if—as the committee's report puts it—"his individual mortality factor is more than 100 percent of the industry mortality factor, and to provide for the removal of such suspension if such master participates in a suitable 30-day training program."

Moreover, each boat is required to have on board a government observer.

In return, H.R. 6970 allows tuna fishermen to go back to work, and take 78,900 porpoise while fishing for yellow-fin tuna. That is a mandated reduction from the 1976 estimated take of 103,753 porpoise.

I will vote for H.R. 6970, but I will oppose any and all weakening amendments. After all, the National Marine Fisheries Service (NMFS) estimates that foreign vessels fishing on porpoise have a kill rate per set two and one-half times the American rate. Does it not make good sense that we pass a bill that allows an industry to work, while establishing safeguards to protect the porpoise?

H.R. 6970 strikes a temporary balance, and allows time for a solution to be reached based on a solid foundation of knowledge and logic instead of emotion. As a Member of Congress who has long taken pride in our record on environmental legislation, I plan to vote "aye" on the committee's bill.

Mr. MIKVA. Mr. Chairman, I am opposed to postponing further enforcement of the Marine Mammal Protection Act of 1972, which was intended to end the unnecessary slaughter of porpoises and other marine mammals. H.R. 6970 not only recants on that commitment, it threatens to undermine the impending International Whaling Commission negotiations. We cannot afford to do either.

Few bills have been as hastily drafted or poorly conceived as H.R. 6970. The bill was hurriedly written following 3 days of equally sudden hearings. Members of the Merchant Marine Committee have said that they did not even see the legislation until 1 hour before the markup. The minority report states that many amendments were so hastily drawn that they required substantial staff modification just to conform to the subject. Some Members have complained that there was so little time for consideration or debate that they could do little more than glance at the bill before voting. This lack of

preparation is reason enough to reject this bill.

Of even greater importance, however, is the senseless porpoise slaughter sanctioned by H.R. 6970. Despite the fact that Congress granted the tuna industry a 2-year grace period following enactment of the Marine Mammal Protection Act, as well as 3 years during which enforcement has been delayed, this legislation would actually raise kill quotas for the next 2 years, while eliminating the requirement to reduce porpoise kills "to insignificant levels approaching zero mortality." H.R. 6970 would also allow 6,500 of the already depleted Eastern Spinner species to be killed, 700 more than were killed last year, when no quotas were in effect.

Enactment of these amendments would put the United States in the hypocritical position of authorizing the killing of a depleted porpoise species while proscribing the killing of depleted whales. This smacks of the worst kind of economic self-service, while it totally compromises the credibility that this country has earned before the International Whaling Commission, whose next meeting is in June. The longer we continue to grant reprieves, the more tarnished is our word and the emptier are our voices, when speaking for the conservation of marine mammals, some of the most highly developed forms of life on Earth. If there was no alternative to killing these hundreds of thousands of porpoises while fishing for tuna, legislative relief such as H.R. 6970 might be appropriate. But newly developed techniques and equipment have rendered porpoise killing obsolete, and, thus, unconscionable, as a necessary byproduct of the tuna fishing process.

Mr. Chairman, I am confident that the tuna industry can conform to the quotas which have been set by the administration. Indeed, many of the largest boats have already improved upon the allowable porpoise kill limits. Those boat captains, and other wise industry representatives, realize that they have a vital stake in preserving the porpoise, as this most intelligent mammal is the very reason tuna is so easy for them to locate and net.

Finally, we ought not be deterred from rejecting this bill because some fishermen have threatened to switch flags if quotas are not raised. These are hollow threats; the boat captains know full well that any tuna caught in violation of the Marine Mammal Protection Act would be prohibited from importation into the United States.

Our vote today is an important test of our resolve to preserve threatened and depleted species of marine mammals. Over 5 years ago, Congress courageously acted in the face of the wanton destruction of the ecological balance in the oceans. At that time, we had the will to resist pressure from an industry which does not need this kind of special environmental waiver. I hope that we will affirm that foresight today, by rejecting the continued killing of a most precious marine mammal—the porpoise.

The CHAIRMAN. All time has expired. Pursuant to the rule, the Clerk will now

read the committee amendment in the nature of a substitute recommended by the Committee on Merchant Marine and Fisheries now printed in the reported bill as an original bill for purpose of amendment.

The Clerk read as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 104 of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1374) is amended by adding at the end thereof the following new subsections:*

"(1) Notwithstanding any other provision of this title, and subject to paragraph (2) of this subsection, the Secretary shall issue permits under this section for the taking, incidental to commercial purse seine fishing operations for yellowfin tuna on porpoise—

"(A) during each of calendar years 1977 and 1978, of the following number of animals from the following stocks of marine mammals:

| "Stock  | Number permitted to be— |           |           |
|---|-------------------------|-----------|-----------|
|   | Killed                  | Encircled | Pursued   |
| (A) Spotted dolphin ( <i>Stenella attenuata</i> ).....                        | 50,400                  | 5,387,000 | 8,040,000 |
| (B) Whitebelly stock of spinner dolphin ( <i>Stenella longirostris</i> )..... | 17,000                  | 1,420,000 | 2,120,000 |
| (C) Eastern stock of spinner dolphin ( <i>Stenella longirostris</i> ).....    | 6,500                   | 549,000   | 820,000   |
| (D) All other stocks, inclusive.....  | 5,000                   | 652,650   | 974,400;  |

and

"(B) during the first quarter of calendar year 1979, the number of animals specified in subparagraph (A) from each stock set forth in such subparagraph, but prorated appropriately by the Secretary.

"(2) The Secretary may reduce the number of animals specified in paragraph (1) of this subsection of any stock of marine mammal which may be killed, encircled, and pursued during calendar year 1978 and during the first quarter of calendar year 1979 if the Secretary—

"(A) finds that such reduction—

"(i) is feasible in view of advancements made in the technology of fishing gear or fishing methods, or both, or

"(ii) should be imposed as a result of new information regarding the size or health of the population of any such stock; and

"(B) establishes such reduction for calendar year 1978 before December 16, 1977, and for the first quarter of calendar year 1979 before December 16, 1978.

"(j) (1) (A) For purposes of this paragraph, the term 'fishing period' means any calendar year after 1977.

"(B) As soon as practicable after the close of each fishing period, the Secretary shall determine the industry kill factor for such fishing period and the individual kill factor for such fishing period for each certified master.

"(C) (i) Except as provided in clause (iii) of this subparagraph, if the Secretary determines under subparagraph (B) of this paragraph that the individual kill factor for any fishing period for any individual who was a certified master for such period exceeded by 100 per centum or more the industry kill factor for such period, the Secretary shall refuse to grant to such individual status as a certified master, for all of the fishing period next succeeding the fishing period for which such determination was made (or for such part of such succeeding period as the Secretary deems appropriate), under any permit issued by the Secretary for such succeeding fishing period.

"(ii) The Secretary may revoke any action taken by him under clause (i) of this subparagraph with respect to any individual at any time after the individual (i) participates in a suitable training program of thirty days established by the Secretary in conjunction with a person issued a permit, and (ii) demonstrates, to the satisfaction of the Secretary, a significant improvement in ability to reduce porpoise mortality while engaging in purse seine fishing for yellowfin tuna on porpoise.

"(iii) The Secretary may waive the application of clause (i) of this subparagraph with respect to any individual if the Secretary determines that the difference between the individual kill factor of such individual and the industry kill factor, for the fishing period concerned, was attributable to unforeseeable weather conditions or unforeseeable gear failure.

"(2) (A) For purposes of this paragraph, the term 'fishing period' means the period referred to in section 111(d) (2) (B) of this title which ends at the close of March 31, 1979.

"(B) No permit shall be issued by the Secretary for calendar year 1978 unless the permittee pays to the Secretary at the time of issuance of the permit a special assessment in the amount of \$2,000,000. The permittee shall collect the assessment from among certified masters on such basis as the Secretary deems equitable, taking into account the relative time during which such masters have engaged, or may engage, in purse seine fishing for yellowfin tuna on porpoise during the fishing period and the relative tonnage of the vessels used, or which may be used, by such masters while engaged in such fishing.

"(C) The special assessment paid to the Secretary under subparagraph (B) of the paragraph shall be deposited to the credit of appropriations made to carry out the following purposes (the amount of such special assessment to be apportioned, as the Secretary deems appropriate, for crediting among appropriations to carry out each such purpose):

"(i) Payment of the operating expenses for the vessel required to be provided to the Secretary under section 111(d) (6) of this title.

"(ii) Payment of incentive payments under subparagraph (D) of this paragraph.

"(D) As soon as practicable after the close of the fishing period, the Secretary shall determine the industry kill factor for such period and the individual factor for each certified master for such period, and thereafter shall pay an incentive payment to each certified master whose individual kill factor for such period is equal to, or less than, one-half of the industry kill factor for such period. The amount of the incentive payment made under this paragraph to each certified master eligible therefor shall equal the amount obtained by dividing the total amount appropriated to carry out the purposes of this paragraph by the total number of eligible certified masters.

"(3) (A) For purposes of this paragraph, the term 'fishing period' means each of the following periods:

"(i) The period beginning on the first day of the period referred to in section 111 (d) (2) (B) and ending at the close of December 31, 1977.

"(ii) The period beginning on January 1, 1978, and ending at the close of December 31, 1978.

"(iii) The period beginning on January 1, 1979, and ending at the close of March 31, 1979.

"(B) As soon as practicable after the close of each fishing period, the Secretary shall determine the industry kill factor for such fishing period and the individual kill factor for such fishing period for each certified master.

"(C) If the Secretary determines that the individual kill factor for any certified master for any fishing period exceeds the industry kill factor for such fishing period, the Secretary shall—

"(i) determine the number of porpoises which would (had not such number been killed during commercial purse seine fishing operations on porpoise engaged in by such master) result in the individual kill factor of such master being equal to the industry kill factor; and

"(ii) assess against, and collect from, the owner of the fishing vessel used by such master during such operations a fee in an amount equal to the product of \$32 multiplied by the number of porpoises determined under clause (i) of this subparagraph.

"(D) The Secretary shall deposit into the special account established under section 111(e) of this title all fees collected by the Secretary under this paragraph.

"(4) For purposes of this subsection—

"(A) The term 'certified master' means any individual who is authorized, pursuant to any permit issued for any fishing period referred to in paragraph (1), (2), or (3) of this subsection, to engage in commercial purse seine fishing operations for yellowfin tuna on porpoise during such fishing period.

"(B) The term 'individual kill factor' means, with respect to any certified master for any fishing period referred to in paragraph (1), (2), or (3) of this subsection, the number obtained by dividing—

"(i) the total number of porpoises killed incidental to commercial purse seine fishing operations (for yellowfin tuna on porpoise) by such master during such period, by

"(ii) the total tonnage of yellowfin tuna caught during such operations by such master during such period.

"(C) The term 'industry kill factor' means, for any fishing period referred to in paragraph (1), (2), or (3) of this subsection, the number obtained by dividing—

"(i) the total number of porpoises killed incidental to commercial purse seine fishing operations (for yellowfin tuna on porpoise) by all certified masters during such period, by

"(ii) the total tonnage of yellowfin tuna caught during such operations by all certified masters during such period.

"(D) The term 'permit' means any permit issued under this section for the taking of marine mammals incidental to the course of commercial purse seine fishing operations for yellowfin tuna on porpoise."

(b) Section 101(a) (3) (B) of such Act (16 U.S.C. 1371(a) (3) (B)) is amended by inserting immediately before "during the moratorium" the following: "and except as provided in section 104(i) of this title."

Sec. 2. Section 111 of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1381) is amended—

(1) by amending subsection (c)—

(A) by inserting "(1)" immediately after "(c)", and

(B) by adding at the end thereof the following new paragraph:

"(2) The Secretary and the Secretary of State are directed to commence bilateral negotiations immediately with appropriate foreign governments, and further to commence negotiations within the Inter-American Tropical Tuna Commission, to effect agreements under which observers shall be placed aboard commercial vessels under the flag of the nations concerned and which engage in fishing for yellowfin tuna on porpoise."

(2) by amending subsection (d) to read as follows:

"(d) (1) The Secretary shall establish and maintain a program under which the Secretary shall place observers, in accordance with paragraph (2) of this subsection,

aboard fishing vessels to carry out the functions set forth in paragraph (3) of this subsection while such vessels are engaging in fishing trips. Except as provided for under subsection (e) of this section, all costs incurred in the establishment and maintenance of the program shall be borne by the Department of Commerce.

"(2) (A) Except as provided in subparagraph (B) of this paragraph, the Secretary shall place observers aboard such number and kinds of fishing vessels, and for such number of fishing trips, as the Secretary deems appropriate to carry out the purposes of this subsection.

"(B) As soon as practicable after the date of the enactment of this paragraph (but not later than October 1, 1977) and until the close of March 31, 1979, the Secretary shall place an observer aboard each fishing vessel having a carrying capacity of four hundred tons or more for each fishing trip engaged in by such vessel.

"(3) Each observer placed aboard any fishing vessel by the Secretary under the authority of this subsection shall, during the course of the fishing trip undertaken by the vessel, carry out the following functions (and only the following functions):

"(A) The collection of such data relevant to the conservation of porpoise stocks (including, but not limited to population and mortality statistics) as the Secretary shall require.

"(B) The observation of the fishing methods and gear employed in the fishing for yellowfin tuna on porpoise for the purpose of—

"(1) determining the compliance of the vessel with the regulations issued under this title regarding such fishing; and

"(2) recommending improvements to, or new, fishing methods and gear in order to reduce the taking of marine mammals incidental to such fishing.

"(4) Observers shall carry out the functions referred to in paragraph (3) of this subsection in such manner as to minimize interference with fishing operations. No master, operator, or owner of any fishing vessel shall impair, or in any way interfere with, the carrying out of such functions by any observer.

"(5) Each observer shall be an individual who is—

"(A) an officer or employee of the Department of Commerce; or

"(B) an officer or employee of any other Federal agency who may be detailed, on a reimbursable basis or otherwise, to the Secretary for assignment as an observer.

"(6) No permit shall be issued under section 104 of this title for the taking of marine mammals during calendar year 1978 incidental to the course of commercial purse seine fishing operations for yellowfin tuna on porpoise unless the permittee enters into an agreement with the Secretary under which the permittee agrees to provide to the Secretary a suitable vessel, during such times within the period beginning after the date of the enactment of this paragraph and before January 1, 1979, as the Secretary may require, for use by the Secretary in carrying out further research (A) regarding fishing gear and methods which may reduce the incidental taking of porpoise during commercial fishing operations for yellowfin tuna, and (B) relating to the conservation of porpoise stocks affected by such fishing.

"(7) For purposes of this subsection the term 'fishing trip' means any voyage by a fishing vessel during which commercial purse seine fishing, or the attempt to so fish, for yellowfin tuna on porpoise will or may occur, if the vessel is under the command of any individual who is authorized, pursuant to a valid permit issued under section 104 of this title, to engage in such fishing; and

(3) by adding at the end thereof the following new subsections:

"(e) There is established a special account in the Treasury of the United States into which the Secretary shall deposit all fees collected under section 104(j)(3) of this title. The Secretary shall use all sums available in the special account, to the extent provided for in appropriation Acts—

"(1) to pay costs of the observer program established under subsection (d) of this section incurred during the period ending at the close of March 31, 1979, referred to in paragraph (2)(B) of such subsection; and

"(2) if any sums remain in the special account after payments are made under paragraph (1) of this subsection, to pay such other costs of the observer program as the Secretary deems appropriate.

"(f) If the approval of the Secretary is sought under the provisions of sections 9 and 37 of the Shipping Act, 1916 (46 U.S.C. 808 and 835) for the transfer to foreign registry, or to any person not a citizen of the United States, of any vessel which is designed for use, or may (with or without subsequent modification) be used, in commercial fishing for yellowfin tuna on porpoise, the Secretary shall not grant such approval unless the transferee—

"(1) agrees to comply, when using such vessel for such fishing, with United States standards with respect to the incidental taking of marine mammals; and

"(2) files with the Secretary a bond in an amount and form determined by the Secretary to be necessary and appropriate to insure performance of such agreement."

Mr. MURPHY of New York (during the reading). Mr. Chairman, I ask unanimous consent that the committee amendment in the nature of a substitute be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

AMENDMENTS OFFERED BY Mr. MURPHY OF NEW YORK

Mr. MURPHY of New York. Mr. Chairman, I offer four amendments of a technical nature and ask unanimous consent that the amendments be considered en bloc, considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The amendments are as follows:

Amendments offered by Mr. MURPHY of New York: Page 7, between lines 5 and 6, insert the following:

"(3) For purposes of applying this subsection and subsection (j) of this section, any marine mammal seriously injured incidental to commercial purse seine fishing operations for yellowfin tuna on porpoise shall be considered to have been killed.

Page 10, line 17, strike out "certified master" and insert "fishing vessel used by one or more certified masters during such period".

Conforming amendments:

Page 10, line 19, strike out "certified master" and insert "fishing vessel".

Page 10, line 25, and page 11, line 1, strike out "master" and insert "vessel".

Page 11, line 4, strike out "the fishing vessel used by such master during such operations" and insert "such vessel".

Page 11, line 19, after "master" insert the following: "or any fishing vessel, as the case may be."

Page 11, line 24, and page 12, line 2, after "master" insert the following: "or such vessel".

Page 10, line 22, strike out "porpoises" and insert "marine mammals".

Page 11, lines 6 and 22, strike out "porpoises" and insert "marine mammals".

Page 12, line 8, strike out "porpoises" and insert "marine mammals".

Page 12, between lines 22 and 23, insert the following:

(c) Immediately after the date of the enactment of this Act, the Secretary of Commerce shall amend the permit, which is dated April 15, 1977 and was issued under section 104 of the Marine Mammal Protection Act of 1972 for the incidental taking, during calendar year 1977, of marine mammals incidental to commercial purse seine fishing operations for yellowfin tuna on porpoise, to conform with the provisions of section 104(i)(1) of such Act (as added by subsection (a) of this section) to the extent that such provisions relate to calendar year 1977. No provision of this title, nor any other requirement imposed by law, relating to agency rulemaking shall apply with respect to the amendment required to be made under the preceding sentence.

Mr. MURPHY of New York. Mr. Chairman, these amendments are technical in nature and are simply meant to clarify the intent of the legislation. They do not make any substantive change in the bill.

The amendments would do the following:

First. The first amendment makes it clear that any marine mammal seriously injured in the course of fishing operations will be considered killed for purposes of the quota and for the purpose of establishing the industry and individual mortality factor.

The bill, as originally drafted, contained similar language; the language was inadvertently dropped after the committee's action;

Second. The second amendment makes it clear that the \$32 penalty provision is to be assessed against the owner on the basis of the mortality rate of his vessel.

This change merely clarifies the existing language by making it clear that an owner will not be able to avoid the penalty fee by employing several certified masters on the same vessel in 1 year;

Third. The third amendment inserts marine mammals in the place of porpoise.

This amendment is intended to make it clear that the bill applies to marine mammals whether they are referred to as dolphins or porpoises;

Fourth. The last amendment makes it clear that the Secretary shall amend the 1977 permit, as provided in H.R. 6970, without adhering to the procedural requirements of the Act.

This clarification is necessary in order to avoid any delay in amending the 1977 permit.

Mr. RUPPE. Mr. Chairman, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from Michigan.

Mr. RUPPE. Mr. Chairman, I would agree these are technical amendments. I do support the amendments as offered by the chairman of the committee.

Mr. CARTER. Mr. Chairman, will the gentleman from New York yield?

Mr. MURPHY of New York. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I would

like to ask the distinguished gentleman from New York another question.

Throughout this discussion the gentleman from New York has referred to dolphins. Of course, porpoises are sometimes called dolphins, but there is a fish which is a dolphin, also. I trust that the gentleman is aware of that.

Mr. MURPHY of New York. Yes. Many environmentalists feel that to refer to such a noble mammal as a dolphin by using the name porpoise is a disservice to it.

Mr. CARTER. Mr. Chairman, if the gentleman will yield further, I am one of the people who think that calling a porpoise by the name dolphin renders a disservice to the porpoise, because that is a general name. Porpoise is what it is called almost always. It is not known, as a dolphin, as the gentleman has stated, but more generally as a porpoise.

Mr. MURPHY of New York. The purpose of my technical amendments was to qualify that difference in understanding.

Mr. CARTER. Mr. Chairman, then I do not object.

The CHAIRMAN. The question is on the amendments offered by the gentleman from New York (Mr. MURPHY).

The amendments were agreed to.

AMENDMENT OFFERED BY MR. McCLOSKEY

Mr. McCLOSKEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McCLOSKEY: Page 5, strike out line 20 and all that follows thereafter through line 5, page 7, and insert the following:

SEC. 1. That section 2 of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361) is amended by striking out "and" at the end of paragraph (5), by striking out the period at the end of paragraph (6) and inserting in lieu thereof "; and"; and by adding at the end thereof the following new paragraph:

"(7) while substantial efforts have been undertaken to reduce the incidental mortality and incidental serious injury of marine mammals, in the course of commercial fishing operations for yellowfin tuna, this mortality and serious injury should be further reduced and measures should be taken to develop and promote fishing techniques which do not result in the incidental taking of marine mammals."

SEC. 2. Section 101(a) of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1371(a)) is amended—

(1) by amending paragraph (2) thereof to read as follows:

"(2) (A) Except as provided in subparagraph (B) and (C), marine mammals may be taken incidentally in the course of commercial fishing operations and permits may be issued therefor pursuant to section 104 of this title, subject to regulations prescribed by the Secretary in accordance with section 103 of this title. It shall be the immediate goal that the incidental mortality and incidental serious injury of marine mammals permitted in the course of commercial fishing operations be reduced to insignificant levels approaching a zero mortality and serious injury rate.

"(B) During calendar year 1977 marine mammals may be taken incidentally in the course of commercial fishing operations for yellowfin tuna pursuant to the provisions of the regulations, permits, and certificates issued under this title in effect on April 15, 1977; except that the number of mammals from the eastern stock of spinner dolphin

(*Stenella longirostris*) authorized to be taken shall be 6,500 killed or seriously injured, 549,000 encircled, and 820,000 pursued; and the number of white-belly spinner dolphin (*Stenella longirostris*) authorized to be taken shall be 11,200 killed or seriously injured, 1,402,000 encircled, and 2,120,000 pursued.

"(C) (1) Subsequent to calendar year 1977 marine mammals may be taken incidentally in the course of commercial fishing operations for yellowfin tuna and permits may be issued therefor pursuant to section 104 of this title, subject to regulations prescribed by the Secretary in accordance with section 103 of this title. The incidental mortality and serious injury of marine mammals allowed shall be progressively reduced to insignificant levels approaching zero. The Secretary shall achieve this reduction by establishing annual quotas for affected species and populations that accomplish significant reductions in the total incidental mortality and serious injury each year and that ensure that no such species or population will be reduced below its level of optimum sustainable population. The total incidental mortality and serious injury authorized in calendar year 1980 shall be limited to no more than 50 percent of that authorized for calendar year 1977, and subsequent annual reductions shall be set at the discretion of the Secretary.

"(ii) Any holder of or applicant for a permit to take marine mammals incidental to commercial fishing operations for yellowfin tuna may petition the Secretary for extraordinary relief to increase the limitation on total quotas set forth in clause (1) above at least six months prior to the time such limitation becomes applicable. The Secretary may, in consultation with the Marine Mammal Commission, grant such relief after an agency hearing on the record in which the petitioner shall have the burden of proving that—

"(I) the total reduction required by the limitation, even if the best available fishing techniques and equipment and due care in fishing operations to minimize incidental mortality and serious injury of marine mammals are used, cannot be achieved without serious economic and social disruption of the tuna industry; and

"(II) an alternative limitation can be imposed that will avoid such serious disruptions and will be otherwise consistent with the provisions of this title.

"(iii) During such period as the eastern stock of the spinner dolphin (*Stenella longirostris*) is determined by the Secretary to be depleted, the Secretary may issue permits for the taking of mammals from such stock incidental to commercial fishing operations for yellowfin tuna until December 31, 1981; except that the number of spinner dolphin from such stock authorized to be taken each year shall be—

"(I) maintained at as low a level as possible and in any event shall not result in the killing or serious injuring of more than 6,500 of such stock;

"(II) limited to taking that is accidental or in association with other stocks of species for which a permit has been granted; and

"(III) limited so as to assure, on the basis of the best estimate, significant annual increases in such stock and the recovery of such stock to its optimum sustainable population as soon as possible but in no event later than December 31, 1981, and, on the basis of virtual certainty, that the present population of such stock will not be reduced.

"(D) The Secretary of the Treasury shall ban the importation of commercial fish and products from fish which have been caught with commercial fishing technology which results in the incidental mortality or incidental serious injury of ocean mammals in

excess of United States standards. The Secretary shall insist on reasonable proof from the government of any nation from which fish products will be exported to the United States of the effects on ocean mammals of the commercial fishing technology in use for such fish or fish products exported from such nation to the United States."; and

(2) by amending paragraph (3)(B) by inserting immediately before "during the moratorium" the following: "and except as provided in section 101(a)(2) of this title,".

Page 12, line 23, strike out "Sec. 2." and insert "Sec. 3.".

Mr. McCLOSKEY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. McCLOSKEY. Mr. Chairman, I have some hope that the committee might accept this amendment because what it does, essentially, is to restore the steady progress toward near zero mortality which the industry itself has achieved since 1972 when the enactment of the Marine Mammal Protection Act put the industry under law.

Essentially, this amendment requires the Secretary to make progressive reduction in the quotas of porpoise from the 69,000, which would be in the bill this year, to at least no more than half of that amount, or roughly 35,000 porpoise, by 1980; and sets later progressive reductions as the Secretary might see fit.

The amendment provides that if the industry will be seriously economically or socially disrupted, by a showing of that fact, the industry can obtain relief from the Secretary of Commerce. These provisions, incidentally, were in the administration bill, which was not received by the Committee on Merchant Marine and Fisheries until our last day of markup, which was May 16. When the committee recessed on May 16, we really had no idea that the chairman would submit an entirely new bill the following day which would not accept the administration's quota.

Let me recite what happened in the years from 1972, when over 300,000 porpoises were killed, until this year. The administration this year, the Department of Commerce, set a quota of approximately 59,000 porpoises that could be taken. The administration did that on the basis of 54 observed trips last year, 1976, on which a Department of Commerce observer noted that good tuna skippers could kill very few porpoise if they took care in drawing these nets to a close; whereas careless skippers might kill an exceedingly large number of porpoise.

Based on that fact and the development of this new fine-mesh net, with backdown procedure using speedboats to keep a chute open as the net closed, the administration reached a figure of 59,000 porpoise this year.

The reason that the legislation is needed is not because of that number of 59,000, but because under the law no eastern spinner could be taken, since the eastern spinner is a depleted species as defined in the Marine Mammal Act. All

parties agree that we should permit 6,500 eastern spinner to be taken.

I might say, in response to the gentleman from Kentucky, that we are trying to strike a balance here. We would like to kill no porpoise, but we do not want to put out of business an industry like the tuna industry, which has half a billion dollars invested in these 141 purse seine boats.

But once we reach that point, why in 1977 should we pass emergency legislation which not only does not continue the steady progress toward less porpoises killed, but adds 20,000 porpoises to that which was in the administration bill?

My amendment, instead of accepting 79,000 as potentially killed, reduces that figure to 69,000, requires that by the year 1980 the figure be reduced to roughly half of that, 35,000, and as equipment and methods are improved, that the Secretary continue with that.

My amendment basically supports the initial provision of the Marine Mammal Protection Act. We are not dealing with the Tuna Protection Act. We are dealing with an act of Congress intended to protect the lives of as many marine mammals as we can. To suggest that we increase the quota to 79,000 is in effect to give this industry the license to kill three times as many porpoises as good tuna skippers have demonstrated need to be killed in order to keep their industry prosperous.

I commend to the Members this Department of Commerce chart. Everyone got a copy of it. It is on page 50, I believe, of the report on this bill. If we look at that chart, as to the number of porpoises killed per set on tuna, we find that some skippers killed as many as 15 porpoises per 100 tons of tuna. Some skippers killed less than two-tenths of a porpoise per 100 tons of tuna. To say that we are going to give this industry the right to kill three times as many porpoises as some skippers have demonstrated can be killed is a license to kill. It is not the protection of marine mammals.

It is hard for me to understand why the committee should not want to accept this amendment.

The CHAIRMAN. The time of the gentleman from California (Mr. McCloskey) has expired.

(On request of Mr. BONKER and by unanimous consent, Mr. McCloskey was allowed to proceed for 1 additional minute.)

Mr. BONKER. Mr. Chairman, will the gentleman yield?

Mr. McCloskey. I yield to the gentleman from Washington (Mr. BONKER).

Mr. BONKER. I thank the gentleman for yielding.

Mr. Chairman, I would be interested in knowing exactly what figure is being established for 1977. The figure I heard earlier was 73,100. Is the gentleman referring to a different figure this morning?

Mr. McCloskey. In my amendment, the figure is 68,910. That is the administration bill. 68,910 porpoises. It is roughly 10,000 less than the committee bill. It is 10,000 more than the Department of Commerce set as the quota for this year.

Mr. BONKER. If the gentleman will

yield further, then I understand in the gentleman's amendment that in 1980 the quota would be reduced to 50 percent?

Mr. McCloskey. It would be cut in half, to roughly 34,450.

Mr. BONKER. And then in 1982 it would be 50 percent of that?

Mr. McCloskey. No. I did not pick up the administration ratchet provision that thereafter went to 50 percent down per year. I left it with the discretion of the Secretary as to what rate the reduction should be.

The CHAIRMAN. The time of the gentleman from California (Mr. McCloskey) has again expired.

(On request of Mr. BONKER and by unanimous consent, Mr. McCloskey was allowed to proceed for 1 additional minute.)

Mr. BONKER. If the gentleman will yield further, do I understand the gentleman correctly that his amendment does not incorporate the so-called ratchet method?

Mr. McCloskey. That is correct. It cuts it in half over a 3-year period, and then leaves it to the discretion of the Secretary as to the future quotas, but requires they be progressively reduced unless the industry can show an economic disruption.

Mr. BONKER. That takes place in 1977 to 1980?

Mr. McCloskey. The cutting in half takes place from 1977 through 1980. From 1980 on is at the discretion of the Secretary.

Mr. BONKER. I thank the gentleman.

Mr. LEGGETT. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I hesitate to oppose the amendment offered by my colleague, the gentleman from California (Mr. McCloskey), because he is a valuable member of my Subcommittee in Fisheries and Wildlife Conservation and the Environment and has immeasurably contributed to some of the environmental bills, particularly in this area. However, I think the Murphy of New York bill in its current form is a good compromise.

The Murphy bill forces the industry and the environmentalists to come together and accept a new amendment to the act that will go into effect sometime in 1979.

I think we would all like to institute today once and for all a program that would reduce targets by 50 percent in various time frames, then reduce them again by another 50 percent, and reduce them once again by 50 percent. Then we would all feel better, and we could go home. But I do not believe we would solve the problem that way.

I think we must all keep in mind the fact that the foreign industry is out there, that they are fishing, and that they have built up a foreign fishing fleet by 113 percent over the past 5 years. We must all remember, too, that no boat has been built in our fleet over the past several years.

We got out of the whaling industry ourselves, but still this year, with the new, improved goals that we have set under the International Whaling Commission, foreign fishermen still take 34,000 or

35,000 whales throughout the world. None is taken by the United States, but other countries that were whaling when we were whaling are still whaling.

Mr. Chairman, we can do the same thing in this industry. We can say that these animals are holy, because they have an intelligence quotient of 160. But let me say that we have met with a Navy Board of Inquiry and we have analyzed the capability of the porpoise. The porpoise is a bright animal, somewhere between a dog and a chimp.

We all recognize that if incidentally we took porpoises at the same rate as they did on the *Elizabeth C. J.*—an experimental boat that we had operating last year—and our results could be like those on the *Elizabeth C. J.*, we, in fact, could get down to a level of about 10,000 or perhaps less at some future date, even though the National Marine Fisheries Service indicated in their report that they do not know how we would get to that point.

Mr. Chairman, let me point out something else about the gentleman's amendment. The gentleman from California (Mr. McCloskey) did not read the amendment, and I know why he did not read it. It is long, it is involved, it is complicated, and it promotes litigation. The gentleman has a hole in his amendment, in particular the language on page 3 of the amendment, as follows:

The total reduction required by the limitation, even if the best available fishing techniques and equipment and due care in fishing operations to minimize incidental mortality and serious injury of marine mammals are used, cannot be achieved without serious economic and social disruption of the tuna industry;

Now, the gentleman knows very well that if we are in the same spot in 3 or 4 years that we are in today, we are going to find that the industry is going to make its exact same catch, and they are going to say, "Well, we have had a target of zero, but you have also said you can abort that target if our industry is going to have serious economic and social problems." And if that means that some 20,000 or 30,000 or 50,000 people are going to be unemployed, certainly ipso facto and automatically, we will have these social, economic, and cultural problems, and so forth. Therefore, under these standards we would desecrate the targets that we have set in the Marine Mammal Protection Act of 1972.

Mr. Chairman, I know that the gentleman does not want to do that, but he writes it right into the law.

That is one of the reasons why the environmentalists did not want to amend this law, because they knew it was a touchy law, that it is plagued with litigation, and that litigation would necessarily follow every single word that we utter here on the floor and put in this bill.

The CHAIRMAN. The time of the gentleman from California (Mr. LEGGETT) has expired.

(By unanimous consent, Mr. LEGGETT was allowed to proceed for 5 additional minutes.)

Mr. LEGGETT. Mr. Chairman, the gentleman from California (Mr. McCloskey) in his amendment, which is

quite involved, did not talk at all about the foreign ban.

Mr. McCLOSKEY. Mr. Chairman, if the gentleman will yield, that is presently in the act, and the Murphy bill does not contain that language.

Mr. LEGGETT. We can talk about that, of course, but I do not think we need the foreign ban section that the gentleman has appearing over on page 5.

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield on that point?

Mr. LEGGETT. Yes, I will yield.

Mr. McCLOSKEY. Mr. Chairman, let me direct a question to the chairman of the subcommittee.

The bill of the subcommittee chairman amends section 104; it does not take out of the act the present prohibition against foreign tuna. I would think that we could all agree that we should not penalize the U.S. fleet by allowing the importation of tuna that is caught under restrictions less onerous than our own.

That is the reason why it is not in my amendment. It is already in the act, and the Murphy amendment does not change it. Let me direct that to the subcommittee chairman.

Mr. LEGGETT. Mr. Chairman, if the gentleman will address that to me, since it is my time, I will respond to it.

If it is in the existing law, why does the gentleman put it in here?

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield so I may answer that question?

Mr. LEGGETT. Mr. Chairman, I did not mean that to be a question. That is just a statement.

We have promulgated a regulation that is going to go into effect on July 31, and that says as follows:

No tuna or tuna products from "countries of origin" whose vessels operate in the yellowfin tuna purse seine fishery in the eastern tropical Pacific Ocean may be unloaded in the United States unless the Director of the National Marine Fisheries Service, in consultation with the Department of State finds either: 1) the fishing is conducted in conformity with U.S. standards or regulations; or 2) although not in conformity, the fishing does not result in an incidental kill or serious injury in excess of that which results from U.S. fishing operations. In order for the Director to make such a finding, the country of origin must first submit a statement containing the following information:

- (a) quantity and types of fish or fish products expected to be imported;
- (b) a detailed description of the fishing technology and procedures;
- (c) disclosure of the incidental kill of marine mammals for the previous year;
- (d) the incidental kill total in 1977 and the impact of the kill on the population on a species-by-species basis;
- (e) a statement explaining the procedures limiting the level of kill to U.S. standards and procedure for prohibiting sets after the level of mortality allowed is reached;
- (f) copies of the applicable laws and regulations; and
- (g) a list of vessels which may be involved in taking of marine mammals incidental to yellowfin tuna purse seining; and a list of United States citizens working on these vessels.

Further, no yellowfin tuna or products may enter the United States after July 31, 1977 unless accompanied by a "Yellowfin Tuna Certificate of Origin" signed by the exporter and by a responsible government official of

the country whose flag vessel caught the fish or the vessel master. The Yellowfin Certificate of Origin must include the following:

- (a) country of origin of the fishing vessel;
- (b) identify the exporter;
- (c) identify the consignee;
- (d) identify and quantity of yellowfin tuna to be imported listed by U.S. Tariff Schedule number;
- (e) name of vessel which caught the yellowfin tuna;
- (f) fishing method used;
- (g) other documentation as may be required after the Director grants the finding mentioned above; and
- (h) signature, certification and declaration requirements.

Mr. Chairman, that is just for openers, and they really have a gut-cutting regulation that is going to accomplish the very objectives that the gentleman has been talking about all year long, and certainly I think they are moving in this area, because of the gentleman's very aggressive action.

Therefore, Mr. Chairman, the gentleman has to recognize that he is getting a pound and a half of what he has asked for already in this regulation.

Mr. Chairman, we will not do what is proper if we enact a further amendment that is going to change the standards for one that is going to set some dogmatic numbers where we say that in 1980 we are going to set a number of 40,070. The chairman's number does not go that far, because he talks about progressive reductions and not an increase in the number that he has, but he does not go out to 1980.

Mr. Chairman, we would hope that by 1980 we could get down to *Elizabeth C.J.* standards, and we would hope we could explain to the world what the *Elizabeth C.J.* standards are so that the IATTC can adopt those standards. Then, this foreign fleet that currently has been expanding by over 100 percent for the last 5 years can comply with what we are doing.

Mr. McCLOSKEY. Mr. Chairman, if the gentleman will yield further, what the gentleman is saying is that the *Elizabeth C.J.* used techniques known to everyone, that the kills are acceptable to everyone and that the fine-mesh net, the speedboats, the chute, and the backing-down procedure have achieved a method of taking tuna which would take 10,000 porpoises a year.

In this amendment we set the limit at 69,000 and require that it be reduced.

Why in the devil should we allow any tuna fisherman to fish except with the methods of the *Elizabeth C.J.*? All but 10 of the boats have this fine-mesh net.

Why is it any economic hardship to set a quota of 69,000 porpoises when 107 out of 117 boats could presumably meet that test today?

Mr. LEGGETT. Hopefully, they could. The gentleman made a statement in his minority views in the report that some seven boats took one porpoise or dolphin per 500 tons.

I have searched through all of the gentleman's statistics here, and we do not find that they are really quite that good.

The CHAIRMAN. The time of the gentleman from California (Mr. LEGGETT) has expired.

(By unanimous consent, Mr. LEGGETT was allowed to proceed for 1 additional minute.)

Mr. LEGGETT. In the cruise in the case of 433, 26 porpoise were taken with 208 tons of tuna, for a 0.125 kill rate per ton. That was excellent, but then the boat went right back out again. I do not know what happened, but apparently it had the same skipper and the same crew, and it took 546 porpoise and only took 509 tons. The kill rate went up to 1.07.

We can say that one can lie with figures and that figures lie, but really, I do not think we can go into international forums with these kinds of fragile statistics and tell them they have to accept what we do when we cannot exactly tell them what we are doing.

Mr. Chairman, that is why in the Murphy bill we are not going to accept a 10-percent observer program; we are requiring a 100-percent observer program.

Mr. McCLOSKEY. Is that not because we cannot believe the tuna skippers?

Mr. LEGGETT. The gentleman knows very well that we have no way of verifying their figures. A 100-percent observer program would help in that regard.

The CHAIRMAN. The time of the gentleman from California (Mr. LEGGETT) has again expired.

(On request of Mr. MURPHY of New York and by unanimous consent, Mr. LEGGETT was allowed to proceed for 3 additional minutes.)

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, I appreciate my colleague's yielding.

I would like to speak to a point that I do not think is relevant in the debate, and that is the veracity of the count and numbers about which we are speaking. We all know that we are in a numbers game, but the tuna skippers are under surveillance.

They do maintain with the U.S. Coast Guard their exact positions. They have been forced to give away most of their trade secrets from the records that are carefully examined by the National Marine Fisheries Service. I feel that the records that I have examined are correct and that they are viable. Also the limited observers that have been out confirm the veracity of the tuna captains. I think it is a disservice to them and to the industry to imply that there is impropriety in their normal reporting procedures.

Mr. LEGGETT. Mr. Chairman, if I may recapture some of my time, I would say this, that we have known for years that when you have one man paid by the Federal Government to sit on their boat and do nothing but estimate the number of porpoise that are pursued, estimate the number that are encircled, estimate the number that are maimed in the water and die, or perhaps that are dragged up on deck, that those numbers might be considerably different than those the skipper of that boat might estimate when he is trying to run his nets, oversee the

running of the speedboats, and catch tuna, hopefully. The skipper is primarily oriented toward catching tuna and not to counting porpoise.

Mr. McCLOSKEY. Do I understand that the chairman of the subcommittee is agreeing with the chairman of the full committee or that he is agreeing with me?

Mr. LEGGETT. All that I am doing is explaining why the numbers are different. I believe there is a tendency to paint the most optimistic picture. An environmentalist can look out there and say, you know, that there are 10,000 porpoise out there whereas someone else might look out and say there are 1,000 porpoise.

Mr. McCLOSKEY. Is the gentleman agreeing with my statement that we cannot believe the skipper? Was the former statement correct?

Mr. LEGGETT. The gentleman from California has made a great point of that in the past. The National Marine Fisheries Service has said that they do not rely on the skipper's data to make their estimate. It does not mean that the skippers are not telling the truth as far as they perceive it, it merely means that as far as the number of porpoises that are actually killed is perhaps somewhat different than that being perceived by an individual skipper. That is because they do not have time to see what is really out there. That is why we will have an observer on every boat and hopefully will be able to get better statistics.

Mr. BOB WILSON. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I have been following this debate so far with great interest. My colleague, the gentleman from California, I am sure is trying to follow the dictates of some of the environmentalists in his area, of which there are many. I am concerned and I have more interest. I must admit, in my district, which is the main fishing center for tuna.

Mr. Chairman, let me say that this bill is a tough and a rough bill on the tuna fisherman. It is about as much as he can stand without going under.

I commend the chairman of this committee, the gentleman from New York (Mr. MURPHY) for his understanding and his thorough research when he could have joined with and have followed the conservationists, I am sure, coming from his district. He does not have any tuna fishing around Staten Island. Instead he took the time to go out to San Diego where my colleagues from California, Mr. VAN DEERLIN and Mr. BURGNER, live and near where the gentlewoman from California (Mrs. PETTIS) lives. He did so in order to try to understand this problem and to really find out the truth about it. That is because we are getting so many conflicting arguments. Not only that, as he told us, the gentleman just returned from actually going out on a fishing boat and watching them set a net on porpoises and to see the remarkable techniques they are using.

I commend the gentleman from New York for doing that. I believe there are very few chairmen in the history of this

Congress who have gone as far as he has to try to observe and understand the problem before this committee.

I think it would be a discredit to the Chairman to try to amend this bill and make it more onerous and make it completely unworkable.

I think the gentleman from California (Mr. LEGGETT) has made his point very well that this bill is a limited bill. It has a cutoff period. Let us find out exactly what is going on. Let us have an observer on these boats and find out how many porpoises there are and how many porpoises are actually being caught unnecessarily.

I do not think that this amendment will accomplish anything, Mr. Chairman, except to fuzz-up the bill, to make it unworkable, and to drive the tuna fishermen to some other area where they can fish, or else just drive them into bankruptcy. I would hope that we will understand that with this bill, as long as the fishermen are allowed to fish, we are going to see fewer porpoises caught and taken than otherwise. If this bill is made tougher, there will be fewer U.S. fishermen fishing, and the foreign fishermen will be the ones who will be catching the tuna. Everyone has previously said the foreign fishermen have no such restrictions. They will be able to take as many porpoises as they want, and they will get up into the hundreds of thousands again rather than the limited number in this bill. So I urge my colleagues in this Congress to oppose this amendment.

Mr. Chairman, I yield back the remainder of my time.

Mr. RUPPE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I certainly respect the knowledge and interest of my colleague, the gentleman from California (Mr. McCLOSKEY). I would like to ask the gentleman for some clarification concerning his amendment. On page 3 there is a reference to serious economic and social destruction to the tuna industry. I really would like to ask my colleague, what is the tuna industry? Is it the cannery workers, the vessel owners, or the vessel operators? Is it the related industries? I think we should have some pretty specific understanding as to whom we are referring when we say that the Secretary can grant relief to the industry under certain conditions when there is disruption to the tuna industry.

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield?

Mr. RUPPE. I yield to the gentleman from California.

Mr. McCLOSKEY. I thank the gentleman for yielding and for asking this question.

The intention is to apply to the canneries in the United States, in Puerto Rico, and in U.S. territories, and also to the fishing boats, and the fishing industry. I think the most significant testimony before our committee was not necessarily from the tuna skippers, who until at least the 28th of April wanted no new legislation because they preferred that the Government not have observers on every boat. They knew that whatever legislation was enacted would require an observer on every boat. The

really significant testimony came from the cannery representatives, speaking for some 30,000 workers ashore in the United States, cannery workers who would be put out of business if the tuna fleet continued to strike.

The industry is presently under investigation by the Federal Trade Commission, and under their rules of confidentiality we can learn nothing more than that the investigation involves alleged price-fixing and alleged anticompetitive activity.

Certainly if there should be social disruption or economic disruption of the tuna industry, comprising the three branches, the fishermen, the boat owners or the cannery workers, we think the Secretary of Commerce should have the power to relieve them from the burdens of this act.

Mr. RUPPE. The only thing I see as a problem with this amendment is that the cannery workers can make an argument to Congress, but as far as a petition before the Secretary of Commerce, only a holder of a permit or an applicant for a permit can make the case. So regardless of whether we like or dislike the tuna boat operators, only they before the Secretary of Commerce can make the case in favor of relief for the industry, whether it is for the boat operators, the cannery workers, or any other individuals related to it. Also, whether we like the boatowners or not, they are the only ones permitted to make that case for relief to the Secretary.

Mr. McCLOSKEY. If the gentleman will yield further, the reason that the language is drafted in this manner is that this is the manner in which the administration drafted it.

The administration apparently felt that if there should be dislocation of the canneries and cannery workers, that the people with whom the administration had dealt, the boat operators, would certainly make this kind of petition.

Mr. RUPPE. Whether they are loved or unloved, they are the ones who are going to have to make it.

Mr. McCLOSKEY. Under this amendment, that is correct.

Mr. RUPPE. Then I would ask the gentleman another question. On page 4 the language of the gentleman's amendment provides:

An alternative limitation can be imposed that will avoid such serious disruptions [to the industry] and will be otherwise consistent with the provisions of this title.

Is that not a bit of a Catch-22 situation? We say the Secretary can impose an alternative limitation, but how can we have an alternative limitation that will guarantee that there will not be serious disruption to the industry and yet will be in conformity with the provisions of this title which calls for zero killing and not more? Is that not going both ways, one way to protect the tuna industry and the other to reach the zero mortality, all in the same time?

Mr. McCLOSKEY. When we first considered this act 5 years ago we did not want to precisely define near-zero mortality. We would probably concede that the CJ standard, translated into 10,000 deaths per year, probably is near-zero.

Mr. RUPPE. There is no way relief can be established which at the same time will permit more porpoises to be killed but yet goes at the same time toward zero mortality. That would be moving under the exception in two different directions.

Mr. CARTER. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment offered by the gentleman from California (Mr. McCloskey).

Mr. CARTER. Mr. Chairman, I support the amendment offered by the gentleman from California (Mr. McCloskey). I would feel better about this if none of the porpoises were killed. Actually it reduces the number from 79,000 to 69,000 and therefore I support it since that helps and it does not kill these 10,000 highly intelligent animals.

During the Vietnam disaster mammals were trained by frogmen in demolition. They were that intelligent. They have been known to push drowning men ashore. As far as their intelligence quotients are concerned, I do not know whether they were tested by the Stephen Benet test, or just what, but they were found to have an intelligence quotient of 168. That is the way it is. We know the average intelligence quotient of a human usually is between 110 and 120. When we get above 140 we get into the genius area.

To me needless killing of the porpoises is almost like killing humans. I think we should avoid with all the strength we have the unnecessary killing of these mammals. They are highly intelligent and they ought to be protected and they are an endangered species.

I urge support of the McCloskey amendment.

Mr. BURGNER. Mr. Chairman, I move to strike the requisite number of words and I rise in opposition to the amendment.

Mr. Chairman, I think the most onerous and unworkable part of this amendment is not the 69,000, although I think the committee bill is better with the 79,000, but I think the real onerous and very difficult part of this amendment will very likely bring us back in this Chamber debating this again in a year or two or it will have the fleet lying idle, and that is the part where by number it automatically reduces to some 35,000 by 1980.

Mr. Chairman, I just do not think we have the information to write down a number like that and be sure about it. The reason the fleet sat idle in San Diego from January until a couple weeks ago was because under the regulation with a zero number on the eastern spinner, the fishermen risked going to jail and being heavily fined. It was a risk they just could not take; so I maintain, if we put in a figure, however desirable, and we all want the same, we all want to reduce the take of porpoises to zero; but we must be practical about it. We must remind ourselves that as recently as 5 years ago the take was 300,000. Now it has been reduced to 103,000 last year and under this bill some 79,000 of a species that we are not even sure is endangered. To write into the law an arbitrary, although highly desirable figure for 1980, I think is unrealistic and will bring us here again.

Mr. VAN DEERLIN. Mr. Chairman, will the gentleman yield?

Mr. BURGNER. I yield to the gentleman from California.

Mr. VAN DEERLIN. Mr. Chairman, would the gentleman agree that by imposing too strict a limit on porpoise kills, one that would keep American fishermen off the sea, we would be making it more difficult than ever to enforce the yellow-fin tuna conservation program, which is well underway, thanks to the American Tropical Tuna Commission?

Mr. BURGNER. I agree, and I think the net result if we adopt this amendment will be by 1980 the taking of more porpoise, not fewer, not by our fishermen, but by the rest of the world.

AMENDMENT OFFERED BY MR. BONKER TO THE AMENDMENT OFFERED BY MR. McCLOSKEY

Mr. BONKER. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. BONKER to the amendment offered by Mr. McCloskey: In the proposed subparagraph (C) (1), strike out the following: "The total incidental mortality and serious injury authorized in calendar year 1980 shall be limited to no more than 50 percent of that authorized for calendar year 1977, and subsequent annual reductions shall be set at the discretion of the Secretary."

Mr. BONKER. Mr. Chairman, it is not my intention to add to the confusion of this subject or to the McCloskey amendment, but to provide an honest compromise, so that we can establish in the bill an opportunity to achieve those targets that were originally in the Marine Mammal Protection Act and are realistic enough for the fishermen and will also reduce substantially the incidental catch of porpoises.

Very simply, my amendment retains the 69,100 quota for 1977 that is recommended in the McCloskey amendment and would strike the 50-percent reduction provision between 1977 and 1980.

Mr. Chairman, I urge adoption of the amendment.

Mr. MURPHY of New York. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the gentleman's amendment could not be more ill-conceived. There is absolutely no evidence in the record that the technology is available to reduce the quota to 34,000 by 1980.

In fact, it appears that the gentleman has misread the record. He states in his dissenting views that 7 vessels last year had a mortality rate of less than 1 dolphin for every 500 tons of tuna landed. This fact is cited as evidence that the fleet can drastically reduce mortality by 1980. In fact, none of the vessels cited by the gentleman had such a mortality rate—his arithmetic is simply wrong.

Moreover, of the seven vessels incorrectly cited for their admirable records, four were experimental gear cruises. But even the National Marine Fisheries Service admits that the rate of a few experimental cruises cannot be approached by the entire fleet without training and experience.

I might add that even if the fleet had miraculously duplicated the success of

the experimental fine-mesh cruises last year, the mortality would have been 60,000—a far cry from the 34,000 called for in the gentleman's amendment.

The basic problem of this amendment is that it could very well spell disaster for the dolphins. Foreign vessels have a mortality rate per set that is 2½ times the American rate. If we prohibit our fishermen from setting on dolphins, you can be assured that the foreigners will pick up the slack. You can also be assured that they will not have the concern for the animals that our fishermen do.

We all want to reduce dolphin mortality—including the fishermen. In fact, it was an American fisherman that developed the backdown maneuver and the Medina panel that have so significantly reduced dolphin mortality.

Let us remember one thing—purse seining is a very complex and technical fishing method. It requires incredible skill on the part of the captain and crew who sometimes have to work under adverse weather and sea conditions. You just cannot put a new net on a vessel and expect immediate dramatic results.

Even the best skippers in the fleet can experience a disastrous set in which many dolphin are killed. Last year, for example, one experimental vessel had a mortality rate of 0.12 dolphin per ton of tuna landed on one trip and a mortality rate of 1.07 per ton on another trip—nearly 10 times higher than the first trip. Obviously, this skipper was good—he had a tremendous record on the first trip. But, obviously, something uncontrollable happened on the second trip to increase his mortality rate.

The gentleman's amendment ignores the plain fact that even the best skippers can have trouble with their equipment or with the weather.

And, the amendment is not improved by the provision permitting "extraordinary relief." If there ever was language with litigation written all over it, this is it. What does "due care" mean, and what would "serious disruption" amount to? And, how could the Secretary increase the quota and be "otherwise consistent with the act," which calls for a goal of zero mortality?

Uncertainties in the law have created much of the current problem. The gentleman's amendment will only exacerbate the situation by guaranteeing law suits and continued disruption of the fishing industry.

H.R. 6970 includes a much more sensible and realistic reduction in dolphin mortality. The bill would establish a maximum quota of 78,900 in 1977. This quota is significantly less than the estimated mortality of 300,000 in 1972 and the 103,000 estimated for last year.

The fleet will have to improve in 1977 under this quota; they will have to improve further in 1978, and the first quarter of 1979. The committee has made it clear that it expects annual reductions in these two periods.

H.R. 6970 would permit the Secretary to reduce the quota in 1978 and the first quarter of 1979, but she could not increase the quota.

We are going to reduce dolphin mortal-

ity, but the way to do it is with more research and incremental reductions based on the results of that research. The gentleman's amendment is just not the way to go.

Mr. BOB WILSON. Mr. Chairman, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from California.

Mr. BOB WILSON. Mr. Chairman, I thank the gentleman in the well for making a very good point. I want to ask him concerning a question raised in his colloquy with the gentleman from California (Mr. McCloskey). Does the gentleman think that all the tuna skippers are liars, untrustworthy individuals who just completely lie on every occasion?

Mr. MURPHY of New York. I will respond to my colleague from California (Mr. Wilson). I did not give up the Memorial Day weekend to go away from my district for no reason. One of the interesting statistics of the American tuna fleet is the very high number of American veterans who are skippers, ex-Navy men who have fought in World War II, the Korean war, and in Vietnam.

On the vessel I was on, there were three ocean masters as part of the crew. Most of the crew were veterans, with the exception of some of the young men. The fact that I was associating with veterans on a Memorial Day weekend in a fact-finding expedition is proof of the fact that the veracity of those men cannot be questioned.

Mr. BOB WILSON. Mr. Chairman, of course, the bill will prove that point. I think the gentleman is going to find that in some instances many of the boats will catch a lot more porpoises than should be caught, but just to say baldly that all tuna fishermen are liars, I think is an insult. I just could not disagree more than I am with my friend and colleague from California. We might just as well say that all Congressmen are liars. Some do, but that does not mean that all do. I hope the gentleman will clarify his remarks in that regard.

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from California.

Mr. McCLOSKEY. First of all, I do not like it said that I said that, but the subcommittee chairman, the gentleman from California (Mr. Leggett) said, "Of course, we know you cannot trust a tuna skipper," or words to that effect.

And the reason for that remark was that last year, 1976, we had observers on 12 percent of the boats. They went out on 54 observed trips.

The CHAIRMAN. The time of the gentleman from New York (Mr. Murphy) has expired.

(By unanimous consent, Mr. MURPHY of New York was allowed to proceed for 5 additional minutes.)

Mr. McCLOSKEY. If the gentleman will yield further, on the unobserved trips, I might say to my colleague, the gentleman from California, the bridge logs of the respective skippers show that on the unobserved trips the skippers

were reporting a kill rate of one-quarter of the observed trips. Therefore, the Department did not accept any unobserved trip figures but instead prorated the figures of unobserved trips and estimated 103,000 porpoise killed.

When the tuna industry appeared before the committee, no tuna skipper, no witness for the industry contested the Department of Commerce extrapolation, which in effect was a tacit acquiescence that they did not believe their own skippers' logs. In fact, their own skippers' logs were one-quarter of what had actually been happening. That is why the chairman of the committee, as I understand it, in his bill insisted that we put an observer on every boat, not because we want to, but because we cannot trust the bridge logs to be accurate.

Mr. MURPHY of New York. Mr. Chairman, I would say the gentleman makes the point we are trying to make here, and the point is this: this 78,900 as written, takes care of the problem on a temporary basis. We put 100 percent observers on so we get the facts from the vessel's viewpoint. We then put out an experimental vessel, and we charge the industry \$2 million to finance that vessel, we put on that vessel experts from the National Marine Fisheries, and we get the facts from them also on fishing gear, on the technology of using that fishing gear. One cannot teach a fleet overnight how to use fine mesh gear and nets, we cannot determine overnight the exact size and circumference of that net, how to back it down, how to use it in different sea conditions, how to see in which area of that vast Pacific we are going to fish in. We say in this bill, "Let us determine the facts, let us check them out," and we charge the industry to find out what those facts are.

Then we say that for 1 year we will have a take of 78,000, which is almost 20,000 below what an administrative law judge recommended after months of intensive hearings. Then we say the responsibility of the Secretary the second year is based on the analysis of those figures. "You may reduce, Madam Secretary, based on fact, not on an automatic irrational 50 percent reduction." We do not know where we are going to be fishing 2 years from now, in 1980, and we cannot take into account immediately all of the differences in fishing techniques, size of vessel, and so forth. Further, within the IATTC yellowish regulatory area the porpoises have been fished on and set on repeatedly. The dolphin in that area is a very bright animal, as my colleague pointed out, and it is most difficult to encircle them. Therefore, the tuna fishing fleet has moved out into the Central Pacific, south of the Hawaiian Islands.

We are dealing with an entire different species and type of porpoise in these new areas outside the CYRA and the reaction of the porpoises is different. How that porpoise reacts in the net is vital to the take. The porpoises within the line, 99 percent go right over the corking area. But outside the line, where they have not been set on, they are a little

bit more confused and there may be a different technique necessary to get the porpoise out of the line in that area.

We felt, and the National Marine Fisheries felt, there were no porpoises south of 1 degree latitude below the equator. The American fleet, which is a pioneer fleet, went down to the 3d and 4th parallel south, found very, very productive yellowfin tuna areas, new areas of porpoises, where the National Marine Fisheries Service said there would be no porpoises.

All of this intelligence is being drawn together now. We want to hold this legislation the way it is. We want to bring down the mortality rate. We say, "Bring it down properly, scientifically, with the technical knowledge that we will gain by taking an industry and making that industry pay."

The CHAIRMAN. The time of the gentleman from New York (Mr. Murphy) has again expired.

(By unanimous consent, Mr. MURPHY of New York was allowed to proceed for 2 additional minutes.)

Mr. MURPHY of New York. This bill expires on the 31st of March, 1979. By that time we will have had the ability to legislate, to bring down to the minimum, the absolute minimum, the take on this very fine mammal which we all are interested in protecting.

Mr. Chairman, I would ask that the committee reject the amendment offered by the gentleman from California.

Mr. PRITCHARD. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Bonker amendment.

Mr. Chairman, I would like to bring us back to the subject that is before us, which is the Bonker amendment, and I wonder if I could ask the gentleman from Washington (Mr. Bonker), just so I am clear in mind, what his amendment does.

Mr. BONKER. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to the gentleman from Washington.

Mr. BONKER. Mr. Chairman, I thank the gentleman for yielding.

My amendment is very simple. I believe it represents a true compromise on this issue, which has placed many of us between a rock and a hard place. That compromise is that it retains the 1977 quota of 69,100 that is contained in the McCloskey amendment.

Mr. PRITCHARD. And that is the administration's figure?

Mr. BONKER. As I understand it, that is the administration's figure.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, let me tell the Members something about the administration's figure.

Mr. PRITCHARD. Mr. Chairman, I wish the gentleman would do that.

Mr. MURPHY of New York. Mr. Chairman, we have the National Marine Fisheries Service that is out trying to obtain technical information, and they report

this information to the bureaucrats here in Washington. Some bureaucrat takes that technical figure, throws in a little policy, and then the policy reacts on that technical figure. That is how we get the administration's figure. We would not have gotten it had this committee not brought this bill out to resolve the problems between those who wish to save porpoises and those who want to see the tuna industry survive.

Mr. PRITCHARD. Mr. Chairman, let me just say to the gentleman from New York (Mr. MURPHY) that I stated that in my remarks, and I complimented him. I was critical of the administration.

However, I think the administration finally moved, and I asked the question only because I wanted to be sure that the Bonker amendment did start out with the 69,000 figure, which is the administration's figure.

Mr. BONKER. Mr. Chairman, if the gentleman will yield, let me say that the gentleman is correct.

The second part of the amendment contains this provision: It eliminates that provision that calls for a 50-percent reduction by 1980. It retains the rest of the McCloskey language, and I believe it is a suitable compromise.

Mr. PRITCHARD. Mr. Chairman, I want to compliment the gentleman from Washington (Mr. BONKER). I think this is a compromise that all sides can live with.

I for one am going to support the Bonker amendment, and I ask the Members to support it.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to the gentleman from Illinois.

Mr. FINDLEY. Mr. Chairman, the 1.5 billion cans of tuna processed each year use approximately 50,000 tons or 100,000,000 pounds of soybean oil annually. In addition, the tuna industry has been a growing industry and thus an expanding purchaser of soybean oil.

Tuna fish are primarily caught off the coast of South America. The neighboring countries would like their fleet to supplant the U.S. fleet in these fishing waters. They do not worry about killing porpoises, of course. These South American countries would welcome the 90,000 jobs directly and indirectly related to the tuna industry which currently are filled by U.S. citizens. And, if the tuna industry moves south, these canneries would likely buy Brazilian soybean oil instead of U.S. oil, so again the United States would lose.

Currently, U.S. tuna fishermen succeed in getting about 97.8 percent of porpoises safely out of their nets and returned alive to the sea. On an average less than one porpoise is killed per ton of tuna caught. In addition, about 48 percent of the tuna processed by U.S. canneries is caught by foreign vessels and 52 percent by U.S. ships. And no foreign country worries about porpoises the way we do.

Clearly, this is a case where we, as U.S. citizens, can do an immense amount of good by adopting the committee bill and thereby demonstrating worldwide

leadership on this important question. Or, we can set standards which may prove impossible to meet and consequently risk losing not only the industry and jobs which might go to other countries, but also our position of leadership which is necessary if we are to help save the porpoises. Either way, Americans will continue to eat tuna. The only question may be whether it is caught and produced by U.S. hands or by foreign hands. There is no reason why we in Congress should make it impossible for our own industry to compete.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, let me ask this question:

How can the gentleman from Washington (Mr. PRITCHARD) be assured that the administration figure is any better than the other figure, if they second-guessed it, as my colleague, the gentleman from New York (Mr. MURPHY), has just stated? I hope that this figure is better than their figures on water conservation in the West.

Does the gentleman think that is possible?

Mr. PRITCHARD. I think it is highly possible.

Mr. Chairman, I do not think at this point we would do much to improve the situation unless we accept the Bonker amendment.

Mr. ROUSSELOT. Mr. Chairman, if the gentleman will yield further, what kind of research did they do in order to come up with this great figure?

Mr. PRITCHARD. The National Marine Fisheries Service has the people that have done this work.

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to the gentleman from California.

Mr. McCLOSKEY. Mr. Chairman, I am prepared to accept the Bonker amendment, because if we look at the original quota of the administration this year, we find it was 59,000, not the 69,000 contained in this bill.

I am satisfied that if the Secretary of Commerce is left the discretion to progressively reduce the figure, the quotas will probably be at the 35,000 figure or below by 1980. If all skippers behaved as the one on the *Elizabeth C.J.* did, the quota would be roughly 10,000.

Mr. Chairman, I am pleased to accept the amendment.

Mr. RUPPE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to ask the author of the amendment the following question:

Is it my understanding that under this amendment and under the McCloskey amendment the kill would go down to 68,000 porpoises? I understand that is based on the authentic figures by the National Marine Fisheries Service.

On the other hand, as I understand it, an administrative law judge took approximately 3,000 pages of testimony from all types of experts within and without the industry, and my under-

standing of his recommendations is that his figure for the take of porpoises this year is 96,100.

So I think that presents a valid question as to which way we should go. Should we be talking about 58,000 or 68,000, or should we be talking about the figure established by the law judge, who took 3,000 pages of testimony and, after an exhaustive study, recommended 96,100 porpoises as the catch?

Mr. Chairman, it would seem to me that we take the figures in the Murphy legislation and then lay over that the amendment that we placed in committee, whereby we put a penalty of \$32 a porpoise above the industry average, we would be reaching a very balanced position because we would be taking a compromise figure between the low of the McCloskey amendment and the high of the administrative law judge.

In addition to taking that compromise figure, we are slapping on the bad boat owners a fee of \$32 a porpoise over the industry average. If I am correct, it would seem to me that on an industry average, they would be paying somewhere between, in the one case, \$60,000 and \$120,000 in penalties; and in the case of the other, somewhere between \$20,000 and \$40,000 in penalties based on the number of porpoises taken in relationship to the tuna catch.

Therefore, Mr. Chairman, what I am suggesting is that if we were to take the Murphy figure, which is a balance between the low of the administration and the high of the administrative law judge, and superimpose upon that a \$32 per porpoise penalty on those vessel owners who have not had a good track record or who have had an atrocious track record, whichever the case may be, we would be achieving a relatively balanced bill.

Mr. BONKER. Mr. Chairman, will the gentleman yield?

Mr. RUPPE. I yield to the gentleman from Washington.

Mr. BONKER. Mr. Chairman, the gentleman is posing questions that do not relate to my particular amendment; and he should direct them to the author of the original amendment, the gentleman from California (Mr. McCloskey). However, the committee report that is before the House does establish those figures. The administrative law judge recommended that a quota of 96,100 be established for 1977.

The NMFS published its final regulations on March 1, 1977, and established a quota of 59,050. Then in their suggested amendments to H.R. 6970 the administration recommended the figure of 68,910, which is in the McCloskey amendment that I am attempting to amend.

Mr. RUPPE. I thank the gentleman.

Mr. BOB WILSON. Mr. Chairman, will the gentleman yield?

Mr. RUPPE. I yield to the gentleman from California.

Mr. BOB WILSON. Mr. Chairman, I would like to clarify whether or not the chairman of the committee has accepted the McCloskey amendment.

I think there is some question, and I would appreciate his clarifying that point.

Mr. MURPHY of New York. Mr. Chairman, if the gentleman will yield, my colleague, the gentleman from Michigan (Mr. RUPPE), clearly stated the number of 78,900 in the legislation, which is the reason I am opposing the Bonker amendment as well as the McCloskey amendment.

That figure was derived at based upon the number of 6,500 eastern spinner, the specific number of white bellied dolphins and a specific number of spotted. That is the midpoint figure between the National Marine Fisheries Service, as testified to before the administrative law judge, and the 96,000 figure of the law judge.

Mr. Chairman, that is how we broke it down, keeping those optimum figures in mind. For that reason, we must vote and act as closely to fact as possible.

We know that if we adopt the figures in my bill, we will have an increase of 103,000 in the overall dolphin population. Therefore, we feel that we can use this figure until we have further facts to move into a long-range solution.

Mr. BOB WILSON. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment to the amendment.

I just want to say briefly again that the Murphy bill, as far as I am concerned and as far as many of us here are concerned, is a good compromise.

If we fuzz it up with these amendments to amendments to amendments and so forth, we are going to end up with a hodgepodge here that no body can accept; and the tuna fleet will go down the drain.

Therefore, Mr. Chairman, I urge a vote against the amendment to the amendment and the amendment itself.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. BONKER) to the amendment offered by the gentleman from California (Mr. McCloskey).

The question was taken; and on a division (demanded by Mr. BONKER) there were—ayes 32, noes 22.

So the amendment to the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. McCloskey) as amended.

The question was taken; and the Chairman announced that the ayes appeared to have it.

Mr. MURPHY of New York. Mr. Chairman, I demand a recorded vote, and, pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

#### QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to rule XXIII, clause 2, further

proceedings under the call shall be considered as vacated.

The Committee will resume its business.

#### RECORDED VOTE

The CHAIRMAN. The pending business is the demand of the gentleman from New York (Mr. MURPHY) for a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 244, noes 109, not voting 80, as follows:

[Roll No. 293]

#### AYES—244

Messrs. BARNARD, HEFNER, GUDGER, MURTHA, CHARLES WILSON of Texas, TRAXLER, CLAY, and EDWARDS of Alabama, Mrs. COLLINS of Illinois, Mr. CORNWELL, Mr. FLOWERS, and Mrs. LLOYD of Tennessee changed their vote from "no" to "aye."

So the amendment, as amended, was agreed to.

The result of the vote was announced as above recorded.

#### AMENDMENT OFFERED BY MR. McCLOSKEY

Mr. McCLOSKEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McCLOSKEY: Page 13, line 20 is amended by deleting "all costs incurred in the establishment and maintenance of the program shall be borne by the Department of Commerce." and inserting in lieu thereof: "The Secretary shall establish and charge a fee for all or part of the costs incurred in the establishment and maintenance of the program. Such fees may be established on the basis of the number and kind of marine mammals authorized to be killed or seriously injured, and may

provide an incentive to masters, owners, operators and crews of individual fishing vessels to reduce the incidental taking of such mammals, and in particular to reduce to the maximum extent possible the incidental mortality and serious injury of the eastern stock of spinner dolphin (*Stenella longirostris*). Such fees may be returned in whole or in part if the Secretary determines, in his discretion, that the return of such fee or portion thereof would further the purposes and policies of this Act."

Mr. McCLOSKEY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. McCLOSKEY. Mr. Chairman, this amendment is a simple one.

The committee bill that the chairman has presented provides that the costs of the observer program shall be borne by the Department of Commerce.

Mr. Chairman, when we speak of the costs of the program, we speak of a full observer program as contained in the committee bill. If the committee bill is adopted in its present form, the cost of putting an observer on each of the 117 purse-seiners which make approximately three trips each a year would be between \$3.5 million to \$4.5 million a year, less credits from the \$2 million assessed against the industry for the dedicated vessel research program.

Mr. Chairman, if this provision is added to the bill, it leaves to the Secretary of Commerce not the requirement, but the right to establish fees for tuna fishing which places the cost of the \$10,000 per trip observer program on the permit applicant or on the tuna industry rather than on the taxpayer of the United States.

The reason that we are asking for observers on every boat is that last year the skippers on unobserved trips reported only one-fourth as many porpoises killed in their bridge logs as were reported on the observed trips. Because of that fact, the administration and the committee were unanimously in agreement that we should put an observer on every boat.

Mr. Chairman, these trips, numbering anywhere from 350 to over 400 per year, lasting from 10 to 16 weeks, will impose a cost on the Government of between \$3.5 million and \$4.5 million.

This amendment would shift that cost to the industry.

What are we talking about with respect to the cost of a can of tuna? The testimony before the committee was that tuna last year was costing roughly \$700 per ton or 30 cents per pound, and that if the cost of the observer program were shifted to the industry, it would increase the cost of a can of tuna perhaps 1 cent a pound or up to 2 cents a can.

Mr. Chairman, we are talking about an industry last year in which 248,000 tons of tuna were caught, with a value of \$173,600,000. By adding to that cost \$4.5 million, we are adding roughly, at the most, 2½ percent to the operating costs of this industry.

Clearly, Mr. Chairman, if the industry

bears this cost of the full observer program to protect porpoises, it will be passed on to the consumer at an additional cost of perhaps 2 cents or, at the maximum, 2½ cents a can of tuna, although the testimony before the committee was that it could be as low as 1 cent per can.

The question is very simple. If an industry of this kind requires Government regulation, should the taxpayers pay the cost of that regulation, or should the industry itself, passing it on thereafter to the consumer?

Mr. LEGGETT. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the amendment the gentleman from California (Mr. McCLOSKEY) has offered really is a further confounding of this bill. I do not believe it is required. The gentleman from California talks about putting the burden on the industry and then taking it off the shoulders of the taxpayers. But then in his proposed amendment he states that:

Such fees may be returned in whole or in part if the Secretary determines, in his discretion, that the return of such fee or portion thereof would further the purposes and policies of this act.

We have already established a fee program. We are going to charge the fishermen \$32 for certain of the porpoises that they have taken and then we will give back to those fishermen who fish according to a standard of excellence a portion of those fees. I believe we also know that we have charged the fishermen for the first time in this bill \$2 million for the privilege of fishing. Also, they have to furnish a ship for research purposes. Further, they will be required to have observers on board and they are going to have to pay this \$32 fee per porpoise taken over the industry kill average.

Mr. Chairman, there comes a point when you try to interface too much of a new idea with an existing program, and it becomes utterly compounded. We have a program under the Murphy bill that looks forward to a 100-percent observer program this year. If we accept this amendment that has been offered by my colleague, the gentleman from California (Mr. McCLOSKEY) we do not know how this will interface with the existing fishing requirements. This will require new rulemaking. This will require some kind of a procedure to figure out how much of this cost is going to be assessed against the fishermen and how much the fishermen are going to get back in some kind of a small revolving fund.

This is not an environmental procedure in any sense of the word. It will not do any good. I believe it should be defeated.

Mr. BOB WILSON. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from California.

Mr. BOB WILSON. Mr. Chairman, could the gentleman from California tell me whether the inspectors for the Government in a meatpacking plant are paid by the meatpacker or they are paid by the Government?

Mr. LEGGETT. Inspectors for EPA

and OSHA and all of the other Federal agencies generally are paid for by the Federal Government. They are employees of the Federal Government. To now impose a very large burden on this industry and then pay it back again on some kind of an amorphous standard is going to promote and extend additional litigation in this area that already is encumbered with too many lawsuits.

Mr. BOB WILSON. Will the gentleman from California tell me if the fishermen are going to pay the inspectors on board, are they going to pay for the Government retirement also, and all of the other things that go with being in the Government service?

Mr. LEGGETT. That would require some further rulemaking.

Mr. BOB WILSON. It will produce the biggest hodgepodge of a mess one can imagine if we were to pass this amendment.

Mr. VAN DEERLIN. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from California.

Mr. VAN DEERLIN. I thank the gentleman for yielding.

If it is the purpose of the bill as written to establish an incentive to the good fishermen to remain good fishermen, and to reduce the porpoise kill, then let the \$32 charge per porpoise be borne by those who kill the most porpoises.

Mr. LEGGETT. Exactly. We are trying to set up a standard here that we can enforce on foreign boats. How do we enforce a standard like this on a foreign boat? Obviously it is just going to apply to the American boats, and it is going to be largely discriminatory.

Mr. VAN DEERLIN. The amendment should be rejected out of hand.

Mr. LEGGETT. It should be rejected out of hand.

Mr. VAN DEERLIN. I thank the gentleman.

Mr. BIAGGI. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from New York.

Mr. BIAGGI. I thank the gentleman for yielding.

If the industry is paying the observer, is it not more likely that the observer would be more sympathetic toward the industry and would be more susceptible to some favoritism in its reporting?

Mr. LEGGETT. Certainly. That is an arguable point.

Mr. MURPHY of New York. Mr. Chairman, I move to strike the requisite number of words, and I rise to oppose the amendment.

Mr. Chairman, the gentleman would have the industry pay for the cost of the observer program, but we already have the industry paying throughout this bill.

Industry penalties will offset the cost of the observer program; the industry will provide \$2 million in incentive fees; and the industry will be required to supply the Government with a research vessel. There comes a point when the industry has been flogged enough. That point has already been reached.

The gentleman says that the industry should pay because we cannot trust their

statistics. Well, the Government has thousands of policing programs, but I have never heard it suggested that the investigated party should pay the investigator's salary. Do the domestic industries pay the salaries of EPA investigators? Of course not. Yet, the gentleman would have us establish a special penalty in the case of tuna fishermen.

The gentleman suggests that the cost of the observer program should be passed on to the 84 percent of American families that consume tunafish. I would agree with the amendment if I thought that only tuna consumers have an interest in reducing dolphin mortality. We all have an interest in saving dolphins, and we all should pay for it. Let us not penalize the tuna consumer simply because he has the misfortune of not being able to afford steak.

I urge a "no" vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. McCloskey).

The question was taken; and on a division (demanded by Mr. McCloskey) there were—ayes 29, noes 64.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. PRITCHARD

Mr. PRITCHARD. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PRITCHARD: Page 10, strike out lines 14 through page 11, line 2 and insert the following:

"(B) As soon as practicable after the close of each fishing period, the Secretary shall—  
 "(1) determine the number of marine mammals killed during commercial purse seine fishing operations on porpoise engaged in by each certified master; and

Conforming amendments.

Page 11, line 8, strike out "(D)" and insert in lieu thereof "(C)."

Page 11, line 20, strike out "(2), or (3)" and insert in lieu thereof "or (2)".

Mr. PRITCHARD (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. BOB WILSON. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard. The Clerk will continue to read the amendment.

The Clerk completed the reading of the amendment.

Mr. PRITCHARD. Mr. Chairman, this amendment would remove the stipulation which requires that the \$32 penalty fee be imposed on only those vessels which are incidentally taking mammals at a level above the "industry kill factor." Under this amendment, the \$32 penalty fee would be levied on each vessel for each porpoise mortality, regardless of the industry kill factor. This approach would establish a sound incentive to stay as far below the quotas as possible in order to reduce fishing costs.

The way the bill is currently worded, with only those exceeding the "industry kill factor" actually paying the penalty fee, there exists a strong potential, in fact an incentive, for the industry kill factor to be sufficiently high for the

allotted quota of mammals to always be completely filled. H.R. 6970 currently provides only a slight modification of a simple quota approach, and as with any quota system, there is always an incentive to consume the entire quota.

If a fee is levied for each mammal taken, as I am suggesting, then many vessel owners as well as skippers and crew will at least find it in their interest to stay as far below the quota as possible. Also, further advances in the development of better technology and fishing practices may be stimulated by such a fee.

In addition, this penalty fee, applied for each mortality, would provide roughly \$2 to \$2.5 million which could help defray the costs of the observer program and required research. This would average out to approximately \$18,000 per vessel and would constitute roughly seven-tenths of 1 percent of the tuna fleet's annual gross revenues. This does not seem unduly burdensome and would have little, if any, appreciable effect on market demand or price.

Mr. Chairman, I might add that I think that the structuring of an incentive system such as the one I have proposed will provide a stronger impetus for the reduction of marine mammal mortalities and, it will also provide a more efficient mechanism for ultimately achieving the goals of the Marine Mammal Protection Act.

Mr. BONKER. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to my colleague, the gentleman from Washington (Mr. BONKER).

Mr. BONKER. Mr. Chairman, I support the gentleman's amendment. I think it is laudatory and positive. Under the previous amendment we rejected we would have imposed an assessment on the industry for the cost of the Government observers, but I think the gentleman's amendment is more constructive and it would encourage the tuna fishermen to be more cautious and to reduce the amount of the dolphin catch.

We discussed this matter in the committee and I fully support it and I ask the other Members of the House to do likewise.

Mr. RUPPE. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to the gentleman from Michigan (Mr. RUPPE).

Mr. RUPPE. Mr. Chairman, I thank the gentleman for introducing the amendment. I think it would do more than anything else we could do in this Congress to reduce the porpoise mortality and at the same time it would help pay for the observers. Accordingly, I do support the amendment and the goals the gentleman from Washington has presented to us.

Mr. PRITCHARD. I thank the original architect of this amendment for supporting it.

Mr. BURGNER. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to the gentleman from California (Mr. BURGNER).

Mr. BURGNER. I want to make sure my arithmetic is correct. We have \$32 times 69,000 which is a \$2,208,000 penalty. I would feel that would be onerous in

addition to the \$2 million already asked for in providing for one boat and for research. Is this another \$2 million?

Mr. PRITCHARD. Yes. But let us remember this: that in the \$2 million per boat we have to remember that the catch of the boat is going to be subtracted from the amount that the tuna industry pays and the incentive program that they are contributing to, the rest of that \$2 million they are contributing to is going to go back to them in rebates for encouragement, not penalties. It would be for encouragement.

Mr. BURGNER. For the good guys?

Mr. PRITCHARD. That is right. Our figures, computed with the help of the National Fisheries, is that this would represent a little less than about seven-tenths of 1 percent cost on the cost of the product landed; so it is less than 1 percent of the catch of the product that the tuna industry catches. I do not think that is out of line.

Mr. BURGNER. Mr. Chairman, if the gentleman will yield further, however, the new penalty of \$2 million, and it will be that, or fee or whatever, does not add to the incentive payment; does it?

Mr. PRITCHARD. Oh, it adds greatly, as every fish they catch is going to be a \$32 penalty. Remember, it is not a \$2 million add-on. Under the Murphy bill, there was a \$32 cost for everybody over the 50-percent mark; so what we are doing is adding about \$1 million to \$1,100,000; so it really is not a total of \$2 million.

Under the Murphy bill, they will pay about 25 percent of the cost. Under my amendment, they will split the cost of the program. I think it is fair.

Mr. BIAGGI. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to the amendment.

Mr. Chairman, this amendment was originally offered in the committee by the gentleman from Michigan (Mr. RUPPE). No matter how we characterize this, it remains a penalty. It is a punitive action. It was subsequently amended by an amendment I offered, which would apply the \$32 penalty; which would commence after the fisherman had reached the industry kill rate. Beyond that point, the \$32 penalty would become operative and would provide the incentive, because no one for a moment agrees or thinks that by virtue of the \$32 per porpoise from point a that it would eliminate the killing of these mammals. If there is to be an incentive, it would be as a result of the amendment that is currently in the bill. It was discussed. It was accepted. The committee did act, almost unanimously.

Mr. Chairman, the gentleman's proposal is to revert back to the Ruppe amendment, which was considered punitive and it is, in fact, punitive. It would heap an additional burden on those burdens previously enumerated by the chairman. If we are talking in terms of a balanced piece of legislation, the Murphy bill provides that. It is delicately balanced. It deals with the industry. It permits them to function. It makes extraordinary concessions to the environmentalists.

The environmentalists have made many suggestions. Those suggestions

have been incorporated into this legislation. To impose this additional \$32 is to, in fact, inflict a counterproductive hardship on an already burdened industry. There will come a time when we break the camel's back and the industry will say, "The Devil with it," as they did when they remained in port for more than 6 months. As a result, the great employment problem developed as the fishing stopped, with the foreign vessels prospering without any regulation.

No one quarrels with the objective. We have worked diligently in an effort to obtain that objective; but the gentleman's amendment to strike that provision in the name of incentive is really misleading and should be rejected.

Mr. MURPHY of New York. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to the amendment.

Mr. Chairman, I think my colleague, the gentleman from New York, and my colleague, the gentleman from California (Mr. BURGNER) have very carefully drawn two valuable points as to why we should oppose this amendment. No. 1, it adds another very substantial monetary burden upon the industry, and we rejected the last amendment because of that factor.

We do not want to overburden this industry. The second point my colleague from New York made was that, as the bill is now written, there is an incentive to the boat and the skipper and the crew to be below the industry average. By adopting this amendment to take away that incentive, no longer are the good boats under an incentive not to take dolphin.

Very simply put, the environmental aspect of this amendment is clear, that it should be defeated. We certainly understand that an incentive of this type is certainly far better than to take away that incentive and just put an across-the-board assessment on the fleet.

Mr. CHARLES H. WILSON of California. Mr. Chairman, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from California.

Mr. CHARLES H. WILSON of California. Mr. Chairman, we keep hearing about the burden on the industry, but does it not really boil down to the fact that the consumer is going to be the one the burden is placed upon? If we add costs to the industry, they just pass it on to the consumer. This is going to cause each can of tuna to go up. It may be just a penny, but a penny here and a penny there adds up and it gets out of control. The consumer eventually will pay for this, is that not true?

Mr. MURPHY of New York. The gentleman makes the point about the consumer, but the tuna consumer is consuming a protein, and in many instances he can only afford the cheapest type of protein, which is tuna fish.

Mr. VAN DEERLIN. Mr. Chairman, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from California.

Mr. VAN DEERLIN. For the purpose of putting a question to the author of the amendment, inasmuch as the amend-

ment refers to this \$32 as a penalty, is it the intent of the author that this would be tax deductible?

Mr. PRITCHARD. If the gentleman will yield, I will say no, it would be a fee and not a penalty. That way, it will be tax deductible. So, it is much less than the cost suggested to the industry of \$1 million.

I thank the gentleman for clarifying that point. It is important that it is a fee and not a penalty, and both of us understand the reasons why.

Mr. VAN DEERLIN. I only attempt to clarify it only should the worst happen and the amendment be adopted.

Mr. McCLOSKEY. Mr. Chairman, I move to strike the last word, and I rise to speak in favor of the amendment.

I would like to lay before the committee the precise costs we are talking about. I would like to do that from the committee report, on page 50. One of those fishing trips, No. 433, 208 tons of tuna was caught and only 26 porpoises were killed. That is a good record. That 208 tons of tuna would be worth \$140,000, so this skipper, with that good record, would be paying roughly \$900 compared to a catch worth \$140,000. Certainly, the good skipper paying \$900 against a catch of \$140,000 is not financially burdened.

The next skipper on the chart would be. The next skipper below that caught 509 tons of tuna and killed 546 porpoises. Five hundred and nine tons of tuna would be worth \$350,000, and for the 546 porpoises he would pay \$17,000. Now, \$17,000 would be a significant penalty even against a value of \$350,000.

It seems to me that, with those figures, we do not impose an incredibly big burden on the industry, and we impose the very best concept of a free enterprise system: that of a financial penalty on the skipper who kills too many porpoise. Under the bill the gentleman from New York, Mr. MURPHY presented, should a skipper kill less than the industry average, he would get a substantial amount of money back. So a good skipper is not going to be materially hurt. A bad one would be, under the best way we know how making a financial penalty on the bad skipper.

Mr. FORSYTHE. Mr. Chairman, will the gentleman yield?

Mr. McCLOSKEY. I yield to my colleague, the gentleman from New Jersey (Mr. FORSYTHE).

Mr. FORSYTHE. I thank the gentleman for yielding.

Is it true that in the two instances the gentleman referred to, that the same boat was involved?

Mr. McCLOSKEY. I cannot answer that.

Mr. MURPHY of New York. If the gentleman will yield, they are the same boat.

Mr. McCLOSKEY. They are trip 279 and trip 323. The boat is listed as 433 under the vessel code. It is the same boat.

Mr. FORSYTHE. The same boat. I think this points out one of the reasons why at this point in time we have to be very careful how we use these types of penalties because the whole technology situation at this time is not sure enough. Here we are, with the same boat, with

two radically different situations, in terms of porpoises killed. To me, it is one more reason why I would oppose this amendment.

Mr. McCLOSKEY. Mr. Chairman, we heard skippers testify before the committee that their crew jumped into the water to save porpoises. Much of this is an individual attitude and action on the part of the crew and the skipper. The testimony before us was that quite often the skipper had 51 percent of the profit, the crew had 49 percent. With this kind of a financial reward, we think the crews and skippers would break their backs to save porpoises, which essentially is our goal.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. McCLOSKEY. I yield to the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. I thank the gentleman for yielding.

Mr. Chairman, my colleague from New Jersey carefully points out that vessel 433 in one set did take 26 porpoises, and then on another voyage it takes 546 porpoises. That probably was a good skipper, in spite of that great difference. This could have been a mechanical breakdown or severe weather change that caused that difference. My bill, in its present form, does penalize in its present language the bad skipper, overall; it does not penalize the good skipper who might have had a serious incident or difficult problem at some time.

Therefore, I would urge that the committee reject the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. PRITCHARD).

The question was taken; and on a division (demanded by Mr. PRITCHARD) there were—ayes 32, noes 38.

#### RECORDED VOTE

Mr. PRITCHARD. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 158, noes 194, not voting 81, as follows:

[Roll No. 294]

#### AYES—158

Mr. COLLINS of Texas and Mr. NEDZI changed their vote from "aye" to "no."

Mr. BEARD of Rhode Island and Mr. NOLAN changed their vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

## AMENDMENT OFFERED BY MR. McCLOSKEY

Mr. McCLOSKEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McCLOSKEY: Page 17, line 13, strike out "and."

Page 17, between lines 13 and 14 insert the following:

"(2) agrees to allow observers approved by the Secretary to board and accompany such vessel in a manner consistent with subsection (d) of this section; and".

Page 17, line 14, strike out "(2)" and insert "(3)".

Mr. McCLOSKEY. Mr. Chairman, this amendment is very simple, and if I could ask the Committee to look at page 17 of the bill, the Committee will note the requirements that the bill imposes. This amendment is intended to protect the U.S. tuna skipper who complies with the requirements that we impose upon him by this law. There were about 117 U.S. purse seiners last year. They comprised about two-thirds of the total world purse-seine tonnage, with one-third of the purse seiners in the Pacific Ocean being under foreign flag.

One of the problems that the committee has had in coping with this problem has been that the tuna fishing fraternity, fishing out of San Diego and San Pedro, primarily, has felt very badly about any Government regulation at all. Some of these skippers, upset with the fact that their Government was imposing upon them regulations which were not imposed on foreign skippers, have sought to transfer U.S. fishing ships to foreign flag in order to escape the application of U.S. law.

The committee bill—the chairman's bill—on page 17 requires that before there be permission from the Secretary of Commerce to transfer a U.S. ship to foreign flag, the transferee must agree to comply—and I quote—"when using such vessel for such fishing, with United States standards with respect to the incidental taking of marine mammals;" and the transferee must file with the Secretary "a bond in an amount and form determined by the Secretary to be necessary and appropriate to insure performance of such agreement."

My amendment adds a third provision that the transferee of this U.S. tuna boat must agree to allow observers approved by the Secretary to board and accompany such vessel in a manner consistent with subsection D of this section. In other words, we require that before a U.S. boat

is transferred to foreign registry that it not only comply with U.S. law and post a bond, but that it also accept an observer, which is the same requirement we put on U.S. fishermen. It seems to me that we should protect our tuna fleet against unfair competition by requiring that observer on foreign boats because without the observer we have no way of guaranteeing that they will comply with the same requirements as U.S. fishermen.

Mr. RUPPE. Mr. Chairman, I rise in opposition to the amendment.

I have really a great deal of concern over that entire paragraph. It would just seem to me that if the bill we are passing is not that onerous on the tuna industry, they would be most willing to stay in the United States. What I fail to understand is that if a tuna boat operator wants to sell his boat, he cannot transfer it or sell it outside the United States unless he posts a bond and does a number of things under this bill.

Under the McCloskey amendment, the operator cannot do that unless he has an observer on the boat. The boat costs \$5 million. If a man puts that much into a boat and wants to get out of the business, I cannot understand why he cannot sell that boat anywhere in the world. Why should we say, as the bill does say, that he has to post a bond with a number of restrictions, and then with the McCloskey amendment says we require an observer on the boat. It seems to me we are taking that man's value away. Certainly he will not be able to sell that boat for the amount of money he would get for it prior to the passage of this legislation.

I really fail to understand why we should penalize a tuna boat operator who has lived under all our regulations in the United States and who now wants to sell his boat to someone in Timbuktu or anywhere else and put this burden on him, saying in effect that if he wants to sell this boat outside the United States, under this amendment, we will be virtually insuring that he will take a financial shellacking.

Mr. McCLOSKEY. Mr. Chairman, will the gentleman yield?

Mr. RUPPE. I yield to the gentleman from California.

Mr. McCLOSKEY. Mr. Chairman, I understand the gentleman's objection to the bill. But all my amendment does is make his abiding by the U.S. law enforceable. Why should a foreign boat not have to abide by the same requirements we put on a U.S. fisherman? Once we say in this bill that a U.S. fisherman has to accept our regulations, why not make foreign people observe those regulations?

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. McCLOSKEY. I yield to the gentleman from New York.

Mr. MURPHY of New York. Once they update and upgrade their equipment, and in this industry it is necessary, then if they want to sell it and go into a much higher-type capability vessel, I think we have prevented our industry from upgrading by many of the amendments we have here, consequently, I have to oppose the gentleman's amendment. I do

not think it adds anything. We require many things in the bill as it is presently written. They have to comply with the Marine Mammal Protection Act and that has a stipulation that we put observers on a vessel even if it is sold foreign. Frankly I think it is unnecessary, but it did give our colleague, the gentleman from Michigan, the opportunity to point out the further restrictions we put on this industry.

Mr. BURGNER. Mr. Chairman, I move to strike the requisite number of words and I rise in opposition to the amendment.

Would the chairman of the committee respond to a question related to this?

The bill already requires a bond, that if we transfer a boat, the transferee must file a bond. That would seem sufficient. My question is: What is the committee's intention as to the size of the bond roughly?

Mr. MURPHY of New York. A reasonable bond would be \$150,000.

Mr. BURGNER. My second question would have to do with the \$2 million fee. This is an enormous provision and I would vote against it; but we are asking to come up with \$2 million for research, is that correct?

Mr. MURPHY of New York. That is correct, primarily for research.

Mr. BURGNER. What I want to establish is a normal cost of doing business; at least those that show it, to be chargeable as a business expense.

Mr. MURPHY of New York. That is correct.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. McCloskey).

The amendment was rejected.

Mr. VAN DEERLIN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take this time to put two questions to the chairman of the committee.

This bill provides for allowing the Secretary to reduce the quota during calendar year 1978 and during the first quarter of 1979, if she finds—she or he—finds that such reduction, first, is feasible in view of the advancements made in the technology of fishing gear or fishing methods; and second, if he or she finds that such reduction should be imposed as a result of new information with regard to the size or the health of any dolphin population. With respect to the first criterion, I would like to be assured that the intent of the bill is that the quota be reduced only if it is economically and technically feasible.

Mr. MURPHY of New York. Mr. Chairman, if the gentleman will yield, I would like to state the original intent of the bill was to have the power in the Secretary to reduce quotas only upon such a finding. However, Mr. Chairman, I yield to the gentleman from Washington for a further explanation.

Mr. BONKER. Mr. Chairman, my amendment to the McCloskey amendment was to maintain the 69,000 quota for 1977 and, in the period between 1977 and 1980, would have deleted the original McCloskey amendment which provided for a 50-percent reduction. That was stricken, so quotas would be at the

discretion of the Secretary of Commerce during that period of time.

Mr. VAN DEERLIN. Mr. Chairman, my second question regards the provision for a 100-percent observer program through the first quarter of 1979. Is it the committee's intention that the observer program after March of 1979 be sufficient to provide a statistical sample of the fleet, but not necessarily be maintained at 100-percent coverage?

Mr. MURPHY of New York. Mr. Chairman, if the gentleman will yield, the gentleman's interpretation is correct. We require 100-percent observers for a period of time, until March 31, 1979, so that we can establish the facts as to numbers taken, as to dolphin pursued, and as to dolphin populations. After that, the observer program would be discretionary for the Secretary to utilize as he deems appropriate to carry out the purposes of the act.

Mr. VAN DEERLIN. Mr. Chairman, I thank the gentleman from New York.

Mr. KETCHUM. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I stand in support of the bill sponsored by my distinguished colleague from the State of New York.

For several months now we have been privy to both sides of the argument in the tuna-porpoise controversy. As we continue to debate this issue, we prolong the long-standing plight of the tuna fisherman, the tuna cannery worker, and other laborers contingent upon the industry. Over 30,000 jobs are at stake, and we must not delay any longer in resolving this problem.

Congressman MURPHY's course of action affords the soundest balance between the porpoise mortality rate and the catch of tuna. Instead of a marine mammal mortality rate of almost 100,000 in 1976, the bill will substantially lower the figure by 20,000.

I wish that I could stand here today endorsing a plan which would lower this rate even further. The cold, hard facts, however, dictate that this is a virtual impossibility. To allow our American tuna fishermen to get back on the job we must enact the prudent provisions of H.R. 6970 now.

Furthermore, we must not forget that the real porpoise conservationists in the future will not be the Government but the tuna fishermen themselves. Their current success in adopting new net designs and techniques has been commendable. They realize the great need to preserve the porpoises and will act accordingly. To monitor their progress, H.R. 6970 judiciously allows for an observer program to enable the Government to collect statistics on the porpoise populations and ongoing technological advancements in the field. In addition the bill requires the establishment of a tuna research vessel which would seek to reduce marine mammal mortalities. The end result is a positive step in the direction of conservation and the perpetuation of the tuna industry.

I commend my colleague for his great foresight, and I urge my fellow Members to vigorously support his incisive and far-reaching measures.

Mr. ROUSSELOT. Mr. Chairman, in

recent months, the regulations promulgated under the Marine Mammal Protection Act have almost succeeded in crippling the American tuna fishing industry. With the imposition of an impossible porpoise mortality quota system issued by the National Marine Fisheries Service, fishermen have been idled for over 2 months. Only because Congress has taken up the gauntlet, has the fleet agreed to sail. If we fail here today, an industry which directly impacts on all of us will be totally wiped out. When you consider the fact that Americans consume over 1.5 billion cans of tuna each year; that it is used in 84.1 percent of all our homes; that it represents 26 percent of all fish and shellfish eaten; and, that upwards of 55,000 jobs depend on our action, our responsibility is enormous.

H.R. 6970, to amend the Marine Mammal Protection Act of 1972 with respect to the taking of marine mammals incidental to the course of commercial fishing operations, comes as close as possible to the needs of the tuna fleet so that it may function at an economically viable level while still meeting the original intent of the Marine Mammal Protection Act. The bill's major provisions do the following: Establish an aggregate quota of incidental porpoise mortalities of 78,900 for calendar year 1977 and 1978, call for a 100-percent observer program for tuna vessels to observe the incidental take by the U.S. fleet and require the industry to provide a tuna vessel dedicated to research methods of reducing dolphin mortalities.

Mr. Chairman, the industry has come under fire from various environmental groups for not doing enough to save the dolphin. Nothing is further from the truth. Dolphin mortality works to the detriment of the fishermen in that a high number in the net can significantly slow set time and reduce fishing efficiency. I would like to point out that it was a fisherman who designed the backdown technique and it was a fisherman who invented the fine mesh webbing to prevent dolphin mortality due to entanglement. That webbing is now on 70 percent of the boats in the tuna fishing fleet and will be on them all as quickly as the Medina nets are produced.

Conservation of porpoise depends largely on the ability of the U.S. tuna fleet to continue to fish. Transfer of our boats to foreign flags would be disastrous because foreign vessels have a per boat kill rate 2½ times the rate of the American fleet. We all know that the Marine Mammal Protection Act cannot be effectively enforced against foreign concerns. As foreign nations capture a greater share of the tuna catch, more dolphins will be killed.

H.R. 6970 is a reasonable, balanced approach to the crisis we face in the tuna fishing industry. It allows additional time for research and discovery of new means to protect porpoise, while at the same time achieving a better catch of tuna. Unless this bill is passed, the almost 55,000 boat owners, captains, crewmen, yard workers, cannery workers, and cannery employees directly affected are going to be out of work. This translates into more unemployment compensation, more welfare,

more food stamps and greater dependence on foreign imports which further enlarges the balance of payments deficit. The economic impact of an American tuna industry shutdown would be disastrous. Let the tuna industry continue to reduce porpoise losses through improvements in gear and techniques, but let it also continue to grow and provide for a hungry world.

The CHAIRMAN. If there are no further amendments, the question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MONTGOMERY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 6970) to amend the Marine Mammal Protection Act of 1972 with respect to the taking of marine mammals incidental to the course of commercial fishing operations, and for other purposes, pursuant to House Resolution 594, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. RUSSO. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. The Chair will count.

One hundred and sixty-one Members are present, not a quorum.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 334, nays 20, not voting 79, as follows:

[Roll No. 295]

 Mr. Scheuer with Mr. Steers.  
 Mr. Roe with Mr. Wampler.  
 Mr. Whitten with Mr. Whalen.  
 Mr. Delaney with Mr. Lujan.  
 Mr. Taylor with Mr. Wiggins.

Mr. MAGUIRE changed his vote from "yea" to "nay."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

#### GENERAL LEAVE

Mr. MURPHY of New York. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on H.R. 6970, the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

PEACE CORPS AUTHORIZATION FOR  
FISCAL YEAR 1978

Mr. HARRINGTON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 6967) to authorize appropriations for the Peace Corps for fiscal year 1978.

The SPEAKER. The question is on the motion offered by the gentleman from Massachusetts (Mr. HARRINGTON).

The motion was agreed to.

## IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 6967, with Mr. CHARLES H. WILSON of California in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Massachusetts (Mr. HARRINGTON) will be recognized for 30 minutes and the gentleman from Kansas (Mr. WINN) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Massachusetts (Mr. HARRINGTON).

Mr. HARRINGTON. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I am pleased to speak today in support of H.R. 6967, which was reported by the International Relations Committee to authorize Peace Corps programs for fiscal year 1978.

First, the major purpose of the bill is to authorize \$81 million for continued Peace Corps operations during fiscal year 1978. This level is exactly the same sum as authorized for fiscal year 1977, and is \$3.8 million lower than the administration's current budget request. At the time the committee acted, however, the administration supported an open-ended authorization, until the new ACTION Director could formulate a new fiscal year 1978 budget and program. Rather than leaving the funding level open as requested, the committee decided to set the authorization at \$81 million, so as to insure that Peace Corps programs could continue at their current level.

Second, the bill authorizes such sums as may be necessary for increases in salary, pay, retirement, or other employee benefits authorized by law. This is a standard provision, estimated by the Congressional Budget Office to amount to no more than \$1 million.

While our immediate concern must necessarily rest with the budget figures I have just explained, I feel it is more instructive to look beyond the numbers, to see just what the Peace Corps is and what it is trying to accomplish.

In 1977, the Peace Corps is a more mature 16-year-old, which has matched the idealistic energy of many Americans with the material needs of people in developing countries. It has enriched both a generation of Americans, through a unique international adventure, and the many people in need with whom they have worked abroad.

More importantly, in 1977, the unemployment rate among our youth has reached an alarmingly high 13 percent, with over 2.5 million people between ages 18 and 24 without creative outlets for their energies and talents. Among these underutilized young people who are clearly not finding fulfilling work outlets, as well as among the public at large, there has been a general declining faith in Government, a loss of the kind of idealistic spirit which made the Peace Corps possible in 1961.

Despite these social trends which seem to call for an expansion of the Peace Corps efforts, Peace Corps applications dropped in the last 10 years by over half. Volunteer strength dropped from a high of 12,000 in 1967 to less than 6,000 at present. A national asset of symbolic, as well as practical importance, was allowed to atrophy as a result of conscious policy.

This year's bill represents a reversal of that trend. By holding the authorization level at \$81 million, against earlier administration requests for a lower figure, the bill stems the financial hemorrhage of Peace Corps programs of recent years. It insures a stable flow of trainees and a slight increase in volunteer strength, the first such increase in 3 years.

But even more important than the actual funds it authorizes, this bill represents a new commitment by both the Congress and the administration to "revitalize," in Vice President MONDALE's words, the Peace Corps and restore its role as an aggressive and innovative part of U.S. development programs abroad. The committee report details the changes in emphasis and program direction contained within the budget total and endorsed by the committee. In short, these changes can be summed up as a greater recruitment effort; a renewed emphasis on the generalist volunteers of all ages, with specialized skill training where needed; new country programs stressing grassroots development programs designed to meet basic human needs; and an increase in volunteer strength.

The committee was well aware of some proposals to changing the bureaucratic structure which places Peace Corps within the larger volunteer agency, ACTION, but felt that the important task of restoring a program's vitality, vision, and strength took a first priority to reshuffling the lines on an organizational chart. We are not unmindful that organization can affect the nature of a program, and thus we intend to consider the various proposals—in cooperation with ACTION officials who have willingly agreed to join in that effort—in due course.

As noted in the committee report—

The innovative spirit and energy of a new administration and a new ACTION management team . . . encourages the Subcommittee to refrain from seeking an organizational solution to the Peace Corps' past problems.

Aggressive and creative leadership, as well as a conducive organizational structure, are both required for any program to meet its full potential. This year's bill seeks to encourage the new admin-

istration to fulfill the former goal, while leaving until next year's bill the resolution of the latter.

In conclusion, I urge the adoption of this bill, as recommended by the Committee on International Relations, both because it preserves the spirit that created Peace Corps in 1961, and enables Peace Corps to better meet its global task for 1977 and beyond.

Mr. WINN. Mr. Chairman, I rise in support of H.R. 6967, a bill to authorize funding for the Peace Corps for fiscal year 1978. Passage of this bill will permit the new leadership at ACTION, the parent organization of the Peace Corps. To commence the groundwork for the "revitalization" of the Peace Corps promised when the new ACTION Director appeared before the Subcommittee on International Development of the International Relations Committee.

H.R. 6967 is a very simple piece of legislation, containing only two provisions. It authorizes \$81 million for fiscal year 1978 plus such sums as may be necessary for increases in salary, retirement, or other benefit authorized by law. This is precisely the same level of funding authorized for the last fiscal year, fiscal year 1977.

The Carter administration had originally submitted an authorization request for \$74.8 million. That figure was submitted prior to the appointment of the new ACTION Director, Mr. Brown, and that initial request represented a cutback in Peace Corps programs and volunteer levels. Twelve days after his appointment as Director of ACTION, Sam Brown testified before the Subcommittee on International Development. Mr. Brown outlined generally his intention to, in his word, "revitalize" the Peace Corps. Due to his very short tenure as ACTION Director at that point, Mr. Brown was naturally unable to provide the subcommittee with much in the way of details on the implementation of the administration's revised policy. The proposed revitalization was broadly described in terms of reemphasizing direct assistance programs of intermediate technology and development skills addressed to the basic human needs of the poorest people in host countries. Implementation of these initiatives contemplates expansion and improvement in Peace Corps recruitment and upgrading of volunteer training programs, including the expansion of the skills training program.

The committee refrained from acting on the Peace Corps authorization legislation for more than a month and one-half in the hope and expectation that the administration would complete internal executive branch action on a revised Peace Corps budget request consistent with the revitalization policy. When a revised budget request was not forthcoming and after the lengthy period I mentioned, the subcommittee felt that mark-up could no longer be delayed.

The subcommittee knew at that point of the administration's revised policy of "revitalization" of Peace Corps programs, and that an authorization at the level of the administration's original request

would not be consistent with the revised administration policy. The subcommittee, therefore, struck a compromise between recommending a justifiable, but clearly inadequate authorization level or arbitrarily setting a higher figure without the benefit of a detailed justification from the administration. That quite reasonable compromise was to recommend an authorization level the same as that of fiscal year 1977, \$81 million. An \$81 million authorization would allow the administration to take some initial steps to begin implementation of its new policy for the Peace Corps.

Two additional points are worth mentioning in closing. First, on May 17, 1977, ACTION officially notified the Speaker of the House of the administration's new budget request of \$84.8 million, \$3.8 million more than the amount proposed in H.R. 6967. Secondly, on May 23, the Foreign Operations Subcommittee of the Appropriations Committee approved an appropriation for the Peace Corps for fiscal year 1978 of \$81 million, the same level as the authorization proposed in H.R. 6967.

The Peace Corps' direct, people-to-people, self-help assistance programs have been helpful to some of the poorest people in developing countries. They have also provided a creative outlet for the energies of countless Americans of all ages. More importantly in the long run, perhaps, is the fact that Peace Corps programs, carried on as they are by citizen volunteers, are a concrete expression of the innate value of human beings as individuals and the dedication to helping our fellow men improve their condition which are fundamental American ideals.

In conclusion, I urge the passage of H.R. 6967.

Mr. Chairman, I yield such time as he may consume to the gentleman from Michigan (Mr. BROOMFIELD).

Mr. BROOMFIELD. Mr. Chairman, I also wish to indicate my support for the passage of H.R. 6967. The Peace Corps was established in 1961 to mobilize American volunteers willing to assist the people of host countries and to promote better understanding between the American people and the people of other countries. Despite profound changes in the world situation since the creation of the Peace Corps, and in spite of administrative and other problems which have arisen from time to time, the Peace Corps has generally been effective in providing capable, volunteer, self-help assistance to needier people abroad on a direct, people-to-people basis.

I welcome the new ACTION leadership's announced intention to place greater emphasis on Peace Corps programs which provide assistance in the form of intermediate technology useful in helping the people of host countries to meet basic human needs. In this regard, the Peace Corps apparently intends to increase the recruitment of interested "generalists" as volunteers who will then be put through more extensive intermediate technology skills training. I certainly hope this announced policy is not merely a euphemistic expression to cover a return to the style of that period when the less mature products of some of our

campuses used service in the Peace Corps as a vehicle for expressing their own personal political views abroad.

I am confident that the committee will exercise careful and comprehensive oversight to insure that such politicization does not occur. Hopefully, the new leadership at ACTION can strike a balance between the past when too many volunteers were long on enthusiasm and short on needed skills and the trend that some see emerging of putting too much emphasis on volunteers who are much more highly skilled than actually necessary to the people-to-people, self-help programs at which the Peace Corps has been most successful.

I have supported the Peace Corps in the past and I feel the new leadership should be given an opportunity to perform on its promises. Therefore, I intend to support H.R. 6967.

Mr. WINN. Mr. Chairman, I yield such time as he may consume to the gentleman from Massachusetts (Mr. CONTE).

Mr. CONTE. Mr. Chairman, I rise in support of this measure to authorize appropriations for the Peace Corps for fiscal year 1978.

My contact with the Peace Corps has been extensive during the 16 years of its existence, and I continue to believe that it is one of the most effective instruments of American foreign policy we have.

As a member of the Foreign Operations Appropriations Subcommittee, I have seen the Peace Corps develop, expand, and improve over the years. And on several occasions, I have had the opportunity to see the Peace Corps in action, in the field.

On these visits, I have been tremendously impressed with the caliber of our Peace Corps volunteers, and with the great work being done by them. Perhaps the most impressive thing I found was the reaction of the people of the host country toward the Peace Corps presence.

I have been out to some Peace Corps outposts hundreds of miles away from anything, where there is no electricity, no running water, even no radio. Many of the people out there did not know anything about international relations or the competition between the United States and the Soviet Union. But what they did know was that the United States had sent them a Peace Corps volunteer or team to help them improve their water supply, or show them how to grow more and better food, or help build a school and teach them how to read and write.

And perhaps most important, they were grateful.

During the 1960's when anti-American feelings ran so high throughout the world, the Peace Corps was often the only American presence many of these countries would accept. And under such circumstances, the Peace Corps did an outstanding job of making friends for the United States.

The new administration has declared its commitment to "revitalize" the Peace Corps, through an active and aggressive recruitment program and a major effort to focus Peace Corps activities on those areas which are best suited for this kind of attention.

Among other things, the Peace Corps program is uniquely equipped to promote the dissemination of light or "appropriate" technology, a matter which has been of considerable interest to both the authorizing and appropriations committees.

Mr. Chairman, I strongly support this people-to-people approach to development, and urge the approval of this authorization.

Mr. HARRINGTON. Mr. Chairman, I yield such time as he may consume to the gentleman from Wisconsin (Mr. ZABLOCKI), chairman of the Committee on International Relations.

Mr. ZABLOCKI. Mr. Chairman, I rise in support of H.R. 6967, a bill to authorize appropriations for the Peace Corps for fiscal 1978 and fully endorse the recommendations of our International Relations Committee's Subcommittee on International Development.

I wish to commend the subcommittee chairman, Mr. HARRINGTON and the members of the subcommittee for reporting a Peace Corps' bill that deserves the enthusiastic support of all Members of Congress.

As the gentleman from Massachusetts (Mr. HARRINGTON) has pointed out, the authorization level contained in this bill is the amount approved by the full committee in its original views and estimates report to the committee on the budget and subsequently in markup. It represents \$3.8 million less than the administration's revised request, which was submitted too late to be considered by our committee, but which has subsequently been approved by the Senate. In other words, this is a minimal authorization request we are acting upon today—which provides for no expansion in the program over fiscal year 1977—and is clearly justifiable, especially when inflationary cost factors are taken into account.

As Members are aware, the Peace Corps is currently in a period of transition—with a new ACTION Director and Deputy Director on board, but with a number of key appointments still pending.

The new management team at ACTION is now in the process of reviewing and evaluating Peace Corps program objectives and clearly has not yet had a chance to "put its act together"—so to speak. The appointment of a new Peace Corps Director—the so-called Associate Director of ACTION for International Operations—is the most pressing need at the moment, upon which other management decisions are largely dependent. In this connection, I would like to call attention to the following observation, included in the committee's report:

In the Committee's judgment, major attention should be devoted to the recruitment of qualified Peace Corps leadership, both in Washington and overseas, to provide adequate direction to, and supervision over, Peace Corps activities worldwide. The future of the Peace Corps is largely dependent on ACTION's success in meeting this important goal.

During the past several years, the committee's oversight of Peace Corps operations has uncovered problems in the personnel field—especially ACTION's apparent inability to maintain continuity in the country director position. As docu-

ments included in this year's hearing record confirm, the high turnover in country directors has continued during fiscal year 1977—especially in West Africa. I hope, therefore, that ACTION will give this matter its immediate, priority attention.

Experience confirms that good projects and successful programs do not just happen—they have to be planned carefully and coordinated with most government officials who will be responsible for their implementation. Getting the right people to perform this function is therefore essential to program effectiveness.

Other management problems also need to be addressed. Among these are: Inadequate advance programing and, especially, followup on Peace Corps volunteer assignments; a lack of coordination between Washington and the field; and inadequate screening procedures to select out unacceptable candidates before they are sent overseas. These are problems, I should add, of longstanding which have been inherited by the present administration. In all fairness, the new ACTION team should be given sufficient time to conduct its review and take corrective action wherever feasible. The committee will, however, be monitoring the progress in these areas—or lack of it—in the years ahead.

While there is some understandable impatience among our committee membership to "get on with the job" of revitalizing the Peace Corps and making it more effective, I would also urge the ACTION leadership to move cautiously and advisedly, as well as vigorously, in devising and introducing new programs. Above all, it is essential that volunteers have real jobs to perform—jobs which the host governments both need and are willing to support—before volunteers are sent overseas in large numbers. One good volunteer, it has been pointed out, is worth several marginal contributors and can have a multiplier effect which is positive and beneficial. Conversely, one Peace Corps failure can serve to discredit an entire program.

With these thoughts in mind, Mr. Chairman, I ask my colleagues to give the new ACTION Director and his colleagues an opportunity to put the Peace Corps house in order and provide the type of direction which is clearly required. This authorization will enable the Peace Corps to do precisely that, and I urge the adoption of H.R. 6967, as reported by the Committee on International Relations.

Mr. HARRINGTON. Mr. Chairman, I yield such time as he may consume to the gentleman from Michigan (Mr. CARR).

Mr. CARR. Mr. Chairman, I rise in strong support of this legislation. I only wish as a strong supporter of the Peace Corps that we were moving ahead this year. I would like to ask the chairman of the subcommittee a few questions about why we are not moving ahead faster.

I think by passing this bill in this manner we are really slipping in one important year when the Peace Corps could really further its development.

I have had occasion to give some time

and attention to monitoring what has been going on down there with respect to the Peace Corps. I am disappointed that my good friend Hon. Sam Brown has not moved with more dispatch in naming a new Director for the Peace Corps. I am wondering if the gentleman's hearings on this particular piece of legislation shed any light on what seems to be the problem in getting some personnel appointed. I am not sure we are going to have that new and revitalized plan for the Peace Corps if we do not have any people to lead it. Apparently the new team has had other things to take their time and attention. I appreciate that they have had a whole new set of problems to deal with, but I think with President Carter's orientation on foreign policy, the Peace Corps should be a high priority and that directorship should get filled.

Can the chairman of the subcommittee enlighten me?

Mr. HARRINGTON. Mr. Chairman, if the gentleman will yield, I think the gentleman has summed up essentially what is a bipartisan concern and what has been expressed publicly and privately with Mr. Brown. I talked to him in the middle of last week and expressed this concern again and was assured they have personnel for a couple of areas of some significance and they would hope very soon that they will have found and named publicly someone to take over the directorship of the operation.

We hope it works. The gentleman has already described this will be done. We concede the effort made to convey the urgency and enthusiasm that Mr. Brown brought to the committee early this spring. Let me say parenthetically in defense of the program that all the problem of personnel and administration has been one imposed within the administration by the Office of Management and Budget in attempting to determine what the level of funding might be and what he might be doing to induce talent and fulfill this role; but I do not think there have been answers to the concerns the way the gentleman has described. I am glad the gentleman has had this chance to reinforce our concerns, since we wish him well to do that quickly.

Mr. CARR. Mr. Chairman, we do wish him well and we do support the Peace Corps.

I have heard a number of rumors about people being offered jobs and refusing and another whole group of applicants who seem ably qualified and have been interviewed and have been in the mill and have not had a job offer extended to them. It all seems rather peculiar, when we relate that to the rest of the job-filling activities of the administration.

I would just hope that the subcommittee would prod Mr. Brown to meet with the subcommittee and do it quickly.

Mr. WINN. Mr. Chairman, I yield such time as he may consume to the gentleman from Florida (Mr. BURKE).

Mr. BURKE of Florida. Mr. Chairman, I rise in opposition to H.R. 6967. My views on this subject have been expressed in the committee report, and I do not intend to spend your time or that of my

colleagues in repeating them. There are some additional observations I would like to make.

I believe that the impulse which gave rise to the Peace Corps was well-meant and generous, but that the Peace Corps never fit into our foreign policy, because it never was thoroughly clear just what the Peace Corps was supposed to do. Those programs which it has undertaken successfully either have been due to the energy of our fine young people or organizations that could have just as well been done by the Agency for International Development or private, volunteer organizations.

You will note, Mr. Chairman, that my distinguished colleague, Mr. HAMILTON, perceptively questions the administrative structure of the Peace Corps, raising questions that when carried to their logical extreme suggest to me at least that those things the Peace Corps should do could in most instances be assigned to the Agency for International Development. Mr. WINN, my good friend from Kansas, also has questions about the administration's commitment to the Peace Corps. I share his concern. Once again, if you take his questions seriously, as I do, it is hard to escape the conclusion that administrative uncertainty reflects continuing problems with the Peace Corps that could best be solved by simply forcing the valuable programs into other, more viable agencies.

I recognize that both my capable colleagues favor continuing funding for the Peace Corps, and say so in their respective supplemental views. I am not optimistic that at this late stage I can persuade this body to perform the surgery necessary. I plan to vote against this bill. I believe we should force the administration to put the good programs in AID—and if necessary, Congress should take a good hard look at that Agency's approach—and leave others to the appropriate volunteer organizations. We can save ourselves considerable money, tighten up our foreign policy apparatus, and eliminate a source of considerable suspicion about the United States abroad. I encourage my colleagues to join me in voting against this authorization.

Mr. WINN. Mr. Chairman, if I may continue, I will guarantee the gentleman from Florida that this Member will do everything possible to see to it that the new revitalization plans of Mr. Brown and the Peace Corps, as soon as it gets a new Director appointed, are thoroughly investigated. We will not just take their word for it in the future that they hope to have this revitalization plan.

I know, too, that the chairman of the subcommittee wants to know more about what this revitalization means, how we can cope with it, and what we can do to help revitalize the Peace Corps.

Mr. Chairman, I have just returned from a United States-Canadian Inter-Parliamentary Group meeting in Canada this past weekend. It was quite clear that our friends to the north are quite concerned about third world activities, as well they should be. It was quite clear, too, that they intend to do everything

possible to help their philosophy be accepted in the third world countries.

We have through the Peace Corps, even though it does not have a Director at the present time, a way for us to have access to a great many of these third world countries. There may be other ways, and there are other ways, in which we have access to the people, particularly the poor people of these countries; but the Peace Corps has been basically a successful organization. It still has, of course, a long way to go; but I will guarantee the gentleman from Florida that I will do everything possible to make it effective. We may not be able to satisfy the gentleman's wants, but we will keep an eye on the Peace Corps to see that we get our money's worth.

As I pointed out earlier, the other body did approve an authorization of \$84.8 million, which obviously is more than the \$81 million that we are requesting.

Mr. Chairman, I yield back the balance of my time.

Mr. DERWINSKI. Mr. Chairman, since the late 1960's when the Peace Corps matured, I have been a consistent supporter of the program. At that time, the Peace Corps began a determined and successful effort to recruit volunteers with maturity and skills as well as the "missionary zeal" of previous years. As a result, the Peace Corps in recent years has become widely accepted—in fact sought after—by developing nations. Under our former colleague, John Delenbach, the Peace Corps received more requests for the services of its volunteers than it could meet.

Now we are beginning a new era in which the Peace Corps is to be "revitalized" under its new leadership. I trust we will not find the Peace Corps radicalized to the point where volunteers become more committed to political action than they are to the down-to-earth jobs through which they are to help the people of developing nations to help themselves.

I will continue to support the Peace Corps so long as it reflects the positive developments of the last several years, which I hope will survive the process of "revitalization."

Mr. COLLINS of Illinois. Mr. Chairman, I take this occasion to join my colleagues in support of H.R. 6967. This bill, which effectively maintains the Peace Corps budget at the \$81 million level authorized for fiscal year 1977, is essential to the revitalization of this unique institution.

It is my feeling that the goals of the Peace Corps have always been sound government policy. As defined in the Peace Corps Act, they include the promotion of world peace and friendship by helping to meet the need for trained manpower and by developing mutual understanding between Americans and other peoples.

In my opinion, the problems that have befallen the Peace Corps in recent years have been the result of subordinating these humanitarian principles to the policies of an administration that was, on the whole, insensitive to the real needs of the Third World and to the fundamental idealism of young Americans.

A revitalized Peace Corps, one that combines professionalism with idealism, is a necessary component to the "New Directions" that the present administration hopes to undertake in its policy toward the developing countries. Our failure, at this time, to lend substance to this ideal, would rightly be interpreted by the people of this country, as well as by people overseas, as a continuing and dismal lack of faith in the possibility of international cooperation at the grass roots level.

For these reasons, I urge my colleagues to approve H.R. 6967.

Mr. HARRINGTON. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

H.R. 6967

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 3(b) of the Peace Corps Act is amended by inserting "and for fiscal year 1978 not to exceed \$81,000,000" immediately after "\$81,000,000,"*

*(b) Section 3(c) of such Act is amended—*  
*(1) by striking out "and fiscal year 1977" and inserting in lieu thereof "for fiscal year 1977, and for fiscal year 1978 by subsection (b)"; and*

*(2) by striking out "for fiscal year 1977" and inserting in lieu thereof "for fiscal years 1977 and 1978."*

The CHAIRMAN. If there are no amendments, under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. CHARLES H. WILSON of California, Chairman of the Committee of the Whole House on the State of the Union, reported that that committee, having had under consideration the bill (H.R. 6967) to authorize appropriations for the Peace Corps for fiscal year 1978, pursuant to House Resolution 600, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. CHARLES H. WILSON of California. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 305, nays 43, not voting 85, as follows:

The Clerk announced the following pairs:

Mr. Thompson with Mr. Anderson of Illinois.  
 Mr. Teague with Mr. Roncalio.  
 Mr. Breaux with Mr. Devine.  
 Mr. Lehman with Mr. Ashbrook.  
 Mr. Mann with Mr. Goodling.  
 Mr. Mazzoli with Mr. Hollenbeck.  
 Mr. Weaver with Mr. Dornan.  
 Mr. Stratton with Mr. Jeffords.  
 Mr. Fountain with Mr. Flood.  
 Mr. Nichols with Mr. Brown of Michigan.  
 Mr. Florio with Mr. Hammerschmidt.  
 Mr. Dent with Mr. Marlenee.  
 Mr. Chappell with Mr. Broyhill.  
 Mr. Bingham with Mr. Gary A. Myers.  
 Mr. Koch with Mr. Flynt.  
 Mr. Millford with Mr. Harsha.  
 Mr. Miller of California with Mr. Don H. Clausen.  
 Mr. Mineta with Mr. Martin.  
 Mr. Neal with Mr. Lloyd of California.  
 Mrs. Burke of California with Mr. Pressler.  
 Mr. Waxman with Mr. Downey.  
 Mr. Zeferetti with Mr. Michel.  
 Mr. Ichord with Mr. Price.  
 Mr. Jenrette with Mr. Long of Maryland.  
 Mr. Aspin with Mr. Pursell.  
 Mr. Fary with Mr. McKinney.  
 Mr. Fraser with Mr. Young of Missouri.  
 Mr. Harkin with Mr. Sebelius.  
 Mr. Mollohan with Mr. Railsback.  
 Mr. Smith of Iowa with Mr. Skubitz.  
 Mr. McCormack with Mr. Young of Alaska.  
 Mrs. Schroeder with Mr. Wyder.  
 Mr. Scheuer with Mr. Steers.  
 Mr. Ford of Michigan with Mr. Wampler.  
 Mr. Whitten with Mr. Whalen.  
 Mr. Heftel with Mr. Burleson of Texas.  
 Mr. Delaney with Mr. Early.

Mr. MEEDS changed his vote from "nay" to "yea."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

Mr. HARRINGTON. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate bill (S. 1235) to further amend the Peace Corps Act.

The Clerk read the title of the Senate bill.

The SPEAKER pro tempore (Mr. McFALL). Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Clerk read the Senate bill, as follows:

## S. 1235

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That so much of section 3(b) of the Peace Corps Act (22 U.S.C. 2502(b)) as precedes the first proviso thereof is amended to read as follows: "There are authorized to be appropriated for fiscal year 1978 not to exceed \$84,800,000 to carry out the purposes of this Act."*

SEC. 2. Section 3(c) of the Peace Corps Act (22 U.S.C. 2502(c)) is amended to read as follows:

"(c) In addition to the amounts authorized for fiscal year 1978, there are authorized to be appropriated for fiscal year 1978 \$1,000,000 for increases in salary, pay, retirement, or other employee benefits authorized by law."

## MOTION OFFERED BY MR. HARRINGTON

Mr. HARRINGTON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. HARRINGTON moves to strike out all after the enacting clause of the Senate bill S. 1235 and to insert in lieu thereof the provisions of H.R. 6967, as passed, by the House.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "To authorize appropriations for the Peace Corps for fiscal year 1978."

A motion to reconsider was laid on the table.

A similar House bill (H.R. 6967) was laid on the table.

## GENERAL LEAVE

Mr. HARRINGTON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on H.R. 6967, just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

## COMMUNICATION FROM SERGEANT AT ARMS—SUBPENA AND FINDINGS OF COURT

The SPEAKER pro tempore laid before the House the following communication from the Sergeant at Arms:

WASHINGTON, D.C.,  
June 1, 1977.

HON. THOMAS P. O'NEILL, Jr.,  
The Speaker,  
U.S. House of Representatives,  
Washington, D.C.

DEAR MR. SPEAKER: On May 24, 1977 I was served with the attached subpoena duces tecum, together with the accompanying court findings, for certain bank records of the Honorable Richard T. Hanna and the Honorable Cornelius Gallagher.

By previous subpoena and order, certified copies of certain bank records of Congressman Hanna, for the period January 1, 1970 to December 31, 1974, and of Congressman Gallagher for the period January 1, 1970 to De-

cember 31, 1972, were furnished to representatives of the Department of Justice. The instant subpoena and order concern records relating to transactions conducted by Congressman Hanna for the period January 3, 1975 to June 23, 1975 and by Congressman Gallagher for the period January 1, 1973 to May 11, 1973, during which periods of time neither were Members of Congress.

In accordance with the provisions of House Resolution 10, I am transmitting said subpoena and order and the matter is presented for the consideration of the House.

Sincerely,

KENNETH R. HARDING,  
Sergeant-at-Arms,  
U.S. House of Representatives.

The SPEAKER pro tempore. Pursuant to the provisions of House Resolution 10, without objection, the subpoena and findings of court will be printed in the RECORD.

There was no objection.

The subpoena and findings of court referred to follow:

[In the U.S. District Court for the District of Columbia, Misc 77-0113]

## SUBPENA DUCES TECUM

In re Possible Violations of 18 U.S.C. §§ 201 and 371:

To: Honorable Kenneth R. Harding, Sergeant at Arms, U.S. House of Representatives, Washington, D.C. or his authorized representative

Bring with you: All bank records, not heretofore produced pertaining to accounts maintained with you by former Congressmen Richard T. Hanna and Cornelius Gallagher from 1971 until such accounts were closed. Records should include monthly statements, deposit slips and checks and deposit items in the amount of \$500 or more.

You are hereby commanded to appear before the Grand Jury of this Court on Monday, June 13, 1977 at 10:00 a.m. to testify and produce the aforesaid documents on behalf of the United States, and not depart the Grand Jury without leave of the Court or the United States Attorney.

Witness this 23rd day of May, 1977.

JOHN J. SERICA,  
Judge.

[Misc. No. 77-0113]

## FINDINGS OF COURT

In re Possible Violations of 18 U.S.C. §§ 201 and 371.

Upon consideration of *in camera* disclosures made by representatives of the Office of the United States Attorney for the District of Columbia and of U.S. House of Representatives Resolution No. 10 adopted January 4, 1977, it is this 23rd day of May 1977,

Found, that the papers, documentary evidence, and materials subpoenaed under the subpoena duces tecum dated May 20, 1977, and addressed to the Honorable Kenneth R. Harding, Sergeant at Arms of the House of Representatives of the United States or his authorized representative, a facsimile of each of which is attached hereto, are necessary, material, and relevant to a pending Grand Jury investigation in this judicial district and in this Court for the promotion of justice.

Wherefore, the Court desires that the documentary evidence or certified copies thereof which are the subject of the subpoena duces tecum be supplied to its authorized representative and agent, Clerk of this Court James F. Davey, accompanied by Department of Justice Attorneys John Kotelly and Craig Bradley as representatives of the proper party to this proceeding, to wit: the Federal Grand Jury, pursuant to said subpoena duces tecum and in conformance with House Resolution No. 10.

JOHN J. SERICA,  
Judge, U.S. District Court for the District of Columbia.

# A CALL FOR CONGRESSIONAL INITIATIVE IN WELFARE REFORM

(Mr. THONE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. THONE. Mr. Speaker, in general, Congress has not shown enough initiative on legislation. Too often, Congress has only reacted to proposals from the executive branch. Too seldom has Congress led the way in offering solutions to America's most urgent problems. And as the House majority leader said yesterday, "If the President and the Congress agree on everything—one of them would not be doing his job."

Specifically, it is time for Congress to take the lead in the field of welfare reform.

Shortly after his inauguration, President Carter ordered that a plan for complete overhaul of America's welfare programs be given him by May 1st. The goals for welfare reform that have been presented to him have been extremely vague. Secretary of Health, Education, and Welfare Joseph Califano has said that it may be impossible to get welfare reform without higher costs than under our present scattered programs. This delay is intolerable.

As a recent Christian Science Monitor editorial said,

If President Carter delays welfare reform as long as his statement this week suggests, Congress ought to move ahead of him on this urgent matter. No one could fault Mr. Carter's generalized goals of efficiency, fairness, family stability and encouragement to the self-help for those who can help themselves which is central to individual morale and national vitality. But after the experience of several previous administrations and the elaborate publicized study by this one, it is too easy to say, as Mr. Carter did, that "it is worse than we thought"—and put off necessary action.

Mr. Speaker, I suggest that the House attack the welfare reform problem directly. I recommend that the Speaker establish immediately an ad hoc Committee on Welfare. This would be made up of members of the committees which presently deal with the myriad of welfare and public assistance programs. It would draw upon the existing committees for staff. The committee would expire once its job was done.

Mr. Speaker, we can achieve welfare reform now. We can treat the American public—including the disadvantaged—more fairly. We can encourage the work ethic. We can do all these things within the limits of present spending for scattered welfare programs.

For the good of America, it is urgent that we complete this task in the current Congress. Mr. Speaker, I urge adoption of the resolution I am now introducing for the ad hoc Committee on Welfare to attack this problem.

# ILLEGAL ALIENS BEING REFERRED FOR JOBS BY U.S. EMPLOYMENT SERVICE

(Mr. SISK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SISK. Mr. Speaker, I am sure my colleagues will be as shocked as I was to learn that the U.S. Employment Service, at least in California, is referring illegal aliens to jobs.

If the situation were not so serious, I would be inclined to laugh at the absurdity of it all. But it is no joke. Consider that we have the Immigration and Naturalization Service, on the one hand, apprehending and removing illegal aliens, while on the other, the Department of Labor is helping them find jobs.

The Congress has not as yet been able to adopt meaningful legislation to make it illegal for most employers to hire illegal aliens, but under the Farm Labor Contractor Registration Act, farm labor contractors are prohibited from knowingly hiring illegal aliens. The Farm Labor Contractor Registration Act is also administered by the Department of Labor. Thus, we have one agency referring illegal aliens to employers, while at the same time it is prosecuting certain employers for hiring such aliens.

I believe this practice must be stopped, and I have written to the Administrator of the U.S. Employment Service and the Governor of California to urge them to look into the problem and to take appropriate measures to insure that illegal aliens are not referred to jobs by State and Federal employment offices. I insert those letters for my colleagues' review:

HOUSE OF REPRESENTATIVES,  
Washington, D.C., May 23, 1977.

Mr. WILLIAM B. LEWIS,  
Administrator, U.S. Employment Service, U.S.  
Department of Labor, Patrick Henry  
Building, Washington, D.C.

DEAR Mr. LEWIS: I am shocked by reports that many of the offices of the U.S. Employment Service throughout the country are referring illegal aliens for work.

The illegal alien, by the very nature of his undocumented and unauthorized status is not supposed to be in this country, let alone be employed. While the Immigration and Naturalization Service, on the one hand, is charged with the responsibility of apprehending and removing those aliens in this country illegally, it appears that the Department of Labor is encouraging illegal aliens to violate the law by accepting unauthorized employment.

Recently I have received numerous complaints from constituent employers who have received illegal alien referrals from the U.S. Employment Service. One such employer, a farm labor contractor, is prohibited by law from "knowingly" hiring illegal aliens. Yet the Department of Labor, which administers the Farm Labor Contractor Registration Act, is through another division, the U.S. Employment Service, telling him to hire illegal aliens.

I am enclosing for your information a copy of an article which recently appeared in the "Fresno Bee" on this problem. I believe your Department has the responsibility to stop this practice of referral of illegal aliens to jobs. It is aiding and abetting those already in violation of our laws.

I would appreciate your investigation into this problem and your report on your findings and contemplated corrective action. It seems to me that appropriate regulations should be adopted to prohibit State Employment agencies from referring illegal aliens, and to require such agencies to report illegal aliens seeking employment to the Immigration and Naturalization Service. Your early response will be appreciated.

Sincerely,

B. F. SISK,  
Member of Congress.

# BROWN BLOCKING EFFORTS TO STEM ILLEGAL ALIEN FLOW?

LOS ANGELES. A Federal effort to stem the flow of illegal aliens into California is meeting opposition from the Brown Administration, federal immigration official says.

Joseph Sureck, district director of the Immigration and Naturalization Service, has complained in a letter to Gov. Brown that California unemployment offices simply accept a person's word on whether he is an illegal alien.

A copy of the letter was obtained by the Los Angeles Times.

"The illegal alien problem and the resultant unemployment that it generates, is one of our most serious domestic issues," Sureck wrote. He added that the state has "sought to ignore and disregard federal and state laws" designed to curb the problem.

Brown's only reply has been that he is waiting for President Carter's final proposal for dealing with illegal aliens and that he depends on state agencies to obey the law.

However, key Brown appointees have said they oppose the current state law calling for punishment of employers who knowingly hire illegal aliens.

Martin Glick, director of the California Department of Economic Development, has said that he and state health and welfare secretary Mario Obledo "completely agree" that such laws are "wrong and unworkable."

Glick contends that enforcements on such a law would result in discrimination against all brown-skinned Spanish-speaking workers.

Sureck said unemployment offices often send illegal aliens out to fill jobs that have often just been vacated by other illegals apprehended by federal officers.

In addition, Glick conceded that state unemployment offices do not report illegal workers to the INS.

"We must preserve the integrity of the system so people will give you full and honest and complete information when you ask them for it. So we don't turn over the names," said Glick, adding, "We just ask the questions. If a person says 'I am a U.S. citizen,' that's the end of it. Always has been."

HOUSE OF REPRESENTATIVES,  
Washington, D.C., May 25, 1977.

HON. EDMUND BROWN, JR.,  
Governor, State of California, State Capitol,  
Sacramento, Calif.

DEAR JERRY: Recently I noticed a wire service report out of Los Angeles which indicated that the State of California has "sought to ignore and disregard federal and state laws" designed to curb the illegal alien problem. Specifically the report stated that State employment offices under the Employment Development Department were referring illegal aliens to jobs.

I fully realize that we do not yet have a federal law which would impose sanctions on employers for hiring illegal aliens "knowingly," but the fact remains that the undocumented or illegal alien by the very nature of his status is not supposed to be in this country, let alone be employed. By referring illegal aliens to jobs, your Department is deliberately aiding and abetting the law breaker.

Farm labor contractors are, however, prohibited by federal law from "knowingly" hiring illegal aliens, yet according to some farm labor contractors in my district, the State employment office frequently refers illegal aliens to them for employment. It seems to me that if we are going to impose sanctions on employers for hiring illegal aliens, then at the very least we should expect that the government agencies which refer workers have done some checking to ascertain their citizenship or alien status. I would like to know what, if any, check is made by state employment offices to ascertain the status of aliens they refer to jobs.

On a related matter, I would like to know

what steps the Employment Development Department has taken to implement Public Laws 94-566 and 95-19, which prohibit payment of unemployment compensation to illegal aliens. As the author of the House amendment to include such a provision in the Unemployment Compensation Amendments of 1976, I have more than a casual interest in seeing that that federal mandate is followed by all of the States.

In view of the reports of the reluctance of some of your Department heads to implement laws which they consider "wrong" or "unworkable," I trust you will understand my skepticism and respond fully to the matters I have raised herein.

With kind personal regards,

Sincerely,

B. F. SISK,  
Member of Congress.

#### HATCH ACT REFORM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri (Mr. VOLKMER) is recognized for 30 minutes.

Mr. VOLKMER. Mr. Speaker, I understand that when the House resumes consideration of H.R. 10, Hatch Act reform, my amendment will be in order when the Committee of the Whole again resumes deliberation. I also understand that the restriction on debate will continue and there will be no time in order to fully explain my amendment.

The gentleman from Missouri (Mr. CLAY) has stated his position in the CONGRESSIONAL RECORD of May 24, 1977, beginning at H4994 in opposition to my amendment and has stated that when I offer my amendment, he will offer a substitute. He has also generously provided me with a copy of his substitute amendment. I have had time to thoroughly acquaint myself with it and I appreciate his courtesy. I believe that it is very fair to say that the difference between the substitute, which will be offered by Mr. CLAY, and my original amendment both of which restrict certain Federal employees from becoming politically active are in the areas of "enforcement" and "auditing." CLAY's amendment would limit the restriction to "supervisory" personnel, while my amendment would not only restrict "supervisory" personnel, but also "field" agents.

The restricted field agents for law enforcement which would include Federal Bureau of Investigation, Alcohol, Tobacco, Firearms, and Narcotics, and other Federal law enforcement officials and also field auditors for the Internal Revenue Service. My amendment would allow restriction of these persons by the Civil Service Commission. Mr. CLAY's substitute amendment would permit field agents to be politically active and run for office, but exclude the supervisory employees over them. It is my humble opinion that an FBI agent or Tobacco agent or an Internal Revenue agent even if he is a field agent should not be completely involved in the political process including the holding of political party office or the holding of a county, State, or Federal office.

I would like to draw on my experience in Missouri where, since its inception, the State highway patrol members have all been denied participation in the political arena and would like to say I am very

proud that the Missouri State Highway Patrol has been above partisan politics and, I believe, is recognized as one of the best law enforcement agencies in the Nation. I am familiar with other law enforcement agencies that are directly involved with political activities and feel that many of their decisions are based on political expediency rather than proper law enforcement.

I sincerely dispute the estimates as to the number of people who would be restricted under my amendment from political participation. Clerks, typists, and so forth, who are not actually involved in the enforcement of the law would not be restricted. Neither would clerks, typists, and so forth, involved in typing up audits, and so forth, be restricted.

However, I do not believe it would be proper to have an IRS field agent do an audit or an FBI agent make an investigation along with a question as to how a person voted or who they supported in the last political campaign. Under Mr. CLAY's amendment I believe that they the authority to do so and, even if such action did not actually take place, the fact that they could occur could lead to abuses and would lead to lack of credence and faith in those agencies.

For that reason, I respectfully request the Members of the House to support my amendment and let us see how the Hatch Act reform actually works in the future and then decide whether or not we wish to thereafter include these additional members. I personally am going to vote for the Hatch Reform Act, but like others, feel that we should go a little slow in certain areas, and at this time I feel strongly that we should not extend these permissible political activities into the areas of law enforcement and auditing.

#### REMARKS ON INTRODUCTION OF HOUSE CONCURRENT RESOLUTION ON THE U.S. EMPLOYMENT SERVICE AND REVIEW OF THE WAGNER-PEYSEY ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Idaho (Mr. SYMMS) is recognized for 10 minutes.

Mr. SYMMS. Mr. Speaker, in the 94th Congress, I had imperative occasion to introduce a resolution designed to require the concentration of the U.S. Employment Service, in its funding and its personnel, upon what is clearly its primary responsibility, namely, the placement of the unemployed, especially those in minority groups and among the veterans and the handicapped throughout the Nation.

The U.S. Employment Service has been miss-directed in this duty as evidenced by: First, the wholly inadequate number of its placements; second, its inattention to genuine service to our people—as most recently confirmed by the General Accounting Office report on its operations, third, the appalling cost-benefit accounting of its placement; and fourth, its widespread and costly advertising of its readiness to locate in still higher paying jobs those already employed.

Such policies and practices are an affront to the people of the United States, whose tax dollars support this expensive

and unsatisfactory agency of our Government, and to the Congress itself, under whose legislative authority it exists.

I believe the time has long since passed when such abuses can be tolerated. Critical unemployment in our Nation is not a matter for bureaucratic indifference and irresponsibility. The Congress must act to protect our citizens in need of jobs and to require that the U.S. Employment Service devote itself primarily and vigorously to that need. In this same regard, I urge review, evaluation and, as may be necessary, the amendment of the Wagner-Peyser Act, in order that its provisions be brought up-to-date and made truly effective to this very end—the prompt assistance of America's unemployed.

For this purpose, Mr. Speaker, I send to the desk for appropriate committee assignment a House concurrent resolution encompassing these objectives.

#### AN ENERGY CZAR IS NOT IN THE INTEREST OF CONSUMERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 10 minutes.

Mr. KEMP. Mr. Speaker, this week the House is considering the establishment of a Cabinet-level Department of Energy in something of a panic atmosphere. This panic has been created by dire warnings from President Carter and others that the United States is on the very brink of running out of energy altogether. I can only say that this is absolute nonsense. The only way the argument can be sustained even for a moment is by totally ignoring the effects of price on supply. Everyone seems to assume that we will never have more natural gas than we have today at the controlled price of \$1.45 per thousand cubic feet. In fact, there is enough natural gas to last for a considerable time frame, at least at the price of about \$2.50 per million cubic feet.

The following editorials from the Wall Street Journal present some of the best evidence I have seen to the effect that our present energy shortage is entirely created by Government price controls. Perhaps after reading them my colleagues will realize that the United States does not need a Department of Energy, it only needs less Government bureaucrats and interference.

If we decontrolled the price of natural gas, I believe the retail price would fall within a short time. But more importantly, the people of the Northeast United States would not have to pay \$4 or \$5 per million cubic feet for imported natural gas or synthetic natural gas.

A \$10 billion super energy agency is in the interest of OPEC and the giant oil companies, it is not in the interest of new supplies of natural gas or our environment.

The material follows:

#### THE 1,001 YEARS OF NATURAL GAS

The conventional wisdom about President Carter's energy program seems to be that the gasoline tax won't fly in Congress, but that the other elements of the plan will sooner or later be enacted. Indeed, there is a deep suspicion among the political crowd

that the gas tax was designed to lose, in the process drawing off the opposition's energies so the rest of the package could go through unmolested.

Our own estimate, though, is that the whole package will collapse a piece at a time. This estimate is not merely wishful thinking, although it certainly expresses our hopes. But it is more firmly based on the fact that the United States has been seriously thinking about energy for more than three years. Not only the general public, but also Congress and the press corps have developed a sophistication about energy issues, and we think we are now past the point of being vulnerable to blindly adopting scare scenarios and emergency solutions.

The notion that we may soon be freezing in the dark unless we sacrifice by paying higher taxes to Washington could not be sold to Congress by President Ford and Vice President Rockefeller when we were all relative greenhorns at the energy game. Yes, Mr. Carter certainly deserves his chance to scare Congress into action. But because he seems to learn quickly and is flexible rather than stubborn, there is a good chance Mr. Carter will discover the true shape of the energy problem in the process of failing to get any major portion of his package adopted.

Take natural gas, for example. Mr. Carter apparently thinks the United States is running out of the stuff. If that were true, we might be as scared as he seems to be. But in the course of the debates on his plan, the President will discover that while we are now consuming 20 trillion cubic feet of natural gas every year and that—if prices were only decontrolled—we have roughly 20,000 trillion cubic feet of natural gas at hand, with some estimates that there may be 50,000 trillion cubic feet of it. That is, enough to last between 1,000 and 2,500 years at current consumption.

The President's energy advisers know this. It was explained to them recently in a briefing by specialists of the American Gas Association. Experts in ERDA have been trying to tell the White House too, but have been snubbed apparently on the ground that this news would take the sting out of the scare.

What Mr. Carter has been told is that we have only 216 trillion cubic feet of proven reserves of natural gas, 10 years' supply. But that number was developed by the U.S. Geological Survey in 1974 relating resources available at 1974 technology and 1974 prices, of 52 cents per thousand cubic feet. USGS does not and never has projected what resources would be available at higher prices.

ERDA though, has unofficially estimated that at an uncontrolled price of \$2.25 the nation would be awash with natural gas. It would bring in 230 trillion cubic feet of what USGS calls "inferred reserves," make economic the 285 trillion cubic feet of Devonian shale in Appalachia, the 600 trillion cubic feet of Western "tight sands" and between 200 trillion and 300 trillion cubic feet of coal-seam methane.

At somewhere between \$2.50 and \$3.00 per thousand cubic feet, the industry could tap the big deposit—geopressed methane that exists at depths of 15,000 feet, both onshore and offshore, in the Gulf region. This natural gas dissolved in water runs to between 20,000 and 50,000 trillion cubic feet. If you consider that 1,000 cubic feet of natural gas is roughly equivalent to one million British Thermal Units, this exotic natural gas is not all that expensive at \$3 per million BTUs. Americans now pay about \$2.05 per million BTUs of natural gas delivered at their homes, \$3 per million BTUs of fuel oil and \$10 per million BTUs of electricity.

The only conceivable way Americans would freeze in the dark anytime in the near future is if the government continues to keep the price of natural gas from getting into the ranges that would finance tapping these re-

serves. Holding down the price is of course precisely what President Carter proposes, a ceiling of \$1.75 per thousand cubic feet.

We can't believe that President Carter genuinely desires that we freeze in the dark because of his policies. Instead, we assume it will take him a little time to get fully informed on the true nature of the energy problem. Perhaps some friend will call him up and tell him about this editorial, and we can begin thinking of dancing in the dark instead of freezing in it.

#### ERDAGATE!

We were frankly astonished at the reaction to our April 27 editorial, "1,001 Years of Natural Gas": telephone messages from high officials, a deputation from Exxon, an urgent letter from Robert Fri, acting administrator of the Energy Research and Development Administration. Naturally, the attention made us curious.

Having put together most of the pieces, we can now report on the cause of the excitement. Deep in the bowels of ERDA, an outfit the MOPPS solution, but here in our editorial the monster was rising again.

called the Market Oriented Program Planning Study (MOPPS) had solved the energy crisis for five days in April. It took that long for the administration, the oil companies and ERDA to snuff out the solution and get the crisis back on the track. They thought they had driven a wooden stake through the heart of

In January, about 70 ERDA people were thrown into a task force to study potential supply and demand. In most resource studies, such a thing as prices never appears. So apparently nobody thought it was necessary to warn the MOPPS people against calculating supply curves, that is, calculating how much gas would be available at different prices in an unregulated environment. In their innocence, they tried to apply a little economics.

The study estimated that at \$2.25 per thousand cubic feet (mcf) the nation would be awash in natural gas. From \$2.50 to \$3 we'd be engulfed with it. MOPPS reckoned that at \$2.50 the U.S. would have about 45 years' worth of natural gas at current levels of consumption. The price would have to go higher to tap some of the unconventional sources, like geopressed methane, which conceptually would last us for a thousand years. But why would anyone worry about these exotic sources if we had 45 years' worth of the usual stuff likely to be available at lower prices?

Indeed if that were true how could there be an energy crisis? How could the President go on television with ringing calls for sacrifice? Why should American taxpayers be scared into coughing up billions of dollars—something like 5% of GNP—to cause conservation? How could Exxon recoup its investments in gasification research and coal properties by supplying gas from these sources at \$3.75 per mcf?

The innocent scientists and technicians in MOPPS had no idea what vested interests their simple calculations threatened. Even more to the point, bearing this unwanted message to the White House would be a black mark against the ERDA bureaucracy. The Federal Energy Administration would be in a position to gobble up all of the best spots when the two were merged into the new Department of Energy.

Given these realities, there was only one answer to the no-energy-crisis crisis. The ERDA brass recalled the MOPPS study, and threw out all the charts that had been so innocently put together over the months. By April 6, it had a "revised" MOPPS study, with the charts looking much like those from the FEA.

In these five days, the price projections jumped so high that the energy crisis was back in business. Mr. Carter's regulated gas price of \$1.75 looked good, because MOPPS II showed that higher prices in an unregulated market won't do much good anyway. And

surely it would be prudent to give Exxon and other coal-gasification people a few billion dollars of tax money to spend on their plants.

A higher price can even be given to exotic sources like geopressed methane; Mr. Fri assures us ERDA will do the research on that. Gas sources of two or three generations hence do not threaten anyone. The problem is allowing prices of ordinary gas to rise into the \$1.75-\$3.00 range, where if MOPPS I is right they would bring on the next generation of gas at threatening low prices. While promising to do the research, ERDA has disbanded the MOPPS I crew, reassigning its members to study almost anything else but natural gas.

Now we have no idea whether the price figures in MOPPS I are correct. It is certainly possible for other groups in the administration to dispute them in all good faith. And clearly Exxon has made serious investment decisions on the basis of other numbers though perhaps tempered with "political reality." But to us the MOPPS I estimates seem not at all implausible, given the one thing we know for sure about natural gas: Since the Phillips decision in 1954 its price has been held at not only artificially but, in recent years, ridiculously low levels. Most of the gas found has only been a by-product of oil exploration. It stands to reason that if looking for gas suddenly becomes profitable a lot will suddenly be found. But the point is—the point of our original editorial was—that no one will know until the price is deregulated.

MOPPS certainly does show, though, how many vested interests need the energy crisis. The President needs a war to fight. Without an energy crisis the energy bureaucracies cannot grow. The energy companies are turning into a regulated industry, all of which try to dampen innovation. We now hear energy czar James Schlesinger bragging that privately most companies do not favor deregulation. This is not yet true, but in time the proposed policies certainly would reduce the oil companies to the state of the airlines.

With all of this clout behind the energy crisis, it is scarcely surprising that a crude but effective message goes out: By gosh, boys, there has to be an energy crisis, so don't nobody find no energy.

#### WHAT BABY DOE WILL COST

A Chevron statistician has been sizing up the \$10.6 billion budget of the proposed new Department of Energy. For example, it is about double the value of all the oil the U.S. imported from Saudi Arabia last year. It exceeds capital and exploration expenditures by the petroleum industry to find and produce oil, gas and gas liquids in the U.S. in 1975. It exceeds by \$800 million the 1974 profits of the seven largest international oil companies; Chevron can't resist adding that those profits were described by a U.S. Senator as "obscene." It is equivalent to about \$3 a barrel of domestic crude oil production, which means, if our own arithmetic is correct, that you could decontrol all domestic crude oil prices and still end up paying less for oil than the federal energy bureaucracy costs. And one should keep in mind that the \$10.6 billion is only the cost of the newly born baby DOE. Think what it will cost when it grows up!

#### METRIC CONVERSION ACT MISINTERPRETED BY FEDERAL HIGHWAY ADMINISTRATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Iowa (Mr. GRASSLEY) is recognized for 15 minutes.

Mr. GRASSLEY. Mr. Speaker, I was shocked and disappointed to learn that the Federal Highway Administration has

proposed rules to require all highway marking signs now designated in miles per hour to be totally replaced with similar signs giving distances and speeds in metric figures only. The Highway Administration claimed authority for this action under the Metric Conversion Act of 1975. I remember that legislation well but could not recall it granting any such authority to any Federal agency. Therefore I undertook and have just concluded an extensive review of the legislative history of the Metric Conversion Act and found that in fact not only has this agency acted beyond its authority in promulgating these rules, it is specifically ignoring the intent of Congress as expressed in the act and its legislative history in at least six ways.

Based upon this information I have today requested the Administrator of the Highway Administration to withdraw his proposal immediately and abandon all plans to continue to ignore congressional intent on this most important issue.

The full facts of this unfortunate situation are spelled out in my letter to Mr. William M. Cox, the Administrator of the Federal Highway Administration:

WASHINGTON, D.C.,  
June 1, 1977.

Mr. WILLIAM M. COX,  
Administrator, Federal Highway Administration,  
Washington, D.C.

DEAR MR. COX: On April 27 the Federal Highway Administration published in the Federal Register notice of proposed rulemaking concerning metric conversion. In the notice you advise it is your intention to force the conversion of all existing sign legends to metric system standards. Through conversations with the media and my office your staff has indicated that the result of this proposed rule would be to force, through the threat of loss of federal highway funds, these conversions on all roads whether on system or off system. Additionally, this action would require the exclusive use of metric signs and the existence of a dual system would be prohibited. Your notice stated specifically that you were proposing these rules under the authority of the Metric Conversion Act of 1975, and no secondary authority was claimed.

Unfortunately, it appears that your office is not aware of the specific provisions and legislative history of this act. Even the most cursory examination of the provisions of this Act (P.L. 94-168), or its legislative history as developed in the House hearings (Hearings of the House Committee on Science and Technology, Subcommittee on Science, Research, and Technology, April 29, 30, May 1, 6, 7, 8, 1975), the Senate hearings (Hearings of the Senate Committee on Commerce, October 8 and 10, 1975), the House debate (Debate on H.R. 8674, September 5, 1975, *Congressional Record* pages 27710-27722), or the Senate debate (Debate on S. 100, December 8, 1975, *Congressional Record* pages 39011-39018) on the Act, indicates clearly that the Act does not grant you the authority you claim.

Specifically, there are six ways in which you are either exercising authority you do not have or are in violation of national policy as expressed and formulated by Congress. Those six ways are:

1. The Act you rely on did not grant you any authority to propose these rules.
2. Congress has not established an official policy of conversion.
3. Congress expected any metric highway signs to be a complement to and not a substitute for customary system signs.

4. The Act stressed voluntary conversion and granted compulsory powers to no one.

5. The Act was not to be used to force costs upon anyone.

6. By proceeding without the help and guidance of the Metric Board, you will be contributing to the haphazard conversion which Congress feared.

You will find an explanation of each of these points in the attached Addendum. The excerpts from the House and Senate Hearings and Debates found therein will emphasize these points beyond a reasonable doubt. The Action you are taking is not only without the statutory authority you claim, it is also in clear violation of Congressional intent.

*Therefore, continuation of this action on your part should be considered illegal. I request that you immediately withdraw your Notice of Proposed Rulemaking and abandon all plans to force metric conversion upon American motorists.*

The Metric Conversion Act of 1975 represented a carefully and skillfully constructed approach to meet our nation's needs and address the justified fears of conversion of most Americans. The intent of Congress was so clear and loud it should not be disregarded by agencies who derive their power from that same Congress. In light of this, I hereby request that you forward to me copies of any internal memorandums circulated within the Federal Highway Administration which discuss the legality of your action.

Sincerely,

CHARLES E. GRASSLEY,  
Member of Congress.

#### Attachment.

1. The Act you rely on did not grant you any authority to propose these rules.

The Act gives no direct authority to any federal agency or department to convert to metric, nor for the agency to exercise its rulemaking authority in such a manner as to force anyone else to convert to the metric system. There is not so much as a single mention of federal agencies receiving such power in the Act nor in the legislative history leading to the adoption of the Act.

One point was made obvious, however, by the Acting Director of the National Bureau of Standards. His testimony indicated that despite the operations of the Interagency Committee on Standards Policy and its metrication Subcommittee—the participating agencies recognized that they could not proceed with forced metrication without endorsement of the change from Congress.

"Dr. ERNEST AMBLER. The Interagency Committee on Standards Policy, which is chaired by the Department of Commerce, has established a metrication subcommittee to help coordinate Federal agency metric activities. As one of its first tasks, this group is compiling a directory of federal metric activities and of the key people involved in them. When the changeover to metric is endorsed by the Congress, this subcommittee will be ready to assist the Metric Board that will be established by the legislation now under consideration." (Senate Hearings, P. 61)

2. Congress has not established an official policy of conversion.

It is beyond question that the intent of your rules is to adopt the metric system as the single official measurement system for use on our highways and roads, to the exclusion of all other methods of measurement. The Metric Conversion Act of 1975 does not in any way authorize adoption of the metric system as the sole official system for our country, nor any segment of our government's operations. Congress was careful in its wording of the Act so that such a meaning could not be construed, and in fact changed the title of the bill so that such a misconception would be less likely. As

Congressman Symington, the Chairman of the Subcommittee which drafted the Act, stated in House debate:

"Does the policy of H.R. 8674 mandate a change to the metric system?"

"The answer is that rather than mandating a change to the metric system, the policy of H.R. 8674 responds to the problems associated with the increasing use of the metric system. The bill would do this by establishing a mechanism to coordinate the metric conversion activities, by studying the associated problems, and by educating the public on the usage of the metric system."

"In fact, one of the reasons for changing the title of the bill is to place the chief emphasis on the voluntary nature of the adoption of the metric system. By eliminating any reference in the title to a policy of adopting the metric system, and emphasizing the coordination function of the government's role, we expect to make it clear that the bill does not mandate the change, but only aims at providing coordination based on voluntary participation." (House Debate, pp. 27711-27712)

This point that the Act was not establishing a national policy on metrication was further emphasized by both House and Senate backers of the Act in debate before those bodies:

"Representative LLOYD: This bill remains flexible and does not predetermine that Congressional policy will make metric units the predominant language of measurement. Let legislative history show that this bill is in effect saying that it is the policy of Congress to study metrication and then decide the correct course of action." (p. 27716; emphasis added)

"Senator INOUYE: It must be made clear here that the bill being considered today does not make conversion compulsory or that the metric conversion is adopted as the sole system of measurement." (p. 39014)

The point that this Act did not even intend to create an official United States policy of metric conversion was also recognized in the testimony of private sector organizations who both favored or opposed such an official policy; such as the American Bar Association, which favored a forceful "full speed ahead" approach, and the AFL-CIO, which was much more reserved in its opinion and desired a slower and voluntary conversion process.

"Mr. WILLIAM E. ZEITER (representing the American Bar Association): The House-passed bill, rather than simply expressing a national policy in favor of a coordinated approach to voluntary conversion and establishing housekeeping details for the proposed Metric Board, makes no change in existing law." (Senate Hearings, P. 90)

"Mr. THOMAS HANNIGAN (International Brotherhood of Electrical Workers): Such a commitment is inconsistent with the policy of H.R. 8674 which requires the Federal Government to remain neutral regarding metric conversion, and limit its efforts to planning and coordinating its increasing use."

"Obviously, all agencies of the Federal Government must clearly understand Congressional intent on metric conversion and consistently apply it." (Senate Hearings, P. 80-81)

"Mr. HANNIGAN: Obviously, any type of metric legislation, regardless of the thoroughness and technical detail, will trigger a flood of misguided and irresponsible metric activities."

"Metric flim-flam artists and peddlers in pursuit of a fast buck will falsely claim that the United States has adopted the metric system." (Senate Hearings, P. 80)

3. Congress expected any metric highway signs to be a complement to and not a substitute for customary system signs.

While the Act does not specifically mention traffic control signs, the legislative history does, and contemplates that should metric

highway signs appear it would be only in addition to and not in lieu of existing customary usage signs. This point is clearly made in the following colloquy between one of the co-sponsors of the Act, Congressman Fuqua (ranking majority member of the Subcommittee), and Mr. Thomas A. Hannigan, Assistant to the International Secretary of the International Brotherhood of Electrical Workers, in the House hearings:

"Mr. HANNIGAN: In one case of labor trouble that I've been informed of in Australia—the details might not be quite accurate, but could be checked. When they changed highway signs, elevations on bridges and tunnels and distances, the Transportation Union down there went on a strike. They just refused to drive until they put the signs in dual measurements. When they put signs with dual measurements up they went back to work. I don't know how long that strike lasted.

"Mr. PETERSON: The Teamsters, when they were driving along, had to convert.

"Mr. FUQUA: I would certainly think that that's what we would have to do in this country, as they do in Ohio.

"Mr. HANNIGAN: And the purpose is what? Why do you do it? Just leave it where it's at, and you don't have any problem.

"Mr. FUQUA: Until we were phased in, and people, such as myself and others, who can't really compute these, all that stuff in their heads.

"Mr. HANNIGAN: Right. You're driving along at 60 miles per hour and the sign ahead in front of you is in kilometers.

"Mr. FUQUA: But that would be something that the Board would have to work out. As to how long it would be, I don't think they would just take them all down today and put up new ones tomorrow.

"Mr. HANNIGAN: No.

"Mr. FUQUA: You'd have a lot of lost souls." (House Hearings, Pages 315-316)

That dialog makes two points clear. Congress did not expect anyone to be so foolish as to follow the Australian misadventure of not using a dual system. Secondly, and possibly more importantly, the problems of planning how to convert would be a question left up to the Board to work out and make the appropriate recommendation to Congress.

Mr. Symington also indicated in the hearings that he expected a dual sign system to be voluntarily developed by the states.

"I imagine that some States are going to be ahead of others in deciding to put dual signs up and to allocate certain of their resources for that purpose." (House Hearings, p. 317)

Chairman Symington clearly could not make a statement such as that one and yet anticipate an action such as you are attempting.

Not only were the Chairman and ranking member of the Subcommittee convinced the Act could not be used in the manner you are attempting, but at least one prominent and respected national organization which was opposed to forced conversion legislation at least in part because of the confusion and expense it would cause by forcing highway signs to change, was willing to support the legislation which created this Act because this legislation did not confer this kind of power.

The National Federation of Independent Business publication "Little Known Facts About Metric" included the following references to the subject at hand as indicative of reasons for their opposition to forced conversion:

"All road signs would have to be changed to reflect metric distances."

4. The Act stressed voluntary conversion and granted compulsory powers to no one.

The rules you have proposed would force total conversion on our nation's highways and roads. No option would be present for individuals to remain with the customary standards or to allow a dual system to exist.

In short, it cannot be questioned that your rules would force compliance and would prevent a voluntary approach.

You have taken this approach despite the straightforward Congressional intent expressed in this Act that any metrication in this country proceed on an entirely voluntary basis. Your notice of proposed rulemaking cited only part of section 3 of the Act; specifically that part of section 3 indicating "the policy of the United States shall be to coordinate and plan the increasing use of the metric system in the United States". Had you continued the section you would note it reads "and to establish a United States Metric Board to coordinate the voluntary conversion to the metric system". The key words in this policy, therefore, are "plan", "coordinate", and "voluntary". The statute makes no use of the words "implement", "force", or "enact", nor of any time limit. Had any of these words of compulsion appeared, it is likely that this Act would have met the same defeat that met just such a compulsory act in the 93rd Congress. This point is made clear by repeated references during House and Senate debate to the voluntary nature of the Act.

"Mr. FUQUA: The bill does not contain, and does not give to the U.S. Metric Board any power to force anyone to go metric." (House Debate, p. 27714)

"Mr. DOB: In addition, Mr. Chairman, no sector of our economy will be forced into conversion nor will any time limit be set on Metric road signs and maps would be useless and confusing unless all automobile speedometers and odometers are changed to measure in metric." (House Hearings, Page 194-195)

The NFIB was able to support metric legislation which did address their fears:

"In light of this, we must recommend caution and we would strongly favor additional in-depth studies to determine the impact of metric conversion on the various segments of the small business community. In terms of legislation, this would mean that we would be most comfortable with the approach put forward in the chairman's bill, H.R. 6177, the Metric Monitoring and Assistance Act of 1975." (House Hearings, Page 323)

"Mr. INOUYE: It must be made clear here that the bill being considered today does not make conversion compulsory or that the metric conversion is adopted as the sole system of measurement." (Senate Debate, p. 39014)

"Mr. INOUYE: The bill before us calls for voluntary conversion also. They are not forced to do this. It is just an educational method." (Senate Hearings, P. 70)

"Mr. SYMINGTON: The committee feels strongly that in any sector, the marketplace—not the Congress or the Metric Board—should provide the impetus in deciding whether, when and how metric conversion activities should proceed." (House Debate, p. 27712)

"Mr. MOSHER: I strongly support this legislation. H.R. 8674 is meant to coordinate and harmonize the voluntary conversion of the United States to the metric system of weights and measures.

"The objective of this legislation is not complete conversion regardless of costs. It is instead metric conversion, on a voluntary basis, to the extent practical and reasonable and at a minimum cost." (House Debate, p. 27713)

"Mr. SYMINGTON: I wish to emphasize at the outset that under this bill the change to the metric system would be entirely voluntary in nature. The bill has no compulsory powers which would force a business, an industry, or an individual to adopt and use the metric system." (House Debate, p. 27711)

The record is precise. Congress refused to force anyone to convert. It refused to grant the metric board the power to force anyone to convert. It assured the American public

that the bill has no compulsory powers to force anyone to convert. Yet you claim authority under the Act to force this system upon every American.

The fact that the bill was voluntary in nature only was also recognized by those representatives of the private sector who testified on its merits.

"Dr. AMBLER: On the other hand, H.R. 8674 provides that programs will be accepted by the Board without submission to the President and Congress.

"The bills are similar in the following respects: Both bills call for voluntary change-over to metric. They include no authority to compel firms or individuals to go metric against their interests." (Senate Hearings, P. 63)

These witnesses also made it clear that they did not consider actions of federal agencies in adopting only one measurement system to be "voluntary".

"Mr. PETERSON (AFL-CIO): Sir, if the DOD starts to order in the metric system, it is no longer voluntary on the part of the companies then to go metric. It is an obligation, if they want to stay in business, if they are doing business with the DOD or another agency of the Government." (Senate Hearings, P. 70)

The fact that this Act presented this voluntary—non-compulsory—approach was of concern to the American Bar Association. Its witness testified at great length in the Senate Hearings of the problems which could be caused by passing the bill in that voluntary form, and urged the committee to place powers in the hands of the Metric Board to force its plan to go into effect unless the plan was specifically vetoed by the President or Congress. Without such a provision the ABA feared that the planning function of the Board would be useless, as full Congressional action would be necessary before the plan could become law. What types of things would require this action and could be sped along by the ABA recommendation? The ABA gave a specific example:

Mr. ZEITZ: The following are examples of changes in laws and regulations which might be made by a metric conversion plan:

"The speed shall not exceed 55 miles per hour" could become, "The speed shall not exceed 90 kilometers per hour." (Senate Hearings, P. 92)

Thus the American Bar Association presumed that something more was necessary in the Act before it could work to change the speed limit signs on our nation's highways. But Congress refused to request and did not add those compulsory powers.

This point on the voluntary nature of the Act is reinforced by the fact that groups who opposed any form of forced conversion or mandatory conversion legislation did in fact support the approach of this bill. A leading example of this is the AFL-CIO. The testimony of Kenneth T. Peterson, Legislative Representative, American Federation of Labor and Congress of Industrial Organization, made the point succinctly:

"We are happy to note that H.R. 6177 calls for planning and co-ordination of 'voluntary substitution of metric measurement units for customary measurements' and for 'voluntary participation' in planning and co-ordination. And we note that the Metric Board proposed in H.R. 6177 'shall have no compulsory powers'.

"There are still too many unanswered questions, there is still insufficient evidence to support an official U.S. Government policy of facilitating and encouraging metric conversion.

"There is still no evidence, no basis for a decision about the extent to which metric usage is necessary and practical.

"There is still no foundation for a decision about the degree to which metric usage should be exclusive, predominant, or complementary to existing measurement methods.

"And there is still no basis for a decision about some appropriate conversion period."

"In short, Mr. Chairman, the AFL-CIO supports the approach taken in your bill, H.R. 6177, and opposes any Government policy of facilitating or encouraging metric conversion, and specified conversion period." (House Hearings, Pages 151-152)

Mr. Peterson was able to re-state this position in even more precise relationship to the final form of the Act when he testified before the Senate Commerce Committee after the Act had passed the House (in almost identical form to the final public law version):

"Mr. PETERSON: It is premature, therefore, for Congress to pass any legislation which would commit the Federal Government to any official policy of facilitating or encouraging metric conversion. Conversion must not be compulsory. We believe conversion to the metric system must be entirely voluntary." (Senate Hearings, P. 70)

"Mr. PETERSON: As you know, the House of Representatives has approved H.R. 8674, a bill to declare a national policy of coordinating the increasing use of the metric system in the United States and to establish a U.S. Metric Board to coordinate the voluntary conversion to the metric system. The House-passed bill is generally in line with the position of the AFL-CIO." (Senate Hearings, P. 69)

"Mr. PETERSON: The language in section 3, subsection (1) of S. 1882 goes beyond the House-passed bill in its effort to make the metric system predominant, although not exclusive. We say that such language is contrary to the voluntary, noncompulsory approach on which there is general agreement, and we say such language should be struck out of the bill." (Senate Hearings, P. 73)

"Senator INOUYE: Mr. Peterson, are you that deeply concerned that these words would imply a policy of compulsory conversion?"

"Mr. PETERSON: Yes, sir." (Senate Hearings, P. 73)

Another prominent national organization shared the position of the AFL-CIO in supporting voluntary conversion and therefore backing the approach of this Act. That organization is the National Education Association.

"National Education Association Briefing Memo, Instruction and Professional Development, September, 1974, No. 7:

"3. The changeover should be voluntary.  
"4. The initiative for changeover should not come from the federal government." (Senate Hearings, P. 125)

"Mr. INOUYE: Do you have any comments to make on the House-passed measure, H.R. 8674?"

"Mr. CORTRIGHT: Yes. We like that bill and we support it, and give our endorsement to it." (Senate Hearings, P. 124)

5. The Act was not to be used to force costs upon anyone.

Congress was specifically concerned that nothing in the Act be construed as to cause costs to be placed upon anyone. This point can be seen throughout the debate on this bill's passage in both Houses. Despite the fact that Congress guaranteed that the Act would not force costs on anyone, your regulations would force costs of conversion of road signs upon local governments and the costs of speedometer conversion upon millions and millions of Americans whose automobiles are not metrically calibrated.

"Mr. FRUQUA: The bill does not contain, and does not give to the U.S. Metric Board any power to force anyone to go metric. Thus in no way can it be said to impose costs on anyone." (House Debate, p. 27714)

6. By proceeding without the help and guidance of the Metric Board, you will be contributing to the haphazard conversion which Congress feared.

Finally, this act created the authorization

for a National Metric Board to study the conversion that was voluntarily going on in this country, anticipate the problems which would be caused by further conversion; then make recommendations as to how to change laws and regulations of state, local, and federal governments. This board is not yet functioning yet you are proceeding to act anyway. By acting without guidance and direction you will be causing the problems Congress hoped to avoid through the Act. Congress feared the repercussions of embarking upon a national policy of conversion or proceeding to convert haphazardly, without first studying the likely effects and establishing a plan first. Through the action you are attempting to make, Congress' worst fears will be realized.

"Mr. EMERY: The Board will supply the needed impetus and framework for an efficient conversion." House Debate, p. 27719)

"Mr. MATSUNAGA: That conversion without some coordination at the national level would be costlier and less efficient than with some rational plan as a guide." (House Debate, p. 27712)

"Mr. FREY: I am convinced we need to carefully plan the transition to metric so as to help the different sectors of our economy adjust and guide our relationships abroad.

"Further, we have determined it is in the best interests of our Nation that conversion be accomplished in a deliberate and careful fashion through a coordinated national effort." (House Debate, pp. 27718-27719)

"Mr. INOUYE: Furthermore, the Board will be required to submit a report not later than 1 year after appropriations are provided for this act on the need to provide an effective structural mechanism for converting customary units to metric units in statutes, regulations, and other laws at all levels of government on a coordinated and timely basis in response to voluntary programs adopted and implemented by various sectors of society under the auspices and with the approval of the Board.

"In closing, I would stress again that the bill will leave the decision of the metric conversion to the individual economic sector. It will not be compulsory and is designed to achieve maximum economic efficiency based on the best informed determination of each separate industry." (Senate Debate, p. 39014)

#### NEW YORK TIMES ENDORSES HOUSE DEBT COLLECTION BILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO), is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, the New York Times in an editorial Friday, June 27, 1977, strongly endorsed the proposed Debt Collection Practices Act which passed the House April 4 and is now being considered in the Senate. The Times editorial in favor of the legislation follows one on April 11 by the Chicago Daily News and reflects growing support for the debt collection bill. It was pointed out in the editorial that such legislation is needed because consumers are suffering from abuses such as calls to neighbors or employers to embarrass the consumer, threats of bodily harm, and impersonation of policemen and other public officials. The House Banking Subcommittee on Consumers Affairs has learned, for instance, that one consumer was harassed so terribly that he suffered a heart attack. Another consumer was told to give her son up for adoption to help repay a debt. Testimony before the subcommittee revealed one instance in which a doc-

tor working in an emergency room was harassed every half-hour during an entire afternoon.

State laws offer inadequate protection. For example, 13 States with a population of over 40 million have no law at all, while 11 other States have toothless laws. The situation for consumers is even worse in the area of interstate debt collection. Even States with good laws are no help where interstate collection is involved.

This legislation would, for the first time, protect consumers from interstate debt collection abuse. The bill is clear and straightforward, setting out prohibited practices that result in harassment or intimidation. It also prohibits false or misleading statements and certain unfair practices such as soliciting postdated checks for the purpose of threatening criminal action. The bill should be easy for consumers and debt collectors to understand. Unlike many other Federal laws, this legislation will stand on its own; no Federal agency will issue regulations to implement it. Reputable debt collectors should have no difficulty complying with the legislation since they undoubtedly do not engage in the prohibited unethical practices, and since there are no recordkeeping or other paperwork burdens.

The New York Times editorial makes several important points: First, most consumers are not unwilling, but rather unable to pay; second, the two largest debt collection trade associations—the American Collectors Association and the Associated Credit Bureaus, Inc.—admit that some of their members use too extreme measures; and third, the ACA and the ACB both support the proposed bill. This reflects that while the legislation would protect consumers, it is fair in the view of reputable collectors.

The final point made by the Times editorial eloquently sums up the problem:

It remains for the Federal Government to collect the debt of decency due all of us.

Following is the text of the New York Times editorial in support of the proposed Debt Collection Practices Act:

#### A BILL FOR BILL COLLECTORS

Professional bill collectors cannot, in the nature of things, expect to win popularity contests, but they are hardly required to set new records for obnoxious behavior. The excesses of some collectors are among the most common consumer complaints to the Federal Trade Commission and have deservedly attracted the attention of Congress. The House has already passed a measure designed to keep collectors within the bounds of civilized behavior, and similar legislation is now before the Senate.

There are some 5,000 debt-collection agencies around the country. They take the unpaid bills of department stores, hospitals, banks, utilities and others, and try to turn them into paid bills—for a percentage. Their methods, as revealed in the House hearings, have included heavy harassment; repeated telephone calls; nuisance calls in early morning and late at night; calls to neighbors or employers designed to embarrass the debtor; rude language and even threats of bodily harm. Some professional collectors have represented themselves as policemen, tax agents or attorneys to bring a delinquent to bay.

Most debtors are not unwilling but unable to pay; they are in trouble—and some collectors have perfected techniques for exploit-

ing their distraught condition. The House was inspired to act by experiences like that of a hard-pressed California woman, who was advised by a collector to seek welfare, end support of her mother, give her son for adoption or, as a last resort, commit suicide.

Though it is difficult to legislate against that sort of behavior, the proposed bill does promise some relief. It would outlaw all abusive phone calls, and any call for payment between 9 p.m. and 8 a.m.; calls or visits to a debtor's place of work or to neighbors and relatives; and all misrepresentations by the collector.

Deadbeats, though they represent only a minuscule proportion of people in debt, are a growing problem for business; creditors are entitled to pursue their money, and this may sometimes require a degree of psychological pressure. But even the two largest associations of collection agents support the proposed law, acknowledging that some of their members have gone too far. State regulation has proved generally ineffectual, so it remains for the Federal Government to collect the debt of decency due all of us.

### SOVIET THREAT TO THE PANAMA CANAL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. Flood) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, in various addresses in the Congress, I have repeatedly stressed that the U.S. owned Panama Canal is a pawn in superpower politics, with the Republic of Panama only serving as the "tip of the iceberg." The passage of time has proved the accuracy of this appraisal.

In addition to the establishment of a Soviet beachhead in Cuba, radical movements for the "liberation" of Puerto Rico, the subversive efforts to organize Communist power in Jamaica and the Red drive to bring about the give-away of the Canal Zone to Panama are well underway, the last with the determined support of the U.S. Department of State.

One of the major deceptions in the current massive propaganda campaign now being led by State Department officials, at the taxpayer's expense, is that Latin America is "unanimous" in supporting the radical demands of the Panama revolutionary dictatorship for surrender of U.S. sovereign control over both the Canal Zone and canal. Because this contention is false, this fact should be understood.

While it is true that officials of certain Latin America countries have publicly supported Panamanian demands, members of the U.S. Congress who have recently visited Latin America report differently. Some going to the Isthmus have stated that officials in the U.S. Embassy in Panama were far more ardent in their advocacy of the surrender treaty than were high Panamanian officials. Others visiting certain of the larger Latin countries, after discussing the subject with many from Presidents down, report that they found strong opposition to the projected surrender by the United States of its sovereign control over the Canal Zone. Knowledgeable observers state that Latin American business leaders know that their interests require the continuation of such control and oppose giving the zone to Panama.

Fortunately, there are many well informed leaders in the United States on Latin American policy question who cannot be hoodwinked, among them the Honorable Spruille Braden of New York. After a distinguished business career, he served with the rank of Ambassador in 1938 to negotiate the end of the Chaco war between Bolivia and Paraguay; as U.S. Ambassador to Colombia, 1939-42; Cuba, 1942-45; Argentina, 1945; and, finally, as Assistant Secretary of State for Latin American Affairs, 1946-47.

In a notable address on February 28, 1977, before the Belair Council of the Navy League of the United States in California, entitled "The Soviet Threat to the Panama Canal," Ambassador Braden gave a discussion of other areas in the Western Hemisphere including Argentina, Chile, and Cuba.

In these general connections, we must never forget that the Panama Canal is a vital element in the seapower of the United States and that loss of its sovereign control would be a matter of the gravest consequence affecting the security of the entire free world in the current struggle for world domination.

Mr. Speaker, because of the exceptional qualifications of Ambassador Braden to speak with the authority of a vast experience, I shall quote the indicated address as part of my remarks and commend it for reading by all Members of the Congress and their staffs working on the canal question.

The address follows:

#### SOVIET THREAT TO THE PANAMA CANAL (By Hon. Spruille Braden)

During many years of an active life throughout the Americas, I have accumulated many convictions and I hope perspicacity, in keeping with the old Spanish saying: "The devil knows more by reason of his age, than because he is a demon."

One of my strongest persuasions is that the greatest threat to "our civilization" is a world-wide breakdown in morality. This we witness in and out of government penetrating every strata of society.

I further believe that the most widely destructive of all immoralities is that centered in and emanating from Moscow. Vide:

(1) The unending and outrageous cruelties perpetrated on the Russian people, as described by Solzhenitsyn;

(2) The so-called "liberation" movements propagated everywhere by Soviet agents, foreign communists and misguided dupes;

(3) Russian ambitions for world hegemony. The Soviet already is progressing by strides in its plans to convert the American republics into a conglomeration of satellite and slave states.

Today I shall summarize only the four most critical areas in the western hemisphere.

#### ARGENTINA

First: Argentina exemplifies how a superior, educated, wealthy and religious nation, possessing virtue and great mental and physical assets for over three decades has suffered a deluge of evils as her government sank into the depths of degradation, corruption, venality and irresponsibility. Murder, torture, kidnapping, terrorism and guerrilla warfare ensued.

The cause of all this was the breakdown in morality and communist infiltration.

As far back as 1945, when I served as ambassador in Buenos Aires, the then vice president and dictator, Peron, while pretending opposition to communists, actually

was intriguing closely with them; they had replaced the Nazis in his esteem.

Simultaneously he, his mistress, later wife, Evita, and his henchmen, enriched themselves on a vast scale.

When Peron died, his third wife and heir, Isabelita (a former bar girl) suddenly found herself the nominal head of a government which had fulfilled 85 percent of the program laid down by Karl Marx and Friedrich Engels. Presently she is imprisoned for stealing public funds.

As Argentina was about to fall completely into communist hands, the armed forces, under General Jorge Rafael Videla (a man of highest character) seized power. They enlisted in their government some patriotic and experienced civilians, such as the new minister of economy, Martinez De Hoz. As a result of the military's firmness and courage, communism, terrorism and corruption gradually are being eradicated. Argentina at long last now may hope eventually to retrieve its old position as a responsible, respected and prosperous nation. Realistic reforms may recapture Argentina's idealism.

From 1922 through 1938 I knew Argentina at the apex of its prosperity, political and social well-being. But in 1945, when I returned as ambassador, I witnessed the beginnings of the decomposition. Communism and its twin, terrorism, later almost leading that pitiable nation into the jaws of destruction.

What I saw beginning 30 years ago in Argentina, I now observe starting in the U.S.A.—traditionally cherished ideals are attacked, while disintegrating corruption is tolerated and exotic ideologies are circulated through our schools, the media, and pretty much everywhere.

#### CHILE

Second: The collapse of Chile into communism was more precipitous and complete than Argentina's; first came the election to power of the Christian-Democrats (actually socialists); four years later they helped the Marxist, Allende, to the presidency, with only a 35 percent constitutional vote.

This accession to power with his socialist-communist cohorts, was planned, incited and aided by the Soviet Union. Moscow was anxious to create another communist satellite in Latin America, and in so doing, to obtain a naval base at Talcahuano on Chile's south Pacific coast, just as it had acquired its naval bases, underground submarine pens, missile sites, encampments and other facilities in Cuba.

Unfortunately the Chileans, overly confident in their dedication to democracy, credulously did not awaken to the threatening communization and loss of freedom until their backs were against the wall.

For more than a year the populace, deceived and helpless, allowed matters to drift. Finally, they were awakened with a bang by the killings and tortures, imprisonments and property confiscations, plus the influx of trained commissars and guerrillas from the Soviet Union, Cuba and elsewhere, along with shiploads of arms and munitions for the Allendistas. Fierce fighting broke out between communists, both national and foreign, and patriotic Chileans.

The first mass protest was staged by women from all walks of life demonstrating in the streets and surrounding the presidential palace, banging pans and kitchenware. Some were arrested; others physically abused. There followed a paralyzing strike by truck drivers.

In the nick of time, the military intelligence discovered that Allende and his co-conspirators had developed a so-called "Z Plan" to assassinate within one week all top military officers and leading citizens.

Immediate counter-action was imperative. It was taken and thousands of communists, guerrillas and criminals were arrested; Allende committed suicide.

The new military government had to fight

fire with fire. Some ill-treatment even of innocent people, was unavoidable if Chile were to be saved from Moscow-controlled communism.

Please believe me when I assert that:

(1) The only thing the communist respect or fear is physical force greater than their own.

(2) A communist commitment or pledge is very rarely fulfilled.

Chile is the only nation, with scant aid from abroad, which has been able, by the courage and sacrifice of its citizenry, to overthrow a firmly established communist dictatorship which had seized power nefariously and by trickery. Chile still has to defend her independence from armed communist bloc attacks from within and without her borders; it also must clear away the lies and deceit disseminated throughout the world, by communists and too often believed by the gulleible.

Despite the catastrophic economic and social results of the Marxist regime, the Chilean people have tightened their belts and are repairing the damage. Their record on "human rights" is now better than the majority of countries in the United Nations who accuse them.

On reflection, we must see that Chile and Argentina are major battlegrounds between east and west, between the forces of communism and freedom. Nevertheless, Washington is alienating these two friendly nations by spurning and aggravating them.

#### CUBA

Third: Cuba, as a full-fledged Soviet satellite and Soviet-occupied fortress, is a major danger to the United States.

At Moscow's command, Havana dispatched 15,000 or more troops to fight for communism in Angola, Mozambique, and elsewhere in Africa. The USSR maintains at least 10,000 of its own military, KGB and intelligence services in Cuba. It directs that island's forces, provocateurs and espionage services in and out of Cuba. It operates the missile, naval and submarine bases I have mentioned.

Castro first attracted notice as a gangster and murderer. Under his regime, thousands have been tortured and killed, 20,000 to 40,000 political prisoners are suffering or perishing in prisons today.

Yet despite all of these horrors and the threat to the U.S.A. from only 90 miles off our shores, there are those high in government, even business, who advocate renewing diplomatic relations with Cuba. How blind or callous can they get?

#### PANAMA

Fourth: It suffices to say about Panama that our sovereignty and ownership of the Canal Zone in perpetuity twice has been reaffirmed by U.S. Supreme Court decisions, by many leading Panamanian statesmen, presidents and ministers, as well as by lower U.S. courts. As recently as December 17, 1976, District Judge Guthrie F. Crowe stated that he believes the U.S.A. owns the Canal Zone: "I think the United States is the owner of this property by reason of the treaties with Panama and Colombia, payments to the French (Canal Co.) and the creation of The Land Commission in which people from Panama and the United States functioned as a court with thousands of claimants. (The land) was paid for with United States money."

Our title is every bit as secure legally as are our territorial acquisitions from France, Spain, Mexico, Denmark and Russia.

The total U.S. investment in Panama is estimated at nearly \$7 billion.

The arguments by our State Department and its representatives as to why we should negotiate a new treaty ceding our full rights to the canal and the Zone are largely fallacious in substance and logic.

The illegally constituted dictator, Torri-

jos, threatens that unless we deliver the Panama Canal Zone and operations of the canal to his government within a limited period, we will have to wage another Vietnam War in that area.

Castro reportedly has several thousand troops now in Panama, and, of course, could bring back his armies from Africa, already trained in Angola. The State Department and our negotiators supinely agree that Torrijos will precipitate guerrilla warfare and sabotage.

Actually Torrijos fears if we do not sign the new treaty, he will be thrown out of power. In this event, he knows Moscow and Castro could not rescue him. On the other, if, with the help of the later two, he can deliver the canal, even indirectly to the comintern, he will be assured of his job for life, just as is Castro.

We have defended the canal for 70 odd years, through two world wars, countless riots and attempted sabotage. Are we so weak and timid that we must now run away from Torrijos' and Castro's Soviet-inspired threats and blackmail?

The real issue from the U.S.A. is not vis-a-vis Panama, but the U.S.S.R.

If we lost the Panama Canal Zone to the Soviets, even indirectly, this humiliation would be disastrous indeed. It might well cause our friends and allies, especially in Latin America, to lose all respect for and confidence in us and abandon our leadership, in order to play with the Soviet. Everybody wants to be with the winner.

#### SOME HISTORICAL BACKGROUND

The following bits of history are pertinent:

A. Phillip II of Spain declared that whoever controls the Caribbean will dominate the Western Hemisphere. President Jefferson expressed the same thought. Admiral Mahan, one of our greatest strategists, warned that any enemy of the U.S.A. controlling the Caribbeans could invade our gulf coast and so proceed up the Mississippi valley to capture the heartland of the United States.

B. Lenin listed in sequence the following "musts" for the Soviets to make effective their world domination:

- (1) Secure U.S.S.R.'s western borders through absorption or Moscow rule;
- (2) communize and control the Far East, especially southeastern Asia;
- (3) proceed similarly in Africa;
- (4) the same for Latin America;
- (5) the United States, thus surrounded, would fall like over-ripe fruit.

Lenin's successors raised point 6: to build their naval forces to overwhelming strength, accompanied by widely dispersed and fully equipped bases. Their objectives include the domination of all sea lanes, passages and routes; among these the Panama Canal is paramount.

Self-evidently the aforementioned six points are well on the way to successful fruition. The security of Russia's western frontier, including Latvia, Lithuania, Estonia, the Ukraine, and Eastern European countries has been ratified by the Helsinki Agreement signed August 1, 1975, by the United States and other western governments.

Moscow and Havana jointly have violated the Helsinki Agreement in Angola, Mozambique and elsewhere, communists have ignored concessions obtained by the free world at Helsinki stipulating greater freedom of movement for western journalists and promises to insure human rights throughout the Warsaw Pact nations.

The Soviet Union's hankering to control the Panama Canal Zone was openly stated by Major Sergei Yuworov in an article published in the Soviet military organ "Red Star," reproduced by the Cuban magazine "Bohemia" on March 17, 1957 in respect of the canal:

"Due to its privileged location as the junc-

ture between South America and the rest of the continent, including the canal, which permits U.S.A. warships to operate simultaneously in the Atlantic and Pacific, must for the Soviet Union be considered as a 'priority zone'."

He adds that Panama can be attacked from Central America, Colombia or from Cuba, Puerto Rico and other Caribbean islands. He intimates that some or all of these can serve as Soviet naval bases.

It is essential for us to remember that for over a quarter of a century, we have been beset by one humiliation after another, each of them contrived, usually financed, militarily aided and equipped by Moscow.

Our major blunders or defeats in policy and/or action were:

MacArthur prohibited from crossing the Yalu or bombing the bridge;

The inconclusive falsely labeled U.N. action in Korea;

Failure to lend help by air to the Hungarian uprising against Russian troops;

Non-resistance to the Berlin Wall;

No aerial help at the Bay of Pigs;

The Cuban missile crisis—tearing up the Monroe Doctrine;

Or shameful commitment to Khrushchev neither to invade Cuba nor permit others to do so;

The "no-win" war in Vietnam;

The so-called "Paris Peace Treaty with honor," with which North Vietnam never complied.

#### NATIONAL SECURITY COUNCIL

This series of surrenders only become explicable when one reads National Security Council Report number 68 (NSC-68) of April 14, 1950, drafted after President Truman's orders as a statement of our basic policies with respect to the U.S.S.R.

The study, opinions and conclusions of NSC-68 were based on reports from the Secretaries of State and Defense; they also were considered in at least one council meeting by the Secretary of Treasury and the heads of the other three top economic agencies of the government.

The content and portent of this super "top secret" 65-page document has been kept completely unknown to the public, Congress and even senior Army, Navy and Air Corps officers commanding at the time of the afore-listed humiliations.

The "top secret" classification, pursuant to law, terminated in April, 1975. On September 30, 1976, a brilliant journalist, Alice Widener, began publishing her expose and analysis of NSC-68. She sums up its principal aims as follows:

1. "To avoid nuclear war but to accept a Soviet nuclear first strike against us if necessary, hoping to ward it off by building up our own and our allies' military, economic, and social strength as a deterrent.

2. "To confine U.S. military action to strictly limited counteractions."

3. "To seek co-existence with the Soviet Union in the hope that democracy will win out eventually against dictatorship, that time would be on our side, and that the U.S.S.R. would undergo changes eventually leading to abandonment of its goal of world domination."

4. "To try to contain the expansion of the Soviet Union beyond its territory, but not to do anything directly challenging Soviet prestige."

"In conceding Soviet prestige as untouchable, NSC-68 seeks to protect the Soviets from any kind of effective attack—be it military, ideological, or psychological."

NSC-68 is a self-contradictory document, at times dove-ish and weak; at others hawk-ish and vigilant. On the one hand, it accurately sets forth the objectives of the U.S.A. for peace and freedom, as laid down by the constitution and the founding fathers.

On the other hand, it describes the fundamental and unchangeable program of the U.S.S.R. as follows:

"The design, therefore, calls for the complete subversion or forcible destruction of the machinery of government and structure of society in the countries of the non-Soviet world and their replacement by an apparatus and structure subservient to and controlled from the Kremlin. To that end, Soviet efforts are now directed toward the domination of the Eurasian land mass. The United States, as the principal center of power in the non-Soviet world and the bulwark of opposition to Soviet expansion, is the principal enemy whose integrity and vitality must be subverted or destroyed by one means or another if the Kremlin is to achieve its fundamental design."

Later, NSC-68 states:

"With particular reference to the United States, the Kremlin's strategic and tactical policy is affected by its estimate that we are not only the greatest immediate obstacle which stands between it and world domination, we are also the only power which could release forces in the free and Soviet worlds which could destroy it. The Kremlin's policy toward us is consequently animated by a peculiarly virulent blend of hatred and fear."

NSC-68 continues to characterize all the evils of totalitarian dictatorship and the latter's determination to dominate the world only limited by expediency. It says:

"It is estimated that, within the next four years (i.e. from 1950), the U.S.S.R. will attain the capability of seriously damaging vital centers of the United States, provided it strikes a surprise blow and provided further that the blow is opposed by no more effective opposition than we now have programmed."

The first time I read NSC-68, I said:

"In each assumption the authors establish a series of ideals as definite possible objectives to be carried out, then turn around and prove that these ideals are utterly impossible of accomplishment. The ink on NSC-68 was no sooner dry than the outbreak of the Korean War made a mockery of this do-gooding optimism."

The Comintern's leaders—perhaps due to blood and inheritance—possess a strain of Mongol innate cruelty, dishonesty and a shrewd depravity. They follow the precepts of Sun Tzu, who in China 600 to 500 years before Christ, wrote the following in a military textbook:

"Undermine the enemy first, then his army will fall to you. Subvert him, attack his morale, strike at his economy, corrupt him, sow internal discord among his leaders; destroy him without fighting him."

This is precisely the formula Moscow successfully has pursued and is directing against the U.S.A.

#### CONCLUSION

As a result, we are drawing nigh to the finish line. Yet there has been no perceptible inclination by either Democratic or Republican administrations to get rid of the NSC-68 policy recommendations, which so often have imperilled and still are entrapping United States' security with an apparently endless chain of humiliations.

If, due to our innate kindness of spirit and our religions' teachings of peace, we endure and add to the list I have already given you one more humiliation, one more breach of a solemn agreement, one more surrender of our rights and sovereignty under the 1903 treaty with Panama, then indeed the Caribbean, adjoining waters and sea lanes will become part and parcel of a huge Soviet lake.

If this happens, we then may have three options:

(1) If possible, to rebuild a definitive superiority in military power and defenses.

(2) To await a Soviet blackmailing ultimatum for surrender.

(3) Nuclear war.

May God save us from the last two alternatives.

#### PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. McHUGH) is recognized for 5 minutes.

Mr. McHUGH. Mr. Speaker, on May 26, 1977, I was unavoidably absent from the House during the consideration of Mr. PREYER's amendment to H.R. 6161, Clean Air Act Amendments of 1977. Had I been present, I would have voted aye on this rollcall, No. 289.

#### ONE HUNDRED AND SEVEN HOUSE MEMBERS SAY IMMEDIATE CONGRESSIONAL ACTION NEEDED TO PREVENT NURSING HOME FIRE DEATHS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 10 minutes.

Mr. PEPPER. Mr. Speaker, with 107 cosponsors, I am today reintroducing legislation which would require the installation of automatic sprinkler systems in all medicare and medicaid skilled and intermediate nursing homes. This legislation is urgently needed to prevent the deaths of residents of nursing homes.

A U.S. General Accounting Office investigation, conducted at my request following the deaths of 32 elderly persons and injuries to 50 others in nursing home fires in Chicago, recommended that the Congress enact such legislation.

In addition, an investigation conducted by the Subcommittee on Health and Long-Term Care, which I have the privilege of serving as chairman, concluded that present fire standards are not adequate to prevent multiple death fires. In a committee report, "The Tragedy of Multiple Death Nursing Home Fires: The Need for a National Commitment to Safety," the full House Select Committee on Aging, which I also chair, recommended legislation to require sprinklers. The report concluded:

Half of the Nation's 16,500 medicare and medicaid nursing homes are not fully protected with automatic sprinkler systems. Yet full protection by automatic sprinkling is the best way to prevent disastrous multiple death fires.

Unfortunately, there has been no congressional action on this legislation, which I introduced both in the 94th and 95th Congresses to implement this recommendation. Meanwhile, there have been even more nursing home fires, most recently in the Zion Nursing Home in Zion, Ill., which resulted in the death of two elderly residents and serious injury to 13 others, including 2 firemen.

Must we wait for the next tragic fire—and the next one after that—before we insist that our older citizens have decent protection against fire? This is another example of the kind of senseless, preventable tragedy that results from our hesitation to act—even when we have the answers.

This legislation (and the identical bills,

H.R. 1129, 5433, 5434, and 5435) has now been cosponsored by some 107 Members of the House. They are:

Mr. Roybal, Mr. Rooney, Mr. Blaggi, Mr. Edward Beard of Rhode Island, Mr. Blouin, Mr. Bonker, Mr. Downey, Mr. Florio, Mr. Harold Ford of Tennessee, Mr. Hughes, Mrs. Lloyd of Tennessee, Mr. Drinan, Mrs. Meyner, Mr. Russo, Mr. Cohen, Mr. Walsh, Mr. Rinaldo.

Mr. Glenn M. Anderson of California, Mr. Annunzio, Mr. Ashley, Mr. Badillo, Mr. Baucus, Mr. Bingham, Mr. Bonior, Mr. Brademas, Mr. Brodhead, Mrs. Yvonne B. Burke of California, Mr. Carney, Mrs. Chisholm, Mr. Clay, Mrs. Cardiss Collins of Illinois, Mr. Conyers, Mr. Corman.

Mr. Cornell, Mr. Dellums, Mr. Dicks, Mr. Diggs, Mr. John J. Duncan of Tennessee, Mr. Edgar, Mr. Don Edwards of California, Mr. Ellberg, Mr. Fascell, Mrs. Fenwick, Mr. Findley, Mr. Fish, Mr. Wm. D. Ford of Michigan, Mr. Frey, Mr. Gephardt, Mr. Gilman.

Mr. Harkin, Mr. Harrington, Mr. Hawkins, Mrs. Heckler, Mr. Hollenbeck, Ms. Holtzman, Mr. Howard, Mr. Hyde, Mr. Ireland, Mr. Kastenmeier, Mr. Ketchum, Ms. Keys, Mr. Koch, Mr. Kostmayer, Mr. Lagomarsino, Mr. Lehman, Mr. Lent, Mr. Jim Lloyd of California, Mr. Clarence D. Long of Md., Mr. Luken, Mr. McHugh, Mr. Maguire.

Mr. Metcalfe, Ms. Mikulski, Mr. Mikva, Mr. Mineta, Mr. Parren J. Mitchell of Md., Mr. Moakley, Mr. Moffett, Mr. Mottl, Mr. Austin J. Murphy of Pennsylvania, Mr. Michael O. Myers of Pennsylvania, Mr. Neal, Mr. Nix, Mr. Nolan, Mr. Ottinger, Mr. Patten, Mr. Rahall.

Mr. Rangel, Mr. Richmond, Mr. Rodino, Mr. Roe, Mr. Rosenthal, Mr. Ryan, Mr. St Germain, Mr. Scheuer, Mr. Simon, Mr. Snyder, Mr. Solarz, Mr. Stark, Mr. Stokes, Mr. Tonry, Mr. Udall, Mr. Weiss, Mr. Charles H. Wilson of California, Mr. Yatron, Mr. C. W. Bill Young of Florida, and Mr. Zefteretti.

I am grateful for their strong support. I hope that because of the wide support for this bill, there will be immediate congressional action. I call on my colleagues, DAN ROSTENKOWSKI and PAUL ROGERS, to report this bill to the House floor with the greatest possible speed.

#### VIOLATIONS OF CIVIL SERVICE LAWS AT THE U.S. INTERNATIONAL TRADE COMMISSION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, on April 25, the House of Representatives passed the fiscal year 1978 authorization for the U.S. International Trade Commission, ITC. The House report on this legislation (H. Rept. 95-217), prepared by my subcommittee, documented some of the administrative problems which have plagued the Commission during the past year. The report stated:

Despite a number of meritorious innovations in operations . . . there has been a completely unwarranted amount of time spent by Commissioners bitterly debating minor administrative or personnel matters, often in public session.

In an attempt to improve the quality of ITC operations, the House passed legislation which provides for a new method of selecting the Commission chairman, new criteria for being appointed to the Commission, and assigns the carrying out of most Commission administrative details to the chairman's

office. In an effort to measure the progress the Commission is making in improving its operations, the report provides for the following:

The Commission is directed to report to the Committee on Ways and Means six months after the . . . enactment of this bill on what actions have been taken to (1) Complete the reorganization of the Commission staff in conformity with Civil Service rules; . . .

The Subcommittee on Trade has received a copy of a Civil Service Commission report on the ITC reorganization. This report—probably the most critical Civil Service Commission report I have ever read—was received too late to incorporate into our consideration of the ITC authorization. The Civil Service Commission found, in part that:

Certain CSC rules and regulations were violated which resulted in an adverse impact on the rights of affected employees.

The manner in which the reorganization was implemented creates the appearance that the reorganization was designed to selectively remove employees from their positions, with significant adverse impact on employee morale. (Of 68 employees interviewed on-site, 43 claimed the major reason for the reorganization was to get rid of certain employees.)

The Agency's manner of implementing the reorganization caused morale to sink to an extremely low level. This can be seen by the following: A total of 68 employee-requested interviews were conducted. This included almost every major component of ITC. The employees interviewed during 1½ weeks on-site represent almost 20% of all agency employees. In addition, several other employees requested interviews, but due to time constraints, could not be scheduled. With 2 or 3 exceptions, every employee interviewed had some complaint about the reorganization's implementation.

Of these 68 employees, 49 volunteered the opinion that there was poor morale throughout the agency because of the reorganization.

This report came as no surprise to the subcommittee, since we have long been concerned about the quality of leadership at the Commission. The Civil Service Commission listed a number of corrective actions which must be taken to comply with the law and to restore employee confidence in the agency.

It was my hope that the Commission which has now received a detailed critique of its reorganization efforts, would have proceeded as fast as possible to correct its past mistakes and restore employee morale at the agency.

Unfortunately, on April 28, 1977, the Commission voted by four to one to appeal the civil service report. Further, by a vote of three to one, they voted to authorize themselves "to contract for special legal and/or other counsel's advice which may be needed to assist in the representation of the U.S. International Trade Commission before the Civil Service Commission, including preparation of this agency's appeal to the CSC evaluation report."

In other words, rather than facing up to their past mistakes which have demoralized this agency for month after month, they have voted to spend the taxpayers dollar to protest a finding of their errors with respect to employee rights and sound management principles in reorganizing the agency. As

chairman of the subcommittee that passes on the authorization for this agency, I find this an unacceptable use of taxpayers' funds.

In the past few days, one Commissioner, whose term had expired, resigned. I hope that when the President considers an appointment to fill the vacancy, that he will make a special effort to appoint an individual with expertise in the area of trade who is also noted for his administrative judgment and ability to work with others.

The Senate did not accept the House recommendation for changes in the ITC organization. I am hopeful that in conference we can convince our Senate colleagues that the House provisions are preferable to the Senate approach in correcting the unfortunate situation at the Commission. Certainly, the ITC also desperately needs now, perhaps more than ever before in its history, the appointment of a person of outstanding judgement and ability.

Attached are the public portions of the civil service evaluation:

#### A REPORT ON INTERNATIONAL TRADE COMMISSION

(Prepared by: U.S. Civil Service Commission Bureau of Personnel Management Evaluation)

Information that would invade an individual's privacy if released to the public has been deleted from this report, under exemption 6 of the Freedom of Information Act, 5 U.S.C. 552(b) (6).

#### I. INTRODUCTION

A. After lengthy discussion, the International Trade Commission (ITC) on January 2, 1977, implemented a significant reorganization. The reorganization focused on realigning functions and reporting relationships rather than adding or changing functions.

The major aspect of the reorganization was the abolition of the Office of the Executive Director, and its replacement by a Director of Operations and a Director of Administration. Various offices which had reported to the Executive Director now report to the two new offices.

In the Office of Operations, there are newly established offices of Consumer Affairs and Nomenclature, Valuation and Related Activities.

The Office of Trade and Industry has been renamed the Office of Industries. Several functions were transferred, such as the support and nomenclature functions. The Accounting Division was eliminated. The Agriculture Division and Lumber and Paper Division were combined, reducing the number of commodity divisions from 7 to 6. Also, various commodities were switched from one division to another.

The Office of Administration combines various functions which had reported to the Executive Director. Included are Services, Finance and Budget, and Production. This office also includes separate offices of personnel and management analysis. These had been combined in the old organization. (The old and new organizational charts are shown as Appendix A and Appendix B respectively.)

B. The agency effected the reorganization by taking mass change actions, changes to lower grade, separations, and reassignments to vacant positions. The reassignment of employees released from their competitive levels to continuing vacant positions (for example: . . .), established the use of vacancies in RIF as agency policy.

In the Headquarters, 2 employees were changed to lower grade, 7 were reassigned to

vacant positions, and 2 employees elected discontinued service retirement. In the New York office, 3 employees were separated by RIF, 1 employee was retained pending disability retirement and 1 employee's RIF NOTICE was cancelled. Two employees were released from their competitive levels in the excepted service in the headquarters; 1 elected discontinued service retirement and 1 was changed to lower grade in a vacant position ( . . . Case #4, Appendix C).

#### II. MAJOR PROBLEMS

We found 2 major problems associated with the ITC reorganization.

A. Certain CSC rules and regulations were violated which resulted in an adverse impact on the rights of affected employees. These violations fell into 5 categories:

1. One group of employees received an invalid General RIF Notice from ITC. The Notice was invalid because the employees occupied positions in the new organization and their positions of record were not being abolished.

2. One employee was reassigned to an unestablished position with no position description. There is no basis to believe the new position is classifiable at the same grade as the old position.

3. Other employees were misinformed by management as to their rights. They were told that they were surplus and should seek employment elsewhere. This is not the case.

4. One employee was downgraded in violation of CSC regulations. He was not given a proper RIF Notice and was not informed of his appeal rights.

5. Employees were reassigned to positions which do not support their current grades. The reassignments were also reductions-in-rank. As neither RIF or Adverse Action procedures were followed, these reassignments were improper. (For specific details and required corrective actions, See Appendix C.)

B. The manner in which the reorganization was implemented creates the appearance that the reorganization was designed to selectively remove employees from their positions, with significant adverse impact on employee morale. (Of 68 employees interviewed on-site, 43 claimed the major reason for the reorganization was to get rid of certain employees.)

1. Had ITC taken all personnel actions associated with the reorganization at the same time, using RIF procedures when required, most of the subsequent problems would have been avoided. Instead, the agency continued to take actions which could not help but increase employee uncertainty and apprehension, and decrease employee morale.

2. Numerous ITC employees were designated as "Acting" in their positions of record. Examples are: "Acting" Director of Personnel; "Acting" General Counsel; 5 "Acting" Division Chiefs, Office of Industries.

3. Another group of 15 employees from the Office of the General Counsel were "temporarily assigned" to the Office of Operations for up to 6 months (see January 4, 1977 Memo signed by Director, Personnel Division).

4. Another large group of employees were designated as "overhires." Employees perceived this to mean that they were surplus employees, subject to another RIF at some future date. Approximately 60 employees have been designated as "overhires" at some time since the January, 1977 reorganization. At the time of our review, 26 employees continued to be carried in this status (see Section III-C for a more detailed discussion of "overhires").

5. Two of these employees have been told that they are surplus to ITC and that they should look elsewhere for employment or retire. Yet, the agency is currently recruiting for vacancies in the same occupation and grade (see Case 3, Appendix C).

6. ITC advertised the positions of some

employees who felt that they had legitimate rights to the advertised positions. In some cases, for example, the 5 Division Chiefs in the Office of Industries (case 1, Appendix C) and 2 Branch Chiefs, Office of Industries (case 5, Appendix C) the employees had to apply for positions which they already incumbered.

7. On August 19, 1976 and again on December 30, 1976 the Commission failed to pass resolutions which would have provided that the reorganization would be carried out in accordance with CSC regulations. Many ITC employees were aware of these Commission actions, and combined with the factors described above, these votes further increased employee fears and suspicions.

8. Throughout the period, employee dissatisfaction was unnecessarily increased because the agency did not take sufficient steps to keep all employees informed of their rights. Of 68 employees interviewed, 45 said that they were uncertain about their rights or what their status would be in the near future.

9. The agency's manner of implementing the reorganization caused morale to sink to an extremely low level. This can be seen by the following:

(a) A total of 68 employee-requested interviews were conducted. This included almost every major component of ITC. The employees interviewed during 1½ weeks on-site represent almost 20% of all agency employees. In addition, several other employees requested interviews, but due to time constraints, could not be scheduled. With 2 or 3 exceptions, every employee interviewed had some complaint about the reorganization's implementation.

(b) Of these 68 employees, 49 volunteered the opinion that there was poor morale throughout the agency because of the reorganization.

#### 10. Corrective Action Required:

(1) Correct specific cases listed in Appendix C.

(2) Discontinue use of "Acting" designation of all employees not actually detailed to a position other than their position of record.

(3) Discontinue use of "Overhire" designation for employees unless they have been reached for release from their competitive level through proper RIF procedures.

(4) Refrain from advertising positions which are already incumbered.

#### III. ASPECTS OF THE REORGANIZATION STILL PENDING

(A) General Counsel Staff and Investigative Staff

1. No decision has yet been made by ITC on how to organize the Office of the General Counsel and the Investigative Staff.

Morale of the employees in these 2 offices was extremely low. (23 of 23 employees interviewed complained of low morale). These employees stated that this condition is likely to continue as long as the present uncertainty continues.

#### 2. Corrective Action Recommended:

The agency should make a speedy decision on the organization desired for the Office of the General Counsel and the Investigative Staff, and implement this decision, placing these employees in their permanent positions. (The provisions of FPM Chapters 351 and 752 or other requisite personnel requirements must be followed if and when a change is implemented).

#### (B) Attorney Positions:

1. We understand there is a current proposal at ITC to permanently reassign GS-905 attorneys to GS-1810 investigator positions. The duties of the new positions are still unestablished and no PD's have been written. However, based on a review of the types of investigations (337) presently being conducted by these attorneys, it appears that the positions are still appropriately classified as GS-905 attorneys.

2. If, at some future time, these duties become classifiable in the GS-1810 series, CSC Rule 6.5 prohibits the performance of these duties by Schedule A, excepted service, employees, without prior CSC approval.

#### (C) "Overhires":

As of April 6, 1977 the Agency had 26 employees on "overhire" status. During the on-site review we had 19 complaints from employees concerning "overhire" status. Upon interview with one of the Commissioners, it was explained that employees considered to be "overhires" would be subject to job abolishment if they had not been placed in continuing positions prior to June 1977. These employees have been given the impression that they are surplus to the needs of the agency. This is the major concern to employees identified as "overhire" as they do not know how long they will have a job and exactly what will happen to them. It is interesting to note that the Agency is currently recruiting for some of the positions which have been determined to be surplus, such as investigators at the GS-13 level.

The agency should be aware that positions are surplus to the needs of the agency, not employees. If and when it is determined that certain positions are no longer needed to carry out the functions of the organization, these positions can be abolished; however, incumbents of abolished positions may, or may not, be subject to RIF. In fact, comparison of the list of "overhires" and the current retention register indicates that the majority of these 26 employees are probably not within reach for release from their competitive levels at this time.

#### Corrective Action Required:

Explain fully to all 26 employees that they are not considered surplus until such time as they are issued a RIF notice. Also, fully explain to the 26 employees that if at some later date it is necessary to have a RIF, their rights in accordance with the appropriate CSC regulations will be strictly observed, as will those of all employees of the ITC and that they will not necessarily be the ones separated or otherwise adversely affected.

#### IV. PROCEDURAL PROBLEMS WITH THE REORGANIZATION'S IMPLEMENTATION

##### (A) RIF Documentation:

1. The Agency retention register was dated August 4, 1976. This retention register was not completely updated before it was used for the Reduction in-Force of January 2, 1977. Not all new hires had been added to the register, nor had all promotions been documented. Up-to-date registers are required by the regulations:

(a) Section 351.404 CFR requires the agency to establish a separate retention register from the current retention records of employees.

(b) Section 351.506 CFR states that the retention standing of each employee released from his competitive level is determined as of the date he is so released.

#### (c) Corrective Action Required:

No specific action is required since no specific employee rights were violated. However, in any future RIF action the agency must take care to use an up-to-date retention register.

2. There were 2 employees at the ITC Headquarters adversely affected by the Reduction in-Force who were in the excepted service. These 2 employees did not appear on the agency retention register, even though excepted employees are covered by RIF procedures.

(a) Excepted employees are covered by RIF procedures. (See Civil Service Regulation 351.202, 351.403(b), and 351.502.)

#### (b) Corrective Action Required:

Corrective action for the employee still on the rolls is specified in Appendix C, case No. 4.

3. The agency did not document the retention register to show which employees

were adversely affected and how these employees were affected.

(a) This documentation is required by Civil Service Regulation 351.505 and by FPM Chapter 351, 4-6(a).

#### (b) Corrective Action Required:

In any future RIF, the register must be documented to show what happened to affected employees.

#### (B) Staffing Concerns

##### 1. Repromotion Consideration:

No procedure currently exists which ensures that the two employees of ITC demoted through RIF (PMS, GS-201-12 and Administrative Services Officer, GS-341-11) are given priority consideration for repromotion. Agencies are required to give employees priority consideration for repromotion to the grade from which demoted through no fault of their own, such as through RIF procedures. This is required by FPM Chapter 335, Subchapter 2, Requirement 1.

#### Corrective Action Required:

Establish a procedure to ensure that and are given noncompetitive reconsideration for repromotion to any positions for which they are qualified at their former or any intervening grade. This must be done prior to efforts to fill vacancies by any other means, in accordance with FPM Chapter 335, Subchapter 2, requirement 1 and section 4-3, c.

##### 2. Reemployment Priority List:

The agency is not utilizing a reemployment priority list for each commuting area in which group I or II employees have been separated by reduction-in-force. This is required by Civil Service Regulation 351.1001.

To date this list should include the 3 employees separated by RIF in the New York Office.

#### Corrective Action Required:

(a) At the time of our review, no vacancies had been filled in New York for which any of these 3 employees would qualify.

However, ITC is currently recruiting for an International Trade Specialist, GS-1140-11, in New York, (vacancy announcement #77-17). One of the 3 employees, may be qualified for this vacancy. The agency must review his qualifications to determine if he should be considered for the vacancy under the provisions of Civil Service Regulation 351.1001 and FPM 351, Subchapter 10. Report to CSC the results of this review.

(b) Establish and maintain a reemployment priority list in accordance with Civil Service Regulation 351.1001 and FPM 351, Subchapter 10.

#### V. GENERAL CORRECTIVE ACTION

The various corrective actions listed in this report serve to correct the specific regulatory and program deficiencies identified during the on-site review of ITC. We are confident that the specific corrective actions already listed rectify those defective personnel actions already taken by the agency.

Because of the nature of the problems enumerated in this report and their adverse impact on employee morale, we are concerned about the need to fully protect employee rights and equities in the future.

Therefore, we recommend that ITC advise the CSC before taking any reduction-in-force actions, adverse actions, or any reassignments or other personnel actions which could reasonably be construed as being disadvantageous to any ITC employee so that a prior review may be conducted if it is deemed warranted.

#### SUPPORT FOR McCLOSKEY AMENDMENTS TO PREVENT NEEDLESS KILLING OF PORPOISES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 5 minutes.

Mr. KOCH. Mr. Speaker, earlier this

spring the American tuna fishing fleet returned to port in a dramatic protest over the Commerce Department's regulations issued under the Marine Mammal Protection Act (MMPA) limiting to 59,050 for 1977 the number of porpoises that may be killed by the fleet incidental to its tuna fishing operations. Most American tuna boats, which are the most modern and productive in the world, employ a technique called "purse seine" fishing in which yellowfin tuna are caught by surrounding schools of porpoises with huge nets. For unknown reasons, this particular species of tuna, which constitutes 65 to 75 percent of the tuna caught by U.S. fishermen in a given year, swims below schools of porpoises. Because the porpoises are easily spotted on the surface, they act as guides for the fishermen, but tragically, many porpoises become entangled in the nets along with the tuna and drown.

Today the House is considering legislation proposed by Chairman JOHN M. MURPHY of the House Merchant Marine and Fisheries Committee to amend the MMPA to raise the allowable limit of porpoises killed to 78,900 and of the depleted eastern spinner porpoises to 6,500. The purpose of this legislation is to enable the American fleet and thousands of workers in tuna-related industries such as canning to return to work. The fleet has recently put back to sea on assurances from Chairman Murphy that he has the votes to get his legislation accepted.

While I share the Chairman's motives, I do not feel the excessive limits he has proposed are justified, and I believe they will be detrimental to the porpoise populations as well as to the intent of the MMPA. The dramatic return to port by the tuna boats was ostensibly forced by the Federal regulation that in addition to the 59,050 limit on porpoises killed no porpoises of the depleted eastern spinner species could be killed. The fishermen claimed that this requirement was impossible to meet; however, in March, Secretary of Commerce Juanita Kreps had assured the industry that accidental killings of eastern spinners that were mixed in with schools of other major species of porpoise involved in purse seine fishing would not be prosecuted. Therefore, the lay-offs in tuna-related industries were not caused by the Government regulations, as charged by the fishermen and supporters of the Murphy amendments, but by the industry's dramatic ploy to bring attention to their complaints.

Today Representative McCloskey is offering several floor amendments to the Murphy bill, all of which I support. The first and most important would lower the total number of porpoises which could be killed this year under the Murphy bill to 69,000 and would require that by 1980 the limit be half that number. In contrast, the limit proposed by Representative MURPHY for the remainder of this year is not only above what the industry asked for, but the same limit would apply each year through the first quarter of 1979. A year-by-year reduction in the limit is needed to make all the boats in the American fleet adopt the equipment and techniques needed to

reduce the porpoise kill to a figure approaching zero. It has already been demonstrated by a research tuna boat using advanced techniques that thousands of tons of yellowfin tuna can be surrounded and caught by means of the purse seine method with an insignificant number of porpoise kills; and furthermore, statistics show that a handful of irresponsible captains cause a large majority of the present-day porpoise drownings.

I do welcome the provisions in the chairman's bill that require every tuna boat over 400 tons to have a Federal observer on board to insure that the regulations are carried out and to keep statistics on the number of porpoises killed, that make the tuna industry pay \$2 million by 1978 to fund a research tuna fishing boat which will accompany the fleet and search for ways to reduce the porpoise mortality rate further, and that place a \$32 fine for every porpoise killed by a boat in excess of the fleet average kill rate. Nevertheless, these do not go far enough. I support the McCloskey proposal which calls for a \$32 fine for every porpoise killed, not just those in excess of the fleet average, and a \$100 fine for every eastern spinner killed. Strong penalties such as these are needed to encourage every captain to kill as few porpoises as possible and bring about an eventual end to the porpoise slaughter.

Finally, Representative McCloskey is proposing amendments that would make the industry pay for the Federal observer program and would require that boats transferred to a foreign flag nevertheless retain a U.S. observer on board to insure compliance with U.S. regulations. Without such observers, enforcement would be impossible. It has been shown that the tremendous efficiency of the American fleet would enable it to meet the requirements being proposed today by Representative McCloskey, including industry funding of the observers, while still enjoying a significant economic advantage over foreign tuna fishermen.

It is my belief that these measures will enable the American tuna industry to remain healthy and profitable and at the same time reduce the needless slaughter of porpoises. The means to reduce porpoise deaths to near zero exist, and it is the job of Congress to see that they are employed so that the highly intelligent and friendly porpoises in our oceans will survive and prosper.

#### HELSINKI'S UNFULFILLED PROMISE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Virginia (Mr. HARRIS) is recognized for 5 minutes.

Mr. HARRIS. Mr. Speaker, I wish I were able to stand and report to you that my friends, Eugene and Sophia Reinberg had been granted exit visas and could now leave the Soviet Union and join their son and only child in Israel. Unfortunately, I am unable to take this action because the Reinberg's situation is the same as in my last report to you, which I delivered the first day of the first session of the 95th Congress.

Briefly, Yevgenny and Sophia Rein-

berg, 55 years of age, applied to leave the Soviet Union over 2 years ago, hoping to join Yuri who had received permission to emigrate. Yuri's only sister died a few years ago at the age of 20 of Hodgkins disease.

The Reinberg's were refused permission to leave and Yevgenny, a Ph. D. in physics, was demoted from his position as a specialist in metallurgy at the institute for shipbuilding to foreman for building repairs. Many believe that he is being used as an example to others at the institute to discourage them from applying to leave the U.S.S.R.

All of the nations which signed the Helsinki Final Act, including the Soviet Union, pledged to do everything possible to reunite families separated by political boundaries. Because the Soviets are not living up to that promise, Members of Congress are conducting a vigil on behalf of the many separated families, such as the Reinberg's, whom I have described today. Eugene and Sophia have not given up hope and I have assured them that those of us who believe in freedom will continue to speak out on their behalf.

#### TRIBUTE TO FRANK C. OSMERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. RODINO) is recognized for 5 minutes.

Mr. RODINO. Mr. Speaker, Frank C. Osmers was a man whose first commitment was to his country. He honored that commitment for 40 years and more, in his native State of New Jersey, in the military and in the House of Representatives. Always, he was prepared to go where he believed he was most needed.

In World War II, Frank Osmers gave up his seat in the House to enlist in the Army as a private. He served with distinction in the Pacific Theater and was discharged with the rank of major.

A few years after his return to civilian life, Mr. Osmers once again believed that his services were needed in the Congress and he regained his seat, serving with honesty and integrity until 1965. Even after leaving the House his record of public service continued in his home State.

Mr. Speaker, the death of Frank Osmers has taken from us a dedicated and principled public servant. He leaves as his legacy to all of us his example of a good and decent man who placed the interests of his country and his fellow citizens above his own. It is an example of which his family and we, his friends and colleagues, are justly proud.

#### PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Kansas (Mr. GLICKMAN) is recognized for 5 minutes.

Mr. GLICKMAN. Mr. Speaker, several weeks ago, May 18, 1977, we debated H.R. 10, the Federal Employees Political Activities Act of 1977. Toward the end of the debate that evening Mr. ASHBROOK offered an amendment that, as I understood it, tightened the restrictions of

the act to prohibit any employee organization from attempting to intimidate Federal employees to vote, or not vote, for any candidate or measure in any election and from directly or indirectly intimidating Federal employees to give or withhold political contributions. The amendment further provided that no portion of any dues, fees, or assessments levied on members of an employee organization be used by such organizations for political purposes.

Although I generally favored the thrust of this amendment and originally voted "aye" on the motion, upon further reflection I felt that the last portion of this amendment appeared inconsistent with existing law. I was disturbed over the lack of debate afforded—perhaps resulting from the lateness of the hour—this complex amendment, and in all honesty did not really understand the entire scope and purpose of the Ashbrook proposal. I doubt if many, especially my freshman colleagues, did. I therefore changed my vote, an action toward which I am disinclined, from "aye" to "present."

Mr. Speaker, I would also like to state for the record that I was absent during two important rollcall votes on last Thursday May 26, due to long-standing obligations in my district. Had I been present, I would have voted "aye" on rollcall No. 290 and "aye" on rollcall No. 291.

#### CONGRESSMAN BROOKS—A LEADER IN THE EFFORT TO ACHIEVE SYSTEMS STANDARDIZATION IN NATO

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. PHILLIP BURTON) is recognized for 5 minutes.

Mr. PHILLIP BURTON. Mr. Speaker, last week at the North Atlantic Assembly meetings in Brussels, our distinguished colleague from Texas, Mr. Brooks, strongly encouraged our allies in NATO to vigorously pursue the much discussed and infrequently achieved goals of weapons and systems standardization and interoperability.

BROOKS, the Vice President of the Assembly, made his remarks to the Economic Committee, of which he is a member and former chairman. His remarks were well received by the delegates, particularly his intent to "support an active standardization campaign in the U.S. Congress," an effort in which he has the support of the ranking minority member of his Government Operations Committee, Congress FRANK HORTON.

In view of the distinguished gentleman from Texas' long record with standardization in computer development and use by the Federal Government, his interest in pursuing such objectives relating to NATO are most promising. He struck a particularly sympathetic chord with the delegates by emphasizing the economic, as well as the military benefits to be derived from realization of standardized systems and interoperable components.

So that our colleagues here in the Congress can have the benefit of his remarks, I include them at this point in the RECORD:

#### REMARKS OF CONGRESSMAN JACK BROOKS

The efficient allocation of resources within our respective countries, and within the Alliance as a whole, is a natural and important concern—especially for those of us with an interest in the work of the Assembly's Economic Committee.

In my legislative career, I have taken a special interest in efforts to make the U.S. Government work better. Among my efforts, I have promoted the development of meaningful and uniform standards for computer software and hardware. Through legislation and hearings, I have attempted to encourage more effective cooperation in this area between government agencies and industries producing computer equipment. This work has convinced me of the potential gains for my country from more efficient government procurement, operation, and maintenance of automatic data processing systems and other commonly utilized systems.

Similarly, efficiency in our Alliance—through cooperation in armaments—has long been accepted as a desirable goal. But this goal has proved particularly elusive, and the progressive standardization of NATO's forces and armaments has become an absurdity in terms of resources available for NATO defense and in view of the continued improvements in Soviet and Warsaw Pact forces.

It is my belief that the Alliance now has a chance—perhaps the first real such chance since the opportunity was missed in the early years of the Alliance—to do something about this problem; and, it is my hope that you will join with me, particularly in the work of your own parliaments, in supporting the major initiative that will be required to develop an effective system of economic cooperation in armaments.

In the past, the issue of standardization has been dealt with primarily as a military problem. The Military Committee of this Assembly, for example, has carried the major burden of our standardization initiatives. While the goal of standardization is essentially military—to support a more effective common defense—both the causes of and the potential cures for NATO's standardization are highly political and economic in nature. Unless we begin to look at the problem as a political and economic, as well as a military task, we will make little more progress than we have in the past 25 years.

In my remarks today, I would like to suggest some directions in which our countries might move to begin to remedy the problem.

First, let me say that the problem is with us in spite of the very dedicated efforts of people in NATO who have worked at various civilian and uniformed levels to deal with it. Their efforts have produced some progress in setting standards and, perhaps most importantly, illustrating that significant progress will require top level policy attention in all of the Alliance countries.

If we look at the history of the standardization problem, we find that although standardization was an early Allied objective, our dependence on nuclear superiority placed a very low priority on effective conventional defense. As a result, we all went our own ways in defense research and production. For the major producers of weapons in the Alliance, defense production was seen as a source of employment, of potential foreign exchange earnings, and as a symbol of national prestige and power. There were, in sum, many more pressures for us to continue to compete with one another rather than to cooperate.

I feel that the reasons for economic cooperation in armaments are now much more compelling than the more narrowly construed impetus for wasteful competition. We no longer can count on the Soviet Union being deterred from military or political adventures in Europe by U.S. strategic nuclear capability alone. We now must give the mean-

ing to our policy of flexible response. One of the most glaring deficiencies of our conventional defense effort is the fact that much of the equipment of our national forces is not interoperable with that of other allied forces. Our respective forces are supported by overlapping and duplicative logistics systems. Eliminating unnecessary duplication in support and logistics is clearly a priority objective for the Alliance. But the impact of such efforts will be limited unless there is also progress toward adoption of common weapons systems—since the weapons systems in part establish the requirements for the support systems. This is why standardization of our forces is a keystone to the maintenance of a credible Western deterrent. If we continue to develop, produce, procure, and support our forces as we have in the past, we face the serious possibility of losing that deterrent edge, or, alternatively, paying dearly for defenses sufficient to defend against a potential Warsaw Pact attack.

A number of factors encourage me to believe that we do now have a good chance of achieving greater standardization of NATO forces. The military rationale is clear and compelling. The United States military disengagement from Southeast Asia permits our defense planners to focus more clearly on European contingencies. The U.S. Congress has declared standardization to be the policy of the United States, even though our record of actions on individual weapons systems does not yet fully reflect that commitment.

And, in Europe, the work of the Eurogroup, and now the European Program Group, has made some tentative progress toward rationalization of the European arms effort—something which I think is a prerequisite to fuller development of a "two-way street" in arms sales between the United States and Europe. Another prerequisite, of course, is a greater willingness on the part of the United States to give equitable consideration to European-made weapons systems.

Given the urgency as well as the opportunity for cooperation, what else is required? In my opinion, we must, as a matter of top priority, develop our knowledge of the economic factors involved, on both domestic and Alliance levels. We are still operating with insufficient data to support positive far-sighted decisions and to develop effective forms of cooperation. Secondly, we must provide a much stronger political impetus behind standardization. Without strong and effective policy leadership at the highest levels in our legislatures, the old ways of doing business will persist and the technical obstacles to cooperation will remain major barriers.

The price that the Alliance pays for the current lack of armaments cooperation has been acknowledged in previous Assembly documents. It has been widely accepted that we waste billions of dollars annually. But we're not talking about "saving" money through standardization. To hold out the promise of funds being diverted from defense to domestic programs would not be accurate. We're talking about more efficient use of the money that we already spend developing and sustaining our conventional forces.

In addition, it would be unrealistic to suggest that because we are wasting many billions of dollars annually that we can eliminate all of that waste. In an ideal world, maybe. But in the world that we have to work with, we will do well to eliminate a portion of that waste, particularly in the absence of a comprehensive system of armaments cooperation. We must recognize that in the near future, individual projects, initiated in the name of standardization, may actually involve short term costs that appear excessive. We will have to guard against inefficient approaches to standardization and accept apparent inefficiencies only to the point that they might be required by carefully considered military needs.

## CURRENT TOOLS

The tools currently being used to cope with NATO's destandardization are essentially the following: (1) direct purchase of an ally's weapons system; (2) competitive research and development with licensed co-production; (3) cooperative research and development and joint production; and (4) the effort to make dissimilar systems interoperable.

The principal advantage of direct purchase is that it allows the purchasing nation to save the R & D expenses of developing a similar system, as well as the expense of establishing a separate production base. Direct purchase can extend production runs and reduce unit costs. Standardization is achieved between the buyer and seller. The problem with direct purchase is that it can result in balance of payments and domestic impacts which are not automatically offset or accounted for at the project level. Contracts for domestic producers may be lost, and jobs as well.

And so, while direct purchase may be the most economic approach to arms cooperation currently available, its use is limited by the fact that we do not have a more comprehensive system of cooperation to balance off—in military or nonmilitary transactions—some of the international financial and domestic implications of direct purchase decisions.

Competitive research and development with licensed co-production is regarded by many experts—and by the U.S. Department of Defense—as the most viable presently available approach to arms cooperation in NATO. The main advantage of this approach is that it tends to mitigate some of the political and economic problems that are engendered by direct purchase. Co-production means that jobs can be created in all participating countries. Many analysts believe that an important advantage of co-production is the fact that the existence of more than one production base is a better guarantee of continued supplies in time of war. This approach also leads to standardization among the participating states—as long as countries do not redesign features of the system in the process of co-production. We should not be misled to expect great budgetary savings when we use the co-production approach. While co-production of one weapons system is more economic than separate production of two or more systems, it is not generally as efficient as direct purchase from a single weapons supplier.

Cooperative research, development, and production involves multinational cooperation from the earliest stages of weapons conceptualization through to production and procurement. The experience with this approach so far, however, has not been that good.

In some cases, such as the U.S.-German attempt to collaborate on a main battle tank for the 1970s, cooperation broke down altogether. In other cases, such as the European Multi-role combat aircraft (MRCAs) Tornado, this approach has involved increased costs and an extremely long time from initiation to delivery. If we develop a more cooperative environment in our armament relations, we might have more success with this approach in the future.

I mention interoperability as a fourth "tool"—and, in my judgment, a very important tool—because in the absence of standardization we must attempt at least to make system work together as best as possible. Doing so, however, after systems are in manufacture or in place, will not necessarily save us money. In fact, making systems interoperable in this manner can be very costly. This illustrates the importance of achieving interoperability in pre-production systems design so that we do not have to struggle continually to make existing dissimilar systems interoperable. While I am not an engineer, it seems to me that it would be both desirable and attainable to utilize

to the greatest extent possible interoperable parts in designing and developing common weapons systems.

I believe that it is sufficiently clear that we need a new use of cooperation that will enable us to make more effective use of these cooperative tools. We must aim high—beyond the consensus that may realistically exist now among our countries. We must begin by convincing the leaders of our respective governments that they must sit down and agree to begin work on building a political structure to create a systematic approach to armaments cooperation. I sincerely hope that the members of the European Program Group, in their deliberations, will come to the same conclusion.

In order for us to move in this direction, a number of factors must be considered, a number of actions taken. I would like to stress a few of these areas.

First, the United States clearly must give greater consideration to European weapons systems in making its armament procurement decisions. When a European manufacturer has a system that represents advanced technology and would improve NATO defenses, the United States should consider procuring or co-producing that system.

Second, the United States and the European countries should work toward more fully sharing technological information. I know that until we all have faith in the mutual advantages of a cooperative approach, there will be great reluctance to share some technological information. But we must still try to do better.

Third, the European members of the Alliance must continue to move toward greater cooperation and mutual efforts in developing a rational approach to the European Arms production effort. Most authorities believe that such rationalization is a prerequisite to a successful comprehensive approach to standardization. Europe cannot expect, and I do not believe that European governments and industries do expect, their allies to buy inferior equipment at exorbitant prices. And it seems unquestionable that Europe's future competitive ability depends on greater specialization and concentration of currently fragmented research and production efforts.

The cooperative European efforts, to be sure, must take place in a framework of cooperation with the United States and Canada. If they should take on a separatist, defensive appearance, the entire effort will fail. While the European members of the Alliance will reach their own conclusions about how the work of the European Program Group should be coordinated with the United States and Canada, I do not think that we can afford a leisurely approach to this problem.

With regard to how this European-American connection is made, I know that we have discovered over the years that how we go about sustaining the common defense is almost as difficult to agree among us as actually doing it. We should not in this case let procedural difficulties—disagreements over the most appropriate organizational framework for cooperation—stand in the way of progress. In particular, if France will seriously pursue a cooperative approach, the nations which do participate in NATO's integrated command structure should accommodate within reason the particular French organizational preferences. The cooperation of France is vital to the rationalization of the European armaments efforts. We take this factor into account. We only hope that France perceives cooperation with her European allies and with the United States and Canada as vital to French interests.

Fourth, I believe that we all will be assisting the standardization effort if we do everything possible to promote strong and steady economic recovery in our respective countries. According to one recent Congressional report: "If the Western countries make a

sufficiently strong recovery from the current recession, chances will improve that NATO members will accept short-term costs in hopes of gaining long-term benefits. If the recovery is not sufficiently strong, industrial production does not revive vigorously, and unemployment remains at high levels, standardization initiatives may be severely limited." This is an area in which we, in acting on our national budgets and in scrutinizing our governments' economic policies, can play a distinct role.

Finally, and perhaps most importantly, we must realize that all of our hopes and plans for progress toward standardization will be meaningless if they do not have the sympathy and support of our people. It will not be sufficient for Americans and Europeans to recognize standardization as a "good thing." They must also be convinced that they will not individually or communally be injured by standardization programs.

For my part, I intend to support an active standardization campaign in the United States Congress. In this work, I will urge that expectations be realistic, and that we not let short-term problems and difficulties cloud the longer-term objectives. In this regard, I want to point out that the Ranking Minority Member of the Government Operations Committee of the House of Representatives, Congressman Frank Horton, fully shares my views of the need for greater standardization of NATO Weapons Systems.

I will make a determined effort to convey to my government the feeling that NATO Standardization is not a panacea; simply a necessity. Our efforts could make the necessity a reality.

Thank you.

#### SMALL REFINERS STRIKE GUSHER IN FEA OIL RULE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oklahoma (Mr. JONES) is recognized for 5 minutes.

Mr. JONES of Oklahoma. Mr. Speaker, on May 29, 1977, the Washington Post carried a story pointing out another failing of the Federal Energy Administration's bureaucracy.

The article in the Post concerned a ruling promulgated by the FEA dealing with "small refiners bias," and its relation to the entitlements program administered by the FEA.

I do not think I need to point out to my colleagues that the source of the problem described in the Post article is not the alleged greed of businessmen in the private sector, but rather the imposition of governmental overregulation in an area of extreme complexity. FEA's attempts to allocate and regulate our Nation's energy industry, has resulted in inequality, confusion, disincentives to further production of energy supplies, and in this case, apparent abuse.

The "gods" on FEA's Mount Olympus have tried to produce uniform regulations on a diverse industry, only to have these attempts backfire in their faces. Along with many of my colleagues, I have fought the institutionalization of the FEA as a fixture in the Federal regulatory landscape. The story in the Post convinces me further that our efforts must go forth to decrease governmental intrusion of the FEA. Unequal advantage obtained by businesses is usually the stepchild of well-meaning

attempts to impose equality by bureaucratic fiat in an area best left to the workings of a free market.

At this time, I request permission to insert the full text of the Post story in the Record as an example of what government regulation can lead to:

**"SMALL" REFINERS STRIKE GUSHER IN FEA OIL RULE**

(By J. P. Smith)

This is the story of Paragraph 211.61(e) in regulations of the Federal Energy Administration. Five hundred words long, the paragraph is adding \$55 million a month to the cash flow of the nation's "small" oil refiners.

The "small" refiners benefitted by the paragraph include such up-and-coming concerns as Pennzoil Corp., Dow Chemical Co., the Union Pacific Corp. and a refining company partly held by the heirs of the late H. L. Hunt. (Dow and Pennzoil are on the "Fortune 500" list of top U.S. corporations. The tale of Paragraph 211.67(e), known in the oil business as the "small refiner bias," illustrates how private interests, astute legal advice and the political process can work in Washington to benefit those who know how to milk the system.

The paragraph was originally put into the regulations in 1974, in response to a general directive from Congress that FEA protect the ability of small refiners to compete with the major oil companies.

In 1975 this "bias" in favor of "small" refiners was significantly enlarged, largely through the assiduous efforts of an influential Washington lawyer and lobbyist, now Secretary of Health, Education and Welfare, Joseph A. Califano Jr.

It has since been expanded even further by FEA, in part to offset what the agency regarded as some unfair effects of the changes Califano won.

Califano declined to comment directly on either the fee he was paid or his exact role in amending legislation to benefit a group of small refiners. Well-informed industry sources reported the fee to have been in excess of \$1 million. The aggregate value to the refiners of the amendment during its six-month longevity was \$237 million.

In the personal financial statement he filed before joining the Carter Cabinet, Califano reported an income of \$505,490 from his former law firm of Williams, Connolly & Califano in 1976.

The small refiner bias is part of the complicated entitlements program FEA administers under the Emergency Petroleum Allocation Act.

When the Arab and other oil-exporting nations quadrupled the price of crude oil in the winter of 1973-74, the federal government did not let U.S. domestic oil prices quadruple.

Instead, it put U.S. oil under price controls.

Those controls created two kinds of oil—"old" and new. Old oil—essentially oil from wells that had been drilled before 1973—was limited to a "low" price which is now about \$5.25 a barrel. New oil was allowed to rise toward the world price; it now sells for a little over \$11 a barrel.

The reason for this system was partly to keep producers of old, or flowing, oil from reaping windfall profits as world oil prices rose.

The difficulty with the system was that it gave some refiners a huge competitive advantage over others. Those whose sources of supply were mainly "old" oil had an advantage over those that had to pay new oil or world prices for their crude.

The entitlements program was designed to offset this advantage. It is a giant price equalization scheme. The government maintains a kind of kitty; refiners who have more than the average amount of old oil coming

into their refineries pay money into the kitty, and this money is used to compensate those who have above-average amounts of higher-cost new or imported oil.

In theory, everyone's costs per barrel of crude thus end up the same.

The original small refiner bias that FEA created in this system was simple. A small refiner that owed money to the kitty because it had more than the average percentage of old oil did not have to pay as large an equalizing fee per barrel as a large refiner in the same circumstances. Similarly, small refiners owed money from the entitlements kitty got more per barrel than large refiners in the same position.

But some small refiners wanted even more of an advantage than this. One of them, the Pasco Oil Co., then based in Englewood, Colo., went to Califano in 1975.

Pasco was a company with an above-average amount of low-cost old oil, but it did not want to make the payments to the entitlements kitty that this required. Its objective was an amendment to the entitlements program, under which small refiners that owed money to the pot would be forgiven those obligations entirely. Those who were owed money would continue to receive it as before.

In effect this amounted to an increase in the bias, but only for some small refiners, not all.

Califano initially sought a ruling from FEA exempting Pasco from making entitlements payments. Later he spearheaded a successful lobbying effort on behalf of as many as 30 small refiners to get the exemption enacted into the 1975 Energy Policy and Conservation Act.

His amendment was introduced in the Senate by Frank Church (D-Idaho) and in the House by Rep. Bob Eckhardt (D-Tex.), both legislators with liberal credentials.

Their amendments, as finally put in the law, exempted small refiners from paying entitlements fees on the first 50,000 barrels of oil a day they processed, and allowed them a reduction in payments on the next 50,000 barrels.

There were then 112 refiners in the country that met the congressional definition of "small"—refiners with a capacity of less than 175,000 barrels of crude oil per day (That is the equivalent of more than 7 million gallons of gasoline with a retail value of about \$5 million.)

Half those small refiners were in the same position as Pasco, in that they owed money to the entitlements kitty.

The Califano amendment saved these 56 refiners up to \$39 million a month during the six months it remained in effect.

The problem was that it disadvantaged those other small refiners that were owed money under the equalization program; the Pasco-type refiners ended up with lower costs than their other "small" competitors.

FEA wanted to correct the unevenness in the program. At the same time it was under intense political pressure from the Pasco-type refiners not to increase their costs too much, if at all.

In May of last year the agency found a way to satisfy both, conflicting pressures, at least in part. It went back to its original type of small refiner bias, giving the same advantage per barrel to small refiners which owed and were owed payments under the program. But it sweetened this advantage per barrel for small refiners versus large ones.

It is this sweetened bias provision that is now adding \$55 million a month to small refiners' net income—most of which goes to profits.

That \$55 million a month is not coming directly from the public, but from the larger refiners. The entitlements program is a zero-sum game, in which the amount paid out equals the amount paid in. The more the small refiners take out—or the less they pay in—the greater the cost to their larger rivals.

But FEA experts say some of these higher costs are passed on by the larger companies to the public in higher prices for refined products.

John Hill, former FEA deputy administrator, said, "Joe was the guy who put it together . . . it was an incredible lobby coming from every side."

Califano was assisted in his lobbying for the 1975 exemption by another attorney, Jerry L. Shulman. They put together a letter-writing campaign asking senators and House members to write letters in the small refiners behalf to Ford administration energy policy-makers.

Pasco also received a helping hand from the Justice Department. Donald I. Baker, who headed the department's Antitrust Division, wrote a memorandum to FEA asserting that, without changes, the entitlements program "would force Pasco to buy entitlements which . . . could significantly affect its marketing area and the industry generally."

Pasco was the only refiner mentioned in the letter.

"We spoke to Baker," Shulman acknowledged in an interview. "We brought the problem to their attention." But he said "we had nothing to do with drafting their statement; that was entirely theirs."

Hill says "Califano successfully painted it as the big refiners against the little refiners." Another onlooker, who was a Senate aide during the 1975 drafting sessions, said Califano's success was based on "Congress' Robin Hood mentality that the big oil companies are inherently evil, and the small firms deserve anything they want."

Yet the small firms, this former aide observes, "have a long history of rolling over the federal government, going back to the 1950s."

The problem with the program now is that FEA experts think it overcompensates the small refiners. They also say the bias is so great that it has led to abuses—and they are seeking ways, at the staff level at least, to tighten the system.

These abuses include a proliferation of small so-called "tea-pot refineries" which J. Lisle Reed, director of FEA's office of oil and gas, says are "coming out of the woodwork . . . just to get some of this entitlements action" under which a small refiner can sell at a greater profit than a larger rival company.

There is also a suspicion within FEA that small refiners are spinning off individual plants under "dummied" ownership, so they can increase their cash flow through the entitlements system, under which the smaller the refiner, the larger the bias. FEA is now investigating at least one such company, and other investigations may follow.

FEA has also come upon:

A series of "processing agreements" under which small refiners sometimes claim entitlements benefits for oil processed in other refineries. For example, C & H Refinery Co., the nation's smallest refiner, has a 200-barrel-a-day plant in Lusk, Wyo. Last December the company claimed over \$500,000 in entitlement benefits for 9,700 barrels a day processed in a Hawaiian refinery over 3,000 miles away. FEA has now promulgated a ruling to stop such processing agreements which takes effect at the end of this month.

Growing evidence that small refiners' profits have been so high that some refiners have been able to "pay out" the cost of a new refinery in less than a year, using just the increased cash flow from the small refiner bias. Generally, according to James Cunningham, vice president and energy financing expert of First National Bank of Chicago, it takes about seven years for a refinery to pay out.

Most damaging of all is a recent FEA report indicating that the small refiner bias—on a weighted basis—gives a 10,000 barrel a day operation a 44 cent a barrel margin on gasoline over refiners larger than 175,000 barrels a day. For naphtha, a refined product

used in petrochemical processes, the margin goes up to 87 cents on the barrel.

An internal FEA document says that "the impact of the present bias levels goes far beyond (the original) intent. . . . The small refiner bias in the entitlements program provides incentives that lead to the creation of a group of refiners who exist only by reason of the bias. This result is undesirable for the interests of the consumers the industry or the government."

Califano spoke of his part through Eileen Shanahan, HEW's assistant secretary for public affairs. "As far as he is concerned," she said, "he didn't do anything wrong, he got a lot of money for his clients."

And the next year, she quoted Califano as saying, "the big oil companies beat us."

#### THE SCIENTISTS VERSUS PORNOGRAPHY: AN UNTOLD STORY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Utah (Mr. McKay) is recognized for 15 minutes.

Mr. McKay. Mr. Speaker, on May 17, 1977, the Honorable CHARLES B. RANGEL of New York introduced into the RECORD an article written by Dr. Amitai Etzioni, professor of sociology at Columbia University. The article stated, in effect, that most adults who view X-rated materials are not affected by them; that there is little support for the notion that pornography breeds criminality; and that as to sex crimes, porn seems to provide a relief rather than a stimulant.

Mr. Speaker, I wish to introduce an article into the RECORD which was written by Dr. Victor B. Cline, a distinguished professor of psychology from the University of Utah, which refutes the findings of Dr. Etzioni. The results of numerous studies by Dr. Cline and others reveals that pornography does in fact breed sex crimes and is a detriment to our society.

The article is entitled "The Scientists vs. Pornography: An Untold Story," which originally appeared in *Intellect* magazine in 1976:

#### THE SCIENTISTS VS. PORNOGRAPHY: AN UNTOLD STORY

(By Victor B. Cline)

The U.S. Commission on Obscenity and Pornography was established under Public Law 90-100 in October, 1967, when Congress determined traffic in obscenity to be "a matter of national concern." Congress assigned the commission four tasks: to analyze pornography control laws and evaluate and recommend definitions of obscenity; to assess traffic, methods of distribution, and volume of pornography; to study the effects of pornography on the public, especially minors, and its relationship to crime and other antisocial behavior; and to recommend such legislation and administrative or other advisable and appropriate actions as the commission might deem necessary to regulate effectively the flow of such traffic without interfering with Constitutional rights. On Sept. 30, 1970, the U.S. Commission on Obscenity and Pornography issued a final report summarizing its findings. [Page references to this report refer to the *Report of the Commission on Obscenity and Pornography* (New York: Bantam Books, 1970).]

The 18-member commission, originally appointed by Pres. Lyndon Johnson, was chaired by William B. Lockhart, a law dean from the University of Minnesota. All commission members (two other attorneys, three clergymen, two psychiatrists, two sociologists, a librarian, a college English teacher, a graduate student-teacher in broadcast journalism,

a book publisher, a magazine and book distributor, a judge, a state's attorney general, and a CBS research director) were assigned to one of four panels dealing with legal issues, sales and distribution, positive approaches, and effects of pornography. Specifically, those who served on the Effects Panel were Otto Larson (chairman), Joe Klapper, Morris Lipton, Marvin Wolfgang, and G. William Jones.

A comprehensive review of the full report of the Pornography Commission plus the many thousands of pages of supporting scientific studies (funded by the commission, but not published until several years after the release of the original report) and outside literature indicates that considerable data suggesting harms associated with pornography exposure were suppressed or covered up by several scientist-members of the Effects Panel and, possibly, their two-man support staff. The evidence strongly suggests that the non-scientist members of the commission and Chairman Lockhart were misled or deceived by withheld negative effects evidence. This undoubtedly influenced the decision of many of the commissioners to recommend repeal of nearly all pornography laws.

The crucial "fact" which led 12 of the 18 commissioners to vote for this repeal was the Effects Panel's "finding" that "empirical research . . . has found no evidence to date that exposure to explicit sexual materials plays a significant role in the causation of delinquent or criminal behavior among youth or adults" (p. 32). Although the Effects Panel originated this conclusion, variations of this statement appear repeatedly in the full report of the commission, later public and professional journal articles authored by commission members, countless public addresses, and many court appearances (testifying in defense of professional pornographers). Because of this, the general notion that "pornography has been judged and found guiltless" now appears as established fact in such sources as the *World Book* and *Americana* encyclopedias and the *Handbook of Psychiatry*.

Commission members Morris Lipton and Edward Greenwood were so strongly committed to the "no harm" findings of the Effects Panel that they wrote (with Joe Klapper also endorsing):

"We should have welcomed evidence relating exposure to erotica to delinquency, crime, and antisocial behavior, for if such evidence existed we might have a simple solution to some of our most urgent problems. However, the work of the Commission has failed to uncover such evidence. [The research studies] fail to establish a meaningful causal relationship or even significant correlation [emphasis added] between exposure to erotica and immediate or delayed antisocial behavior among adults. To assert the contrary from available evidence is not only to deny the facts, but also delude the public." . . . (p. 452).

Thus, scientists Lipton, Greenwood, and Klapper profess that not only are there no causal linkages between exposure to pornography and harm, but neither are there significant relationships or correlations of any kind between the two.

Sociologists Larson and Wolfgang called for repeal of all pornography laws, including those currently controlling unsolicited pornographic advertisements sent through the mail unwanted into homes, obscene public display ads, and pictorial pornography for children. The rest of the commission refused, however, to go along with such an extreme position.

#### NEGATIVE EFFECTS EVIDENCE IN COMMISSION-FINANCED RESEARCH

Space limitations prevent a detailed recitation of most harmful evidences which raise major concerns about the validity of their conclusions, as well as malfeasance. (Information is available to the reader in the au-

thor's *Where Do You Draw the Line?*) However, several salient examples may serve to suggest the nature of the negative effects evidence.

In a sophisticated commission-financed study of seven different populations of subjects comprising 365 people, Davis and Braucht<sup>2</sup> assessed the relationship between exposure to pornography and moral character, deviance in the home and neighborhood, and sex behavior. In their study, impressive in its rigorous methodology and statistical treatment, they conclude that "one finds exposure to pornography is the strongest predictor of sexual deviance among the early age of exposure subjects." They also found that there was "a positive relationship between sexual deviance and exposure to pornography at all ages of exposure levels" (p. 213): "In the early age of exposure [to pornography] subgroup, the amount of exposure was significantly correlated with a willingness to engage in group sexual relations, frequency of homosexual intercourse, and 'serious' sexual deviance; and there were trends for the number of both high school heterosexual partners and total homosexual partners to be positively related to [pornographic] exposure" (p. 206).

Correlation alone never demonstrates a causal relationship—however, it does permit a reasonable hypothesis. Because the researchers have partitioned out the contribution of other key variables in this study, the possibility of causation is highly suggested. Although this commission contracted and financed research was in the hands of the commission's staff for many months and was referred to many times in their report, no mention is made in their report of these negative finds.

Obviously, more research of this kind must be done, but, as was true with the early studies linking smoking with lung cancer, it seems irresponsible not to report negative findings—especially in the commission's Effects Panel Report—for few people have either access to the original research or scientific expertise to understand and evaluate the elaborate, highly complex statistical analyses.

Much evidence and data from the commission's own technical reports, such as the Davis-Braucht research, conflict with the refrain repeated so often in the commission report (p. 58) that "extensive empirical investigation both by the Commission and by others provides no evidence that exposure to or use of explicitly sexual materials play a significant role in the causation of social or individual harms such as crime, delinquency, sexual or nonsexual deviancy, or severe emotional disturbances," and with the reassurance of Commissioners Lipton and Greenwood to all their fellow psychiatrists in the *Psychiatric News*<sup>3</sup> that "the many varied studies . . . are remarkably uniform in the direction to which they point. This direction fails to establish a meaningful significant causal relationship or even significant correlation [emphasis added] between exposure to erotica and immediate or delayed antisocial behavior. . . ."

In another commission study by Goldstein and associates<sup>4</sup> sex offenders, homosexuals, transsexuals, pornography users, blacks, and a control group were interviewed and compared. Although Goldstein states his work "clearly supports the view that pornography does not incite criminal or antisocial acts," Goldstein's actual data support the opposite conclusion.

In Goldstein's interviews, he asked his subjects if they had ever "tried out" the sexual behavior depicted during a peak adolescent exposure to pornography. Fifty-seven percent of his rapists replied yes (p. 76, Table 9).<sup>5</sup> Yet, in his chapter summary, Goldstein curiously comments: "While the [rapists] noted

Footnotes at end of article.

an intense desire to imitate the [sexual] activities shown [by the pornography], only rarely did they satisfy it (p. 79).<sup>9</sup> The use of the term "rarely" to describe 57 percent of the rapists who acted out or imitated the pornography modeled for them is not really accurate. The data show that 77 percent of the child molesters with male targets and 87 percent with female targets reported trying out or imitating the sexual behavior modeled by the pornography seen during this peak adolescent experience. Even more interesting is the fact that 85 percent of the normal controls also indicated they had imitated behavior modeled by the pornography. All groups then were significantly affected by the pornography, and some, apparently, in an antisocial direction.

#### ADDITIONAL NEGATIVE EFFECTS EVIDENCE

Other very powerful cause-effect data come from the conditioning laboratories of investigators such as Rachman,<sup>7</sup> who demonstrated that, with the use of erotica, sexual deviations can be created in individuals. Additionally, the work of McGuire<sup>8</sup> suggests that exposure to special sexual experiences (which could include witnessing certain types of pornography) as well as masturbating to the fantasy of this exposure can sometimes later lead to participation in deviant sexual acts.<sup>9</sup> The massive literature on therapy for sex deviates suggests that their sexual orientation can frequently be changed with the use of erotica as a therapeutic tool.<sup>10</sup> If these data are valid, then one must allow for the possibility that deliberate or accidental exposure to erotica can facilitate antisocial sexual behaviors and conditioning of sexual aberrations.

One might plausibly argue that these accidental kinds of conditionings of persons into deviant sexuality through exposure to pornography might be relatively infrequent events. However, if pornography were a factor in causing only one adolescent or adult into having disturbed sexual feelings, changed sexual orientation, or some manner of antisocial sexual deviancy, and if this person yearly influenced only one other individual who, in turn, affected only one other, in 20 years, 1,048,575 sexually or otherwise disturbed people would be the result—a major consequences.

In sum, five commission studies (some causal, but all unreported in the commission report) linked pornography and sexual arousal with aggression; commission-financed literature reviews told how sexual deviations could be created in the laboratory using erotic pictures; 254 psychotherapists reported in their practices cases in which pornography was found to be an instigator or contributor to a sex crime, personality disturbance, or antisocial act; and another 324 professionals suspected such relationships in cases with which they had worked. Additionally, much violence literature linked filmed violence with aggressive behavior, a fact that has major relevance to that pornography which models sadomasochistic and sexually violent behavior (e.g., rape, "snuff films," etc.).

In critiquing the commission's majority report, a distinguished British psychologist and social scientist comments:

"It should be borne in mind that the Commissioners were concerned to 'make a case,' and that in doing so they may not always have been entirely scrupulous about weighing the evidence impartially. . . . The writers of the majority report tend to generalize too freely. Such generalizations are not permissible. The limitations should be recognized and emphasized. Failure to do so implies a slide from scientific discussion to propaganda. Worse, the majority report suppressed information that goes against its recommendation."<sup>11</sup>

Undoubtedly, the harms associated with pornography will affect only a minority of consumers, but there seems little doubt that some people can be harmed. While, in a free

society, some individuals may choose to immerse themselves in a pornographic milieu just as some people may choose to smoke excessively, in both cases these individuals should be made fully cognizant of the health hazards involved so they can make informed decisions.

Although it is perfectly responsible and permissible for scientists to disagree in interpretations about the meaning of a body of data, to suppress or cover up harmful effects data—especially in an area involving health and welfare concerns, where one is in a position of trust—is highly unethical, irresponsible, and contrary to most canons of the scientific community. Responsible scientists may never hide or suppress data merely because it is contrary to their personal values or social-political orientation, especially where possible hazards are involved. That this apparently happened in the case of several of the scientists affiliated with the Presidential Commission on Obscenity and Pornography is a regrettable episode in the history of the behavioral sciences.

#### PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. FOUNTAIN) is recognized for 5 minutes.

Mr. FOUNTAIN. Mr. Speaker, on Thursday, May 26, the House vote—roll No. 288—to resolve itself into the Committee of the Whole for the further consideration of H.R. 6161, the Clean Air Act Amendments of 1977.

I am recorded on this vote as answering "present." It appears that I inadvertently inserted my voting card into the "present" slot rather than the "yea" slot which was my intention.

Mr. Speaker, I ask that the permanent edition of the RECORD show that I intended to vote "yea" on roll No. 288.

#### TESTIMONY BEFORE LABOR-HEW SUBCOMMITTEE REGARDING HYDE AMENDMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentle-

man from North Carolina (Mr. PREYER) is recognized for 5 minutes.

Mr. PREYER. Mr. Speaker, I understand that the Labor-HEW appropriations bill will be considered by the full House later this month. Accordingly, I would like to submit my testimony of April 18 before the Labor-HEW Subcommittee. This testimony is in regard to the Hyde amendment, which would restrict Federal Medicaid funds for abortions.

The abortion issue has generated a great deal of controversy, not only in Congress, but in millions of American homes as well. Certainly, very few believe that abortion is an advisable method of birth control, but many of these same people favor abortion to unwanted pregnancies.

As a member of the Health Subcommittee of the Interstate and Foreign Commerce Committee, I have sponsored legislation that encourages family planning. The Health Services Extension Act of 1977, passed last month by the House, includes a family planning provision. This is the route we ought to be taking; we ought to give the highest priority to educating our people about the constructive alternatives to abortion.

Notwithstanding, it is my view that an unwanted child is subject to the double jeopardy of rejection by the mother, and quite often, by society as well. This does not mean that we should be encouraging abortions, but rather that this option should be left open to all women who choose it.

Accordingly, I oppose Congressman Hyde's amendment to restrict federal Medicaid funds for abortions. This amendment would not stop abortions, because people who could afford them would pay the necessary costs. The effect of this amendment would be discrimination against poor women who have insufficient funds to pay for abortions, an action that would affect their entire lives.

It is unconscionable to think that this Congress would, in effect, sanction abortions for those who can afford them, and prohibit them for those who can't. Such action is constitutionally dubious, and serves as a challenge to the equal protection guarantees of the Fifth and Fourteenth Amendments. I will not participate in a tragic maneuver that would put the government in the position of interfering with existing state statutes.

We are dealing with an emotional issue that merits sober, rational consideration. Support of the Hyde Amendment would represent a giant step backwards for the sanctity of the Constitution and for the dignity of all women, rich or poor.

#### RESOLUTION REQUIRING PAPERWORK ASSESSMENTS BE INCLUDED IN REPORTS OF HOUSE COMMITTEES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. HAMILTON) is recognized for 20 minutes.

Mr. HAMILTON. Mr. Speaker, as the Nation enters its third century many of us in public office are aware that Americans from all walks of life are losing confidence in the Government. The signs of disapproval are everywhere. We see the dismal results of polls; we receive hundreds of letters from disillusioned constituents; we witness unrelenting criticism in the press; we hear harsh complaints from the halls of the Government itself. Though the erosion of confidence is not as marked now as it

was a few years ago, it must be a matter of continuing concern to us all.

Surely there are many causes of the public's disapproval of the Government. Today, however, I wish to discuss one of them: the Federal paperwork burden. No one who has experienced it will deny that Federal paperwork has a heavy hand. Tax returns which seem to grow more complex every year overwhelm the ordinary citizen; forms for the agricultural census frustrate the farmer; unbelievable reporting requirements smother the educator; reams of paper confront the businessman who wants his place of business to be safe for workers. Many Americans have concluded that the Government's sole purpose is to harass them with its unnecessary, duplicative, and frivolous paperwork. In the minds of these Americans a benefactor has become a nuisance.

A brief look at some general statistics should convince even the most stubborn bureaucrat that Federal paperwork has gotten out of hand. As of June 1976, there were 4,054 duplicative reports being used by those agencies subject to the Federal Reports Act. It took individuals, businesses, and institutions approximately 140 million man-hours to fill the reports out. By one estimate, the bureaucracy generates 10 billion pieces of paper every year, enough to occupy 4.5 million cubic feet of space. In terms of cost, the General Services Administration calculates that Federal paperwork drains \$40 billion annually from the economy, enough to create 1.5 million permanent jobs in the private sector if properly invested. The additional costs of Federal paperwork in terms of stifled creativity and stultifying delays cannot be accurately measured.

To make matters worse, there is reason to believe that the problem has increased fivefold in the last decade. Forms for taxes, social security, grants, loans, directives, reports, and even other forms are proliferating at an alarming rate. No sector of the society or the economy is untouched by Federal paperwork. It encompasses millions of individuals, businesses and institutions, as well as thousands of State and local governments. The latter, of course, add to all the paperwork. A close look at this bureaucratic maelstrom reveals at least three main reasons for it.

A lack of centralization is one of the main reasons for excessive paperwork. Many reports required of businesses, for example, duplicate information already on file with other Government agencies. Duplication takes place because there is no central "data bank" of nonsensitive information. One agency does not know what facts another agency is collecting, and so each agency must incur the expense of gathering redundant data on its own.

Another main reason for excessive paperwork is the promulgation of overly complex regulations. A well-meaning Congress passes a law and well-meaning executive personnel write the regulations on which enforcement of the law will be based. However, the regulations sometimes go far beyond what Congress intended both in scope and detail. The Occupational Safety and Health Act is a

case in point. Passed in 1970 as a remedy to the serious problem of death and injury in the workplace, the act has become a regulatory nightmare. The blizzard of petty and ultimately unenforceable regulations promulgated in connection with it has made it an object of ridicule. Employers and employees alike are intensely dissatisfied with it. Unfortunately, the Occupational Safety and Health Act is not the only overinterpreted law on the statute books. Almost any person, whether at work or at leisure, can tell a similar tale.

The final reason for excessive paperwork is the action of Congress itself. All too often Congress passes a law whose implementation and enforcement require too much paperwork, no matter what the writers of regulations do. Behind such legislation one frequently finds a mistaken notion of what Congress can do, or how Congress should proceed, to solve a problem. For example, consider legislation to preserve the environment. As things stand, the Government attempts to control directly some 100 million mobile sources of air pollution. The amount of paperwork entailed by this direct control is as staggering as its cost, but such is the concept of the law. Many experts now believe that this legislation mandates the impossible. They suggest that a national system of effluent charges could do the job more efficiently and economically. It is possible that the experts are right. In this case and many others, Congress must face the fact that the means provided by legislation may be ill conceived even though the ends are not. Failure to face the fact means more paperwork.

Though Congress should try to get a rein on Federal paperwork in any way possible, it has a special responsibility to see that the laws it enacts do not contribute to the problem. Consequently, it is with great pleasure that I introduce today a resolution to require that paperwork assessments be included in the reports of House committees. The resolution is brief and to the point, so I include its text in the RECORD:

#### H. RES. 607

*Resolved*, In clause 7 of rule XIII of the Rules of the House of Representatives, insert after subparagraph (a) (2) the following:

"(3) An evaluation of the paperwork which would be incurred in carrying out the bill or joint resolution. The evaluation shall include, but not be limited to, estimates of the amount of time and financial costs required of affected parties, showing whether the effect of the bill could be substantial; as well as reasonable estimates of the recordkeeping requirements that may be associated with the bill, or in lieu of such evaluation, a statement of the reasons why compliance by the committee is impracticable."

It is my firm belief that the passage of the resolution would take us a long way toward a very desirable goal: The elimination of Federal paperwork at one of its primary sources. The resolution already has the support of the Commission on Federal Paperwork. In addition, it can claim as advocates 66 other Members of the House of Representatives.

It is obvious how the resolution would help eliminate Federal paperwork. First, and prior to the casting of votes, the res-

olution would provide information on the "paperwork impact" of bills to Members of Congress. Members would be obliged to do some hard thinking about paperwork. They would have to balance the potential social or economic benefits of a bill against its bureaucratic implications. Second, and prior to the writing of regulations, the resolution would make executive agencies privy to the intent of Congress in the matter of the reporting and bookkeeping requirements of bills passed. Executive agencies would appreciate the additional guidance. Conferences between distressed legislators and confused writers of regulations would become less common. The upshot of the resolution would surely be less paperwork on all sides.

Mr. Speaker, there is one final reason why the resolution should be passed. On February 4, 1977, the Senate amended its rules to require that committees estimate the cost in dollars and hours of work which would result from the passage of a bill. On that occasion Senator THOMAS MCINTYRE, a sponsor of the amendment, said:

At long last, the Congress will face up to its responsibilities in bringing about effective control of paperwork. For too long, we in Congress have been the culprits. Now the Senate is no longer part of the problem, but is an active force in the solution. I hope the House will follow the example of the Senate.

We must all hope that the House will follow the example of the Senate. I urge prompt and positive action on this important measure.

#### MOSS-BROWN AMENDMENT TO H.R. 6804

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. Moss) is recognized for 5 minutes.

Mr. MOSS. Mr. Speaker, as Members may be aware, my colleague Mr. Brown of Ohio and I plan to offer an amendment to H.R. 6804, the Department of Energy Organization Act, which would transfer the authority for regulating the first sale of natural gas in commerce from the Secretary to the Federal Energy Regulatory Commission, and limit the rulemaking authority of the Secretary to functions identified in section 301(b) (2) (7) of the bill. It is essential that broad authorities under the Natural Gas and Federal Power Acts should be vested in a collegial regulatory commission at least until the Congress considers the President's substantive energy bill.

This is an important amendment to consumers. Several leading consumer organizations, including the Energy Policy Task Force of the Consumer Federation of America, the American Public Power Association, and the American Public Gas Association, support this amendment. Their letters on this issue follow:

ENERGY POLICY TASK FORCE,  
Washington, D.C., June 1, 1977.

Hon. JOHN E. MOSS,  
House of Representatives,  
Washington, D.C.

DEAR CONGRESSMAN MOSS: The Energy Policy Task Force of the Consumer Federation of America, the country's largest consumer organization, strongly supports your

proposed amendments to H.R. 6804, which would (1) transfer the authority for regulating the sale of natural gas from the Secretary of Energy to the Federal Energy Regulatory Commission, and (2) limit the rulemaking authority of the Secretary to the regulatory functions enumerated in Section 301(b) parts 2-7 of H.R. 6804. Moreover, we support, in general, those amendments which will protect the procedural framework for assuring due process in regulatory proceedings.

As currently drafted, H.R. 6804, the Department of Energy Organization Act, would substantially reorganize the structure and function of both executive and regulatory branches in the key areas of natural gas, oil and other energy policymaking. In the past, natural gas rates have been decided by a five-person independent regulatory commission, the Federal Power Commission, which has determined rates based upon either adjudicatory proceedings or substantial evidence tests. These proceedings have allowed consumers, producers, pipelines, and others to bring forth evidence under oath to support their views in favor of or in opposition to higher (or lower) gas rates. The changes proposed in H.R. 6804 would seriously erode these protective standards.

An amendment to require a test of substantial evidence is critical to prevent arbitrary and capricious decision-making in the setting of "just and reasonable" prices for energy. In creating this massive new agency, with such broad authority, it is essential that there be provision explicitly ensuring due process for consumers as well as producers and other parties in all judicial review proceedings. The requirement of a substantial evidence test must be clearly spelled out to prevent "arbitrary and capricious" energy pricing decision-making.

Moreover, preserving an independent regulatory board as the rate-setting body provides far more insulation from political influence than vesting such power in any one individual, regardless of whom that individual may be.

Without these amendments, we have little confidence that this agency could adequately protect consumers' interests. We are pleased to learn that you intend to propose these critical amendments and will support them in any way we can.

Additionally, we would like to express support for the Conyers proposal to establish a Public Energy Administration that could, upon direction by the President or the Secretary of Energy, serve as the nation's sole importer of oil and gas from abroad. In our view, this is a highly useful authority that could work to the benefit of this nation and its consumers in an effort to offset the strength of the OPEC international oil cartel.

Sincerely,

LEE C. WHITE.

AMERICAN PUBLIC GAS ASSOCIATION,

Washington, D.C., May 27, 1977.

Hon. JOHN E. MOSS,

U.S. House of Representatives, House Office Building, Washington, D.C.

DEAR MR. MOSS: On behalf of the members of the American Public Gas Association, which represents municipally owned gas distribution systems throughout the nation, I would like to express support for amendments to H.R. 6804 which would protect the procedural rights of all parties under the provisions of the Natural Gas Act.

H.R. 6804, the "Department of Energy Organization Act," as reported by the House Committee on Governmental Operations, contains provisions which, we believe, could alter the due process rights presently available at the Federal Power Commission. As this bill is intended to reorganize existing federal agencies and not make substantive changes in the laws under which those agen-

cies operate, we believe the bill should be amended on the floor of the House of Representatives to eliminate any provisions which appear to alter existing law under the Natural Gas Act.

In particular, APGA would like amendments enacted which assure that the Federal Energy Regulatory Commission which would be created by H.R. 6804 is vested with all the responsibilities of the Federal Power Commission to establish final, just and reasonable rates under the Natural Gas Act, subject to due process safeguards for all parties.

Such amendments should clarify the fact that the Energy Regulatory Commission would establish final just and reasonable rates for all sales of natural gas subject to FPC jurisdiction, pursuant to the procedural safeguards of Sections 54-557 of the Administrative Procedure Act prescribing procedures for full adjudicatory hearings. Under these procedures, notice, opportunity to present direct evidence and rebuttal, cross-examination, and a written decision based upon the evidence is required. Without amendments to H.R. 6804 to insure these due process safeguards, it is possible that precedents set by the Federal Power Commission in administering the provisions of the Natural Gas Act could be changed to the detriment of all parties.

APGA was pleased to note that Chairman John D. Dingell of the House Commerce Committee Subcommittee on Energy and Power, on May 24, issued a statement expressing concerns about the procedures established in H.R. 6804, and that these concerns under the Natural Gas Act are shared by Representative Clarence J. Brown, ranking member of the Subcommittee. In his statement before the House Rules Committee on H.R. 6804, Representative Brown stated: "These precedents (under the Natural Gas Act) have arisen out of the need to protect the due process rights of individuals appearing before the Commission. In my opinion, these precedents should be retained and followed by whoever sets wellhead gas prices. But under this bill, these precedents would not have to be followed. This should be corrected."

Representative Brown, in his statement, indicated that he would join with you in sponsoring an amendment vesting gas pricing authority in an independent Federal Energy Regulatory Commission within the new DOE, in order to insure that procedural due process is maintained.

APGA offers its strong support for such an amendment. Maintenance of procedural safeguards under the Natural Gas Act is the only way to assure consumers that the prices they pay for natural gas are the result of the hard scrutiny afforded by full adjudicatory hearings.

Respectfully yours,

ARIE M. VERRIPS,  
Executive Director.

AMERICAN PUBLIC POWER ASSOCIATION,

Washington, D.C., May 25, 1977.

Hon. JOHN E. MOSS,

U.S. House of Representatives,  
Rayburn House Office Building,  
Washington, D.C.

DEAR CONGRESSMAN MOSS: The American Public Power Association is concerned over the regulatory framework contained in H.R. 6804, as reported. As you know, the responsibilities of the Federal Power Commission would be divided between the Secretary of Energy and a five-member Regulatory Commission. The Secretary would have jurisdiction over certain specified issues, including the authority to issue rules on wellhead sales of natural gas, and the resolution of emergency interconnection and wheeling disputes. The Secretary, in addition, would have the authority to issue rules of general applicability under the Federal Power and Natural

Gas Acts. APGA believes that this general rulemaking authority places too much power in the hands of a single individual who could, through the exercise of that power, sharply circumscribe the essentially adjudicatory nature of the regulatory activities of the Regulatory Commission.

It can be argued that there are certain issues under the Federal Power and Natural Gas Acts over which the Secretary should have jurisdiction. It appears to us, however, that no attempt should be made, through the guise of reorganization, to alter the manner in which very important issues, such as establishment of policies which will be used to determine rates and charges under the two acts, will be resolved. These are issues which should be considered by the appropriate legislative committees.

The two amendments which I understand you plan to offer during House consideration of H.R. 6804 would narrow the rulemaking authority of the Secretary, thereby enlarging the jurisdiction of the Regulatory Commission. APGA is pleased to support you in your effort to secure the passage of these two amendments.

Sincerely,

ALEX RADIN.

#### LEGISLATION TO ESTABLISH A REDUCED RATE OF POSTAGE FOR CERTAIN MAIL MATTER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. FORD) is recognized for 5 minutes.

Mr. FORD of Michigan. Mr. Speaker, each morning in my office, and I am sure in the offices of every Member of Congress, hundreds and hundreds of letters are received. These letters represent a broad cross-section of my district and the country. Some are from business, some from labor, some may be from church groups, and some from many other organizations. But the letter which always catches my eye first, and in my view, requires some special attention, is that handwritten, personal letter from an individual constituent involving some problem or some issue which to him or her is of great import.

That individual has taken the time to gather stationery, envelopes, stamps, pen to write his Congressman as his court of last appeal. It is letters such as these which tell me the true feeling of the people who have elected me to represent them in this body.

As I thumb through all of these letters, the thought often strikes me that that individual constituent who writes me pays as much for his or her postage stamp as do those large corporations which also frequently write me. But actually the individual is paying more—because our tax laws permit corporations to "write-off" their postage costs. This means that while the private citizen is paying 13 cents to mail a letter, the corporations are actually paying only about 6½ cents. Over the last 6 years our citizens have experienced a 117-percent increase in their mail rates, a rate of increase which has climbed more rapidly than even gasoline prices. This is neither fair nor reasonable.

I am, therefore, introducing legislation today to protect the millions of individuals in this country from rapidly rising postal rates. This legislation, entitled the

Citizens' Postal Rate Relief Act of 1977, is based on the concept that all Americans are willing to accept some increases in postage rates, so long as they are fair and reasonable.

This legislation would freeze the present 13-cent rate for matter mailed by private citizens until December 31, 1978. At that time, and at every 2 years thereafter, private citizens' first class mail rates would be adjusted by the amount the cost of living has changed over the preceding 2-year period. This rate would apply to all letters sent by individual private citizens. A civil penalty of \$2,500 would be imposed for each letter mailed by anyone other than a private individual.

Mr. Speaker, in carrying out its role in commerce, the Postal Service should not forget the private citizens who write their Congressmen, the child who sends a greeting to a distant friend, or the young adults who take the time and care enough to write to some loved ones. Perhaps nothing so clearly demonstrates the most basic and important role of the Postal Service as the quotation inscribed over the main entrance of the Washington, D.C. Post Office. It reads:

Messenger of sympathy and love  
Servant of parted friends  
Consoler of the lonely  
Bond of the scattered family  
Enlarger of the common life

The one true and meaningful means for the American people to communicate must be available to them at a price which is reasonable and fair. This bill will accomplish that goal, and I urge my fellow Members to join with me in cosponsoring it.

The text of Citizens' Postal Rate Relief Act of 1977 follows:

#### H.R. 7537

A bill to amend title 39, United States Code, to establish a reduced rate of postage for certain mail matter of private individuals

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Citizens' Postal Rate Relief Act of 1977".

SEC. 2. (a) Subchapter II of chapter 36 of title 39, United States Code, is amended by adding at the end thereof the following new section:

"§ 3629. Reduced rate for certain mail matter of individuals

"(a) Notwithstanding the provisions of this subchapter or of subchapter III of this chapter, the rate of postage for qualified mail matter (as defined in subsection (d) of this section) shall be established only in accordance with subsection (b) of this section.

"(b) (1) Until such time as an adjustment is made under paragraph (2) of this subsection, the rate referred to in subsection (a) of this section shall be 13 cents for the first ounce of each piece of mail matter and 11 cents for each additional ounce or fraction of an ounce.

"(2) (A) (i) Each October 1 of each even-numbered year, the Postal Service shall adjust the amount which is in effect under this subsection by multiplying such amount by the ratio which the price index for the calendar year immediately preceding the year in which the adjustment is made bears to the price index for the base period and such amount, as adjusted and rounded to the lower whole cent, shall be the amount in effect for the two calendar years immediately

following the year in which the adjustment is made.

"(ii) In any case in which an adjusted amount derived under subclause (i) of this clause includes a fraction of a cent before such adjusted amount is rounded to the lower whole cent, such fraction shall be carried forward and added to any fraction of a cent which results from a subsequent derivation of an adjusted amount under subclause (i) of this clause until such fraction which is carried forward, when so added to any such additional fraction, results in an amount which is equal to or exceeds a whole cent.

"(ii) The Postal Service shall not make any adjustment required in clause (i) of this subparagraph if the amount which is in effect under this subsection, when so adjusted, would exceed the rate of postage currently in effect for that class of mail for which the Postal Service provides the most expeditious handling and transportation under section 3623(d) of this title.

"(B) For purposes of subparagraph (A) of this paragraph—

"(i) the term 'price index' means the average over a calendar year of the Consumer Price Index (all items—United States city average) published monthly by the Bureau of Labor Statistics; and

"(ii) the term 'base period' means the calendar year 1976.

"(c) (1) Any person (other than an individual to whom subsection (a) of this section applies) who sends any mail matter as qualified mail matter to which the maximum rate prescribed by subsection (a) of this section applies shall be subject to a civil penalty of \$2,500 for each piece of mail matter so sent.

"(2) The Postal Service may commence an action for the assessment and collection of the penalty prescribed under paragraph (1) of this subsection against any person subject to such penalty in the district court of the United States in which the act constituting the violation occurred or in which such person resides or transacts business. Any process in such actions may be served in the district in which such action is brought and in any other district in which such person resides or transacts business. Any subpoena issued by the district court in which such action is brought may be served in any other district.

"(d) For purposes of this section, the term 'qualified mail matter' means any mail matter which—

"(1) is sealed against inspection;

"(2) is mailed within the United States;

"(3) is not the mail matter of a person other than an individual, provided that, for the purpose of this subsection 'person other than an individual' means a corporation, company, business, association, partnership, professional entity, proprietorship, institution, or governmental unit or any similar entity; and

"(4) bears such evidence of being qualified mail matter

(b) The table of sections for subchapter II of chapter 36 of title 39, United States Code, is amended by adding at the end thereof the following new item:

"3629. Reduced rate for certain mail matter of individuals."

SEC. 3. Section 2401(c) of title 39, United States Code, is amended by striking out "and 3626" and inserting in lieu thereof "3626, and 3629".

SEC. 4. The amendments made by the foregoing provisions of this Act shall apply to any qualified mail matter (as defined in section 3629 of title 39, United States Code, as added by section 2 of this Act) which is mailed on or after the date of the enactment of this Act, except that if on such date the existing permanent or temporary rates in effect exceed 13 cents per ounce per piece of such mail matter, such amendments shall apply with respect to mail matter mailed on

or after the 100th day after the date of the enactment of this Act.

### STOPPING OIL FROM TAKING OVER COAL AND URANIUM—HAS PRESIDENT CARTER CHANGED HIS POSITION?

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEIBERLING. Mr. Speaker, for some time those of us who have been concerned about preserving competition in the energy industries have felt that the incipient takeover of the coal and uranium industries by the major oil companies needed legislative attention, if competition between competing energy sources was to be maintained. Early in this session, our colleague MORRIS UDALL and I introduced a bill which, among other things, would have prohibited a major oil company from owning coal and uranium. To date, we have 35 cosponsors on this proposed legislation.

We were encouraged in proceeding with such legislation by Mr. Carter's position expressed during the Presidential campaign last year. His initial position was:

I support legal prohibitions against ownership of competing types of energy, oil and coal, for example.

He expressed a similar position with respect to oil company ownership of uranium as well. After Mr. Carter received the Democratic nomination, he continued to reiterate this position, although his issues chief, Stuart Eizenstat, indicated that such prohibitions might apply only to future acquisitions of competing forms of energy.

To my surprise and disappointment, President Carter's energy message of April 20 and his energy program released on April 29 appear to have abandoned any advocacy of horizontal divestiture between oil on the one hand and coal and uranium on the other. While the energy message continued to express concern, it indicated that the only action would be continued monitoring of the situation by the Justice Department. In fact, the actual language of the message almost appears to have been written by the oil companies with respect to this particular point.

All this is spelled out in specific detail in an article by James F. Flug in the May 28 issue of the Nation under the title, "Fudging Away from a Hard Line." Because of the importance of this subject, I am offering the entire article for printing in the RECORD following these remarks.

Let me add that I cannot believe that Mr. Carter has changed his explicit and oft repeated views on this subject. It is apparent, however, that someone representing the oil company point of view has managed to infiltrate that point of view into Mr. Carter's energy proposals. It is important that those Members of Congress and others who are concerned about this issue be made aware of this astonishing situation so that we can consider the best way of moving ahead

with appropriate legislation to insure competition between different sources of energy.

The article follows:

**CARTER ON OIL AND GAS: FUDGING AWAY FROM A HARD LINE**

(By James F. Flug)

On January 14, 1976, less than a week before the Presidential campaign began in earnest with the Iowa precinct caucuses, an ad entitled "Iowans Want Some Straight Answers on Energy" appeared in the *Des Moines Register*. It contained the results of a questionnaire on energy policies sent by a new consumer group, Energy Action, to fifteen Presidential hopefuls during December. Ten of the fifteen responded; Mr. Carter was not among them. But on January 16, in the same paper, the Carter campaign placed a larger ad. It explained that Governor Carter had not answered Energy Action's six questions because they "could not be answered honestly and directly with a yes or no answer." It then answered all six questions in detail.

Question Number 2 read, "There are legislative proposals to stimulate more competition among different sources of energy by preventing major owners of one type of energy resource from owning other types. Do you support or oppose legislative efforts in the U.S. Congress to prevent 'horizontal integration' and require major energy companies to divest themselves of such competing energy sources?" Carter's response was, "I support legal prohibitions against ownership of competing types of energy, oil and coal, for example."

Question Number 5 was, "A major issue before the U.S. Congress is whether the price of natural gas should continue to be set under a system which assures gas producers a 'reasonable return' or should be allowed to be set by the oil and gas companies themselves at whatever price (probably at least triple current prices) they think gives them the highest possible profits and allows them to take advantage of the high monopoly prices for oil set by the international oil cartel. What is your position?" Mr. Carter replied: "I support legal restrictions to allow a 'reasonable profit' on oil and natural gas rather than allowing prices to be set without restriction. . . . I support the overwhelming position of the National Governors' Conference to limit deregulation of natural gas to that small portion (less than 5 percent) of production not under existing contracts. This deregulation should not exceed five years."

Two key energy issues. Two entirely different types of answer. An unequivocal yes to horizontal divestiture of the oil companies, a proposal that was popular with consumer groups and anathema to Big Oil. An equivocal and puzzling answer on natural gas deregulation—priority Number One to the oil industry, for which each 10¢ rise in the average price of natural gas meant \$2 billion more a year in profits. Equivocal because the commitment to "legal restrictions to allow a 'reasonable profit'" clearly conflicted with the reference to "deregulation." And the discussion of deregulation was in terms of a limit in amount (5 percent) and time (five years). Puzzling because in fact the Governors' Conference had not adopted such a position. A few weeks later, when the proposal was made to the conference, it was rejected.

Several things happened next. On divestiture, the late Senator Philip Hart (D., Mich.) standing side by side with Energy Action founder, Paul Newman, announced a major effort to pass vertical divestiture, a separate proposal to break the oil companies into their producing, transporting, and refining and marketing segments. It made horizontal divestiture look mild by comparison. As of May, when the Hart bill was, to everyone's

surprise, reported from the Judiciary Committee, many legislators were saying, "I may not be able to go along with vertical but I would go with horizontal."

On gas the pressures were conflicting. On the one hand, Carter the candidate was courting Oklahoma Gov. David Boren, a notable cheerleader for gas deregulation. But at the same time the House of Representatives, in early February, reversed a previous Senate vote for deregulation and not only rejected deregulation for all except small, independent producers but went on to extend regulation to the previously uncontrolled intrastate gas market.

Carter's positions reflected these developments. His stand on horizontal divestiture became even stronger. A campaign fact sheet, reiterating his support for horizontal separation, added new language: "When competition inadequate to insure free markets and maximum benefits to America's consumers exists, I will support divestiture. At the present time, I consider these circumstances to exist or to be a threat . . . within the coal and uranium industries because of excessive ownership and control by the oil companies."

The stand on natural gas became even more complex and puzzling. The campaign's gas fact sheet talked of deeper gas wells and said, "Under the present regulated price structure, producers who attempt to exploit these deeper wells are forced to take a loss on every cubic foot of gas they pump." On its face the statement was ludicrous. No one would produce gas at a loss. Actually, however, it was erroneous, too, for any producer with a high-cost well could and would go to the Federal Power Commission for an exception from the general price limit.

But the same fact sheet added a new element. The five-year period of limited deregulation now had a special purpose: "At the end of a five-year period, the success of the programs should be evaluated and appropriate new actions taken." In other words, Carter was not necessarily accepting the arguments for deregulation, just expressing a willingness to test them out.

This approach was even more explicit in Carter's written presentation to the Democratic Platform Committee on June 16, 1976, after he had clearly locked up the Democratic nomination. He called for "price protection for the consumer." And again his reference to deregulation was in terms of a limitation. "For natural gas, we should regulate the price of only that natural gas not currently under existing contract (less than 5 percent) for a period of five years. At the end of the period of time, we should evaluate this program to see if it increases production and keeps gas-related products at prices the American people can afford." (Emphasis added.) The June position on horizontal divestiture was almost word for word the same as the January position.

Since Carter was firmly in control of the party by the time the Platform Committee met, hardly a word went into the platform that Carter issues chief, Stuart Eizenstat, and Washington representative, Joseph Duffey, had not specifically approved. And, perhaps because Carter was about to make a fund-raising swing into Texas, the energy planks were given special scrutiny. Yet there it was again, the promise of a "legal prohibition against corporate ownership of competing types of energy, such as oil and coal." And: "We believe such 'horizontal' concentration of economic power to be dangerous both to the national interest and to the functioning of the competitive system."

On natural gas, the platform moved further away from deregulation. It called for continued price controls on both oil (Carter's previous position) and gas, though it talked about narrowing the gap between oil and gas prices. In an interview about this time with the industry publication, *Oil and Gas Journal*, Eizenstat still spoke of what the

publication called "the trial test on natural-gas deregulation." And for the first time there was mention of a possible hedge on horizontal divestiture. *Oil and Gas Journal* reported that "Eizenstat says 'legal prohibitions' would 'not necessarily' apply to existing industry structure but rather future purchases of competing forms of energy." That is, a prospective rather than retrospective remedy.

At this time—mid-July—the industry feeling, as reflected in *Oil and Gas Journal*, was that the Democratic platform was "tinted anti-oil" because it "calls for continued oil and gas price controls and for restrictions on integration by majors and on their ownership of other energy sources."

Sen. J. Bennett Johnston (D., La.), speaking for Carter at a July fund-raiser in Tulsa—an oil boomtown—took a more "optimistic" view, but one which confirms the general perception of—and industry reaction to—Carter's positions on coal/oil connections and gas. According to Platt's Oilgram, Johnston conceded Carter "could conceivably be for horizontal divestiture" but said, "While I don't think this is particularly wise, I don't think it is particularly crucial either." Platt's continued: "Carter also is for controls on 'old' natural gas, but favors a five-year trial decontrol period for new gas. 'I don't like the five-year proposition,' Johnston said, and I think we can get him to back off on that.'"

Nominee Carter spoke twice on energy during August of 1976, and did not relent on what was now his clear position against horizontal integration. Appearing at a luncheon sponsored by Ralph Nader, Carter said he would sharply restrict the investment of big oil companies in competing energy sources such as coal and uranium unless he was convinced there was "an adequate amount of competition, which there is not now." And, reporting to the press on a mid-August energy briefing in Plains, Carter described the discussion of vertical divestiture and complained that "there had been no discussion of horizontal divestiture, which he considered more important," according to The New York Times dispatch.

At about the same time, Sen. Adlai Stevenson (D., Ill.) floated what he called a "compromise" on natural gas which reflected his political judgment that if he didn't push a new price system that approached deregulation, immediate deregulation might be stymied through Congress before the election. Stevenson's friends in the consumer movement were outraged, since his proposal would have tripled the price of natural gas from 52¢ per mcf (thousand cubic feet) to more than \$1.50 per mcf. Their outrage was compounded when in late July, the Federal Power Commission moved on its own to raise the price for new gas contracts to \$1.42 per mcf. In fact, the FPC action amounted to administrative deregulation. To reach the \$1.42 level, three commissioners, all of whom were on the record as opposing the cost-based price regulations they were supposed to enforce, had to accept all the industry's cost and productivity data, and add hypothetical income tax (40¢ worth) at the highest rate.

That the industry data are highly suspect goes without saying. That there was no evidence that the producers pay any income tax, let alone the highest rates, should not be surprising. What should the price have been? The FPC's own staff found that at a price around 60¢ per mcf, the producers would recover all their costs and net about 18 percent return on investment. The dissenting commissioner found the \$1.42 price "excessive," and a large group of consumer organizations, Senators, Congressmen, municipal gas distributors, and states immediately took the FPC to court. The arguments against the FPC's price also applied to the Stevenson price, and his bill died quietly.

A strange thing happened in October, however. A letter to the Governors of Texas, Louisiana and Oklahoma, over Carter's signature, began circulating in industry circles. It contained rhetoric and advocacy for the joys of natural gas deregulation that were unlike anything that had appeared in any other Carter position on gas. Much later, it was revealed that although it had been sent from Carter headquarters, the letter had a peculiar origin, involving Governor Boren of Oklahoma and one Duke Ligon, an oil industry advocate in Washington. Even on its face, it was obviously a strange document. It said nothing about the five-year and 5 percent limitation, or about the "test" to evaluate the arguments for deregulation. On the other hand, its operative sentence was virtually meaningless: "I will work with the Congress, as the Ford administration has been unable to do, to deregulate new natural gas." The reason Ford could not work with Congress on gas was, of course, that Congress itself was split on the subject: the Senate had been stampeded into a vote to remove most gas price regulation. The House had narrowly voted not only to continue regulation of interstate gas but to extend controls to the previously uncontrolled intra-state market. Which way, then, did Carter intend to go?

In fact, the industry recognized that what came to be called the "Ligon letter" was an aberration, that even Carter, who had been known to adjust his positions, could not all that suddenly have abandoned his careful and clever straddle on natural gas. And as the final *Oil and Gas Journal* before the election made clear, the industry read into the letter Carter's oft-stated 5 percent and five-year limitations, and even focused on the letter's mention of an intent to "protect the consumer against sudden, sharp increases in the average price of natural gas," as a basis for continuing to question Carter's real sympathy for the industry position. The Washington column in that issue of the magazine was entitled, "May We Read the Fine Print, Please," and not only say the earlier Carter qualifications as still operative but explicitly rejected that offer of a limited deregulation test as too little and too short. "Gas producers don't like the sound of a five-year plan," the article went on, pointing out that Senator Mondale, the very day before the Ligon letter, had told a Denver audience that the Carter administration would work to keep controls on oil and gas prices. Nevertheless, responsible journalists who should have known better, and industry officials and politicians who did know better, began after the election to talk about how Carter's "commitment" to natural gas deregulation had helped him win Texas and Louisiana.

The irony is that even if Carter had made a real commitment to deregulation, it would not have helped him with the voters of the gas-producing states. The people in places like Texas have, over the past two years, come to realize that nationwide deregulation of natural gas prices is the worst thing that could happen to them, since it would drive even higher the uncontrolled prices they now pay both for gas and, more importantly, for electricity made from gas. As small farmers have been driven out of business because they can't afford to run their irrigation pumps, and as householders see their utility bills running higher than their mortgage payments, Texans have come to realize that their interests are not identical to those of the oil and gas industry. There has been strong public pressure in Texas for tight state controls on gas prices, and New Mexico has already enacted such a law.

And strange as it must seem to those who claim there was a Carter "commitment" to deregulation, despite the winter's gas-supply problems—which would have sent Gerald

Ford into a frenzy of deregulation rhetoric—President-elect Carter and President Carter never mentioned deregulation except when pushed by reporters, and then always in vague terms of describing his past statements about a five-year test. Had Carter been panting to espouse deregulation, one would have expected his January 21st statement on the natural gas emergency to be full of urgent calls for deregulation. But not a word. Why not? Energy adviser James Schlesinger may have provided the answer when he said, just before Inauguration Day, that the industry had received "considerable price increases recently" as an incentive for oil and gas searches, that "the problem has been uncertainties for the industry," not insufficient price, and that since consumers can't defend themselves against unfair price increases without regulation, "these are not ideal circumstances to deregulate gas." Asked point-blank whether he was opposed to deregulation, he told the A.P. that "the Carter administration has no position on deregulation so far."

And on February 10, Schlesinger pointedly told a consumer audience not to think that the administration's willingness to allow emergency natural gas sales at essentially uncontrolled prices during last winter's gas crisis represented Carter's long-term view on gas pricing. Again, when asked whether his statement meant that the White House was not committed to deregulation, he answered, "That would be a fair inference." The administrator-designate of the Federal Energy Administration, John O'Leary, had also been saying that raising gas prices would not increase supplies because "there just isn't that much gas to be found."

And Carter himself on January 30, responding to a question on gas, showed that the industry had been correct in focusing on his campaign words about protecting the consumer. Built into his gas policy, he said, "would have to be some prohibition against excessive or windfall profits from energy costs at the expense of the consumer." And at his first press conference: "I am going to try to make sure that all the natural gas companies . . . don't derive unwarranted profit when we cut back on consumption and when we encourage production." And, in his first fireside chat: "Oil and natural gas companies must be honest with all of us about their reserves and profits. . . . We will ask private companies to sacrifice, just as private citizens must do."

In the meantime, President Carter said and did nothing to dilute his clear commitment to horizontal divestiture. On the contrary, two key energy appointees, FEA's John O'Leary and Cecil Andrus, Secretary of the Interior, expressed their own support for the concept. The only new factor was a concerted industry drive to fight horizontal divestiture. At the American Petroleum Institute's winter meeting, there was a marked and open shift in emphasis from the previous industry focus on vertical divestiture to horizontal. The institute's literature against horizontal divestiture began appearing on Capitol Hill. Exxon and Gulf TV advertising began to extol the beauties of having oil companies in the coal, nuclear and solar energy businesses. The industry appeared at the White House "miniconferences" held by Schlesinger and his staff during March, to plead the case.

There were also numerous private meetings between oil executives and high-level administration officials to discuss horizontal divestiture—as well as gas and other issues of billion-dollar levels of interest to the companies. And so the scene was set for the April unveiling of the Carter policy. The bidding up to then was:

**Natural Gas:** Hedged and conflicting statements, including on the one hand, Carter's January 1976 stand for a "reasonable profit" standard, against setting prices "without restriction," and his later opposi-

tion to "unwarranted" "excessive or windfall profits" for the gas producers; but, on the other hand, a willingness to test the arguments for deregulation by a trial for a limited time (five years) and limited amount (less than 5 percent), something the industry did not want and had rejected during the campaign.

**Horizontal Divestiture:** A clear, unequivocal, oft-repeated position that horizontal divestiture was important and necessary, and an undiluted commitment to do something about it. The only hedge was the isolated Elzenstat suggestion—never repeated by Carter—that the action might be prospective instead of retroactive.

On April 18, President Carter gave his "sky is falling" speech, a statement of energy goals and principles with no specifics as to program. Carter told Americans that "you may be right" in suspecting that gas was being withheld from the market, as a series of Congressional, executive and company reports all through the winter had indicated. He promised the energy companies fair treatment, but said he would not let them "profiteer." He said the sacrifices would be fair; that "no one will gain an unfair advantage."

April 20, E-day. The President's speech to a joint session of Congress was as ambivalent on gas as his campaign rhetoric. "Immediate and total decontrol of . . . natural gas prices would be disastrous for our economy and for working Americans, and would not solve long-range problems of dwindling supplies. . . . Because fairness is an essential strategy of our energy program, we do not want to give producers windfall profits beyond the incentives they need for exploration and production." This was clearly inconsistent with any notion of deregulation or with any price much beyond the 60¢ range which the FPC experts had said would provide adequate incentives. He added that he would also end the unreasonable distinction between interstate (controlled) and intra-state (uncontrolled) gas sales which had "caused people in the producing states to pay exorbitant prices" for their gas. Still no sign of a spirit of deregulation, since ending controls would drive all prices not only up and over the "exorbitant" \$1 to \$1.50 range at which intrastate gas had been selling during the previous two years but beyond the \$1.50-to-\$1.60 level to which much (but not all) intrastate gas had risen when the FPC's \$1.42 price took effect.

Then the ghost of the "Ligon letter" reappeared in a paragraph that looked as though it had been thrown in at the last minute by someone who had not read the preceding sentences—perhaps by the same person who had dispatched the "Ligon letter" itself, since the wording was so similar: "I want to work with the Congress to give gas producers an adequate incentive for exploration, working carefully toward deregulation of newly discovered natural gas as market conditions permit." No five-year trial? No test to see whether higher prices really accelerate the finding of new supplies? No 5 percent limit? What had happened to the person who was worried about "fairness," about "windfall profits"?

Clearly the Ligon half of the split personality was in control when the next paragraph was written. For in that paragraph the proposal was that the new gas price be set at the price of the "equivalent energy value" of U.S. crude oil, which the accompanying "Fact Sheet" explained would be \$1.75 per mcf:

Six and a half times the 26¢ price which producers had agreed in 1970 was high enough to last through 1977.

Almost three and a half times the last (1976) judicially approved "just and reasonable" price of 52¢.

Almost three times the 60¢ range which the FPC staff said should produce ample returns and incentives.

Well above the overall trend of uncontrolled ("exorbitant") intra-state prices, especially without the aberrational emergency spot sales.

About 25 percent over the \$1.42 price by which the Ford-Nixon FPC had administratively deregulated, and which most observers agreed would be overturned in court as being unsupported by evidence that it was "just and reasonable."

Almost by definition, any gas price set at an oil-price equivalent would be a windfall price since domestic oil, unlike gas, did not have a history of cost-based pricing. On the contrary, the domestic price had been artificially inflated through production limits and import protection before the OPEC price jump and, despite the vestiges of post-1973 controls, had been drawn sharply upward in the 1970s on the coattails of the cartel's quintupling of world prices. Thus from an average price of \$3.39 per barrel in 1972 U.S. crude has risen to \$5.25 or \$11.28, depending on the date it went into production.

Nor did the "Fact Sheet" provide any encouragement to the reader who thought that the speech's later exhortation that "the energy industry should not reap large unearned profits" might require some application to the gas area. The gas section of the "Fact Sheet" began with a hymn to the need for deregulation. Again no reference to the campaign qualifications about time and amount, no assurances that this was merely "a test," no recognition that the price picked was "exorbitant," no acknowledgment that the "current \$1.42 mcf ceiling" was likely to be overturned in court, no estimate of the fantastic revenue benefits to the producers, not even the bone which Gerald Ford threw to the public interest when he tried to deregulate—the imposition of an excess profits tax and means to assure that extra gas profits would go to further gas exploration.

Those waiting to hear about horizontal divestiture on April 20 waited in vain. It was not mentioned, except that Carter did say he believed in competition, "and we don't have enough of it right now." He said he would get new data from the energy companies about their operations: "strict enforcement of the antitrust laws based on this data may prevent the need for divestiture." Well, at least, he still thought there might be a "need."

The "Fact Sheet" added detail: "Effective competition in the energy industries is a matter of vital concern." Thus we would have "continuous vigilance" by an "Under Secretary." Finally the operative section: "Horizontal diversification by oil and gas producers, particularly into the coal industry has aroused fears that the major firms will be able to restrict the development of alternative fuel sources. The existence of such power could be very detrimental to the nation as it increases its reliance on coal, uranium and renewable energy sources. The trend of oil and gas company entry into coal mining merits continuous close attention."

Fine. Now what are they going to do about it—pass a law? Sue? Condition federal leases on horizontal separation? Not give help on coal or nuclear or solar projects to oil companies? No. The "Fact Sheet" continued: "From information available at the present time, it does not appear that new laws mandating either vertical or horizontal divestiture are required in order to promote or maintain competition in the energy industries. That conclusion is subject to change. If it should appear that there are anti-competitive problems in the energy industries that cannot be reached under current laws, new legislation would be proposed."

Well, it could have been worse, an optimist might say. It still recognizes the evils of horizontal integration. It specifically opens the door to future legislative action as the case becomes clearer under the new reporting requirements. The realist would have to say—it just isn't there. Words, maybe. Com-

mitment, hardly. Action, nil. It couldn't be any worse.

The realist would have been wrong. It could have been worse and became much worse in the week between the April 20th message and the April 29th release of the actual "National Energy Plan," a 103-page tome with what appears to be part of an unfinished spider web on the cover. The metamorphosis has both subtle and blockbuster elements to it. The subtle: "has aroused fears" becomes "has led to concern"; "the existence of" horizontal market power is now "the potential exercise of such power"; "very detrimental" is downgraded to "detrimental."

The blockbuster: A new paragraph that can be described only as a brief *against* horizontal divestiture. Only a complete quote can give its full flavor—remember that it is supposed to represent the view of the man who wanted "legal prohibition against ownership of . . . oil and coal," because "there is not now" an "adequate amount of competition":

"Traditionally, the structure of the coal industry has been extremely competitive. It is still relatively unconcentrated compared to industries such as steel and automobiles. Nevertheless, recent trends have caused legitimate concern. A total of 32 oil and gas companies accounted for 16 percent of total U.S. coal production in 1974, a 48 percent increase over their share in 1967. These companies accounted for more than 18 percent of coal shipped to electric utilities in 1974, a 27 percent increase over their share in 1967. In 1974, they held 5 percent of total U.S. coal resources, compared to 1 percent in 1967. These figures do not indicate that the oil and gas companies have a dominant position or even significant market power in the coal industry. But the trend of oil and gas company entry into coal mining and the companies' activities and performance merit continuous attention to make sure that a competitive industry does not become noncompetitive."

The whole is incredible enough but the parts are mindboggling:

"Unconcentrated compared to . . . steel and automobiles." Someone has a weird sense of humor. If you saw a film of a hostage who said his captors were gentlemen compared to Attila the Hun and Jack the Ripper you would know (a) that he is under duress and can't talk freely; and (b) that, like Attila and Jack, his captors were not gentlemen at all. Is there a speech writer hidden somewhere in the White House trying to signal us (a) that he's being held captive and forced to write paragraphs like this one against his will; and (b) that, like steel and autos, coal is really very concentrated?

"Thirty-two oil companies account for 16 percent of coal production." Why would anyone use that figure when the American Petroleum Institute itself admits that eight oil companies produced more than 20 percent of our coal, and other figures show an even higher percentage?

"Five percent of total U.S. coal resources." Off by a factor of 700 percent from other credible estimates of oil company coal holdings. Yet it is "these figures" that lead the Plan's author to conclude that the oil companies do not have "even significant market power in the coal industry."

Whereas on April 20 the "trend of oil . . . entry into coal" was enough to merit concern, by April 29 we would really only worry if, after the fact, we found that "the companies' activities and performance" were evil. A careful but vital distinction to any antitrust lawyer. It is not monopolistic structure and acquisition of a capacity to restrict competition that would trigger action but only getting caught in the act of overt misbehavior. And a final message from the April 29th phantom: to avoid any confusion as to why the oil-coal connections merit attention, he or she tells us "to make sure that a competitive industry does not become non-competitive."

And so Mr. Carter came around by 180 degrees—from firm advocacy of horizontal divestiture between oil and coal, to worrying about that possibility, and finally to advocating the industry position that there is really nothing to worry about. Although the "Fact Sheet" on April 20 concluded that present information did not require new laws on competition, it warned: "That conclusion is subject to change." There was a change nine days later—the warning was deleted.

Meanwhile, the industry was not satisfied to rest on its laurels in the matter of gas. It had already managed to expand the definition of "new gas": Schlesinger's original draft, which made all gas within 5 miles of an existing well "old gas," had been changed to put the boundary at 2.5 miles. The industry began a public relations and lobbying campaign to expand the "new gas" definition even further, and it had the gall to complain about the \$1.75 price as well.

Who cares, you say? Well the President says he does, and in so saying, suggests why you should: "If producers were to receive tomorrow's prices for yesterday's discoveries, there would be an inequitable transfer of income from the American people to the producers, whose profits would be excessive and would bear little relation to actual economic contribution."

Fine rhetoric, an excellent description of what the proposed gas pricing will do. The numbers are hard to estimate but here's a ballpark calculation to keep in mind:

If the FPC staff was right about the 60¢ price being ample a year ago, and we generously add 25 percent for inflation since then, we get 75¢ per mcf as the "ample incentive" price.

At \$1.75 there is \$1 of windfall on each mcf, even more on "old gas" that Carter will permit to be recontracted at \$1.42 despite its low-cost, fully depreciated origins.

Even if we take the old Carter standby of 5 percent as the amount of gas to which the new gas, or other bonus prices, will apply, there will be a windfall of \$1 billion that first year, \$2 billion the second year, and so on, until by 1985 there has been a cumulative windfall of \$36 billion—a gift from all of us to "them."

That estimate may be very low. The American Gas Association told James Schlesinger that its estimate was 5.5 billion mcf of "new gas" by 1980 (their broader definition is probably offset by their desire to have a conservative number, so this projection is relevant). That would mean about \$60 billion of profiteering by 1985 on "new gas" alone, not to mention the "roll-over" windfalls, the Alaska oil bonus, the "new oil" windfall, the drilling tax de-reform, and other goodies to assure that the oil and gas people escape their share of the national sacrifice.

Why? How? Who? We must all try to find out. For if the ghost of Duke Ligon and the April 29th Phantom are running around the White House and can turn a campaign fudge on gas-price deregulation into a multibillion-dollar commitment to the oil and gas industry, and can transmute a promise to the people to break Big Oil away from Big Coal into a tract against oil-coal separation, we all had better keep our hands on our wallets.

#### THE WELFARE TRAP

(Mr. THONE asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. THONE. Mr. Speaker, James Treloar is a writer for the Detroit News. He has written a study of one family that has been receiving welfare for four generations. His series was widely re-

printed, including in my State, by publication in the Omaha World-Herald.

The articles showed how one family has been robbed of their energy to succeed on their own—robbed by welfare measures that were intended to help. The articles also showed how one welfare family collected more than \$1,400 in monthly payments—far more money than millions of hardworking families are able to take home.

Mr. Treloar's articles point up the urgent need for welfare reform now!

Mr. Speaker, I include the aforesaid articles for reprinting in the CONGRESSIONAL RECORD, as follows:

(By James Treloar)

When Mrs. Elizabeth Reed was a little girl, her mother used to say: "A woman's duty is to honor her husband by giving him children."

It was a maxim that had served the family well. In tribal Africa, families that had many children were people to be reckoned with. They could dominate the political life of a village.

In America, children helped keep black families intact through 200 years of slavery. After the Civil War, children brought comfort in a hostile world.

So in 1925, when she was 17, Elizabeth married Charles Reed and honored him with 15 children.

Reed couldn't—or wouldn't—hold a job or support his family. He had a reputation for chasing women, and would be gone for weeks at a time. He took off for good in 1946, leaving the care of his family in the hands of welfare agencies. He was last known to be living in New York.

Mrs. Reed first ran into financial trouble and applied for welfare in 1928. Now, nearly half a century later, the family is still on welfare—down to the fourth generation. Mrs. Reed has 109 living descendants, and most of them are receiving welfare.

The money and services coming into her house from Social Security, Aid to Dependent Children (ADC), Medicaid, food stamps, and freedom from taxes are estimated at \$20,000 a year.

Her case makes a thick file at Michigan's Wayne County Social Services. Social workers who have examined it are appalled, but they can offer no explanation of what went wrong with the family or how the welfare pattern could have been broken.

Perhaps you, the reader, can.

#### ROACHES

It's nearly two years now since Mrs. Reed bought a 1920 house on Detroit's near east side, but she has never seen the second floor of her own home. The stairs aren't to be trusted. She says she'll have a man look at them—some day.

She's had the place fumigated three times already, but cockroaches continue to scurry along her walls and around the family pictures Mrs. Reed displays proudly in her dining room china cabinet.

Fourteen people—representing four generations—live in the house. Mrs. Reed's daughter, Rose Marie Sadler, and five of her children occupy the two upstairs bedrooms, trying to avoid the broken stairs when they go to bed at night. The sixth waits until Mrs. Reed gets up in the morning, then slips into her bed.

Mrs. Reed has been responsible for five other grandchildren since the death of their mother, Mrs. Caroline Wylie. Four of them sleep in one of the downstairs bedrooms. The fifth, Briane, sleeps with Mrs. Reed when she's in a tolerable mood; otherwise she sleeps on the sofa with her baby.

The clock on Mrs. Reed's living room wall

always proclaims 5:16. When the battery went dead, Mrs. Reed resigned herself to accepting the clock as a mere decoration.

The clock isn't necessary, Mrs. Reed can keep track of time by what is showing on her TV set. The set is on all day while Mrs. Reed watches a succession of game shows and soap operas from an easy chair in her living room. Callers sometimes peek in the front window before knocking. If Mrs. Reed isn't in her easy chair, they know something is very wrong.

#### "ALL THE NEWS"

She has a telephone with a long extension cord that reaches her chair, and it rings constantly. When any of her relatives has something to report, Mrs. Reed hears first. "I get all the news," she says with great pleasure.

Mrs. Reed is 68. It's hard to believe that she was once a strong, handsome woman, but she has the pictures to prove it. She's had a series of heart attacks. Her weight soared to 266 pounds. And she has only one tooth left. She insists that no dentist will ever get that one.

Life has not been the bright promise it was when the family arrived in Detroit 53 years ago.

Mrs. Reed was born Elizabeth Jenkins in 1908 on a farm outside Talladega, Ala., to Arthur and Caroline Jenkins.

She is one of 15 children and the eldest daughter.

Her earliest recollections are of sitting in a corner and listening to her great-grandmothers tell of living in slavery. She heard tales of whippings and the auction block.

Her parents had both attended Talladega College, a school for blacks run by the Congregation Church, but it's not certain how far they went in school. Talladega had its own elementary school on campus, and it's possible that her parents just went there. In later years, however, Arthur Jenkins was able to tutor his own children in high school math, which suggests he went further than grade school.

He was also well educated enough to pass the examination for mail carrier, but was refused the job because he was black.

#### TRAIN NORTH

Elizabeth's maternal grandfather, Jeremiah Burt, was the first of the family to arrive in Detroit. He got a job in Highland Park where the Maxwell car was built. Chrysler later took over the factory.

Burt found a job in the Maxwell plant for Elizabeth's father, sent for him, and one morning in 1923 the family stood with all their possessions on the station platform in Rendalia, Ala., to catch the train north.

They found a house on St. Aubin Street. Unlike their home in Alabama, it had electricity and running water. It was the first time Elizabeth had seen a flush toilet.

Her education in Alabama had been spotty at best, and Elizabeth was put into the 6th grade, although she was 14. It is as far as she'd ever go in school.

Her mother had chronic heart trouble and was unable to do housework. She became a seamstress and sat at her sewing machine all day making gowns and outfits for a growing clientele. Many weeks she made more money with her sewing than her husband and two sons together earned at the factory. Once she made a wedding gown for a Grosse Pointe debutante who was so appreciative that she gave Mrs. Jenkins a \$50 tip.

It was a hard-working family. Elizabeth's father labored 18 years for Chrysler, and missed only 10 days' work—the time he went back to Alabama to bury his wife.

But the hardest worker was Elizabeth. With her mother an invalid, Elizabeth became "little momma" and was put in charge of the housework. She rose at 5 every morning, made breakfast for her father and two

older brothers, packed their lunches and got them off to work. Then she got breakfast for the children, made sure they were washed and dressed properly and sent them off to school.

#### TWO EXTRA PLACES

When they were old enough, the younger boys took over the dishwashing chores.

Before every meal, Elizabeth's mother came to inspect the table setting. There had to be two extra places set, in case neighbor children wandered in and were hungry. No child was ever turned away from her home.

Though Elizabeth left school after the 6th grade, her brothers and sisters continued their education. Most made it through tenth grade, and a few finished high school.

They found good jobs and made sound marriages.

Not one of them ever sought welfare.

The six still living are gracious, well-spoken people who live in well-kept homes.

#### TOO MUCH

Elizabeth says she quit school because, with all the housework, it was too much. "I was tired all the time," she says.

She admits now that perhaps she got married for the same reason.

She met Charles Reed at a neighborhood party. His father was a junkman and sometime-preacher who combed the neighborhood with a push-cart, finding scraps to sell.

"His parents thought the sun rose and set on Charles," Elizabeth says. "He was their only son. I guess he got the idea he was too good to work." All she can remember of the attraction is that Reed was a good dancer.

The wedding was held in her parents' living room. Elizabeth, 17, made punch, cake and lemonade for the occasion. Her mother made the satin gown. Most of the wedding guests were white. "It was different in those days," Elizabeth recalls. "We had white friends and neighbors. It wasn't like it is now."

After the wedding, her husband borrowed a Model "T" Ford from one of Elizabeth's brothers, and drove his bride to her aunt's house for the night.

He didn't have money for a honeymoon. He didn't have money for an apartment, either, and the newlyweds moved in with his parents.

#### ANXIOUS

Elizabeth says her husband never held a job for more than four weeks all the time they were together.

When the babies started coming, the support of two families was too much for Elizabeth's father-in-law.

Records show that Elizabeth first applied for welfare in 1928, at the Department of Social Services. "It was for the usual," she says, "—coal, food, clothing."

After five years of living with her in-laws, Elizabeth became increasingly anxious.

"They were always nice to me," she remembered. "But I'm a woman. I wanted a woman's place. A woman should have her own place to take care of. It's not right, being in someone else's house, always wondering if you're doing things the way they want."

One day in 1930, a cousin summoned Elizabeth Reed to her home across the street and gave her a lecture. Charles, Mrs. Reed's husband, was obligated to support his family, she said, and could be made to.

It was a revelation to Elizabeth. She'd never heard of "nonsupport" before.

So the cousin took Mrs. Reed downtown to the Friend of the Court's office.

That was on a Friday.

Monday, her husband got a letter from the court ordering him to appear. He went into a rage, but nothing like the one he threw when he returned home.

He said they called him "a dog" and ordered him to give his wife \$30 every month. There was a violent scene at home, and

knives were drawn. Mrs. Reed says there'd have been bloodshed, too, if her father-in-law hadn't stepped in and ordered his son from the house.

Her husband's response to the court order was to immediately quit his job and put his family on welfare.

That was all right with Mrs. Reed.

"I was so tired the way things were before," she says, "I was proud to get the welfare. It was a real break. We got our own place for good, and I didn't have to depend on his parents."

The Detroit Department of Public Welfare apparently wasn't concerned with why Reed was unemployed—just that he needed money.

#### SOMETIME THING

For several years, welfare was a sometime thing. Mrs. Reed's husband would get a job and they'd be off welfare for a few weeks. Then he'd lose his job, and Mrs. Reed would be back on welfare.

The babies kept coming. All 15 of them were born at home. Seven were stillborn or died shortly after birth. All but the first delivery were paid for by the City Physician's office. No one discussed birth control with Elizabeth—it was a taboo subject.

The Reeds were separated three times before making a final break in 1946.

In July, 1940, during one separation, Mrs. Reed applied for Aid to Dependent Children (ADC) but was denied on grounds that her husband hadn't been gone for a year, a requirement that has since been changed.

In August 1946, with six youngsters, she claimed she'd been separated 10 years, even though her last four children had been born during those years. This time, ADC was granted.

In 1958, a caseworker wrote a summary of information gathered on Mrs. Reed's family since they'd been on ADC:

"On 8-26-48 a neighbor complained that Mrs. Reed's (Elizabeth) children were neglected and starving. They had been seen eating from garbage pails. It was reported that Mrs. Reed was taking her ADC check and going to beer gardens and spending the money there.

"The bureau made a home call to investigate the situation, and the house was found dirty and untidy. This was the usual description throughout the record. Soiled clothing was lying about, and the children were home alone. They told (the social worker) that Mrs. Reed was at her sister's house and that she usually spent the weekends there . . .

"The children's school records were checked after this complaint was received. It was found that Norma and Charles have been in Juvenile Court for nonattendance. Norma was finally sent to Adrian School for Girls . . .

#### POOR ADJUSTMENTS

"Most of Mrs. Reed's children made very poor adjustments in life. Though Arthur married, his marital adjustment was poor and he eventually left his family, causing them to seek public assistance; and Charles, at the age of 17, had gotten into trouble for stealing items from a junkyard. He also had been to Juvenile Court for truancy from school.

"Norma, at the age of 16, quit school and became illegitimately pregnant by a married man. Mrs. Reed was not at all disturbed about the girl's situation. (The social worker) described Mrs. Reed's attitude as follows:

"She accepted it as a natural thing," Norma later married but made a poor adjustment to marital life. Eventually she applied for ADC as Norma Harris.

"Mrs. Reed's daughter, Jessie Davis, also made a very poor adjustment in her marital life and eventually received ADC for her eight children. Rose Marie, at the age of 14, became pregnant. Mrs. Reed dismissed statu-

tory rape charges against the boy as she felt Rose Marie was equally guilty."

None of Mrs. Reed's children has ever gone far from home, and they still call or visit their mother almost daily.

Her home is where the clan gathers on holidays, and at times of tragedy. It's where her children find a haven from quarrels with their spouses. It's the dumping ground for babies when they want to go on a trip.

She keeps taking in people who need help.

#### GENEROSITY

This year, she displayed a generosity that would dismay most people—she took in the boy who had made her granddaughter pregnant. He'd been thrown out of his own home, and was sleeping in a car.

Mrs. Reed's daughter, Caroline, suffered chronic heart trouble, and died in her mother's arms five years ago. Mrs. Reed has since had custody of Caroline's children, three of whom are receiving Social Security benefits and two ADC.

Two years ago, Mrs. Reed was evicted from her apartment and moved in with her daughter Rose Marie Sadler while trying to find a house to buy.

She was there when Rose Marie's home burned to the ground. Everything was lost.

Mrs. Reed and Mrs. Sadler both received cash grants from ADC to buy new clothes and bedding.

Now Mrs. Sadler and her children live with Mrs. Reed, along with Caroline's children.

Mrs. Sadler is 35. She was born and raised on welfare. She's had 12 illegitimate pregnancies and has eight surviving children. Her eldest son has fathered two children with a girl he does not intend to marry, and she's now on ADC. Her second eldest son has a girl pregnant, but does not intend to marry.

#### REVIEW OVERDUE

ADC cases are supposed to be reviewed every six months, but Mrs. Reed says she hasn't seen her caseworker in about two years.

Instead of interviewing clients, ADC now just mails them a form, and clients fill in the amount of money they need.

But even with the new mail system, Elizabeth's case has not been reviewed during the last six months. Nor have 125 of the 205 other cases her social worker is responsible for.

#### WELFARE SOURCES

Following is a breakdown of monthly income into Mrs. Reed's household. Figures for housekeeper and disability stem from Mrs. Reed's frailty, and, accordingly, inability to do housework.

| From ADC                                    |       |
|---|-------|
| Mrs. Reed.....                              | \$220 |
| Mrs. Sadler.....                            | 660   |
| Mrs. Reed's housekeeper.....                | 160   |
| From Social Security                        |       |
| Mrs. Reed's disability.....                 | 192   |

| Total all sources.....                      | 1,477 |

#### PERSONAL EXPLANATION

(Mr. MIKVA asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, due to a typographical error, my personal explanation in the Journal of May 26, 1977, did not include my vote on roll No. 282,

passage of the International Security Assistance Act. I would have voted "yes."

#### PRESS SUPPORTS CHANGES IN POSTAL POLICY

(Mr. HANLEY asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. HANLEY. Mr. Speaker, on Tuesday, May 24, several Members of this body expressed varying opinions about the Postal Service. The general thrust of those remarks was that significant changes in organization and approaches were required.

Recently, two major newspapers printed editorials which agree with that approach. The following are editorials from the Washington Star of May 23 and the Syracuse Herald-Journal of Thursday, May 19:

#### ANOTHER MAIL RATE INCREASE?

A study commission created last year by Congress to advise it on the Postal Service found in a poll that 79 per cent of the people would rather have mail delivery cut to five days a week than to have an increase in postal rates.

Well, if the U.S. Postal Service's board of governors has its way, we'll have both. The other day it approved the preparation of a request to increase the first-class letter rate by 3 cents (to 16 cents) and to cut back delivery to five days, probably eliminating delivery on Saturdays.

But is either necessary? Probably yes, if the aim is to make the Postal Service pay its own way. Probably no, if Congress and the people are willing to underwrite progressively larger Postal Service deficits with tax money.

Congress established the quasi-independent U.S. Postal Service in 1970 with the hope that removing mail service from politics would result in more efficiency and make the postal service self-supporting. But it has proven to be far from a break-even operation; and if it is more efficient, you wouldn't know it from the complaints.

Furthermore, it has not been removed from politics. Members of Congress constantly are breathing down the Postal Service's neck, and with good reason for the most part. There is a bill in Congress at the moment, for example, to require continued six-day service.

The outlook for improving the Postal Service's operation is not good. Increases in postal rates have caused patrons, particularly large-scale users, to try other methods of delivery. Electronic communications systems are taking away business. Further rate increases and a cutback to five-day delivery likely would cause an additional decline in volume.

Costs, meanwhile, would continue to escalate. As business continues to drain away, the Postal Service could be left with the least profitable segments of its service. And it still would be saddled with the congressional requirement that postal wages be subject to collective bargaining, which has made Civil Service postal employees among the highest-paid workers in the country.

Among recommendations of the congressional study commission were a cutback to five-day delivery, a cutback in costly overnight sorting of mail, consideration of getting into electronic message transmission, and an increased subsidy of postal operations from the current fixed level of \$920 million a year to a sum equal to 10 percent

of the Postal Service's expenses (about \$1.5 billion this year).

Significantly, the commission, which had only one congressman among its seven members, declined to go along with pressures to bring the Postal Service under closer political scrutiny. Some members of Congress would like, for example, to see the Postal Service's board of governors abolished. There also is a move afoot in Congress and the White House to have the postmaster general appointed by the President rather than the board of governors.

Obviously, something must be done. It is apparent after more than six years of experience that the objectives hoped for in turning mail delivery over to a quasi-independent Postal Service have not been achieved, and likely cannot be.

It seems clear that, even with more efficiencies, mail delivery cannot be put on a self-sustaining financial basis while at the same time maintaining the kind of service that the public wants at postal rates the public and the Congress consider acceptable.

Congress must accept the fact that large federal subsidies are necessary to keep this vital service going. And the study commission's recommendations notwithstanding, it seems to us that the Postal Service ought to be brought under closer control of the White House and the Congress.

#### USPS DOESN'T WORK

There is a point at which it becomes obvious that a failure is destined to be just that—a failure.

The ill-fated and mistakenly conceived U.S. Postal Service is an example.

Back in 1971, when Congress cut the cord and created the autonomous, private entity to deliver the mail, the idea was to make it—eventually—self-sustaining while keeping the cost of sending a letter within reasonable bounds.

It didn't work and it won't work. The experiment has been a failure and it's time to try alternative solutions.

What we don't need is Postmaster General Benjamin Bailar trying to balance the books by cutting back on services and jacking up the price of a stamp.

Despite the fact that in fiscal 1976 the operations of the "independent" Postal Service cost the taxpayers nearly \$2.9 billion in subsidies over and above postage rates paid by the users, Bailar proposes now to cut back service to five days a week and raise the price of a first-class stamp to 16 cents.

Syracuse's Rep. James Hanley, chairman of the subcommittee on postal operations and service, was right when he, along with Rep. Charles Wilson, chairman of the subcommittee on postal personnel and modernization, charged that Bailar's independence is inappropriate, considering the source of the USPS's funds.

According to Hanley and Wilson, "On a number of occasions Bailar has arrogantly refused to appear before either committee. . . . Our patience is growing thin. We believe Mr. Bailar's uncooperative attitude reflects a total lack of willingness to work with the House of Representatives to help develop postal policies for decades to come."

Within reason, of course, Bailar's independence is his right—since he is running an independent agency.

By his own word, "there is no legal requirement for legislative action," on his plans to eliminate suburban post offices and cut deliveries to five days a week.

As for the increase in rates, that's a matter for the Postal Rate Commission to decide under the present arrangement.

But the present arrangement isn't working!

The current, quasi-independent Postal Service never will pay its way and it shouldn't be expected to. If we are to get the services we need and expect, our tax dollars will have to subsidize the USPS.

President Carter will ask Congress for sweeping changes in the postal system—including the return of the postmaster general to the Cabinet.

Among recommendations expected to be passed by the President to Congress are a return of the Postal Service to the control of the Executive Branch, with assurances that "politics" not play a part in the selection of the postmaster general.

He also will ask that Congress reserve for itself the right to veto rates set by the Postal Rate Commission.

Perhaps his most important recommendation will be a provision that Congress subsidize the mails to keep rates from climbing as rapidly as they have since the Postal Service was made an autonomous agency.

(Since May 16, 1971, when the USPS replaced the Post Office Department, the price of a first-class letter has risen from eight cents to the present 13 cents and, if Bailar has his way, will continue to go up.)

The Postal Service is what the name says—a service. Just as many other government services do not pay for themselves, it cannot be expected to be self-sufficient.

Our taxes will help pay for it and our elected officials should have a say in how the tax money is to be spent.

#### LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. CHAPPELL (at the request of Mr. WRIGHT), for June 1, 2, and 3, on account of official committee business.

Mr. DEVINE (at the request of Mr. RHODES), for today and the balance of the week, on account of medical reasons.

Mr. JEFFORDS (at the request of Mr. RHODES), for today and the balance of the week, on account of official business.

Mr. LEHMAN (at the request of Mr. WRIGHT), for June 1, 2, and 3, on account of official business.

Mr. MCKINNEY (at the request of Mr. RHODES), for an indefinite period, on account of illness.

Mr. MANN (at the request of Mr. WRIGHT), for June 1 through 3, on account of official business.

Mr. YOUNG of Alaska (at the request of Mr. RHODES), from May 26 to June 6, on account of official business.

Mr. ZEFERETTI (at the request of Mr. WRIGHT), for today, on account of official committee business.

#### SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. WALKER) and to revise and extend their remarks and include extraneous matter:)

Mr. ARMSTRONG, for 60 minutes, today.  
Mr. SYMMS, for 10 minutes, today.  
Mr. KEMP, for 10 minutes, today.  
Mr. GRASSLEY, for 15 minutes, today.

(The following Members (at the request of Mr. IRELAND) to revise and extend their remarks and include extraneous matter:)

Mr. ANNUNZIO, for 5 minutes, today.  
Mr. GONZALEZ, for 5 minutes, today.  
Mr. FLOOD, for 5 minutes, today.  
Mr. McHUGH, for 5 minutes, today.  
Mr. PEPPER, for 10 minutes, today.  
Mr. VANIK, for 5 minutes, today.  
Mr. KOCH, for 5 minutes, today.  
Mr. HARRIS, for 5 minutes, today.  
Mr. RODINO, for 5 minutes, today.  
Mr. GLICKMAN, for 5 minutes, today.  
Mr. PHILLIP BURTON, for 5 minutes, today.

Mr. JONES of Oklahoma, for 5 minutes, today.

Mr. MCKAY, for 15 minutes, today.  
Mr. FOUNTAIN, for 5 minutes, today.  
Mr. PREYER, for 5 minutes, today.  
Mr. HAMILTON, for 20 minutes, today.  
Mr. MOSS, for 5 minutes, today.  
Mr. FORD of Michigan, for 5 minutes, today.

#### EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. EDWARDS of California in three instances and include extraneous matter.

Mr. SEIBERLING and to include extraneous matter notwithstanding the fact that it exceeds two pages of the CONGRESSIONAL RECORD and is estimated by the Public Printer to cost \$1,046.50.

Mr. ROUSSELOT immediately preceding the vote on final passage of H.R. 6970, Marine Mammal Protection Act amendments.

(The following Members (at the request of Mr. WALKER) and to include extraneous matter:)

Mr. SARASIN.  
Mr. ARMSTRONG in four instances.  
Mrs. PETTIS.  
Mr. FORSYTHE.  
Mr. BOB WILSON in three instances.  
Mr. McCLORY.  
Mr. EDWARDS of Alabama.  
Mr. DERWINSKI in five instances.  
Mr. GILMAN in two instances.  
Mr. SYMMS in two instances.  
Mr. HYDE.  
Mr. KETCHUM.  
Mr. BROWN of Ohio.  
Mr. KEMP in two instances.  
Mr. ROUSSELOT in two instances.

(The following Members (at the request of Mr. IRELAND) and to include extraneous matter:)

Mr. ROSENTHAL in 10 instances.  
Mr. SISK in two instances.  
Mrs. LLOYD of Tennessee in five instances.  
Mr. ANNUNZIO in six instances.  
Mr. ANDERSON of California in three instances.  
Mr. GONZALEZ in three instances.  
Mr. BROWN of California in 10 instances.  
Mr. HAMILTON in 10 instances.  
Mr. BLANCHARD in two instances.  
Mr. BAUCUS in two instances.  
Mr. EILBERG in 10 instances.

Mr. CARNEY.  
 Mrs. COLLINS of Illinois in three instances.  
 Mr. McDONALD in three instances.  
 Mr. DRINAN in two instances.  
 Mr. MOAKLEY.  
 Mr. STEED.  
 Mr. EDWARDS of California.  
 Mr. HARRIS.  
 Mr. HOLLAND in three instances.  
 Mr. KILDEE in five instances.  
 Mr. OTTINGER.  
 Mr. DICKS.  
 Mr. ROE.  
 Mr. STUDDS.  
 Mr. REUSS.  
 Mr. FORD of Tennessee.  
 Mr. EVANS of Indiana.  
 Mr. RUSSO.  
 Mr. SIMON.  
 Mr. GINN.  
 Mrs. SPELLMAN.  
 Mr. VOLKMER.  
 Mr. WALGREN.  
 Mr. KOCH.  
 Mr. BRECKINRIDGE.

### SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

- S. 682. An act to amend the Ports and Waterways Safety Act of 1972, to establish a program of oil pollution research, and for other purposes; to the Committees on Merchant Marine and Fisheries and International Relations.  
 S. 1060. An act to amend the act of February 9, 1821, to restate the charter of the George Washington University; to the Committee on the District of Columbia.  
 S. 1062. An act to amend section 441 of the District of Columbia Self-Government and Governmental Reorganization Act; to the Committee on the District of Columbia.  
 S. 1063. An act to amend the District of Columbia Self-Government and Government Reorganization Act; to the Committee on the District of Columbia.  
 S. 1103. An act to permit States the reciprocal right to sue in the Superior Court of the District of Columbia to recover taxes due the State; to the Committee on the District of Columbia.

### ENROLLED BILLS SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

- H.R. 4390. An act to authorize appropriations for continuation of construction of distribution systems and drains on the San Luis Unit, Central Valley project, California, to mandate the extension and review of the project by the Secretary, and for other purposes;  
 H.R. 5040. An act to authorize additional appropriations for the Department of State for fiscal year 1977;  
 H.R. 5306. An act to amend the Land and Water Conservation Fund Act of 1965, and for other purposes; and  
 H.R. 6752. An act to amend the Water Resources Planning Act (79 Stat. 244) as amended.

### BILL PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on May 27, 1977 present to the President, for his approval, a bill of the House of the following title:

H.R. 6752. An act to amend the Water Resources Planning Act (79 Stat. 244) as amended.

### ADJOURNMENT

Mr. IRELAND. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 43 minutes p.m.), the House adjourned until tomorrow, Thursday, June 2, 1977, at 10 o'clock a.m.

### EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1584. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notice of the location, nature, and estimated cost of various construction projects to be undertaken by the Navy and Marine Corps Reserve, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

1585. A letter from the Acting General Counsel, Council on Wage and Price Stability, Executive Office of the President, transmitting a report on the Council's activities under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552 (d); to the Committee on Government Operations.

1586. A letter from the Director, Federal Mediation and Conciliation Service, transmitting a report on the agency's activities under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

1587. A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to amend the Wild and Scenic Rivers Act by designating certain rivers for study as potential additions to the National Wild and Scenic Rivers System; to the Committee on Interior and Insular Affairs.

1588. A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to amend the Wild and Scenic Rivers Act by increasing the appropriations authorizations therein, and for other purposes; to the Committee on Interior and Insular Affairs.

1589. A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to establish National Historic Trails as a new category of trails within the National Trails System, and for other purposes; to the Committee on Interior and Insular Affairs.

1590. A letter from the Chief Commissioner, U.S. Court of Claims, transmitting a report on the allowance of attorney expense claims in docket No. F-22, Lester W. Miller, Jr., and docket No. F26, Jackson & Fenton, Barry W. Jackson and Thomas E. Fenton, pursuant to section 20 of the Alaska Native Claims Settlement Act; to the Committee on Interior and Insular Affairs.

1591. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the State Department's intention to consent to a request by the

Federal Republic of Germany for permission to loan certain U.S.-origin defense equipment to an Italian company, pursuant to section 3(d) of the Arms Export Control Act; to the Committee on International Relations.

1592. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the State Department's intention to consent to a request by the Federal Republic of Germany for permission to transfer certain U.S.-origin defense equipment to the Government of Turkey, pursuant to section 3(d) of the Arms Export Control Act; to the Committee on International Relations.

1593. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the proposed issuance of a license for the export of major defense equipment sold commercially to Saudi Arabia (Transmittal No. MC-45-77), pursuant to section 36(c) of the Arms Export Control Act; to the Committee on International Relations.

1594. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a report on political contributions made by Malcolm Toon, Ambassador-designate to Russia, and his family, pursuant to section 6 of Public Law 93-126; to the Committee on International Relations.

1595. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

1596. A letter from the Administrator, Federal Energy Administration, transmitting a report covering the month of January 1977, on sales of refined petroleum products, pursuant to section 4(c)(2)(A) of the Emergency Petroleum Allocation Act of 1973; to the Committee on Interstate and Foreign Commerce.

1597. A letter from the President, National Academy of Sciences, transmitting a summary of the Academy's report on drinking water and health prepared for the Environmental Protection Agency pursuant to section 1412(e) of the Public Health Service Act, as amended (88 Stat. 1664); to the Committee on Interstate and Foreign Commerce.

1598. A letter from the Chairman, U.S. Railway Association, transmitting the first annual report on the performance of the Consolidated Rail Corporation, pursuant to section 307(b) of the Regional Rail Reorganization Act of 1973, as amended (90 Stat. 99); to the Committee on Interstate and Foreign Commerce.

1599. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to improve the administration of the Federal Magistrates System, and for other purposes; to the Committee on the Judiciary.

1600. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to enlarge and amend the trial jurisdiction of U.S. magistrates in misdemeanor cases; to the Committee on the Judiciary.

1601. A letter from the Acting Assistant Secretary of the Army (Civil Works), transmitting a Corps of Engineers report on New York and New Jersey channels, in response to resolutions of the House Committee on Public Works adopted March 30, 1955, and June 27, 1956; to the Committee on Public Works and Transportation.

1602. A letter from the Chairman, John F. Kennedy Center for the Performing Arts, transmitting the Center's annual report and audit for fiscal year 1976 and the transition quarter, pursuant to 72 Stat. 1700 and 78

Stat. 4; to the Committee on Public Works and Transportation.

1603. A letter from the Acting Comptroller General of the United States, transmitting a report on the need for greater cooperation between military and Federal civil agencies conducting search and rescue and law enforcement missions along the coasts or in U.S. coastal waters (LCD-76-456, May 23, 1977); jointly, to the Committees on Government Operations, Armed Services, and Merchant Marine and Fisheries.

1604. A letter from the Comptroller General of the United States, transmitting a report on NASA's Space Transportation System (Space Shuttle) (PSAD-77-113, May 27, 1977); jointly, to the Committees on Government Operations, Science and Technology, and Armed Services.

1605. A letter from the Comptroller General of the United States, transmitting a report on the Department of Labor's first-year record in investigating and certifying worker petitions for adjustment assistance, pursuant to section 280(a) of Public Law 93-618; jointly, to the Committees on Government Operations, and Ways and Means.

1606. A letter from the Comptroller General of the United States, transmitting a report on the examination of the financial statements of the Federal Prison Industries, Inc., Department of Justice, for fiscal year 1976, pursuant to section 106 of the Government Corporation Control Act, as amended (FOD-77-03, May 31, 1977) (H. Doc. No. 95-166); jointly, to the Committees on Government Operations, and the Judiciary and ordered to be printed.

1607. A letter from the Acting Administrator, U.S. Energy Research and Development Administration, transmitting a revised draft of proposed legislation to authorize appropriations to the Energy Research and Development Administration in accordance with section 261 of the Atomic Energy Act of 1954, as amended, section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, as amended, and for other purposes; jointly, to the Committees on Science and Technology, Armed Services, Interior and Insular Affairs, and International Relations.

#### REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DANIELSON: Committee on the Judiciary. H.R. 4885. A bill to authorize appropriations for the Indian Claims Commission for fiscal year 1978; to facilitate the transfer of cases from the Indian Claims Commission to the United States Court of Claims; and for other purposes; with amendment (Rept. No. 95-234, Pt. II). Referred to the Committee of the Whole House on the State of the Union.

Mr. FOLEY: Committee on Agriculture. Supplemental report on H.R. 7073. A bill to extend the Federal Insecticide, Fungicide, and Rodenticide Act, as amended (Rept. No. 95-343, Pt. II). Referred to the Committee of the Whole House on the State of the Union.

Mr. THOMPSON: Committee on House Administration. Report of the Committee on House Administration pursuant to section 302(b) of the Congressional Budget Act of 1974 (Rept. No. 95-372). Referred to the Committee of the Whole House on the State of the Union.

Mr. DIGGS: Committee on the District of Columbia. Report on allocation of budget authority and outlays by major programs (Rept. No. 95-373). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 2502. A bill to extend certain oil and gas leases by a period sufficient to allow the drilling of an ultradeep well; with amendment (Rept. No. 95-374). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAN ELSON: Committee on the Judiciary. H.R. 5023. A bill to amend the statute of limitations provisions in section 2415 of title 28, United States Code, relating to claims by the United States on behalf of Indians; with amendment (Rept. No. 95-375). Referred to the Committee of the Whole House on the State of the Union.

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 5846. A bill to amend the Regional Rail Reorganization Act of 1973 to require ConRail to make premium payments under certain medical and life insurance policies, to provide that ConRail shall be entitled to a loan under section 211 (h) of such act in an amount required for such premium payments, and to provide that such premium payments shall be deemed to be expenses of administration of the respective railroads in reorganization; with amendment (Rept. No. 95-376). Referred to the Committee of the Whole House on the State of the Union.

Mr. FLOWERS: Committee on the Judiciary. H.R. 6893. A bill to amend title 4 of the United States Code to make it clear that Members of Congress may not, for purposes of State income tax laws, be treated as residents of any State other than the State from which they were elected (Rept. No. 95-377). Referred to the Committee of the Whole House on the State of the Union.

#### PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California (for himself, Mr. McFALL, Mr. ROGERS, and Mr. GARY A. MYERS):

H.R. 7498. A bill to amend title 38, United States Code, to provide for the payment of service pensions to veterans of World War I and the surviving spouses and children of such veterans; to the Committee on Veterans' Affairs.

By Mr. BRINKLEY:

H.R. 7499. A bill to provide for limited public financing of congressional general election campaigns, to provide that candidates receiving public funds in Presidential elections may accept certain contributions and make increased expenditures, and for other purposes; to the Committee on House Administration.

By Mr. COHEN:

H.R. 7500. A bill to amend section 212 of title 18 of the United States Code which relates to the offering of loans by banks to bank examiners; to the Committee on the Judiciary.

H.R. 7501. A bill to amend the Maritime Academy Act of 1958 in order to authorize the Secretary of the Navy to appoint students at State maritime academies and colleges as Reserve midshipmen in the U.S. Navy, and for other purposes; jointly, to the Committees on Merchant Marine and Fisheries and Armed Services.

By Mr. COHEN (for himself and Mr. Mr. EMERY):

H.R. 7502. A bill to direct the Secretary of the Department under which the U.S. Coast Guard is operating to cause the vessel *Quoddy Pride*, owned by the Washington County Vocational Technical Institute of Calais, Maine, to be documented as a vessel of the United States so as to be entitled to engage in the American fisheries; to the

Committee on Merchant Marine and Fisheries.

By Mr. DELANEY (for himself, Mr. CORNELL, Mr. BIAGGI, Mr. FITHIAN, Mr. TRAXLER, Mr. OTTINGER, Mr. HANLEY, Mr. AKAKA, Mr. LAGOMARSINO, Mr. FARY, Mr. ROUSSELOT, Mr. BADHAM, Mr. CLEVELAND, Mr. DORNAN, Mr. ELBERG, Mr. MURPHY of New York, and Mr. CAPUTO):

H.R. 7503. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer to deduct, or to claim a credit for, amounts paid as tuition to provide an education for himself, for his spouse, or for his dependents; to the Committee on Ways and Means.

By Mr. DICKS (for himself, Mr. BAUCUS, Mr. BEDELL, Mr. CORNWELL, Mr. ELBERG, Mr. GILMAN, Mr. MCCORMACK, Mr. PATTERSON of California, Mr. ST GERMAIN, Mr. SEIBERLING, Mr. SOLARZ, Mr. TRIBLE, Mr. VENTO, Mr. WHITEHURST, and Mr. YOUNG of Alaska):

H.R. 7504. A bill to require the Secretary of Defense to conduct a systematic cost-effectiveness review before contracting for personal services; to the Committee on Armed Services.

By Mr. EDWARDS of California:

H.R. 7505. A bill to amend title XVIII of the Social Security Act to eliminate the deduction from benefits with respect to blood donation from benefits with respect to blood provided an individual which is not replaced; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. FINDLEY (for himself and Mr. RUPP):

H.R. 7506. A bill to terminate age discrimination in employment; to the Committee on Education and Labor.

By Mr. GILMAN (for himself, Mr. BADILLO, Mr. BAUCUS, Mr. CORNWELL, Mr. CONYERS, Mr. CORRADA, Mr. D'AMOURS, Mr. DOWNEY, Mr. DUNCAN of Tennessee, Mr. EDWARDS of Oklahoma, Mr. FAUNTROY, Mr. FITHIAN, Mr. GEPHARDT, Mr. HAWKINS, Mr. HOLLENBECK, Mr. KINDNESS, Mrs. LLOYD of Tennessee, Mr. MINETA, Mr. MITCHELL of New York, Mr. MURPHY of Pennsylvania, Mr. OTTINGER, Mr. PEPPER, Mr. RANGEL, Mr. SPENCE, and Mr. YATRON):

H.R. 7507. A bill to amend title 38, United States Code, in order to entitle veterans to 54 months of educational assistance for all educational programs under chapter 34 of such title, to eliminate the time limitation within which educational assistance must be used, and to restore on behalf of certain veterans educational assistance benefits previously terminated; to the Committee on Veterans' Affairs.

By Mr. GILMAN (for himself, Mr. SIMON, Mr. SCHEUER, Mr. THONE, Mr. WHITEHURST, Mr. CHARLES WILSON of Texas, and Mr. YATRON):

H.R. 7508. A bill to amend title II of the Social Security Act to reduce from 72 to 65 the age beyond which deductions on account of an individual's outside earnings will no longer be made from such individual's benefits; to the Committee on Ways and Means.

By Mr. HAGEDORN:

H.R. 7509. A bill to amend the Internal Revenue Code of 1954 to exempt certain agricultural aircraft from the aircraft use tax, to provide for the refund of the gasoline tax to the agricultural aircraft, and for other purposes; to the Committee on Ways and Means.

By Mr. HANSEN:

H.R. 7510. A bill to prohibit the expenditure of Federal Funds for the conversion to the metric system of measurements posted on highways without a direct authorization

by the Congress for such expenditure; to the Committee on Public Works and Transportation.

By Mr. HYDE (for himself, Mr. BAUCUS, Mr. BURGNER, Mr. COLLINS of Texas, Mr. CORCORAN of Illinois, Mr. EDWARDS of Oklahoma, Mr. ERTTEL, Mr. FRENZEL, Mr. HAGEDORN, Mrs. HECKLER, Mr. KETCHUM, Mr. KINDNESS, Mr. LaFALCE, Mr. LAGOMARSINO, Mr. LENT, Mr. MOTT, Mr. MURPHY of Pennsylvania, Mr. ROBINSON, Mr. WALKER, Mr. WHITEHURST, and Mr. WINN):

H.R. 7511. A bill to amend title 18, United States Code, relating to the production of false documents or papers of the United States, and the use of false information in obtaining official documents and papers of the United States, involving an element of identification; to the Committee on the Judiciary.

By Mr. HYDE (for himself, Mr. ARDOR, Mr. BAUCUS, Mr. BLANCHARD, Mr. BUTLER, Mr. CLEVELAND, Mr. COLEMAN, Mr. CORNWELL, Mr. DERWINSKI, Mr. DORNAN, Mr. DOWNEY, Mr. DUNCAN of Tennessee, Mr. EDWARDS of Oklahoma, Mr. EILBERG, Mr. EVANS of Delaware, Mrs. FENWICK, Mr. FLOWERS, Mr. FOUNTAIN, and Mr. FRASER):

H.R. 7512. A bill to have an inscription and appropriate medals, ribbons, and tributes placed upon the crypt at the National Cemetery at Arlington, Va., reserved for an American soldier who lost his life in Southeast Asia during the Vietnam era, and whose identity is unknown; to the Committee on Veterans' Affairs.

By Mr. HYDE (for himself, Mr. FRENZEL, Mr. GILMAN, Mr. GRASSLEY, Mr. GUYER, Mr. HALL, Mr. HANSEN, Mr. HUGHES, Mr. JENNETTE, Mr. KETCHUM, Mr. KINDNESS, Mr. LAGOMARSINO, Mr. LEDERER, Mrs. LLOYD of Tennessee, Mr. LONG of Maryland, Mr. McHUGH, and Mr. MARIOTT):

H.R. 7513. A bill to have an inscription and appropriate medals, ribbons, and tributes placed upon the crypt at the National Cemetery at Arlington, Va., reserved for an American soldier who lost his life in Southeast Asia during the Vietnam era, and whose identity is unknown; to the Committee on Veterans' Affairs.

By Mr. HYDE (for himself, Mr. MICHEL, Mr. MILLER of Ohio, Mr. MURPHY of Pennsylvania, Mr. NEAL, Mr. OBERSTAR, Mr. PRESSLER, Mr. RICHMOND, Mr. SCHULKE, Mr. SIMON, Ms. SPELLMAN, Mr. SPENCE, Mr. TREEN, Mr. WALSH, Mr. WHITEHURST, Mr. CHARLES WILSON of Texas, Mr. WINN, Mr. WYDLER, Mr. YOUNG of Alaska, and Mr. YOUNG of Missouri):

H.R. 7514. A bill to have an inscription and appropriate medals, ribbons, and tributes placed upon the crypt at the National Cemetery at Arlington, Va., reserved for an American soldier who lost his life in Southeast Asia during the Vietnam era, and whose identity is unknown; to the Committee on Veterans' Affairs.

By Mr. KETCHUM:

H.R. 7515. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. McDONALD:

H.R. 7516. A bill to reduce expenditures by the Federal Government, except expenditures for national defense and national security, for the fiscal year 1978; to the Committee on Government Operations.

By Mr. MIKVA (for himself, Mr. BLOVIN, Mr. BROWN of Michigan, Mr.

CARNEY, Mr. CEDERBERG, Mr. DRINAN, Mr. EVANS of Colorado, Mrs. FENWICK, Mr. HANLEY, Mr. MAGUIRE, Mr. OBERSTAR, Mr. PREYER, and Mr. STUDDO):

H.R. 7517. A bill to correct inequities in certain franchise practices, to provide franchisors and franchisees with even-handed protection from unfair practices, to provide consumers with the benefits which accrue from a competitive and open market economy, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. MIKVA (for himself and Mr. HANLEY):

H.R. 7518. A bill to correct inequities in certain sales representatives practices, to provide protection for certain sales representatives terminated from their accounts without justification, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. MITCHELL of Maryland:

H.R. 7519. A bill to amend title 23 of the District of Columbia Code to remove the automatic disqualification of any person who has been convicted of an offense involving moral turpitude from engaging in the bonding business in the District of Columbia; to the Committee on the District of Columbia.

By Mr. MITCHELL of Maryland (for himself, and Ms. HOLTZMAN):

H.R. 7520. A bill to amend section 1979 of the Revised Statutes to provide that States, municipalities, and agencies or units of Government thereof, may be sued under the provisions of such section; to establish rules of liability with respect to such States, municipalities, and agencies or units of Government thereof; and for other purposes; to the Committee on the Judiciary.

By Mr. MURPHY of New York (for himself, Mr. KILDEE, Mr. BLOVIN, and Mr. KOSTMAYER):

H.R. 7521. A bill to amend the Child Abuse Prevention and Treatment Act to prohibit the sexual exploitation of children and the transportation and dissemination of photographs or films depicting such exploitation; to the Committee on Education and Labor.

H.R. 7522. A bill to amend title 18, United States Code, to prohibit the sexual exploitation of children and the transportation in interstate or foreign commerce of photographs or films depicting such exploitation; to the Committee on the Judiciary.

By Mr. PEASE (for himself, Mr. GEPHARDT, Mr. VENTO, Mr. WIRTH, Mr. BONIOR, Mr. CARNEY, and Mr. ROSE):

H.R. 7523. A bill to amend title XVI of the Social Security Act to provide that certain aliens may not qualify for supplemental security income benefits unless they not only are permanent residents of the United States but have also continuously resided in the United States for a period of 5 years, and to provide that an alien may not be admitted to the United States unless a citizen of the United States agrees to provide support to such alien for a period of 5 years after admission, and for other purposes; jointly, to the Committees on Ways and Means, and the Judiciary.

By Mr. PEPPER (for himself, Mr. BEARD of Rhode Island, Mr. BEDELL, Mr. BEVILL, Mr. BINGHAM, Mr. BLOVIN, Mr. CARNEY, Ms. CHISHOLM, Mr. CONTE, Mr. DAN DANIEL, Mr. DAVIS, Mr. DIGGS, Mr. EDWARDS of California, Mr. EILBERG, Mr. EVANS of Delaware, Mr. FASCELL, and Mr. FAUNTROY):

H.R. 7524. A bill to amend the Social Security Act to provide for inclusion of the services of licensed practical nurses under medicare and medicaid; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. PEPPER (for himself, Mr. GILMAN, Mr. GLICKMAN, Mr. HARRINGTON, Ms. HOLTZMAN, Mr. HOWARD, Mr. HUGHES, Mr. HYDE, Mr. JENNETTE, Mr. LEHMAN, Ms. LLOYD of Tennessee, Mr. LOTT, Mr. LUKE, Mr. MANN, Ms. MIKULSKI, Mr. MINETA, and Mr. MITCHELL of Maryland):

H.R. 7525. A bill to amend the Social Security Act to provide for inclusion of the services of licensed practical nurses under medicare and medicaid; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. PEPPER (for himself, Mr. MOAKLEY, Mr. NEAL, Mr. OTTINGER, Mr. PATTISON of New York, Mr. PEASE, Mr. RANGEL, Mr. REUSS, Mr. RONCALIO, Mr. SANTINI, Ms. SPELLMAN, Mr. ST GERMAIN, Mr. WALGREEN, Mr. WEAVER, Mr. WEISS, Mr. WINN, Mr. WOLFF, Mr. YOUNG of Missouri, and Mr. ZEFERETTI):

H.R. 7526. A bill to amend the Social Security Act to provide for inclusion of the services of licensed practical nurses under medicare and medicaid; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. PEPPER (for himself, Mr. ANDERSON of California, Mr. ANNUNZIO, Mr. BADILLO, Mr. BAUCUS, Mr. BINGHAM, Mr. BONIOR, Mr. BRADENAS, Mr. BRODHEAD, Mr. CARNEY, Mr. CLAY, Mrs. COLLINS of Illinois, Mr. CONYERS, Mr. CORMAN, Mr. DELLUMS, Mr. DIGGS, Mr. DUNCAN of Tennessee, Mr. EDGAR, Mr. EDWARDS of California, Mr. EILBERG, Mr. FASCELL, Mr. FINDLEY, and Mr. FORD of Michigan):

H.R. 7527. A bill to amend the Social Security Act to require automatic sprinkler systems in all nursing facilities and intermediate care facilities certified for participation in the medicare or medicaid program, and to provide for direct low-interest Federal loans to assist such facilities in constructing or purchasing and installing automatic sprinkler systems; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. PEPPER (for himself, Mr. FREY, Mr. GILMAN, Mr. HARKIN, Mr. HARRINGTON, Mr. HAWKINS, Ms. HECKLER, Ms. HOLTZMAN, Mr. HOWARD, Mr. HYDE, Mrs. KEYS, Mr. KOCH, Mr. LAGOMARSINO, Mr. LEHMAN, Mr. LENT, Mr. MAGUIRE, Ms. MIKULSKI, Mr. MINETA, Mr. MOAKLEY, Mr. MOTT, Mr. MURPHY of Pennsylvania, Mr. NEAL, Mr. NIX, and Mr. NOLAN):

H.R. 7528. A bill to amend the Social Security Act to require automatic sprinkler systems in all nursing facilities and intermediate care facilities certified for participation in the medicare and medicaid program, and to provide for direct low-interest Federal loans to assist such facilities in constructing or purchasing and installing automatic sprinkler systems; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. PEPPER (for himself, Mr. ROYBAL, Mr. ROONEY, Mr. BIAGGI, Mr. BEARD of Rhode Island, Mr. BLOVIN, Mr. DOWNEY, Mr. FLORIO, Mr. FORD of Tennessee, Mr. HUGHES, Mr. DRINAN, Mrs. MEYNER, Mr. RUSSO, Mr. COHEN, and Mr. RINALDO):

H.R. 7529. A bill to amend the Social Security Act to require automatic sprinkler systems in all nursing facilities and intermediate care facilities certified for participation in the medicare or medicaid program, and to provide for direct low-interest Federal loans to assist such facilities in construction or purchasing and installing automatic sprin-

kler systems; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. PEPPER (for himself, Mr. OTTINGER, Mr. PATTEN, Mr. RAHALL, Mr. RANGEL, Mr. RICHMOND, Mr. RODINO, Mr. ROSENTHAL, Mr. RYAN, Mr. ST GERMAIN, Mr. SCHEUER, Mr. SIMON, Mr. STOKES, Mr. UDALL, Mr. WEISS, Mr. CHARLES H. WILSON of California, Mr. YATRON, Mr. YOUNG of Florida, and Mr. ZEPERETTI):

H.R. 7530. A bill to amend the Social Security Act to require automatic sprinkler systems in all nursing facilities and intermediate care facilities certified for participation in the medicare or medicaid program, and to provide for direct low-interest Federal loans to assist such facilities in constructing or purchasing and installing automatic sprinkler systems; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. RICHMOND:

H.R. 7531. A bill to amend the Employee Retirement Income Security Act of 1974 to promote more efficient and satisfactory management of the functions of the Federal Government relating to employee pension and welfare benefit plans and more effectively carry out the purposes of such act, and for other purposes; to the Committee on Education and Labor.

By Mr. SISK (for himself, Mr. KREBS, Mr. JOHNSON of California, Mr. McFALL, and Mr. PANETTA):

H.R. 7532. A bill to amend the National Labor Relations Act, as amended, to amend the definition of "employee" to include certain agricultural employees; to the Committee on Education and Labor.

By Mr. SISK (for himself and Mr. MARKEY):

H.R. 7533. A bill to amend the Immigration and Nationality Act to facilitate the adoption of more than two children; to the Committee on the Judiciary.

By Mr. THONE (for himself, Mr. GRASSLEY, and Mr. WAMPLER):

H.R. 7534. A bill to amend the Internal Revenue Code of 1954 to authorize a tax credit for certain expenses of providing higher education; to the Committee on Ways and Means.

By Mr. BURKE of Massachusetts (for himself, Mr. LaFALCE, Mr. RODINO, Mr. BOLAND, Mr. MURPHY of Pennsylvania, Mr. EILBERG, Mr. SIMON, Mr. COTTER, Mr. NIX, Mr. STUDDS, Mr. CARNEY, Mr. BROWN of California, Mr. MOAKLEY, Mr. CAPUTO, Mr. BADILLO, Mr. WAXMAN, Mr. STARK, Mr. NOLAN, Mr. PATTERSON of California, and Mr. ROSE):

H.R. 7535. A bill to authorize the Secretary of Agriculture to distribute seeds and plants for use in home gardens; to the Committee on Agriculture.

By Mr. DUNCAN of Tennessee:

H.R. 7536. A bill to amend the Small Business Act by authorizing the Small Business Administration to furnish reinsurance for property liability insurers for small business concerns which would not otherwise be able to obtain product liability insurance on reasonable terms, and for other purposes; to the Committee on Small Business.

By Mr. FORD of Michigan:

H.R. 7537. A bill to amend title 39, United States Code, to establish a reduced rate of postage for certain mail matter of private individuals; to the Committee on Post Office and Civil Service.

By Mr. GONZALEZ:

H.R. 7538. A bill to amend title 5, United States Code, to provide for grade retention benefits for certain Federal employees whose positions are reduced in grade, and for other

purposes; to the Committee on Post Office and Civil Service.

By Mr. HEFTTEL:

By Mr. CHARLES H. WILSON of California (for himself, Mr. CLAY, Mr. ABDNOR, Mr. ALEXANDER, Mr. AUCOIN, Mr. BADILLO, Mr. DANIELSON, Mr. DE LUGO, Mr. GAYDOS, Mr. GILMAN, Ms. HOLTZMAN, Mr. KINDNESS, Mr. LaFALCE, Mr. LE FANTE, Mr. LEGGETT, Mr. MATHIS, Mr. NEAL, Mr. NOWAK, Mr. OTTINGER, Mr. QUILLIN, Mr. RINALDO, Mr. ROSENTHAL, Mr. SEBELIUS, Mr. SISK, and Mr. THOMPSON):

H. Con. Res. 237. Concurrent resolution expressing the sense of the Congress that the U.S. Postal Service should not reduce the frequency of mail delivery service; to the Committee on Post Office and Civil Service.

By Mr. CHARLES H. WILSON of California (for himself, Mr. MICHAEL O. MYERS, Mr. BIAGGI, Mr. BLOVIN, Mr. CARNEY, Mr. DICKINSON, Mr. DOWNEY, Mr. EDWARDS of Oklahoma, Mr. EILBERG, Mr. FISH, Mr. HAGEDORN, Mr. ICHORD, Mr. IRELAND, Mr. LLOYD of California, Mr. MITCHELL of Maryland, Ms. OAKAR, Mr. PEPPER, Mr. POAGE, Mr. ROGERS, Mr. ROSE, Mr. SIMON, Mr. SKELTON, Mrs. SMITH of Nebraska, Mr. VOLKMER, and Mr. WATKINS):

H. Con. Res. 238. Concurrent resolution expressing the sense of the Congress that the U.S. Postal Service should not reduce the frequency of mail delivery service; to the Committee on Post Office and Civil Service.

By Mr. DODD (for himself, Mr. MURPHY of Pennsylvania, Mr. WEAVER, Mr. VENTO, Mr. JACOBS, Mr. KRUEGER, Mr. LEVITAS, Mr. MOAKLEY, Mr. HUGHES, Mr. GAYDOS, Mr. KREBS, Mr. ETEL, Mr. DERWINSKI, Ms. HOLTZMAN, and Mr. DOWNEY):

H. Res. 605. Resolution directing the Committee on Banking, Finance and Urban Affairs, the Committee on Appropriations, and the Committee on International Relations to conduct a full review of all U.S. assistance for developing countries which is not currently subject to prior congressional review on a country-by-country basis, especially indirect assistance furnished through bilateral and multilateral lending institutions, in order to identify ways to increase congressional control over such assistance; to the Committee on Rules.

By Mr. DODD (for himself, Mr. GEPHARDT, Mr. CAVANAUGH, Mr. PEASE, Mr. WAXMAN, Ms. MIKULSKI, Mr. ROUSSELOT, Mr. BEILSON, Mr. BADILLO, Mr. BAUCUS, Mr. EDWARDS of Oklahoma, Mr. MANN, and Mr. JENNETTE):

H. Res. 606. Resolution directing the Committee on Banking, Finance and Urban Affairs, the Committee on Appropriations, and the Committee on International Relations, to conduct a full review of all U.S. assistance for developing countries which is not currently subject to prior congressional review on a country-by-country basis, especially indirect assistance furnished through bilateral and multilateral lending institutions, in order to identify ways to increase congressional control over such assistance; to the Committee on Rules.

By Mr. HAMILTON:

H. Res. 607. Resolution amending clause 7 of rule XIII of the Rules of the House; to the Committee on Rules.

By Mr. MEEDS:

H. Res. 608. Resolution providing for the printing of the final report of the American Indian Policy Review Commission; to the Committee on House Administration.

By Mr. PATTISON of New York (for himself, Mr. AKAKA, Mr. BADILLO, Mr. BAUCUS, Mr. BONIOR, Mr. CORCORAN of Illinois, Mr. CORNWELL, Mr. DOWNEY, Mr. DUNCAN of Tennessee, Mr. FLORIO, Mr. FRASER, Mr. HARRINGTON, Mr. HOLLENBECK, Ms. HOLTZMAN, Miss JORDAN, Mr. KETCHUM, Mr. KOSTMAYER, Mr. MCHUGH, Ms. MEYNER, Mr. MILLER of California, Mr. MITCHELL of New York, Mr. MOSS, Mr. MURPHY of Pennsylvania, Mr. NOLAN, and Mr. OBERSTAR):

H. Res. 609. Resolution to authorize each Member of the House of Representatives to hire two additional Lyndon Baines Johnson congressional interns and to authorize payment of additional compensation for such interns from the clerk hire allowance; to the Committee on House Administration.

By Mr. PATTISON of New York (for himself, Mr. OTTINGER, Mr. PANETTA, Mr. RICHMOND, Mr. RODINO, Mr. SANTINI, Mr. SOLARZ, Mr. STOKES, Mr. STUMP, Mr. WIRTH, and Mr. WON PAT):

H. Res. 610. Resolution to authorize each Member of the House of Representatives to hire two additional Lyndon Baines Johnson congressional interns and to authorize payment of additional compensation for such interns from the clerk hire allowance; to the Committee on House Administration.

By Mr. THONE:

H. Res. 611. Resolution to establish an ad hoc Committee on Welfare; to the Committee on Rules.

## MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

171. By the SPEAKER: Memorial of the Legislature of the State of Montana, relative to complete reconstruction of the Fort Union Trading Post National Historic Site; to the Committee on Interior and Insular Affairs.

172. Also, memorial of the Senate of the Commonwealth of Massachusetts, relative to telephone service; to the Committee on Interstate and Foreign Commerce.

173. Also, memorial of the Legislature of the State of Nevada, requesting that Congress propose an amendment to the Constitution of the United States requiring a balanced Federal budget except in national emergencies; to the Committee on the Judiciary.

174. Also, memorial of the Legislature of the State of Louisiana, relative to tax exemptions on fuel used for farming or fishing or the manufacture of fertilizer; to the Committee on Ways and Means.

175. Also, memorial of the Legislature of the State of Nevada, relative to the proposed Public Employee Retirement Income Security Act; jointly, to the Committees on Education and Labor, and Ways and Means.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALEXANDER:

H.R. 7548. A bill for the relief of Pedro Avad-Alvarez; to the Committee on the Judiciary.

By Mr. AKAKA:

H.R. 7549. A bill for the relief of Everlita Rivera; to the Committee on the Judiciary.

By Mr. HARRINGTON:

H.R. 7550. A bill for the relief of Joanne Lapointe; to the Committee on the Judiciary.

By Mr. PEASE:

H.R. 7551. A bill for the relief of Noel Abueg Emde; to the Committee on the Judiciary.

## PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

116. By the SPEAKER: Petition of the Democratic State Executive Committee, Columbus, Ohio, relative to the proposed Universal Voter Registration Act; to the Committee on House Administration.

117. Also, petition of the city council, Prichard, Ala., relative to low-cost spaying and neutering clinics; to the Committee on Interstate and Foreign Commerce.

## AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 10

By Mr. ALLEN:

In section 7325(d)(1), insert a period after the word "campaigns" and strike out the remaining language of said subsection (1).

Delete from Sec. 7326 subsections (b) and (c) thereof, substituting therefor a new subsection (b), below, and change the designation of subsection (d) to "(c)";

"(b) An employee who desires to become a candidate for any elective office shall first be required to obtain a leave of absence without pay from the last workday preceding the

day said employee shall either qualify as a candidate or announce his or her candidacy for such elective office, said leave of absence without pay to terminate the day after said election or the day after said employee withdraws as a candidate for elective office, whichever is sooner."

H.R. 6804

By Mr. DINGELL:

Page 90, strike out line 21 and everything that follows through page 95, line 17, and insert in lieu thereof the following:

## TITLE V—ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

Sec. 501. (a) Subject to the other requirements of this title, the provisions of subchapter II of chapter 5 of title 5, United States Code, shall apply in accordance with its terms to any rule or regulation, or any order having the applicability and effect of a rule (as defined in section 551(4) of title 5, United States Code), issued pursuant to authority vested by law in, or transferred or delegated to, the Secretary, or required by this Act or any other Act to be carried out by any other officer, employee, or component of the Department, other than the Federal Energy Regulatory Commission, including any such rule, regulation, or order of a State, or local government agency or officer thereof, issued pursuant to authority delegated by the Secretary in accordance with this title. If any provision in any Act, the functions of which are transferred, vested, or delegated pursuant to this Act, provides administrative procedure requirements in addition to those provided in this title, such additional requirements shall also apply to actions under that provision.

(b) (1) In addition to the requirements of subsection (a) of this section, notice of any proposed rule, regulation, or order described in subsection (a) shall be given by publication of such proposed rule, regulation, or order in the Federal Register. Such publication shall be accompanied by a statement of the research, analysis, and other available information in support of, the need for, and the probable effect of, any such proposed rule, regulation, or order. Other effective means of publicity shall be utilized as may be reasonably calculated to notify concerned or affected parties of the nature and probable effect of any such proposed rule, regulation, or order. In each case, a minimum of thirty days following such publication shall be provided for opportunity to comment prior to the effective date of any such rule, regulation, or order; except that the requirements of this subsection as to time of notice and opportunity to comment may be waived, subject to paragraph (3) of this section, where strict compliance is found by the Secretary to be likely to cause serious harm or injury to the public health, safety, or welfare, and such finding is set out in detail in such rule, regulation, or order.

(2) Public notice of all rules, regulations, or orders described in subsection (a) which are promulgated by officers of a State or local government agency pursuant to a delegation under this Act shall be provided by publication of such proposed rules, regulations, or orders in at least two newspapers of statewide circulation. If such publication is not practicable, notice of any such rule, regulation, or order shall be given by such other means as the officer promulgating such rule, regulation, or order determines will reasonably assure wide public notice.

(3) The requirements of this subsection may be satisfied within a reasonable period of time subsequent to the promulgation of the rule, regulation, or order if the Secretary finds, under paragraph (1), that an emergency exists requiring the immediate implementation of any such rule, regulation, or order.

(c) (1) If the Secretary determines at the time of publication of a proposed rule, regulation, or order described in subsection (a) that no substantial issue exists and that such rule, regulation, or order is unlikely to have a substantial impact on the nation's economy or large numbers of individuals or businesses, the proposed rule, regulation, or order may be promulgated in accordance with section 553 of title 5, United States Code, except that subsection (a) (2) of section 553 shall not apply. If the Secretary determines at the time of publication of any such rule, regulation, or order that a substantial issue exists or that such rule, regulation, or order is likely to have a substantial impact on the nation's economy or large numbers of individuals or businesses, an opportunity for oral presentation of views, data, and arguments shall be provided.

(2) Any person, who would be adversely affected by the implementation of any proposed rule, regulation, or order issued pursuant to the first sentence of paragraph (1) and who desires an opportunity for oral presentation of views, data, and arguments, shall offer evidence supporting the existence of such substantial issues or such impact during the period established for public comment. If the Secretary determines that such evidence is sufficient to establish the existence of such issues or impact, the Secretary shall provide an opportunity for such oral presentation.

(3) Following the notice and comment period, including any oral presentation required by this subsection, the Secretary may promulgate such rule, regulation, or order, which shall include therewith an explanation responding to the major comments, criticisms, and alternatives offered during the comment period.

(4) A transcript shall be kept of any oral presentation with respect to a rule, regulation, or order described in subsection (a).

(d) The Secretary, or any officer authorized to issue rules, regulations, or orders under the Federal Energy Administration Act, the Emergency Petroleum Allocation Act of 1973, the Energy Supply and Environmental Coordination Act of 1974, or the Energy Policy and Conservation Act shall provide for the making of such adjustments, consistent with the other purposes of the relevant Acts, as may be necessary to prevent special hardship, inequity, or unfair distribution of burdens, and shall, by rule, establish procedures which are available to any person for the purpose of seeking an interpretation, modification, or rescission of, exception to, or exemption from, such rule, regulation, or order. The Secretary or any such officer shall additionally insure that each decision on any application or petition requesting an adjustment shall specify the standards of hardship, inequity, or unfair distribution of burden by which any disposition was made, and the specific application of such standards to the facts contained in any such application or petition. If any person is aggrieved or adversely affected by a denial or a request for adjustment under the preceding sentences, such person may request a review of such denial by the Secretary and may obtain judicial review in accordance with this title when such a denial becomes final. The Secretary shall, by rule, establish appropriate procedures, including a hearing when requested, for review of a denial, and where deemed advisable by the Secretary, for considering other requests for action under this subsection, except that no review of a denial under this subsection shall be made by the same officer denying the adjustment.

(e) (1) With respect to any rule, regulation, or order, the effects of which, except for indirect effects of an inconsequential nature, are confined to—

(A) a single unit of local government or the residents thereof;

(B) a single geographic area within a State or the residents thereof; or

(C) a single State or the residents thereof; the Secretary shall, in any case where appropriate, afford an opportunity for a hearing or the oral presentation of views and provide procedures for the holding of such hearing or oral presentation within the boundaries of the unit of local government, geographic area, or State described in paragraphs (A) through (C) of this paragraph as the case may be.

(2) For purposes of this subsection—

(A) the term "unit of local government" means a county, municipality, town, township, village, or other unit of general government below the State level; and

(B) the term "geographic area within a State" means a special purpose district or other region recognized for governmental purposes within such State which is not a unit of local government.

(3) Nothing in this subsection shall be construed as requiring a hearing or an oral presentation of views where none is required by this section or other provision of law.

(f) (1) Judicial review of agency action taken under any law the functions of which are vested by law in, or transferred or delegated to, the Secretary or any officer, employee, or component of the Department shall, notwithstanding such vesting, transfer, or delegation, be made in the manner specified in such law.

(2) Notwithstanding the amount in controversy, the district courts of the United States shall have exclusive original jurisdiction of all other cases or controversies arising under this Act, or under rules, regulations, or orders issued exclusively thereunder, other than any actions taken to implement or enforce any rule, regulation, or order by any officer of a State or local government agency under this Act, except that nothing in this section affects the power of any court of competent jurisdiction to consider, hear, and determine in any proceeding before it any issue raised by way of defense (other than a defense based on the unconstitutionality of this Act or the validity of action taken by any agency under this Act). If in any such proceeding an issue by way of defense is raised based on the unconstitutionality of this Act or the validity of agency action under this Act, the case shall be subject to removal by either party to a district court of the United States in accordance with the applicable provisions of chapter 89 of title 28, United States Code. Cases or controversies arising under any rule, regulation, or order of any officer of a State or local government agency may be heard in either (A) any appropriate State court, or (B) without regard to the amount in controversy, the district courts of the United States.

(3) Where authorized by any law vested, transferred, or delegated pursuant to this Act, the Secretary may, by rule, prescribe procedures for State or local government agencies authorized by the Secretary to carry out such functions as may be permitted under applicable law. Such procedures shall apply to such agencies in lieu of this section, and shall require that prior to taking any action, such agencies shall take steps reasonably calculated to provide notice to persons who may be affected by the action, and shall afford an opportunity for presentation of views (including oral presentation of views where practicable) a reasonable time before taking the action.

(4) Notwithstanding any other law, the litigation of the Department shall be subject to the supervision of the Attorney General pursuant to chapter 31 of title 28, United States Code. This paragraph shall

not apply to the Federal Energy Regulatory Commission.

Sec. 502. (a) Section 501 of this title shall remain in effect for two years after the effective date of this Act. Any proceeding commenced under such section prior to the termination of its effect shall, notwithstanding such termination, be conducted in accordance with such section. Orders shall be issued in such proceedings, appeals shall be taken therefrom, and payment shall be made pursuant to such orders as if such section had not terminated; and orders issued in any such proceedings shall continue in effect until modified, terminated, superseded, or revoked by a duly authorized official, by a court of competent jurisdiction, or by operation of law. Nothing in this section shall be deemed to prohibit the discontinuance or modification of any such proceeding under the same terms and conditions and to the same extent that such proceeding could have been discontinued or modified if such section had not terminated.

(b) Within one year after effective date of this Act, the Secretary shall submit a report to Congress concerning the actions taken to implement section 501. The report shall include a discussion of the adequacy of such section from the standpoint of the Department and the public, including a summary of any comments obtained by the Secretary from the public about such section and implementing regulations, and such recommendations as the Secretary deems appropriate concerning the extension and revision of such section.

(c) Nothing in this title shall be construed as repealing by implication any existing provision of law relating to administrative procedures and judicial review applicable to any authority vested, transferred, or delegated pursuant to this Act, except that such existing provisions shall, to the extent provided by section 501, be superseded by the provisions of such section during the two years specified in subsection (a).

Page 90, strike out line 21 and everything that follows through page 95, line 17.

By Mr. DODD:

Page 75, after line 16, insert the following new section:

Sec. 207. (a) The Secretary shall assign, to a single administrative officer, responsibility for all energy technology transfer programs which are transferred to, and vested in, the Secretary by title III of this Act and shall take such other measures as may be necessary to centralize and to provide for improvement in the efficiency and coordination of such programs.

(b) As used in subsection (a), the term "energy technology transfer programs" includes programs for the transfer of energy technology through making available, to other Federal agencies, State and local governmental agencies, and industrial and other private concerns, expertise, information, apparatus, rights, and other products and results of energy technology research and development, and includes programs providing assistance in patent and licensing, adaptive engineering, market identification and aggregation, commercialization, and data-base information systems operations.

By Mr. HUGHES:

Page 96, after line 23, insert the following: "(B) an individual compensated under the Executive Schedule, as provided in subchapter II of chapter 53 of title 5 of the U.S. Code."

Redesignate subparagraphs (B) through (D) as (C) through (E), respectively.

Page 100, after line 21, insert the following:

"(C) For a period of two years after ceasing to be an employee of the Department, no supervisory employee who exercised regulatory responsibilities under this Act shall accept employment or compensation, directly

or indirectly, from any person subject to regulation by the Department."

By Mr. MEEDS:

Strike subsection (a) through (c) of section 302, page 77, line 15 through page 79, line 4, and insert in lieu thereof the following:

Sec. 302. (a) There are hereby transferred to and vested in the Secretary all functions and authorities of the Secretary of the Interior under section 5 of the Flood Control Act of 1944 (16 U.S.C. 825a), and all other functions and authorities of the Secretary of the Interior, and officers and components of the Department of the Interior, with respect to—

(1) the Southeastern Power Administration;

(2) the Southwestern Power Administration;

(3) the Alaska Power Administration;

(4) the Bonneville Power Administration including but not limited to the authority contained in the Bonneville Project Act of 1937 (50 Stat. 731), as amended, and the Federal Columbia River Transmission System Act (88 Stat. 1376);

(5) the power marketing functions of the Bureau of Reclamation including the construction, operation, and maintenance of transmission lines and attendant facilities; and

(6) the transmission and disposition of the electric power and energy generated at Falcon Dam and Amistad Dam, international storage reservoir projects on the Rio Grande, pursuant to the Act of June 18, 1954, as amended by the Act of December 23, 1963.

(b) The Southeastern Power Administration, the Southwestern Power Administration and the Alaska Power Administration shall be preserved as separate and distinct orga-

nizational entities within the Department; shall each be headed by an Administrator appointed by the Secretary at an Executive Schedule level or a General Schedule grade not less than the level or grade for the chief executive officer of each such administration in effect on the effective date of this Act. The functions and authority hereby transferred to the Secretary shall be exercised by the Secretary, acting by and through such Administrators. Each such Administrator shall maintain his principal office at a place located in the region served by his respective Federal power marketing entity.

(c) There is hereby created a separate and distinct Administration within the Department of Energy which shall be headed by an Administrator appointed by the Secretary who shall serve at an Executive Schedule level not less than the level held by the Bonneville Power Administrator on the effective date of this Act; the functions and authority transferred in paragraph (a) (5) or (a) (6) of this section shall be exercised by the Secretary, acting by and through such Administrator; and the Administrator shall establish and shall maintain such regional offices as necessary to facilitate the performance of such functions. Neither the transfer of functions and authority effected by subsection (a) (5) of this section nor any changes in cost allocation or project evaluation standards shall be deemed to authorize the reallocation of joint costs of multipurpose facilities theretofore allocated unless and to the extent that such change is hereafter approved by Congress.

By Mr. ROSE:

Page 114, strike out line 17 and insert in lieu thereof the following: "life of the Nation, including a comprehensive summary of data pertaining to all fuel and energy needs

of residents of the United States residing in—

"(A) areas outside standard metropolitan statistical areas; and

"(B) areas within such areas which are unincorporated or are specified by the Bureau of the Census, Department of Commerce, as rural areas;"

Page 65, after line 20, insert the following new paragraph:

(3) in the conservation and development of energy resources, the energy needs of both rural and urban residents shall be given full consideration;

Page 65, line 21, strike out "(3)" and insert in lieu thereof "(4)", and on page 66, line 1, strike out "(4)" and insert in lieu thereof "(5)".

By Mr. ROUSSELOT:

Page 129, after line 6, insert the following new section:

SEC. 719. Effective 90 days after the effective date of this Act, all authority with respect to the allocation of petroleum, petroleum products, or natural gas under the Emergency Petroleum Allocation Act of 1973, the Energy Supply and Environmental Coordination Act of 1974, the Energy Policy and Conservation Act, and the Natural Gas Act which is transferred or delegated to, or vested in, the Secretary or the Federal Energy Regulatory Commission shall terminate. The Secretary shall, within 30 days after such effective date, submit legislation to the Congress to conform such statutes to the purposes of the preceding sentence.

By Mr. UDALL:

Strike Section 302(d) (1) (C) and renumber Section 302(d) (1) (D) and 302(d) (1) (E) accordingly; and

Strike Section 303 and renumber succeeding sections accordingly.

## EXTENSIONS OF REMARKS

### DEPARTMENT OF ENERGY LEGISLATION SHOULD BE POSTPONED

#### HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. ARMSTRONG. Mr. Speaker, tomorrow the House will consider H.R. 6804, legislation to create a Department of Energy.

On the surface, it is tremendously appealing to vote for a plan that might bring order out of the chaos which is our Federal energy establishment. And, I would like to accommodate President Carter and to cooperate with his efforts to reorganize the executive branch. I feel the President is entitled to considerable latitude in managing the Government.

But H.R. 6804 goes too far. It is no mere reorganization measure. No, it represents a drastic change in long-standing policy, and House action on this legislation should be deferred at least for the time being. I would like to explain why:

We are getting the cart before the horse. Obviously, this Nation urgently needs a coherent and responsible energy policy. President Carter has submitted a series of energy proposals which he himself has rightly termed "one of the most complicated \* \* \* legislative packages that a President has ever sent to Con-

gress." Hearings are now being held on Mr. Carter's proposals and, hopefully, additional hearings will soon be held on recommendations presented by Members of Congress, including myself, and other interested persons. After we have evaluated the proposals and have made basic energy policy decisions would be the proper time to establish the agency needed to administer that policy.

Moreover, it is likely this new agency will impose great costs on the Nation's consumers and taxpayers. I personally doubt that more Government regulation of our economy is the answer to the Nation's energy shortage. Indeed, the available evidence seems to indicate such regulations have heavily contributed to the existing crisis and have created many economic dislocations and injustices. So I would personally favor loosening existing regulations rather than creating new ones.

But to return to the practical question of cost. Today's Wall Street Journal summed up the issue succinctly:

A Chevron statistician has been sizing up the \$10.6 billion budget of the proposed new Department of Energy. For example, it is about double the value of all the oil the U.S. imported from Saudi Arabia last year. It exceeds capital and exploration expenditures by the petroleum industry to find and produce oil, gas and gas liquids in the U.S. in 1975. It exceeds by \$800 million the 1974 profits of the seven largest international oil companies; Chevron can't resist adding that those profits were described by a U.S. Senator as "obscene". It is equivalent to about \$3 a

barrel of domestic crude oil production, which means if our own arithmetic is correct that you could decontrol all domestic crude oil prices and still end up paying less for oil than the federal energy bureaucracy costs. And one should keep in mind that the \$10.6 billion is only the cost of the newly boring baby DOE. Think what it will cost when it grows up!"

But the truly ominous aspect of H.R. 6804 is the extent to which it will consolidate unprecedented power over energy producers and consumers in the hands of one person. In a Nation whose very essence is freedom, Congress should go slow in giving any person the kind of power granted to the new Secretary of Energy under this legislation:

Oil pricing and allocation, conservation, coal utilization, strategic petroleum reserve, energy information, resource development;

Natural gas regulation, interstate wholesale electric rate setting, and hydroelectric licensing;

R. & D. in fossil, nuclear, fusion, solar, geothermal and conservation—energy efficiency—uranium enrichment and production military applications and safeguards, environment and health research;

Power marketing functions—the power marketing functions of Bonneville, Alaska, Southwestern, Southeastern Power, and Defense Electric Power Administration; and the marketing power by the Bureau of Reclamation—coal mine production research fuel date, production goals;

Naval Petroleum Reserves No. 1, 2, 3, and Naval Oil Shale Reserves No. 1, 2, 3; Pipeline valuation, pipeline rate setting;

Industrial energy conservation program;

New buildings energy efficiency standards—program will continue to be carried out through HUD;

Competitive bidding among companies for Federal leases, use of alternative bidding systems, production rates, due diligence requirements that mandate development of a lease within a certain time limit, distribution of lease revenues; and, the authority to approve all economic terms and conditions of leases;

Authority over electric utility mergers;

Authority to approve loans made by the Agriculture Department's Rural Electrification Administration for construction, operation, or expansion of utility plants, and a role in advising the Department of Transportation on automobile efficiency standards;

A total of 20,000 employees and a \$10.6 billion budget.

The Secretary would not only be able to control the energy we need to power our economy and keep us working, but he would also be able to control when we get it; from whom we get it; at what price we get it; who can produce it; and from where they can produce it.

Exercising such control over energy is tantamount to holding hostage every economic interest in the Nation. As John Winger, Chase Manhattan's vice president for energy affairs correctly observed:

To some degree, every single business activity is dependent upon energy in one form or another. None could function totally without it.

Thus total control over energy implies total control, however benignly exercised, over every farm, every business, every job, every community and region of the Nation.

The distinguished economist Dr. Milton Friedman warns that:

A Department of Energy has the potential of being the most powerful, and the most harmful, of all Federal agencies. It would control the lifeblood of our economic system. Its tentacles would reach into every factory, into every dwelling in the land. Our economic system has been able to survive the U.S. Postal Service. It has been able to survive Amtrak. I suspect that it will survive Conrail—though Conrail is potentially more harmful than its predecessors. But can our economic system survive Federal control of the pricing, the production, the distribution, the import of energy?

Do not be misled into supposing that the energy problem is a purely technical problem that engineers can solve. No government engineer is in as good a position as you are to decide whether you would rather use expensive energy for heating your home, driving your car, or helping to produce one or another product for you to buy. No government engineer is in as good a position as the owner of a factory to choose the most economical fuel for his purposes or the cheapest way to conserve energy. No government engineer can replace the market in calculating the indirect effects of energy use or conservation. And no government engineer will enforce the ever more numerous edicts that will come down from on high. That will be done by policemen.

Make no mistake about it. The establishment of a Department of Energy, with the

powers requested by the President, would be a further major step toward converting our free-enterprise system into a corporate state.

Mr. Speaker, let us reflect upon the true implications of the Department of Energy legislation.

This proposal has been formed to fit a policy which awaits action from this body. The President's energy package will take long hours of debate and discussion to hammer out. Rather than transferring powers from independent regulatory commissions to a new bureaucracy, inevitably subject to political pressure, let us defer action on this broad powerful process which is a prelude to the new energy program until we know the particulars of that program.

And by taking the time to do so, we will also permit time to develop safeguards over the power of the new Department and, hopefully, to avert the dangers of which Dr. Friedman and others have so properly warned.

#### THE NEED FOR AN ELITE EDUCATION

HON. ROBERT MCCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. MCCLORY. Mr. Speaker, a distinguished educator, John R. Silber, president of Boston University, who is particularly perceptive with respect to educational programs and opportunities in our Nation presented an excellent exposition of his views in the June issue of Harper's magazine which, in turn, was reprinted in the Sunday, May 28, issue of the Chicago Tribune.

In his article, Mr. Silber questions the wisdom of reducing admission and educational standards in order to accommodate minority groups. On the contrary he emphasizes the importance of rewarding excellence in education and in all other human activities as the standard which should apply to all Americans.

Mr. Silber particularly questions the present-day tendency to accommodate those coming from Spanish-speaking families by resorting to bilingualism. It is clear that by authorizing or requiring the use of the Spanish language for the benefit of Latin American immigrants we imply that they are incapable of learning the English language as the German, Italian, Russian, Polish, Greek, and other immigrant groups have done.

Particular attention is drawn to the recent Voting Rights Act amendments which exempted segments of our population from a requirement to understand and use the English language in voting.

Mr. Speaker, our Nation's preeminence in the world has resulted in large measure from our respect for excellence. Persons of all races and creeds and from all ethnic backgrounds should strive to perpetuate this goal. If we downgrade our respect for excellence and accept or adopt a standard of mediocrity, we jeopardize the future of all of our citizens.

Mr. Speaker, with this inadequate introduction, I wish to laud Mr. Silber and to call to the attention of my colleagues

and to all Americans the following excellent, well-timed, and perceptive message from which all of us can benefit:

[From the Chicago Tribune, May 28, 1977]

#### THE NEED FOR AN ELITE EDUCATION

(By John R. Silber)

The only standard of performance that can sustain a free society is excellent. It is increasingly claimed, however, that excellence is at odds with democracy; increasingly we are urged to offer a dangerous embrace to mere adequacy.

By this I do not mean that our performance is necessarily becoming worse. In the sports in which precise comparison is possible we excel our predecessors with a consistency and regularity that threaten to become monotonous.

Athletes have never run so fast, jumped so high, or sunk so many baskets. Even as we recognize what appears to be our prevailing inability to teach most children to read and write, we reassure ourselves that educational opportunity has never been greater and that science and mathematics have never been taught more effectively.

Consumer goods have been developed to such a degree of sophistication, low cost, and reliability that one can now buy for a few dollars a tiny device whose capabilities were unavailable 40 years ago in any size and at any price, the pocket calculator.

Our flight from excellent is different and apart from this progress. It is profoundly philosophical. Out of a well-intentioned but inept concern with equality of opportunity, we have begun to reject anything that exceeds anyone's grasp.

Some might argue that it is our right to engage in this curious flight, and so it is, the right of free men to be fools. But do we have the right as citizens in a free society to reject excellence on behalf of others who may not be so foolish?

Much of the present-day rejection of standards is precisely by people and institutions that act in trust for others. This is flagrantly true of higher education, and especially regrettable because higher education purports to be and has been a repository for the highest standards.

One of the most obvious examples here is the war against grading. While there are many motives and rationales behind the movement to substitute pass/fail or pass/no-entry "grading" for the traditional scales, all begin with the same crucial assumption: that there is no compelling reason to distinguish between excellence and adequacy, and that it is wrong—either educationally or morally—to record evidence of inadequacy or failure.

A related phenomenon is grade inflation, whereby teachers behave as if all students are equally gifted and hardworking. Declining standards are also reflected in the relaxed indifference shown by many professors and institutions to the wholesale and retail distribution of plagiarized materials by corporations selling term papers and other academic assignments.

In all cases the threat to excellence is obvious, for our refusal to reject inauthentic work or to identify excellence will eventually render us unable to recognize it or care about it.

Last year the City University of New York abandoned open enrollment. It did not, however, return to its earlier admissions standards, but instead established as the minimum qualification for admission the competence expected of an eighth-grade education.

This is less an indictment of the standards of CUNY, which was, after all, seeking rather tentatively to step back from the abyss, than it is of the high schools. For while prospective students at CUNY must now have reached an eighth-grade level, they must also be high-school graduates—so, in theory, they must also have attained a twelfth-grade edu-

cation. Implicit in the admissions standards of CUNY is a one-third devaluation of the New York high-school diploma.

Every day it becomes more obvious that a technologically sophisticated society will need more, not fewer, educated citizens. Postindustrial society will be grim for a functional illiterate, and it will itself be badly disrupted by the presence of large numbers of semilliterates whose skills, if any, are suited to a world that no longer exists. A restoration of excellence is therefore in the interest of society at large and of each of its members.

Some people believe that the pursuit of excellence is essentially antidemocratic. This fallacy is most obvious in the commonly voiced charge that educational institutions with high standards of excellence in admissions and faculty recruitment are "elitist," a term that for most people is redolent of special and unearned privilege and suggests that these institutions are havens for the incompetent offspring of the rich.

Our society is ambivalent about elitism. We refer easily and unselfconsciously to Ruth, Gehrig, and Mays as the elite of baseball, to Simpson and Baugh as the elite of football, to Jones, Palmer, and Trevino as the elite of golf, and to Zaharias, Thorpe, and Owens as the elite of athletics itself: but outside of sports we use the word as a reproach. This confusion did not afflict Jefferson or Adams. "That all men are born to equal rights is true," said Adams.

Every being has a right to his own, as clear, as moral, as sacred as any other being has. . . . But to teach that all men are born with equal powers and faculties . . . is as gross a fraud, as glaring an imposition on the credulity of people as ever was practiced.

Jefferson recognized a natural aristocracy based on virtue and talents. He contrasted to this aristocracy an artificial one, founded on wealth and birth without regard to virtue or talent. The natural aristocracy, Jefferson believed, was "the most precious gift of nature." He not only acknowledged, but embraced, the idea that people are born with varying degrees of intelligence and talent.

Speaking on the occasion of receiving an Alumnae Award recently at Boston University, Rep. Barbara Jordan [D., Tex.] pointed out that our confusion has had deleterious effects on the federal government's effort to aid higher education. She said:

"We have been so brainwashed by an erroneous definition of democracy that we have difficulty prescribing any program or formula, or giving any grant which is better or more than some other grant, because we don't want to be accused of being antidemocratic because we recognize that some people are excellent. . . . As members of Congress, we should not be engaged in a leveling process. . . . We ought to enunciate and promote those policies which would lead absolutely, categorically, and without hesitation, to the best this country has to offer."

Calls for the maintenance of standards are often denounced as racist and sexist, but only a sexist or racist could believe that women or members of minorities are in fact inferior to everyone else, and would be unable to compete on an equal basis if judged by performance alone.

The movement to establish the United States as a bilingual nation provides a striking example of this condescension. Until recently, the United States was unique in the world as a very large nation covering a great land mass that maintained a single national language with dialects that were easily mutually intelligible.

It is remarkable that a nation of such ethnic diversity has not been torn apart by intercommunal violence. Our comparative peace and the single language are almost certainly related: unlike Canada, Belgium, and other nations with explosive linguistic problems, the United States has been able to sus-

tain its diverse culture within the context of one official language.

Recent attempts to require bilingual ballots erode the position of the national language by assuming that it is possible to be a citizen even if one is literate only in the language of one's ethnic group.

The proposal is designed to exempt one large group of citizens from a requirement that has hitherto been expected of all citizens, the acquisition of some modest competence in the national language. This reduces the standard of performance expected of citizens to a derisory level.

It patronizes the Hispanic culture by implying that it cannot survive coexistence with the English language. And it has racist overtones, suggesting that Spanish-speaking American citizens cannot be expected to acquire the same level of competence that was acquired by immigrants from Germany, Italy, Russia, Poland, Greece, and many other countries, and that was until recently expected of Spanish-speaking citizens.

A similar question arises with regard to the various dialects of English. In 1974 the National Council of Teachers of English issued a position paper maintaining that students who grow up speaking dialectal variants of English should not be required to learn standard English.

On a recent television program an obviously intelligent and educated young black student said it was plain that students who grew up speaking dialects arrived in school ill prepared to function in the standard dialect. He did not think that attempts to require these students to use the standard dialect grew out of "overt racism of elitism. . . . That's the way it's mapped out by society."

Recognizing that the good intentions of such attempts precluded their being overtly racist, he nevertheless left the impression that he considered them part of unconscious societal racism.

Nothing could be farther from racism or elitism than requiring students from the ghetto to learn standard English. For this is to treat them as the equals of the great majority of students.

It is particularly reprehensible for white professors and white middle-class students to encourage black students in the mistaken belief that it does not matter whether they learn to speak and write with educated middle-class proficiency.

The black student who speaks only ghetto English is not able to communicate fully. He can communicate effectively only with those who speak his own dialect, but an educated black can converse with anyone in the English-speaking world.

White professors and students, already proficient in standard English, retain their monopoly in it and protect themselves from black competition by encouraging blacks to renounce their educational opportunities. Thus blacks may remain tragically isolated from the mainstream of their national culture, and pay the price for the ideological whims of whites.

Lowered expectations are a threat to all our students, since their ability to develop is very largely dependent upon the goals we establish for them. But it is not students alone who need a vision of excellence. Writing in 1830, Alexis de Tocqueville noted that in times of faith, people concern themselves with a distant supreme goal beyond this life. In so doing, they learn by imperceptible degrees to repress a crowd of petty passing desires in order ultimately to best satisfy the one great permanent longing which obsesses them. When these same men engage in worldly affairs, such habits influence their conduct. . . . That is why religious nations have often accomplished such lasting achievements. For in thinking of the other world, they have found out the great secret of success in this.

But in skeptical ages, Tocqueville continued, the vision of the life to come is lost, a problem that is exacerbated in democracies, where people are set free to compete with each other to improve their situations.

In such a combination of circumstances, "the present looms large and hides the future, so that men do not want to think beyond tomorrow." Tocqueville thought it especially important that the philosophers and rulers in skeptical democracies should always "strive to set a distant aim as the object of human efforts; that is their most important business."

He did not specify the nature of the goals which need to be set in such ages, but we can hardly doubt that such goals require the best efforts not merely of individuals but of the society as a whole.

In a secular age in which few believe in a life to come and in which God is, if not dead, at most indifferent, a vision of excellence—a secular kingdom of God—in which individuals fulfill themselves through education and useful public service may be essential.

## OUR AID FOR ARGENTINA

### HON. GERRY E. STUDDS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. STUDDS. Mr. Speaker, on May 23, I offered a amendment to the foreign military aid bill which would have eliminated our military training assistance and cash military sales to the Government of Argentina. I offered this amendment—which was defeated by a very narrow margin—because I believe that the Argentine Government is currently engaging in a consistent pattern of gross violations of internationally recognized human rights, and that it should therefore be considered ineligible for U.S. military aid.

Last week, I was visited by Dr. Maximo Victoria, a nuclear physicist and former member of the Argentine Atomic Energy Commission. Dr. Victoria was arrested almost immediately after the current Argentine Government seized power. I think that the doctor's experiences subsequent to his arrest might be of interest to my colleagues. I ask them to remember, while reading this statement by Dr. Victoria, that the United States trained the head of the Argentine secret police, and that the House has just authorized an additional \$700,000 in training for the Argentine military:

TESTIMONY FROM MAXIMO PEDRO VICTORIA

#### 1. DETENTION PROCEDURES

I'm a physicist, doing research in physical metallurgy. I have worked for the Argentine Atomic Energy Commission (CNEA) since 1952. Since August, 1973, I was a member (Director and then Vice-President) of the National Institute of Industrial Technology (INTI), on a leave of absence from the CNEA position.

After the military coup of the 24th of March, 1976 I was asked to resign from my post at INTI, by the military authorities that had taken over that institution when I returned to CNEA. I was asked to present myself at the Personnel Office. There I was told by the Personnel Manager, a Navy Captain, that I was under arrest. No reason was given to me for my detention.

At gunpoint I was taken back to the entrance hall of CNEA. I was then placed in a

police car. About three blocks from the CNEA building the car went into a side road. I was then gagged, blindfolded and a hood was put over my head. Always at gunpoint, I was told to lie on the floor of the police car. I was then driven to what I suppose was the port of Buenos Aires, taken to a cabin in a navy boat, where I stayed for the next fourteen days, completely isolated. The whole procedure was very violent, being constantly beaten with fists and guns.

In the boat, I was constantly harassed by my guardians, who came to knock and kick the cabin door at all times of the day, while shouting that I was next in line to be shot or thrown into the sea. At no time I was allowed to see the faces of my custodians, since I had to face a wall each time the door was open or put a hood over my head when I had to go out of the cabin to use the toilet.

On April the 13th, I was given back my shoes, gagged and blindfolded once more and banded hands in my back, with one cord that tied my wrists and neck with self-adjusting knobs. With this procedure, I started to suffocate after a short period since even the smallest movement produced a tightening of the rope. I probably fainted. Sometime afterwards, I was told that I "had survived for another day" and untied. The next day I went through the same procedure, but this time I was taken out of the cabin, placed in the floor of some sort of wagon and driven to another boat.

Here the treatment was even more rough, and I was not allowed to take off the hood and blindfold at any time. I was firmly chained to one of the bedposts in such a way that I had to remain rigidly in a seated position. I was interrogated a number of times by different persons, on my political and religious beliefs, and on my connections with several people many of them fellow scientists.

It was on this boat, on hearing the names of other prisoners being called, that I realized that other nine members of the CNEA were at the same place under detention. No food or water was given to us.

After one or two days, we were taken to Devoto Prison. I found out later from my family, that during this whole period we had been technically "kidnapped", since they couldn't obtain any information on my whereabouts or even if I was still alive, from the moment I was taken from the CNEA building on April 1st.

#### 2. THE CONDITIONS AT DEVOTO PRISON

In Devoto we were all placed under arrest at the disposal of the Executive (PEN). In this condition a person can remain in jail for an indefinite period of time, even without any accusation being brought against him. Up to the military coup, an individual under PEN, had the constitutional right to leave the country into exile, but this right was "suspended" by the military junta. In a number of cases I met in Devoto, people were placed under PEN after they had been discharged by normal judicial procedures.

Political prisoners are placed into Devoto in the "high security ward". This is a five floor building, totally occupied by political prisoners, from 100 to 120 people per floor. This means an average of five prisoners to a cell of about 2 by 3 meters, including a sector for the W.C. on the floor. They are not only very crowded quarters, but also very poor sanitary conditions. The food is extremely poor, with almost no proteins, meat, milk or cheese are seldom provided or hot at all. It was only in the last two months in Devoto that we were allowed to buy powder milk from the prison store.

Medical attention is almost nonexistent. When one is finally able to reach a prison physician, one is usually "checked" through the cell bars and given an aspirin. A number of fellow prisoners that had underwent tor-

ture still had ulcers from burns or electric shock. One of them had a deep wound in one foot as a result of a bullet. The resulting infection went on for months. The medical attention they received came mainly from three medical doctors who were imprisoned in the same floor.

The whole treatment of political prisoners is a violent and terrorizing one. We were subjected to constant body inspections or sent to solitary confinement on the least of excuses. These are isolation cells of 1 by 2 meters, where a mattress is provided at night and taken at six in the morning.

At one point, we were locked in our cells for 45 days, without any communication with the outside world. All visits, even from lawyers, were prohibited. No mail came in or went out. No reason was given for this procedure.

#### 3. THE TRANSFER TO SIERRA CHICA PRISON

On the 6th of September about fifty political prisoners, Dr. Santiago Morazzo and myself among them, were taken from their cells at about 6:00 a.m. We were introduced into a large locutory, requisitioned and all our personal belongings taken out from us. We were transported to the military airport at Palmar, with a guard of four armored vehicles and a tank. At about nine o'clock. The beatings with both, sticks and guns started as we were introduced in a military transport plane, where we sat with our heads between our knees. About ten guards from the Federal Prison System continued to beat us, walk over our backs, while we were forced to shout "long live the military!" "long live, general Vilas", etc. After a 45 minute flight we arrived at an airport somewhere near Sierra Chica. The beating continued while we went down, the guards having been joined by army people with dogs and while we were transported to prison. Once in here, we were striped naked for a "medical check up" and forced through a double file of guards that beat with sticks.

The beating continued while we tried to pick up our personal belongings. One at the time and nude we were made to run the distance to the cell pavilion, about a hundred meters from the main building. The floor was covered with small sharp stones and it was probably here that two toes of my right foot were broken. We were waited at the pavilion by about fifteen guards, and the beatings continued while we were taken to our cells. A few minutes afterwards, one by one, we were violently taken from our cells to the back of the pavilion and asked, among a shower of blows to pick our clothing, given an ice cold shower and brought back to our cells. It was about 6:00 p.m.

In the process, I had not only two broken toes, but also my front teeth beaten out and my back was covered with sores. Dr. Morazzo, whom I was to see some days later had two broken ribs. The whole contingent were in similar or worse conditions. No medical attention was provided. Two days afterwards we were asked to sign a paper saying that the wounds had been self inflicted or we would not be allowed visitors.

This sort of procedure during transfers of prisoners became standard, and I was a witness to reception of three other contingents.

#### 4. CONDITIONS AT SIERRA CHICA PRISON

The conditions of political prisoners at Sierra Chica are even worse than at Devoto. We were initially placed in isolation, one prisoner to a cell. Because of the increasing number of prisoners, we were finally put two to a cell (I would calculate between 1000 y 1200 political prisoners are detained at Sierra Chica).

Prisoners are only allowed to go out of their cells into one of the prison yards only for half hour, three times a week. They are not allowed to lie down during the day and they can only sit in the metal frame of the beds. They are allowed to buy one news-

paper, but books are prohibited. Sierra Chica is one of the oldest prisons in the country and the conditions of the buildings show their age. Every cell has leaks some of them have no running water.

The conditions I have described are not the exception but the rule, I have met entire families in prison that were detained because the agents of repression did not find someone whom they were looking for and instead took everyone in the house, after pillaging all belongings of value.

I have also witnessed the results of torture in those that survived it. In Sierra Chica at least two fellow prisoners were psychologically disturbed as a result of torture. Another one had lost the use of one arm because of electrical shocks. No medical attention was given to them.

I was released on the 11th of October, 1976, from Sierra Chica. During the whole detention period I was not officially accused nor told the reasons for my detention. The same is true for the rest of the members of CNEA that were in prison with me.

Having been told that both, the security of my family and my own life were in danger. I left Argentina on October 11, 1976.

#### CONTROL DATA'S CYBER 76

#### HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. HYDE. Mr. Speaker, a recent column by Jack Anderson and Les Whitten directed their readers' attention to Control Data's pending sale of their Cyber 76 computer to the Soviet Union.

This situation is not of recent vintage. On December 28, 1973, one of the most farsighted and patriotic industrialists I know, Mr. Gerald Gidwitz, chairman of the board of Helene Curtis Industries, Inc., wrote to William C. Norris, chairman of the board of Control Data Corp., expressing great concern about the trend in some elements of American industry to heap our technological bounty upon the Soviet Union.

Mr. Gidwitz's letter states these concerns so very well that I want to share it with my colleagues, as well as his recent letter to me:

MAY 25, 1977.

HON. HENRY J. HYDE,  
Oak Park, Ill.

DEAR HENRY: I am enclosing a copy of a newspaper article by Jack Anderson and Les Whitten about the U.S. selling the Cyber 76 computer to the Russians. I began reading about this as far back as December 1973, when I became involved in correspondence with William C. Norris, the Chairman of the Board of Control Data, who seems to have built up a very substantial business with the Russians. At that time I complained that the modern equipment he was selling would enable the Russians not only to control industry and manufacturing processes there but that it would have substantial benefits in controlling their population and would be used for military purposes.

I am enclosing a copy of my original letter of December 28, 1973. Subsequently, on January 29, 1974, I wrote him as follows:

"... The situation is far worse than I thought it was.

"You obviously have the facts and draw the wrong conclusions. Russia's large core of engineering talent is, has been, and will continue to remain directed toward its main

objective and that is world domination. This is evidenced by the fact that its major technology and development are entirely in the military field or in related fields. Those areas where civilian technology can be used for military purposes and where it hasn't been used so far, is because either the Russians were too concentrated on their military technology, or overlooked the importance and relationship of these other fields, or merely because of their cumbersome organization they could not develop all of these technologies at once.

"Several years ago, I think it was in 1966, when we made the first wheat shipments to Russia we opened the flood gates to European business deals and technological transfers to Russia. The present attitude of this administration and of companies like yours actually stimulates competitions from European companies. . . ."

Apparently nothing that I have been able to write to Mr. Norris or say to anyone else has had any effect on the sale of the Cyber 76 to the Russians, which will give them a quantum jump in technology as well as provide them with the instrument that, in my judgment, would be extremely dangerous for them to have as far as we are concerned.

If there is anything you can do to stop this nonsense of assisting in the building of the Russian industrial complex to support their military, I wish you'd do it. A couple of years ago I talked to people in the government who were afraid to raise their voices against these transactions. It appears that they have not stopped with the new administration.

Sincerely yours,

GERALD GIDWITZ,  
Chairman of the Board.

HELENE CURTIS INDUSTRIES, INC.  
December 28, 1973.

MR. WILLIAM C. NORRIS,  
Chairman of the Board,  
Control Data Corp.  
Minneapolis, Minn.

DEAR MR. NORRIS: The other day I was having a conversation with Ben Schemmer of the Armed Forces Journal about the problem of the United States industrializing Russia and its effect, not only upon our present trade with Russia, but the effect on our world trade when these construction programs come to fruition. Ben thought that your letter to him of December 19 would be of great interest to me and I agree with him. He sent me a copy, and I am taking the liberty of writing to you about it.

In the conclusion of your letter, you remarked that the USSR has many more scientists and engineers than do we. I was in Russia in 1958 and there was practically no visible evidence of Russian scientific knowledge, either on the streets, in the stores, in factories where we were allowed to visit, nor in private homes. In the conversation that I had with the woman in charge of the construction materials exhibit in Moscow, I was told that most of the steel produced in Russia did not go into the construction industry or into consumer goods, but went into their military program.

Russian engineering talent also all goes into their military program. If we furnish the consumer goods technology, we not only build a competitor in the world markets, but we reduce the internal pressure from the Russian consumer to divert talent in that direction.

Industrial power is the key to military power. We ship them whole plants financed by the Ex-Im Bank at subsidized interest rates that are the equivalent of a gift. (You are aware that with a mortgage at a 7%

interest rate, an 8.27% constant retires the principal in twenty-five years.)

Russian engineering development has almost all been in the military field. Russian plants, whether heavy-duty trucks, plastics, automobiles, and other items, depend upon exports to pay for the plants. Many plants call for the American company to take products from the plants as payment. When we are building a petrochemical plant and are taking plastics in payment, it is nonsense. We would be better off building the plants here.

We shipped them 164 of the subminiature ball bearing grinders that are only made in the U.S. The sole use of the 77 we have in this country are for bearings on the guidance system of the MIRV.

We ship computers.

Perhaps, some enterprising entrepreneur may try to get a license for our "clean" atomic explosives on the ground that there will be less permanent damage in the event we get into a shooting war.

The enclosed Washington Report of June 1973 is illuminating.

Don't you think this whole program of helping Russian industry should stop until we have Russian policy changes that no longer condone stopping our oil, inciting wars, and imprisoning anyone who raises a voice objecting to practices that are repugnant to free people?

Sincerely yours,

GERALD GIDWITZ.

GUARDIAN OF THE MENORAH TRIBUTE BANQUET TO HONOR STANLEY ENGEL OF YOUNGSTOWN, OHIO

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

MR. CARNEY. Mr. Speaker, on Sunday, June 5, 1977, the eighth annual B'nai B'rith Guardian of the Menorah Award will be presented to Mr. Stanley Engel.

The B'nai B'rith Guardian of the Menorah Award is given each year to the outstanding individual who has shown, through service and commitment, a devotion to youth and the community. In conferring the award on Stanley Engel, B'nai B'rith is recognizing Mr. Engel's many years of distinguished service to the city, State, and Nation, through his active participation and leadership in a wide range of civic, cultural, educational, religious, and service associations.

Born in Youngstown, Stanley Engel was raised in a Cleveland Jewish orphan home. He attended Ohio State University and earned a bachelor of science degree in social administration in 1939. Following his graduation from Ohio State, he returned to Youngstown and became the first full-time social caseworker engaged by the Jewish Federation of Youngstown. In 1943, he became executive director of the Tri-State Jewish Welfare Council, with headquarters in Pittsburgh, Pa. Two years later, he again returned to Youngstown, this time to serve as executive director of the Jewish Fed-

eration, a position he has held for the past 27 years.

The Jewish Federation of Youngstown is a functional federation and embraces various disciplines of the social work practice, including social casework, community organization, and community relations. Its various departments include the Jewish Family and Children's Service, Jewish Community Center, Jewish Community Relations Council, and the Annual Jewish Federation Campaign. The Federation provides community planning, fund raising, and coordinating services for the health, welfare, and social group work and recreational needs of the Youngstown Jewish community.

Mr. Engel's activities include member of the National Association of Social Work, National Association of Jewish Center Workers, American Civil Liberties Union, Ohio State Alumni Association, National Conference of Jewish Communal Service, Academy of Certified Social Workers, Association of Jewish Community Organization Personnel, and American College of Nursing Home Administrators; member of the board of Educational Opportunity Youngstown, Inc.; Mahoning County Council on Aging—currently serving as treasurer; and Kent State University Hillel-Jewish Services Center.

Mr. Engel has also been a member and chairman of various committees of the Eastern Ohio Chapter of the National Association of Social Workers, serving as its president from 1962 to 1964. A former member of the board of the local health and welfare council, he has been involved in many other community endeavors, such as: Executive secretary of the Youngstown Fair Employment Practices Committee, which helped bring about the enactment of a local fair employment practices ordinance, and chairman of the first social service division of the Greater Youngstown Community Chest Campaign.

In addition, Mr. Engel was formerly a member of the board of directors of the Anshe Emeth Temple, and a member of the Inter-racial Committee which preceded the Mayor's Human Relations Committee. He has made numerous special surveys and studies, including a study on the needs of the Jewish Aging in Youngstown, which led to the founding of Heritage Manor, the Jewish Home for the Aged.

Stanley Engel is married to the former Eleanor Moranz. The Engels have three children: Alan S. Engel, MSQ, campaign director of the St. Louis Jewish Federation; Miss Susan Engel, a graduate of the University of Massachusetts in medical technology and now associated with Photo Plate, Inc., a division of the Dow Chemical Corp., and Brian Jay Engel, a freshman at Ohio University.

The funds raised from the Guardian of the Menorah Tribute Banquet will be donated to the B'nai B'rith Youth Services Appeal, which supports Hillel Foundations on 290 college campuses, B'nai B'rith youth organizations, serving about 35,000 teenagers, and Career Counseling

Services, which provide youth with college placement and job search assistance. B'nai B'rith is the oldest and largest Jewish service organization in the world, with representation in over 40 countries of the free world and a membership of over half a million men, women, and youth.

Stanley Engel has demonstrated his commitment to the well-being of his fellowman by serving in virtually every facet of community life. Because he has given so much of his time and energy to help others, it is altogether fitting and proper that this year's Guardian of the Menorah Award be presented to him. Mr. Speaker, I wish to extend my sincere congratulations to Stanley Engel and his family on his fine achievement. When his many friends join in honoring him, I hope to be there.

KONSTANTIN VIKTOROVICH RUSAKOV, BREZHNEV'S NEW MAN IN THE POLITBURO

### HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. McDONALD. Mr. Speaker, last week the press featured the dropping of Podgorny from the Soviet Politburo and barely mentioned the promotion of Rusakov to that vacancy. Rusakov for at least the past 3 years has been a personal assistant to Brezhnev and their association may date back to at least 1960. Rusakov is no youngster, having been born in 1909.

In 1930, he graduated from the Kalinin Polytechnical School in Leningrad and from 1930-39 held various engineering positions in construction trusts in Leningrad, Leninakan, and Irkutsk, respectively. From 1946 until 1957, he held various positions in the fishing industry of the Soviet Union in administrative positions. In the period from 1948 through 1952, there is a gap, but he may have been in the fishing industry during that time also.

In 1958, he assumed his first diplomatic position as counselor to the U.S.S.R. Embassy in Poland. He left this job in 1960 for a position in the all-powerful Central Committee where he stayed until 1962. In 1962, he again returned for a short stint in the diplomatic service as Ambassador to Mongolia for a year.

In October 1964, Rusakov was made a deputy department head in the Central Committee and he has been in the Central Committee apparatus ever since. One key position he held was chief of the Department for Liaison with Foreign Communist Parties, a position he may now reassume in place of the recently demoted Katushev.

In January of 1966, he accompanied Brezhnev to Bulgaria, Rumania, and Czechoslovakia and has seemed to be in Brezhnev's shadow ever since.

CXXIII—1983—Part 14

In sum, he is both a well-trained technician and party man personally responsible to Brezhnev and in his new position will enhance Brezhnev's leadership role.

OUR NATION SALUTES REV. EUGENE KOWALSKI OF NEW JERSEY, ESTEEMED PASTOR, COMMUNITY LEADER, AND GREAT AMERICAN

### HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. ROE. Mr. Speaker, on Saturday, June 4, the residents of my congressional district and State of New Jersey will join with the congregation of St. Stanislaus Kostka Roman Catholic Church, Garfield, N.J., in honoring an outstanding clergyman, distinguished citizen, and good friend, the Reverend Eugene Kowalski, in celebration of the 35th anniversary of his consecration into the Sacrament of Holy Orders.

Father Kowalski has maintained the highest standards of excellence throughout his lifetime in his many, many achievements, so unselfishly and willingly dedicated to the betterment of mankind. His exemplary service to God and country are mirrored in the happiness and security he has provided our people in his steadfast quest for the religious and cultural enrichment of all of our citizens, young and adults alike.

Mr. Speaker, there is so much that can be said of the love, affection, and reverence with which Father Kowalski is held by all who have had the good fortune to know him. He was born in Bayonne, N.J., on September 20, 1915, one of five sons of Ignatius and Janina—nee Hilinski—Kowalski. From 1930 to 1934 upon his graduation from local public schools in his hometown of Bayonne, he attended St. John Kanty Preparatory School in Erie, Pa. From 1934 to 1936 he continued his education at St. John Kanty College, also in Erie.

Father Kowalski received his bachelor of arts degree from Seton Hall University in 1938. He then attended Immaculate Conception Seminary in Darlington, N.J., and completed his theological studies at Catholic University, Washington, D.C., receiving his STL—licentiate in sacred theology.

He was ordained to the holy priesthood on May 30, 1942. As a young curate he served for 3 years at Our Lady of Czestochowa, Jersey City, N.J. He then served at Immaculate Conception Parish in Secaucus, N.J., for 4 years and at St. Ann's Parish in Jersey City, N.J., for the following 2 years. During the next 17 years he served at St. Adalbert's Parish in Elizabeth, N.J.

On September 14, 1968, Father Kowalski was appointed pastor of St. Benedict's in Newark, N.J., where he served until his appointment as pastor of St. Stanislaus Kostka Roman Catholic

Church, Garfield, N.J., on November 17, 1973.

Mr. Speaker, I appreciate the opportunity to present this profile of a distinguished man of God who has dedicated his life's purpose and fulfillment to helping others and guiding them in their pathway of life. His comfort and aid which he unselfishly and willingly gives to those in need and those who seek his spiritual guidance has truly enriched our community, State, and Nation.

Mr. Speaker, as Father Kowalski celebrates the 35th anniversary of his ordination to the priesthood I know that you and all of our colleagues here in the Congress will want to join with me in extending our warmest greetings and felicitations for the excellence of his service to his church, our Nation, and all mankind. We do indeed salute the Reverend Eugene Kowalski, esteemed pastor, community leader, and great American.

FOREIGN OIL TANKERS TAKE AWAY U.S. JOBS

### HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. EILBERG. Mr. Speaker, this Congress will shortly be called upon to deal with tanker cargo preference legislation that would require that a significant percentage of America's oil imports be carried on U.S.-flag ships.

As things now stand, U.S.-flag tankers carry only about 4 percent of our imported oil, and this contributes to the critical unemployment of Americans. Thousands of jobs aboard ships, in shipbuilding and in service industries would be generated for American workers by the enactment of tanker cargo preference legislation.

The U.S. Maritime Committee to Turn the Tide has put this employment situation into perspective, Mr. Speaker, and I am placing in the RECORD at this point the text of a factsheet which they have prepared on this subject:

FOREIGN OIL TANKERS TAKE AWAY U.S. JOBS

Currently, without cargo assurance, U.S. shipbuilding potential is not being realized. At the end of 1978, the U.S. shipbuilding industry will have only 14 merchant ships on order.

The shipbuilding industry is an especially effective job-generating industry, which can contribute significantly to the Administration's program to reduce unemployment. Dependent on private investment, the shipbuilding industry recruits unskilled persons, and provides training in skilled trades.

The industry generates 33 man years of employment for each \$1 million of shipbuilding contracts, one of the highest ratios in the manufacturing sector of our economy. By contrast, each \$1 million of aircraft contracts will generate only 19 man years of employment.

Approximately 31% of the shipyard work force and 17.5% of shipboard crews are members of minority groups, substantially above

the 11% national average of the minority work force.

It is estimated that each additional 1% of total imports carried by U.S. flag tankers could result in shipyard employment of 6,864 man years—and in shipboard employment of 5,610 man years.

It's time to turn the tide and generate more U.S. jobs in shipbuilding, sea-going and on-shore labor, and support service industries.

## THE ANNIVERSARY OF THE ARMENIAN GENOCIDE; A CALL TO CONSCIENCE

**HON. ROBERT F. DRINAN**

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. DRINAN. Mr. Speaker, recently the world observed, all too quietly, the 62d anniversary of the genocide of 1.5 million Armenians in Turkey. This atrocity remains unredressed. The Minority Rights Group, based in London, described the genocide of the Armenians in Turkey in 1915-18 as a "national catastrophe compared to that suffered by the Jews" during World War II. Sadly, it is a catastrophe which the world prefers to ignore.

On Memorial Day, May 30, the New York Times published on its editorial page a letter on this subject by Mr. K. Donabedian, of the Armenian National Committee in Boston. Mr. Donabedian eloquently called for more than token memorials. He called upon the Turkish Government to offer some kind of belated acknowledgment of guilt; to offer some form of restitution, even if in a largely symbolic sense, to the families of the victims of the genocide; and to cease its efforts to deny the nature and scope of this infamous massacre.

I commend to the attention of my colleagues Mr. Donabedian's letter to the New York Times, which follows:

[From the New York Times, May 30, 1977]

### OF TURKEY AND AN ARMENIAN ANNIVERSARY

TO THE EDITOR: Armenians throughout the world recently observed the 62d anniversary of the genocide of 1.5 million Armenians in Turkey. In the past, these manifestations of collective grief and outrage have been treated by the media simply as memorial activities designed to "remind the world" in hopes of deterring future genocides. They represent much more than that.

In this respect, C. L. Sulzberger's recent column "Deadline for More Terrorism," which deals with recent developments on the Armenian question, is a welcome sign that a prominent journalist recognizes there is more to the Armenian question than mere memorials. Particularly significant and indicative of his refreshing insight into the real issue is his suggestion that "indeed, it would be advisable even at this late date for the Turkish republic to offer some kind of belated guilt acknowledgement, an apologetic restitutional act plus compensation to descendants of survivors of the gruesome events that occurred, as Konrad Adenauer and Willy Brandt did for Israel." Perhaps it is not so much that our message finally got through but that someone was willing to acknowledge publicly that Turkey does have a responsibility to take some positive steps to cor-

rect the injustices of the past, the contemporary effects of which are very real and pressing.

In its recently released Report No. 32, "The Armenians," the respected Minority Rights Group (London) describes the genocide of the Armenians in Turkey in 1915-18 as a "national catastrophe compared to that suffered by the Jews" and one which "threatens to become more and more of a live issue." At the core of this indeed very live issue is the attitude of the present-day Turkish Government, which continues to deny or distort the well-known and extensively documented truth—that 1.5 million Armenians were slaughtered and hundreds of thousands driven from their homes in a cold-blooded and premeditated act designed to remove them forever from their ancestral lands.

Today, in sharp contrast to post-war German behavior, a major boulevard in the Turkish capital is named after Talaat Pasha, the chief architect of the mass slaughter, and Istanbul even boasts a monument to the archcriminal. In fact, in recent propaganda mailings from Ankara to U.N. delegates, U.S. Congressmen and others, the Turks go so far as to attempt to picture the victims as the perpetrators.

Armenian frustration and indignation—especially in the face of Turkish distortions and denials—have led to renewed determination to struggle to regain Armenian territorial and national rights. Recent developments, which prompted the Sulzberger piece, indicate that some Armenians have apparently lost faith in the willingness or capacity of the world's governments to listen to, or act on, peaceful appeals.

However, the Armenian National Committee will continue to press the Armenian case in every appropriate forum.—K. DONABEDIAN, Armenian National Committee, Boston, May 14, 1977.

## HEARINGS ON FBI CHARTER

**HON. DON EDWARDS**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. EDWARDS of California. Mr. Speaker, on June 6, 1977, at 9:30 a.m., the Subcommittee on Civil and Constitutional Rights of the Committee on the Judiciary will begin a series of hearings on creating a charter for the Federal Bureau of Investigation. Past and present Attorneys General, the Director of the FBI and numerous concerned individuals agree that a statutory foundation is essential for the future of the FBI and for the protection of our citizens' rights.

The approaches to the creation of a statute differ, but those differences should be resolved by a thorough consideration of the objectives of such legislation. The statute must be drafted in a way that those subject to it can understand its provisions and not require constant interpretation of its meaning from higher authority. We must not attempt to recodify existing laws and penalties as some proposals suggest. The language must avoid symbolism and rhetoric; the duties of the agents must be described in a manner that enables the enforcement of existing and future Federal laws while allowing the necessary flexibility to deal with a limitless variety of fact situations.

To begin this process we will first look

at what now comprises the FBI's charter. That charter includes existing law and a series of guidelines issued by the office of the Attorney General. We will ask the Department of Justice and the Federal Bureau of Investigation to share with the subcommittee the effects of and problems with the domestic security guidelines that have occurred since they were promulgated in the spring of 1976. These views should provide valuable insight into the problems encountered by those charged with working within and interpreting those orders.

After we have heard from the Department of Justice we plan to hear from a variety of interested persons and organizations with regard to the proposals for a charter. The General Accounting Office will report to the subcommittee this summer on their followup study of domestic security cases now pending in the FBI field offices. The GAO will have recommendations as to additional legislative efforts which should be made to define the FBI's proper role in our society.

Our goal is a positive definition of the duties of the FBI in those areas which have caused harm to our citizens and discredit to the FBI. We assume the cooperation of all concerned will enable us to attain this goal.

**ANDREW R. ATHENS**

**HON. MARTY RUSSO**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. RUSSO. Mr. Speaker, Mr. Andrew A. Athens, Chicago industrialist, president of the United Hellenic American Congress and layman of the Greek Orthodox Church, was selected last month as one of eight Americans to be honored as typifying the "high ideals reflected by persons who entered the United States as immigrants via Ellis Island or descended from such persons."

In ceremonies held at Ellis Island in the harbor of New York, on April 30, the award from the Restore Ellis Island Committee was presented to Mr. Athens by Prof. Peter Sammartine of Fairleigh Dickinson University and chairman of the committee.

I am privileged to count Andy as a personal friend and I know of no other person who more deserves recognition for his service to humanity and to civic affairs. He is a fine and decent human being whose character and integrity are as strong as his generosity and warmth.

I would like to quote now from the news article on the event that appeared in the Hellenic Times the week of May 19:

In presenting the award, Prof. Sammartine cited Athens' altruistic and philanthropic activities and his many citations for his dedication to the church, to civic affairs, and for his leadership in youth programs. Reference was also made to his military service in the U.S. Army, his participation on Sen. Percy's Committees: Alliance to Save Energy and the Senatorial Advisory Commit-

tee and his extensive leadership in industry as president of the Metron Steel Corporation in Chicago, which he founded in 1950 and which is one of the largest independent steel service centers in the Midwest.

In an emotional response, Athens thanked the committee for the award and recalled that his late father passed through Ellis Island in 1904 in search of "precious freedoms—political, religious, and freedom from want."

I am deeply proud of Andy and I know my colleagues join with me in commending him for his unselfish contributions to those around him and in congratulating him on attaining such a prestigious award.

#### CONTRACTING OUT

### HON. NORMAN D. DICKS

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. DICKS. Mr. Speaker, the subject of contracting out has received increasing congressional attention as of late, as can be expected with the Office of Management and Budget's increased emphasis on performing work by contractors rather than by Government personnel.

I have no problem with contracting out—if such action makes sense in terms of saving the taxpayer's dollars, and in the case of defense contracts, if such action does not impair mobilization readiness or individual or unit retraining. Unfortunately, the recent spate of contracting out has raised questions in both areas.

For this reason, I believe the House of Representatives—following the lead of the Armed Services Committee—acted wisely in passing the fiscal year 1978 defense authorization bill. This bill contains two provisions which, in my view, will eventually lead toward a more rational and justifiable approach toward contracting out. First, this proposed legislation would, in effect, place a moratorium on contracting out until the Secretary of Defense reports back to the Congress by December 31, 1977. This study would "evaluate the methods for conducting cost analyses and identification of those mission essential functions which do not lend themselves to performance by private contractors."

Second, the House agreed to give the Secretary of Defense a 3-percent leeway in exceeding civilian personnel ceilings imposed by the Congress. In the past, civilian personnel ceilings—and not cost-effectiveness—have proven to be a prime motivating factor behind contracting out decisions. Giving the Secretary of Defense a 3-percent leeway can help to ease this pressure. I hope that the House conferees on the fiscal year 1978 defense authorization bill will stand firm on both contracting out initiatives.

There is still much to be done on this issue, however. Today, I am reintroducing a bill on contracting out, H.R. 6188, with 14 cosponsors. This proposed legislation is very simple and straightforward.

ward. It would require the Defense Department to conduct systematic cost-effectiveness audits prior to entering into any contract over \$100,000.

This review must include a simple cost-comparison between contractor and in-house personnel, as well as a review of the impact that any proposed contracting out action would have on individual or unit retraining of military personnel or on mobilization readiness. H.R. 6188 has an exemption clause which would waive cost-effectiveness audits on those activities where a sufficient record already exists with regard to cost comparison and defense readiness.

Finally, H.R. 6188 would establish a requirement for post-contract award audits to compare a contractor's promise with his performance. All too often, I am afraid that contractors bid low to win a contract, knowing that they may well become the sole source for such services. Subsequent contracts naturally rise, as the alternative of reverting to Civil Service personnel appears disruptive and unattractive. It seems to me that the Government should initiate post-contract audits to make certain that its interests are truly served by contracting out decisions.

In my view, this legislation is needed because of deficiencies in current practice. The key policy documents on contracting out are OMB Circular AX76, and the implementing Department of Defense directives. As difficult as it may be to believe, neither the OMB circular nor the implementing directives by the services call for systematic cost-effectiveness analyses.

In the case of the Navy, for example, cost effectiveness analyses for on-going programs earmarked for contracting out have been extremely shallow, according to the GAO. In the case of new starts, a cost-effectiveness study is discretionary, based on the views of the Assistant Secretary for Installations and Logistics. In my judgment, these procedures do not provide the data base on which sound contracting out decisions can be made. Similar situations exist within the Army and the Air Force.

By reintroducing H.R. 6188 today, I hope to call attention to this state of affairs. I wish to underscore the point that H.R. 6188 has no bias for or against contracting out. It merely directs the affected agency to prepare the statistical evidence from which valid contracting out decisions can be made. I hope more of my colleagues will join in cosponsoring this bill.

#### MEASURE INTRODUCED TO CORRECT UNFAIR CIVIL SERVICE DOWNGRADING

### HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. GONZALEZ. Mr. Speaker, I am introducing a measure today that I feel

is needed to correct an unfair and arbitrary procedure in the civil service program, the downgrading of Federal jobs.

The procedure of downgrading came about a number of years ago when it was discovered that Federal employees, all doing the same job but in different agencies, were being paid different salaries. In an attempt to develop a single coordinated pay system, many jobs were downgraded; that is, the grade level for that particular job was reduced.

While I realize that we want to insure equal pay for equal work, I am concerned that this procedure produces a serious effect on the morale of the employees involved and will certainly hamper their job performance.

The measure I am proposing would give a Federal agency 3 years to downgrade a job classification. After that, an incumbent employee would be protected against having this classification changed.

Under the current procedure, a civil service employee is subject to a lifetime of uncertainty, never knowing when he might be notified that his grade will be lowered. My bill would guarantee him a sense of security after he has performed successfully at a particular job for a period of 3 years.

I believe that this legislation is necessary and I hope that Congress can take expedient action to rectify the current downgrading practice, and I believe that my bill is fair and equitable to both the employee and the agencies involved.

#### NORTH BAKERSFIELD RECREATION AND PARK DISTRICT

### HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. KETCHUM. Mr. Speaker, it is my great honor to bring to the attention of my colleagues the dedicated public service of the North Bakersfield Recreation and Park District.

This year we celebrate with the district its 20th year of existence. During its service to the community it has opened its doors to the young and old alike and has effectively instituted innovative projects in the area of recreational programming. Today the benefits of the district extend to over 35,000 people in an area of 125 square miles.

In addition, the district has pioneered cooperative agreements with county departments, area school districts, churches, and community organizations. Through this effort the districts' programs have been geared to promote values of personal initiative as well as community pride.

The foundation of the district has grown into an impressive unit of three swimming pools, five wading pools, two community centers, one gymnasium, five programed parks, three undeveloped park sites, and an office complex. Over 400,000 participant sessions are held each

year with an annual participation growth rate of 4.22 percent.

At the forefront of this outstanding record has been a highly competent and professional staff which continues to serve with great distinction. Under the supervisory framework of the district a Board of Directors governs without compensation to a community which extends into the area of Oildale, Fruitvale, Norris, and Rosedale. The fulltime staff has distinguished itself in maintaining the excellence of the recreational and park system.

Mr. Speaker, I consider it a personal privilege to commend the North Bakersfield Recreation and Park District for its outstanding service. The work which it has accomplished throughout these years should stand as a model to similar communities across the country.

#### HOW POOR ADMINISTRATION IS KILLING THE SOLAR HEATING AND COOLING DEMONSTRATION PROGRAM

**HON. MAX BAUCUS**

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BAUCUS. Mr. Speaker, the solar energy section is perhaps the least controversial section of President Carter's energy plan. The President proposed not only tax credits to make the purchase of solar equipment cheaper but a commitment to use solar energy where possible in Federal buildings. The only complaint about the solar proposals is that they do not go far enough. Some solar supporters advocate loans and grants in addition to credits. Nevertheless, adoption of the President's solar program will be a big step toward putting solar equipment in millions of homes. Solar energy, like good weather, is something almost no one is against.

The President's progressive program presents a marked contrast to HUD and ERDA administration of Public Law 93-409, the Solar Heating and Cooling Demonstration Act of 1974. The act set up a program to bridge the gap between development of individual solar heating and cooling systems and their widespread sale and use. Public interest in solar energy was to be aroused by demonstration of solar equipment at sites around the Nation, and commercialization of solar equipment would rapidly follow. Unfortunately, the national program for solar heating and cooling has been a source of disappointment for many reasons, especially for those of us with strong, longstanding interests in solar energy.

Public Law 93-409 had several objectives. First, it set up a research program to work on the problems which kept the cost of solar systems high—problems such as heat storage over long cloudy periods. Second, the demonstration program was to provide maximum opportunities for small business participation. The intent here was to prevent the new solar industry from being taken over

and dominated by big corporations. Third and most important, the act set up a Federal effort to demonstrate currently available solar systems in order to generate consumer interest in purchasing them. Finally, the program was to provide information for the development of consumer protection standards and purchase incentives. On paper, the program appeared capable of creating a large market for solar equipment by the end of the decade.

Performance has lagged far behind the promise of the program. The Department of Housing and Urban Development was assigned to administer the residential demonstration section of the program. The Energy Research and Development Administration was given responsibility for commercial demonstration and for research and development. Both agencies relied on high-priced solar systems when equally efficient, cheaper units were available. With a fixed budget, this resulted in fewer demonstration sites. Both agencies tended to favor big business in making grants. HUD made grants available only to developers for units not yet sold.

And ERDA played down the heating and cooling program in its budget request in favor of work on the more remote solar electric applications.

At the end of this statement I have attached a copy of my letter to Dr. Henry H. Marvin, who last fall was the Director of ERDA's Solar Energy Division. In the letter I outlined these complaints. A copy of his response is attached as well. As I will show, the Director's response has proved to be less than satisfactory.

Reliance on expensive equipment is documented in a special study report released on February 18, 1977, by the Sheet Metal and Air Conditioning Contractors' National Association. In the first round of HUD residential grants, solar collectors were purchased at prices ranging from \$19 per square foot up to the astounding price of \$255 per square foot. In the ERDA commercial program, collector prices in the first round varied from \$39 to \$210 per square foot. Most solar collectors on the market today sell for less than \$25 per square foot. HUD favored the more expensive, less efficient liquid systems in 85 percent of its grants. ERDA used the liquid systems in 97 percent of their demonstrations. According to Dr. George Lof, a noted expert in the field:

... air systems have overwhelming advantages over the liquid type ... (including) lower capital cost, higher efficiency, greater reliability and durability, superior compatibility with conventional warm air heating systems, and freedom from the liquid hazards of freezing, corrosion, boiling, and leak damage.

If the goal is to encourage consumer purchases, it seems logical that the lower cost air systems should be demonstrated. Otherwise, data generated at the demonstration sites will indicate that solar power is not economical, when, in fact, it is. HUD and ERDA have not yet arrived at this logical conclusion.

I sent copies of my letter and Dr. Marvin's reply to several solar manufacturers. Their replies highlight the prob-

lem of reliance on expensive equipment. Dr. Harry Thomason, for example, had given several Congressmen a tour of his self-designed solar home. They went on to push Public Law 93-409 through the House, citing the influence of their visit to Dr. Thomason's home. Thomason wrote that "the policy of both HUD and ERDA allows Government funds only for the 'incremental' cost of solar, over and above the cost of conventional." Thus, contractors get bigger grants for more expensive units. Solar systems which perform as well but cost less are closer in price to conventional units; hence contractors get smaller grants if they purchase them. This policy was not in the original legislation; it was adopted by HUD and ERDA. Dr. Marvin claimed in his letter that ERDA gave priority to "technical performance and potential reliability" in equipment selection for solar demonstrations.

Calvin D. MacCracken, president of CALMAC Manufacturing Corp., replied with the suggestion that "it would be very easy for ERDA to simply state in the solicitation that costs must be under \$2 per square foot." Unfortunately, such easy solutions are often overlooked.

While it is true that a large portion of demonstration project awards went to small business concerns, this is no surprise since even the largest contractor usually qualifies as a small business by virtue of the nature of the contracting industry. Thus the fact that most contractors who received grants were small businesses is understandable. It should be noted that the top five producers from whom contractors purchased solar equipment with Federal grants in the first two HUD rounds were all major corporations: General Electric, PPG, Lenox-Honeywell, Northrup, and Revere. This is not because these corporations produce the cheapest solar equipment; quite the contrary, the HUD/ERDA grant system encourages the purchase of their high-priced systems.

A more realistic view of ERDA priorities is afforded by the fact that, in the research and development section of the program, 10 percent of fiscal year 1976 funds went to small businesses. The solar energy industry has the potential to be a source of growth for small businesses, but HUD and ERDA policy continues to feed funds to the existing giants.

In selecting participants for the residential demonstration program, HUD limited its choice to contractors who would put solar systems into homes which they planned to build but which they had not yet sold. Thus, even though a homeowner wants to put a solar system in his home and is willing to participate in the demonstration program, he will not even be considered for a demonstration grant. Once again, this policy was not set up in the original legislation but was adopted by HUD. Of course, only a portion of the homeowners who might apply for grants if they were allowed to could actually receive one. But one purpose of this program was to provide information on possible incentive systems. In fact, both agencies opposed immediate enactment of incentives during 1976 because such incentives were still being studied in the dem-

onstration program. What better way to study the effect of loans and grants on the total cost of a solar system than to experiment with different approaches through the program by allowing individual homeowners to participate?

Finally, ERDA has overemphasized solar electric at the expense of solar heating and cooling, which is far more advanced. Over 70 percent of ERDA's proposed 1978 solar budget is for solar electricity. Dr. Lof comments:

Research in this area is certainly needed, but the hundred-million-dollar pilot plants and demonstrations now planned represent a great misuse of public funds.

As an additional personal note, in response to Dr. Marvin's contention that Montana has received so few solar grants because only two groups have applied, I agree that this may indicate a lack of interest in solar energy in Montana. My experience, however, teaches me that it more likely indicates that applications are deterred by lengthy and complicated application procedures. Such a phenomenon has doubtless been noted by many of my colleagues from various parts of the country. However, I understand that HUD and ERDA are revising and simplifying their application procedures. I welcome this development.

Clearly, the solar heating and cooling demonstration program could stand substantial improvements. I regret that the program is already half way to completion, but perhaps revisions will help put it back on track for its last 30 months. I intend to communicate my views to Dr. James Schlesinger with the hope that the new Department of Energy will upgrade the administration of this program.

If changes are not made, and if solar equipment is to be used in millions of homes, I am afraid it will have to occur in spite rather than because of Public Law 93-409. The equipment being demonstrated is too costly, and because of this, there are not enough demonstration sites. Hopefully, when incentives are available and market forces operate, people will purchase solar equipment from the low cost small firms which have led the development of the solar industry. The potential of solar power will be realized in this low cost high efficiency world, not in the opposite world of HUD and ERDA.

The letters follow:

HOUSE OF REPRESENTATIVES,  
Washington, D.C., September 21, 1976.

DR. HENRY H. MARVIN,  
Director, Division of Solar Energy, Energy  
Research and Development Administration,  
Washington, D.C.

DEAR DR. MARVIN: I am writing to you to get your reaction to certain observations I have made concerning the administration of P.L. 93-409, the "Solar Heating and Cooling Demonstration Act of 1974." My observations are based on my research of ERDA and HUD administrative actions in connection with P.L. 93-409, my personal discussions with interested constituents in Montana, and conversations with my colleagues.

I am specifically interested in your implementation of four parts of the Act:

(1) Section 14, which indicates a congressional desire for maximum participation opportunities for small businesses;

(2) Section 15(a), which expresses a similar desire for a good geographical distribution of demonstration sites;

(3) Section 15(b), which implies that administrators should purchase the least expensive components and systems which perform at a given level; and

(4) Sections 5(c), 5(d), 6(d), and 6(e), which give the Secretary of HUD broad discretion in choosing the homes and homeowners to participate in the program and to receive the benefit of low-interest finance of expensive solar equipment granted under Section 13.

I realize that this fourth area of interest involves HUD rather than ERDA administrative policies. However, I am writing to you because funds for the HUD section of the program are funneled through ERDA.

According to a report of the Senate Select Committee on Small Business entitled "Energy Research and Development and Small Business," small businesses, as defined by SBA, received only 5.9% of the dollar amount of contracts awarded in connection with P.L. 93-409 over the past two fiscal years. Is this consistent with the congressional intent cited above?

Montana, which houses eight NOAA Principal Climatological Stations and is divided by two major climate systems, has not yet received a P.L. 93-409 demonstration project. HUD and ERDA officials informed me that Montanans have shown a lack of interest in the program, yet my personal conversations with my constituents do not confirm this. Over sixty individuals and groups applied for Montana state coal tax funds to conduct solar R & D. How is it that a state with such expressed interest and climatological diversity has been left out of the P.L. 93-409 program?

According to my written correspondence and personal conversations with solar inventors, developers, and manufacturers, HUD and ERDA have tended to rely on more expensive components and systems for the program than are needed to meet certain performance levels. What evidence can ERDA give to demonstrate compliance with Section 15(b) of P.L. 93-409?

Finally, in selecting participants for the demonstration section of the program, is it true that only contractors who have not pre-sold the units to be used for demonstration and testing are chosen? Is it possible for an individual homeowner, or a contractor with pre-sold units, to apply for and be included in participation in the residential demonstration program? And if not, why is such a policy necessary in carrying out the provisions of P.L. 93-409?

I realize that answering these questions may require detailed and time-consuming work. However, as a member of the House Committee on Appropriations, I feel that these questions must be settled in my own mind before any further consideration of ERDA appropriations.

If you need any clarification of my questions, please contact either Jerry Tinlanow or Steve Browning of my office. I appreciate your cooperation in replying to my questions, and I hope to learn from you in the near future.

Sincerely,

MAX BAUCUS.

U.S. ENERGY RESEARCH AND  
DEVELOPMENT ADMINISTRATION,  
Washington, D.C., October 29, 1976.

Hon. Max Baucus,  
House of Representatives, Washington, D.C.

DEAR MR. BAUCUS: Thank you for your letter of September 21, 1976, requesting information on the administration of Public Law 93-409, the Solar Heating and Cooling Demonstration Act of 1974.

In answer to your question about small business participation, I will discuss small business participation in each of four areas:

(1) demonstrations (residential and commercial), (2) research and development (3) development in support of demonstrations, and (4) agriculture and process heat. In 1975, the Energy Research and Development Administration (ERDA) issued a Program Opportunity Notice (PON) inviting proposals for solar heating and cooling demonstration projects. Thirty-four projects were selected for awards. The total amount for these awards was about \$7.5 million.

In twenty-eight of the thirty-four awards, the system contractor was a small business company (82% participation). Of the remaining six awards, five went to large corporations and one went to a state agency.

Among the major subcontractors to the solar system contractor, we find 63 small business concerns and 11 large corporations (85% small business participation). Our original objective was to obtain a 50% small business participation. The results are gratifying to us since they show that small business can compete effectively in solar heating and cooling.

Demonstration grants awarded by the Department of Housing and Urban Development (HUD) for residential projects were made to builder-developers, to universities, to Indian tribes, to cities, and to public housing authorities. All of the 55 awards were either small business or public bodies. The total amount of these grants was about \$1.1 million.

In the research and development program for FY 1976, small business received 12 awards for 10% of the R&D funds, whereas large business received 15 awards for 28% of the R&D funds. The remaining awards and funding went to universities and government laboratories.

In the program for development in support of the demonstration program being administered for ERDA by the National Aeronautics and Space Administration (NASA), Marshall Space Flight Center (MSFC), five RFP's were issued in FY 1976. Small business received 25% of the funds and 75% of the awards resulting from these RFP's.

In the agriculture and process heat program, most of the funds and awards have gone to universities and the U.S. Department of Agriculture, but 4 awards were made to small business for 17% of the funds.

In answer to your question about the participation of Montana in the solar heating and cooling program, both ERDA and the Department of Housing and Urban Development (HUD) are primarily using open competitive solicitations to invite participation in the solar program and to identify potential solar heating and cooling demonstration projects. In the first HUD solicitation inviting proposals about 250 applications were received, but only one was submitted from Montana. That proposal was from the Blackfoot Tribe Housing Authority and they were awarded a grant for five single family dwellings. In the second HUD solicitation for residential demonstration projects, over 300 applications were received and again only one was received from Montana. Awards on this solicitation were recently announced by Secretary Carla A. Hills and the Montana application did receive a grant award. Enclosed for your information is a copy of the HUD press release listing all grantees.

In ERDA first solicitation for commercial demonstration projects, 308 proposals were received, but none were received from Montana.

In summary, we have received over 750 expressions of interest in solar heating and cooling demonstration projects and only two were from Montana.

In May 1975, a National Solar Energy Workshop was held in Huntsville, Alabama. The purpose of this workshop was to discuss the solar heating and cooling program with the states and identify how the states could be-

come more involved in the program. All fifty states were invited and 30 states were represented, but no one attended from Montana. A copy of the proceedings was sent to the Montana State Energy Office.

In answer to your question about ERDA and HUD relying on more expensive solar systems in demonstrations, two methods are used in the residential and commercial demonstrations to select solar systems for demonstration. One method involved the selection of acceptable solar systems and the integration of these systems into selected sites. Through a joint solicitation last year, ERDA and HUD selected a number of solar systems for use in selected residential demonstration projects. In selecting these systems, consideration was given to technical performance and potential reliability, and not primarily to cost; we believe that current system costs are still uncertain and that significant price changes will occur as manufacturing capabilities, mass production, system performance, and competition are better understood.

The other method of selecting solar systems was where the solar system was selected by the applicant and submitted as part of an integrated project proposal. This is the way the construction industry works, and we believe it is essential to the rapid acceptance of solar energy by the industry and its customers for the normal supplier-developer relationships to be established as quickly as possible. In evaluation of project applications, both ERDA and HUD look primarily at the technical capability but also consider costs of the systems in the proposed application, and we have required cost-sharing by private commercial users.

In the second cycle of residential demonstrations, HUD has declined to accept several projects where system costs are far too high for the market, and has accepted several where low cost systems that have been proposed, even though technical consultants have indicated that maintenance and serviceability problems may result in higher operating costs. Low initial first cost does not necessarily mean low life-time costs, and Section 15(b) calls for consideration of both production and maintenance costs.

Primarily, though, we believe that in this early stage of the demonstration program we must establish acceptable levels of technical performance and maintenance capability, and that all systems which appear to hold promise of being economical in given applications should be demonstrated and tested. As we build a basis of experience in performance and actual costs, we will be concentrating on the proven economical systems.

In answer to your question about the use of pre-sold residential units in the demonstration program, at this time HUD is not awarding project grants to individuals for their private homes or to builders who have pre-sold the units to individuals. There are two reasons for this decision. First, one of the primary objectives of the demonstration program is the development of a residential market, and the determination of the potential barriers to the development of such a market. By requiring the grantees to market the demonstration units after construction, we can obtain data on market acceptance and builder willingness to use solar as a marketing device which could not come from projects for private owners. Second, HUD has received over 10,000 inquiries from individuals about obtaining Federal assistance in installing a solar system to reduce heating costs. It would be most difficult to select on an equitable basis a few hundred "lucky" individuals to receive such grants. A lottery system has been considered but a number of problems exist with the lottery approach.

If you need additional information or

clarification on the above, please let me know.

Sincerely,

H. H. MARVIN,  
Director, Division of Solar Energy.

#### RECOMP

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BOB WILSON, Mr. Speaker, the editorial in last week's Air Force Times was directly on target with respect to the long smoldering recompensation issue. Opponents seem to feel that recompensation, like old soldiers, will simply fade away. Believe me, they are wrong. With each passing year of congressional inaction, the inequity against the older retirees is only magnified. I commend to my colleagues' careful attention this Times commentary:

#### RECOMP

For some years, a determined body of retirees has argued unsuccessfully for "recompensation" of retired pay.

Recomp died so long ago that the term probably is meaningless to much of today's generation of service people.

Here, roughly, is the idea: Years ago, the law required that whenever active duty pay was raised, a similar adjustment would be made in retired pay. Then—almost 20 years ago—recompensation was terminated. There was a modest percentage raise in retired pay in 1963 but since then, retired raises have been based on changes in cost of living.

Since recomp ended in 1958, there has been an increase of more than 100 percent in retired pay under the cost-of-living formula. The problem is that the increase in active duty pay has been more than 150 percent during the same period.

The result is that thousands of service people who retired when active duty pay was low have not felt the benefit of the substantial raises given the active force. They have received increases in pay with the rise in the Consumer Price Index.

These percentage increases serve to widen the gap between the pay of the early retirees and that of people retired more recently.

Successive administrations have explored the question of recomp. Congress has considered reviving it at least on a one-time basis to bring the pay of early retirees more in line with that of recent retirees. To date, however, there has been no action to remedy the situation.

As is often the case in legislation affecting the military, critics of recomp focus on the extreme cases. Retired general officers already receive substantial retired pay checks. Recomp would increase the take for some of these people when they aren't really hurting, the argument goes.

We are not greatly concerned about the benefits for generals. What does concern us is the plight of lower ranking retired officers and enlisted members.

When recomp died, many of these were drawing only modest retirement benefits. Under the present system, they never can catch up. In fact, they will continue to lose ground to inflation.

Realistically, we do not see much chance for early passage of recomp legislation. The present administration is trying to reduce defense costs and retired pay in general is being looked at critically. Nor is Congress

likely to press expensive legislation not supported by the White House and the Pentagon.

In another sense, however, the time seems ripe for one more try at recomp. Another major pay study is underway and the Pentagon's retiree pay modernization plan is pending. While future pay and retirement benefits are being considered, it would seem only logical to find some remedy for past omissions.

Those who support recomp suggest that if the government does not play fair with past retirees, it will have trouble getting future members. In the past, that argument did not impress us much. We doubted that new potential recruits would be much concerned about the problems of people who retired while the present generation still was in grade school.

Recently, we have seen more merit in the argument. The question of the government's living up to its written and implied promises has become a major one in the discussion of erosion of benefits and possible unionization. Those fighting for recomp can point to their experience as a case in point.

We don't know whether there is any chance for recompensation in the near future. We do think it deserves more serious attention than it has received recently and that the time is ripe for consideration of at least a one-time readjustment.

The alternatives are some other kind of support for many of the aging retirees. It would be better to provide their earned entitlements than to subject them to the humiliation of some other form of government subsistence.

DR. LYMAN SPALDING, FOUNDER OF  
"PHARMACOPOEIA"

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BROWN of Ohio. Mr. Speaker, I wish to share with my colleagues the following statement submitted to me by a constituent, Rylance Allen Lord, M.Sc., R.Ph., of Springfield, Ohio, who has spent much time and effort in an attempt to gain approval for the issuance of a commemorative stamp to honor Dr. Lyman Spalding, the founder of this country's official drug standard, the "United States Pharmacopoeia":

Fellow Americans: We are attempting to secure interest in obtaining what we feel is long overdue formal recognition for the founder of the United States Pharmacopoeia—this country's official drug standard.

For 157 years, all Americans have been the beneficiaries of the keen foresight of Doctor Lyman Spalding when he encouraged the adoption of an official drug compendium of medicines and preparations as early as 1798 while he was assisting in the founding of Dartmouth Medical School in Hanover, New Hampshire.

During his short life (1775-1821), Doctor Spalding contributed much to the health and welfare of his fellow citizens which directly benefit us all today.

History cannot succeed in recording, for posterity, each and every American who has a part in each and every significant event. Spalding and the founding of the United States Pharmacopoeia (1817-1820), it is felt, just got "lost in the shuffle" of events which surrounded a very young nation grasping for its very survival after two wars within 30 years to achieve and maintain its freedom and independence.

However, we feel that appropriate and timely commemoration of the work of Doctor Lyman Spalding is at hand and should be made via the vehicle of a United States postage stamp, and we urge the members of both branches of the Congress to exhibit a favorable opinion in this regard to the officials of the United States Postal Service. The subject has been before them since the Fall of 1975.

#### FEDERAL PAPERWORK COSTS SCHOOLS BILLIONS

**HON. WILLIAM L. ARMSTRONG**

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. ARMSTRONG. Mr. Speaker, Dr. Calvin Frazier, Colorado's Commissioner of Education, came to Washington last week to express his concern about a large and growing problem that threatens to overwhelm the financial structure of school systems throughout the United States.

The problem is the excessively high cost, in time and money, of doing all the paperwork required by the Federal Government.

In his testimony before the House Subcommittee on Elementary, Secondary and Vocational Education, Dr. Frazier estimated that school districts in Colorado spent approximately \$3 million in 1975-76 to collect the more than 2 million items of educational information demanded by various Federal agencies.

Dr. Frazier said:

If our state is an indication, this would mean 250 to 300 million dollars were spent compiling K-12 educational data by all states last year.

The figure is staggering, and gets worse beyond the elementary and secondary school level.

One college estimated recently the costs of complying with Federal regulations at between \$4.6 million and \$8.3 million. The American Council on Education reported in 1975 that the overall impact of Federal regulations was an increase in the cost of running the Nation's colleges by the equivalent of from 5 to 18 percent of total tuition revenues. And Change magazine estimates that Federal regulations cost as much as the total of all voluntary giving to the Nation's private schools—about \$2 billion a year.

Since Federal aid to education accounts for only about 7 percent of the budgets for elementary and secondary school systems—less than that in Colorado—it is clear that local school officials are spending a grossly disproportionate amount of their time doing Federal paperwork, much of which is needless and duplicative.

Colorado currently is conducting a detailed study of the cost of providing required data to the Federal Government. The survey will not be concluded until August or September of 1978, but the preliminary findings give a clear indication of the scope of the problem.

Frazier said that in order to report only 1,000 summarized data items to the Federal Government, several million individual student data items had to be collected by Colorado's vocational education system.

A data item is a single response to a question such as: "How many students do you have in the sixth grade?" Reporting costs vary widely, from 30 cents per item to as much as \$20 per item. The average cost to report a data item is \$1.31.

Dr. Frazier proposed a number of reforms to ease the paperwork burden imposed on State and local school officials:

1. Centralize the review of data collection forms and procedures in one agency.
2. Expand the scope and responsibility for preliminary review of forms to weed out those which are duplicative or unnecessary.
3. Coordinate Federal data collection activities that impact on local school districts through the state education agency.
4. Establish a data item directory as a means for identifying duplication of effort.
5. Require all new requests for data and changes to existing surveys to be defined and approved for collection by the December prior to the school year in which it is to be collected, to permit more orderly planning by local school districts.
6. To reimburse the suppliers of data for the costs they incur in complying with Federal requests for information.

Dr. Frazier's proposals are sound and necessary reforms, and I will do what I can to see that they are enacted. Our children deserve the best education our money can buy, but the money we spend on education should go toward educating our children, not filling out forms.

#### REPRESENTATIVE FRANK C. OSMERS

**HON. EDWIN B. FORSYTHE**

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. FORSYTHE. Mr. Speaker, I would like to express my regret regarding the recent death of Frank C. Osmers, Republican, New Jersey. During his total of 17 years in the U.S. Congress, spanning four decades, Representative Osmers displayed an intense sense of responsibility and distinction. His career in public office involved all levels of government and politics.

First elected to Congress in 1938, Congressman Osmers was reelected in 1940. He did not run for reelection in 1942, however, as he enlisted in the Army as a private 2 days after the attack on Pearl Harbor. Despite his isolationist views, he had patriotically vowed to enlist if this country were attacked, and subsequently voted in Congress for war immediately after the Japanese strike.

This courageous man rose to the rank of major in an infantry division and served in the Philippine and Okinawa invasions and the Korean occupation. After his discharge in 1946, he remained an officer in the Army Reserves and

then resumed his private business pursuits.

He continued his active interest in politics and in a special election in 1951, Osmers returned to the Congress filling a vacancy as the Representative from his Bergen County district in New Jersey. This fine man was reelected to the six succeeding Congresses, serving until January 3, 1965. His exemplary service in Congress will be remembered with honor by those who knew him.

Even after his retirement from public life, Frank Osmers displayed continued interest in politics and public affairs at the local, State, and Federal levels. I speak for his colleagues in many places and at many different levels in expressing my deep sense of sadness at his death. My heartfelt sympathy goes out to his wife, Marguerite, and their two children, Frank C., III, and Nancy Wysocki. He will be greatly missed by all.

#### WEATHER OR WASHINGTON

**HON. JOHN H. ROUSSELOT**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. ROUSSELOT. Mr. Speaker, as Congress considers tomorrow H.R. 6804, to create a Department of Energy, I would urge that serious consideration be given to the complete decontrol of the price of these commodities and letting their value be determined by the free market. This, more than any other single action, would contribute to an improved energy outlook for our country.

It has been credibly established by the American Gas Association and the Energy Research and Development Agency that there are vast supplies of natural gas deposits available to last between 1,000 and 2,500 years—but not at the present Government-regulated price levels. Only if the price of natural gas is decontrolled and permitted to be set by the market will there be sufficient growth and development capital to access these resources.

In a recent Newsweek editorial, dated February 28, 1977, Nobel prize-winning economist, Milton Friedman, makes a persuasive case for decontrol. Suggesting that the recent winter gas shortage was due more to Government regulation than bad weather, Friedman recommends that the best way to end the fuel shortage is to abolish the Federal Energy Administration and eliminate the power of the Federal Power Commission to fix the price of natural gas—or any other product. As Congress deliberates over different solutions to our country's energy problems, I would urge my colleagues to lend an ear to Dr. Friedman's sage counsel:

GAS CRISIS: WEATHER OR WASHINGTON?

(By Milton Friedman)

The statements and proposals about the gas crisis emanating from Washington these days remind me of the story of the young man, convicted of murdering his mother and

father, who threw himself on the mercy of the court as an orphan!

True, the winter has been extremely severe in large parts of the country. Under the best of circumstances, the severe winter would have imposed a hardship, raised costs, and interfered with production. But there have been hard winters before, and they have never been accompanied by some of the problems specific to this one: widespread shortages of natural gas, leading to compulsory rationing and the closing of schools, factories and other establishments.

#### HOW TO PRODUCE A SHORTAGE

The source of the difference should by now be crystal clear: Federal control of the prices of natural gas and oil. For natural gas, price control, which goes back to 1954, has produced a crazy-quilt price structure that encourages wasteful consumption and discourages production. Some natural gas (from so-called old wells) must be sold at 52 cents per 1,000 cubic feet; some (from so-called new wells) at \$1.42; and some, which is used intrastate, is not subject to control by the Federal Power Commission and sells at a free market price, currently around \$2. In addition, utilities pressed to supplement domestic supplies have been purchasing liquefied natural gas from abroad at prices ranging up to \$3.50 per 1,000 cubic feet. Make sense of all that, if you can!

This crazy-quilt structure has been erected in the name of protecting the consumer from the greed of the producer. But the predictable effect has been very different. Economists may not know much; but one thing we do know: how to produce a shortage. Force the price of anything—from tomatoes to town houses—below the market price, and you can be sure eager buyers will scramble for inadequate supplies. So it has been with gas. Consumers lucky enough to get gas have benefited; those denied gas have been forced to use more expensive fuels. Industrial users have been induced to move to states where they can buy gas free from controls—the availability more than compensating for the higher market price. Those remaining dependent on interstate gas have experienced expensive interruptions.

My own senator, Adlai Stevenson of Illinois, illustrates dramatically the perversity of the political process. He has consistently supported low price ceilings on natural gas, which inevitably means a shortage of gas and, hence, gas rationing. Politics assures that residential users will get first priority. As a result, the bills that Senator Stevenson has sponsored could accurately be described as bills to drive industry out of Illinois. Has he truly been serving the interests of his constituents by making gas cheap and simultaneously depriving them of jobs? By making gas cheap to some, and forcing others to rely on more expensive fuels? By assuring interruptions of schools and other governmental services?

But, you may say, why blame Senator Stevenson and his colleagues? Are not the real culprits the greedy gas producers who prefer to sell gas intrastate for \$2 per 1,000 cubic feet, instead of shipping it interstate at 52 cents or \$1.42? Before answering a resounding "yes" to that question, let me suggest that each of my gentle readers ask himself whether he would voluntarily take a large salary cut in the name of protecting the consumers of the product that he helps to produce. If not, why do you expect the workers and stockholders of the corporations producing gas to do so? Do you really prefer government allocation of jobs and of output, to voluntary cooperation in a free market?

#### HOW TO END A SHORTAGE

Nothing Washington can do will change the weather. But assuring an end to the fuel shortage and the misallocation of fuel is

easy: simply abolish the Federal Energy Administration and eliminate the authority of the Federal Power Commission to fix the price of natural gas—or any other product. That is the only effective way to assure that the present output of fuel is used efficiently and that future supplies are found and developed. It would also be the most effective blow that we could strike to speed the breakdown of the OPEC cartel.

The hard winter will have been a blessing in disguise if it drives this lesson home.

### PEACE THROUGH READINESS

#### HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. STEED. Mr. Speaker, on Armed Forces Day, May 21, Maj. Gen. Donald M. Keith, the commander of Fort Sill, Okla., gave an incisive address on the state of our defense system and the role of Fort Sill in particular.

His remarks, given at a luncheon at the fort, provide a telling illustration of the Armed Forces Day theme, "Peace Through Readiness," so essential to our security.

The text follows:

#### PEACE THROUGH READINESS

Thank you, Colonel Moran. Ladies and Gentlemen: I am pleased to be with you—particularly on an occasion like today. Each year, Armed Forces Day offers every American the opportunity to take a close-up look at the nation's military forces. This year, the Armed Forces Day theme is "Peace Through Readiness." Therefore, the thrust of our activities nationwide is to demonstrate how we are helping prevent the next war by being ready to win it. My remarks will focus on what the Army is doing, and more specifically, what Fort Sill is doing to exemplify and support "Peace Through Readiness."

There are a great many things that make up this condition we call readiness. It has to do with equipment, organization, training . . . really with just about everything the Army does. But the key to readiness is people. The primary consideration in achieving combat readiness is having quality people. To this end, the Army has placed a heavy emphasis on recruiting high school graduates who score well on military examinations. Young men and women who have graduated from high school have demonstrated that they perform more effectively, are twice as likely to complete their enlistments, and cause fewer disciplinary problems than non-graduates. Today, over 80% of our soldiers have high school or equivalent diplomas.

Although we consider recruiting to be the foundation of our quality program, it's not enough by itself. Equally important is "skill match," a program with the objective of putting the right soldier in the right job at the right time. Success in this area results in job satisfaction, and contributes to unit morale and that all-important combat readiness.

Both morale and efficiency were enhanced at Fort Sill during the past year when we instituted our one station training and one station unit training programs. In both programs, a soldier receives his basic and his advanced training right here. In OSUT, where the basic cannoner is trained, the soldier

stays in one unit, and we have been able to reduce the period of training from 16 weeks to 12 weeks. This is a money saver since we don't have to move the field artillery trainee from his basic training post to Fort Sill for advanced individual training. We have found no degradation in the quality of our product because we can provide him an earlier exposure to the field artillery while he is learning the basics of being a soldier. By not uprooting the individual in the midst of his training, we have found that his morale and motivation is better than under the old split system.

Although we don't have any female cannoners, women are playing an increasingly important role in today's Army. In the past five years, the number of women in the active Army has quadrupled to about 47,000. The Army has come to realize that women make good soldiers in more areas than we had previously expected—officers as well as enlisted. And at the present time, we're getting more high school graduates among women than men. Of a total of 406 enlisted job categories in the Army, 371 are now open to women. Among officers, we now have women assigned to all branches except the combat arms. Here at Fort Sill, there were 518 women military personnel in 1975; today there are 853. Last year, as all of you know, women were enrolled as cadets in the United States Military Academy for the first time and by all accounts, they're doing quite well. Last year, also, the first 150 women graduates were commissioned through the Reserve Officer Training Program, so we now have alternate sources for female officers other than Officer Candidate School.

I would be less than candid if I discussed only the good points of our personnel situation. You've heard the volunteer Army concept questioned on more than one occasion recently. Last fall you may recall that I went on record as favoring a standby draft. The Selective Service System has been dismantled to such an extent that it can no longer meet our manpower needs in the early months of a future war. While I believe that the all-volunteer Army has worked for us up to this point, there is no doubt that the recent state of the economy helped us. But the fact is that now we are beginning to experience some real problems in getting both the quantity and quality of soldiers that we need, particularly for the Reserve components. When the draft was terminated, greater emphasis was placed on keeping the active Army up to strength—there simply wasn't enough money available to effectively promote the National Guard and Reserve at the same time as the active force. Moreover, Reserve component shortages were not an immediate problem: The six-year obligation of draft-induced Guard and Reserve enlistees from the Vietnam era had not expired yet. However, in the past few years, those obligations have been ending, and new recruitment has not made up the difference. The incentives just aren't there. I am encouraged, though, by public pronouncements by some concerned members of Congress that suggests we should institute some form of broad-based universal service, one part of which would be a military option.

Frankly, we don't talk as much as we should about our Reserve components. Most of the emphasis seems to be on the active force. But our total Army is made up of the active element, plus the National Guard, the selected Reserves, the individual ready Reserves, and the standby Reserves. Together, the Reserve components make up over half of the total Army, and serve to round out the units on the line. Selected Guard and Reserve units have even become integral parts of the actual structure of four active divisions. These "roundout" units, as we call them, are vital to the Army total force structure.

I would be remiss if I didn't note at this point the large number of people at Fort Sill and our sub-installation, Fort Chaffee, deserving credit for supporting the Guard and Reserves. You don't hear much about it, but Chaffee alone trains over 20,000 Guardsmen and Reservists each year. With the Selective Service machinery in a "deep standby" status, effective training of our Reserve component assumes greater significance. In the event of a national emergency, the Guard and Reserve will be called upon to fill the gap between our peacetime capability and our wartime requirement.

The manpower situation, then, is of concern throughout the Army. I should emphasize that right now we are not in any sort of a weakened state. We have met the challenge of a voluntary service to date. But being ready means looking ahead to future needs, too. That's why some of us are sounding the alarm—we can look ahead and see where we might have a real problem in the not-too-distant future, if we don't act now.

At the beginning of my remarks, I noted that one aspect of readiness is equipment. It's the old situation of having the right tool for the job. The Army has a vital research and development program to keep our "tools" current. For example, full-scale development of the Army's new tank, the XM-1, began in November of last year. It is scheduled to be part of the active Army inventory by 1980. Also on the horizon are the all-weather advanced attack helicopter, the mechanized infantry combat vehicle, the patriot surface-to-air missile system, and a new utility helicopter which is entering production.

Within the field artillery, we have a number of exciting modernization items. The cannon-launched guided projectile (now named Copperhead) is in the final phase of development. During tests last year, these projectiles fired from 155mm howitzers at ranges of about 13 miles scored direct hits on moving tanks that were being illuminated by an observer with a low power laser device.

Also, rocket-assisted projectiles are being developed for our existing howitzers. The rocket motors in the base of these projectiles burn for just a few seconds, but increase considerably the range of the shell.

There are many other artillery or artillery-related developments that I don't have time to cover in any detail today. But they include new radars and other target acquisition devices, a new multiple rocket system to attack the enemy's artillery and air defenses, and a new automated command and control system which will greatly improve our ability and responsiveness to do the artillery job. We simply must harness the best that technology has to offer if we are to fight outnumbered and win.

The Army's combat capability is its 24 combat divisions—16 active and eight National Guard. They, of course, are augmented by the necessary combat support and service type units to balance the force. What you see locally are the 15 battalions and three battery-size units of III Corps Artillery constantly maintaining a high degree of readiness. All of our military units are structured for a variety of missions in different world environments. But the goal is to maintain a total Army force available for a commitment anywhere U.S. interests require—peace through readiness.

Efforts during the past year—including 26 major training exercises—have resulted in improved combat readiness. Looking to the future, Army goals are designed to sustain a highly professional, combat-ready force by: recruiting and retaining high quality soldiers; improving the career management and professional development of both officer and enlisted personnel; developing and procuring

improved materiel; and molding the active and Reserve components into a fully-manned, fully-equipped, and fully-trained total Army.

George Washington, the Army's first Commander-in-Chief and the nation's first President, said: "To be prepared for war is the most effectual means of preserving the peace." That axiom is as true today as it was in the eighteenth century. But readiness has never been cheap—or easy. Modern weapons systems are costly—costly to develop, and costly to maintain—and the cost of manpower has increased even more dramatically. People costs in the volunteer Army now account for over half of our annual budget. Even so, and contrary to the belief of many Americans, the Department of Defense is not the top spending agency in the Federal Government. Defense expenditures for fiscal 1978, for example, will be about half of what will be spent for social and economic programs. Viewed over a longer period, defense spending has increased about 112 percent since fiscal 1964; social programs have jumped some 517 percent during the same period.

The defense load is indeed heavy, but history has taught us the price of unpreparedness: a high cost in lives, resources, and equipment—and that is unacceptable. We must, in Washington's words, be prepared to maintain the peace.

That spirit of "Peace Through Readiness" must remain as important to the volunteer men and women of today's total Army—who serve the needs of our country and protect the American way of life—as it was to General Washington and the Continental Army, and as it is to all of you here today.

Thank you for your continuing interest in and support of the U.S. Army—both worldwide and here at Fort Sill. It has been my pleasure to have this opportunity to report to you today.

#### THE FEDERAL RESERVE

#### HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. VENTO. Mr. Speaker, the series of letters between Chairman HENRY REUSS and the Chairman of the Federal Reserve Board of Governors points up the need for considerable concern by Members of Congress.

The reasonable and timely requests of Mr. REUSS have been treated with disdain by the Federal Reserve Board. The begrudging submission of abbreviated minutes of the 12 Federal Reserve Districts with some 900-plus deletions serves notice on Congress of a serious problem. The Federal Reserve System has a unique regulatory responsibility in our economy, certainly one that requires public trust and avoidance of potential conflicts of interest.

The fragmented minutes that have been submitted and analyzed by the staff of the House Committee on Banking, Finance and Urban Affairs indicate that there are indeed conflicts of interest which are permitted to thrive within the Federal Reserve.

That conclusion is arrived at from the information made available to the committee. There has been, apparently, no acceptance of an invitation to the Federal Reserve Board Chairman to appear before the full committee and address these concerns.

Frankly, I am not satisfied with the response of the Federal Reserve Board Chairman and officers, nor should the committee or Congress be satisfied. As a member of the committee, I view our role seriously and responsibly. The oversight review of various programs and agencies and boards is a major endeavor, and Congress has equipped itself with competent staff and important support from agencies such as the General Accounting Office to help achieve those goals.

The overwhelming conclusion that is gleaned from this recent evaluation is that the Federal Reserve System has not been sufficiently protective of the public trust, that flagrant conflicts of interest are tolerated and that the covert conduct of the 12 Board of Directors is deemed to be above review by this or any other Congress.

For my part, I most emphatically reject this attitude and fully support Chairman REUSS in his efforts to review the minutes of these Federal Reserve Bank Boards. I call upon the Chairman of the Federal Reserve Board of Governors to provide an immediate and full explanation of the conduct of these boards and the complete sets of minutes.

It is obvious that the Federal Reserve Board of Governors and the 12 Federal Reserve Banks have a legal and moral responsibility to remedy the conduct of their members. The improper covert utilization of the district Federal Reserve Bank meetings to engineer lobbying efforts at this very Congress, at various State legislatures; the attempts to encourage member banks to lend funds to real estate trusts and utilities; the indiscriminate distribution of special gifts, favors, and the self-serving loan demonstrate a contempt for ethics which challenges the American people's sense of fairness.

Certainly, I do not question the rights of fiduciary institutions to form trade associations and the attempt to provide input on legislation or regulations. Nor do I question the necessary capital needs of utilities or an employer's small mementoes to employees or loan programs.

However, the Federal Reserve System is not a private business entity, but rather one of the primary mechanisms in our national monetary system charged with tremendous responsibilities and public trust.

I am alarmed that the various Federal Reserve Bank Boards, charged with these very significant responsibilities, should exercise such poor judgment, that some individuals with the ability and experience to serve objectively have sought to abuse the public trust and have covertly engaged in improper self-serving activities.

It is, indeed, unfortunate that the Federal Reserve System as a regulator is losing sight of its unique role and status. The answer clearly focuses upon the need for congressional action. It is ironic that the Federal Reserve Bank Board directors' actions to defeat legislative proposals which would mandate a GAO audit, reinforce the need for it.

In the struggle to retain their auton-

omy and special treatment, they amplify the importance of more consistent treatment and compliance with codes of conduct in effect for almost all branches of Government.

What will prevent future problems of this nature when the current turmoil subsides? More congressional oversight? Improved legislation? New board members? The eventual answer must include public exposure. The actions, minutes, and meetings must be public insofar as possible. The assumption that fair policy is made only by experts from the financial community has been dealt a serious blow. We must seek involvement by the nonexpert consumer, the nonpolitical citizen, and public membership from outside the financial community.

The general policy represented in Federal law and regulations that has evolved in most instances to delineate the proper conduct of individuals, either as employees or appointed individuals in public policy roles, should be applied to the Federal Reserve System. These criteria must provide a basic assurance to the public that regulated industries' decisions will be objective, that the public policy will reflect the public interest, and that it will be decided in an open manner with the rights of the public to representation and voice in decisions fully protected.

Finally, I would like to give credit to our distinguished chairman, the esteemed gentleman from Wisconsin, for his leadership in this instance has initiated a needed focus on some tough questions. His commendable crusade to make the Fed responsible to the legitimate inquiries of Congress has been ably assisted by an excellent staff. I believe this effort brings distinction and responsibility to our committee and the chairman and this initiative deserves the complete support of all Members.

#### LET'S NOT FORGET THE LADIES

**HON. SHIRLEY N. PETTIS**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mrs. PETTIS. Mr. Speaker, currently the Senate Veterans' Affairs Committee is conducting hearings on legislation to provide recognition to the Women's Air Force Service Pilots for their service to their country during World War II by deeming such service to have been active duty in the Armed Forces of the United States in order that they might receive veterans' benefits.

As an article from the Washington Post—which I am inserting—indicates, these women courageously volunteered to ferry fighter and bomber planes, tow targets for combat pilots to fire at and train other pilots, in order to free male pilots for combat duty overseas. Additionally, they test flew aircraft—including the P-39 and B-26—which male pilots refused to fly because they were considered to be unsafe. Thirty-eight of these women died while in service with the WASP's.

Though promised "militarization,"

they were abruptly disbanded after the war so that "they would not take jobs away from men." As one of my constituents, Mrs. Lila Moore Mann—a former WASP—recently wrote:

I enlisted in the WASP program in 1944 with the understanding that I was serving my country in a military capacity, the same as my brother who was then in the naval training program at Pensacola, Fla. I was released from a teaching contract in order to enable me to "serve in the military," since it was the intention of the Army Air Force to militarize the WASP's.

Mr. Speaker, I am cosponsoring a similar bill to provide these women with veterans' benefits, and I urge my colleagues in the House Veterans' Affairs Committee to hold hearings on this matter as soon as possible.

It is a very sad commentary on our attitude toward those who honorably serve this country, that we would on one hand provide veterans' benefits to those who deserted during the Vietnam conflict and have subsequently had their discharges upgraded, while, on the other hand, we refuse to give the same benefits to those 800 remaining members of the Women's Air Forces Service Pilots, who assisted their country during World War II. We must correct this inequity.

Article follows:

#### WORLD WAR II WOMEN FLIERS SEEK EQUALITY

(By Kathy Sawyer)

During World War II more than 1,000 of them flew military planes a total of more than million miles. They ferried fighter and bomber planes to points of embarkation, towed targets for combat pilots to fire at and helped train other pilots. Thirty-eight of them were killed while on active duty.

They were all women and they belonged to the Women's Airforce Service Pilots (WASP). Though they were subject to military discipline and lived in military barracks, they got smaller travel allowances than men doing the same job. They had been promised military commissions, but were abruptly disbanded after the war so that they would not take jobs away from men.

Even now they are not eligible for military benefits.

"We just didn't question things that much" during the war, Margaret Boylan, a former WASP who is now a branch chief for the Federal Aviation Administration, said recently. "We were so young, and we expected to be made part of the military all along."

"We were so pleased, so delighted, to have this chance to fly these aircraft," she said.

Now times have changed and the collective consciousness of the WASP has been raised. Boylan and many among the estimated 850 WASPs still living are lobbying Congress for veterans' benefits.

Their leading champion on Capitol Hill is Sen. Barry Goldwater (R-Ariz.), who flew with WASP ferry pilots during the war. He says their performance was equal to or better than that of their male counterparts.

Goldwater is sponsoring legislation in the Senate that would entitle the women to veterans' benefits from the date of enactment. Rep. Lindy Boggs (D-La.) and Rep. James Quillen (R-Tenn.) have introduced similar bills in the House.

The Veterans Administration and some veterans' groups have opposed past efforts to extend benefits to WASP alumnae, on the grounds that they would then have to grant similar privileges to other civilian groups who served under military jurisdiction during war time, such as the Merchant Marine.

The WASPs feel that their case is unique, and this year, better prepared than ever, they feel optimistic about their ability to convince Congress.

In an office on I Street NW not far from the White House, WASPs, aided informally by the son of a general who organized them in 1942, are collecting paper ammunition for their mission. This includes documentation for their claims that they operated under military discipline, rules and regulations, lived in military barracks and ate Army food, went through officers training, got low military-type pay and no insurance, and earned military decorations—all with the understanding that they would be militarized and commissioned as second lieutenants.

During the WASP's brief existence, between September, 1942, and December, 1944, some 25,000 women applied for fewer than 2,000 slots as WASP trainees. Those who were accepted earned \$150 a month during training, and the 1,074 who graduated earned \$250 a month thereafter. Out of this they paid for, among other things, their room and board.

Wearing baggy men's GI uniforms, which they called "zoot suits," they ferried fighters to points of embarkation in the U.S. and Canada and flight-tested aircraft and performed other duties in order to free male pilots for combat.

They plan to show Congress that when a male and female pilot were killed in the same air crash, the male received full military honors and benefits, while the female copilot and her family received nothing.

Penny Houghton, a former WASP, now the mother of three and a court reporter in the District Superior Court, recalls that once after a classmate was killed in a crash during training, "the other girls had to pass the hat to collect money to ship the body home."

As an 18-year-old WASP, Houghton was an engineering test pilot for training craft.

"Some of the girls were so little that they had to put pillows behind them to reach the pedals," she recalled recently.

Penny Houghton's current WASP duties include alerting members in other states to come here for the Congressional hearings when the dates are set. WASP alumnae include lawyers, scientists, employees of aircraft companies and housewives, many of them grandmothers.

So far, the more militant rhetoric associated with recent women's rights issues has not been a part of the WASP style. They favor a softer "sting."

"Oh, it was (sex) discrimination, but we're going to try not to hit at that point. It's used so much," said Mrs. Joseph Haydu of Palm Beach Gardens, mother of three and current president of the WASP alumnae.

A WASP ferry pilot, she recalled that the daily travel expense allowances were \$7 for males and \$6 for females delivering aircraft. "Did we get our meals for less? Did we pay less for our rooms? It's little things like that that shows discrimination."

The FAA's Boylan was 21 when she entered the WASP in 1942. She ferried planes, mostly fighters, to bases in the U.S. and Canada. "We worked seven days a week, sun-up to sun-down."

In some instances, the women were used as psychological goads for the men, she said. "Some men were refusing to fly certain planes—P-39s, B-26s—because they said they had a lot of bugs and were killing people. They had us fly the planes and that way they shamed the men into flying them."

The unfamiliar sight of female pilots created a stir sometimes. For instance, Boylan recalled, "Sometimes we'd get on a commercial flight (returning from a ferry run) with our uniforms and our parachutes on and other passengers would start getting off. They wanted to know, 'Why don't WE have parachutes?'"

Congress first denied the WASP military status in 1944, when the House defeated by 19 votes a bill that had been approved by the Armed Services (then called Military Affairs) committee and endorsed by the Secretary of War, the Army chief of staff and the commander of the Army air forces.

The bill failed largely because of pressure from civilian male pilots who had, as one WASP put it, "sat out the war in higher paying jobs training pilots for the military; as those jobs were phased out, they were afraid they would be drafted as foot soldiers. They wanted our flying jobs in order to avoid that."

Gen. H. H. (Hap) Arnold, chief of the U.S. Army air forces and organizer of the WASP, told the women when they were disbanded: "You have freed male pilots for other work . . . The situation is that if you continue in service, you will be replacing, instead of releasing, our young men."

Almost three decades later, in 1972, some of the WASP alumnae held a reunion at Avenger Field, in Sweetwater, Tex., the old Wasp training field. This and subsequent get-togethers put the women, as Boylan said, "back in touch and in action."

They had invited Col. Bruce Arnold (U.S. Air Force, retired), son of their late "founder," to that 1972 reunion.

"There was a parade, and lots of drinking and hell-raising," Arnold said, "and in a weak moment, after three martinis, I volunteered" to help them take on the Congress. "Seriously, I felt responsible, in a way," he added. "I wanted to finish up some 30-year-old business my old man didn't have a chance to finish."

Now his I Street office has become a base of operations for the WASP, the worktables and some floor space littered with newspaper articles from several states, collected to show public interest in the WASP cause, and with other WASP documents. Arnold emphasizes that he is just an "unpaid, concerned citizen."

Since the WASP re-activated their Capitol Hill crusade, several attempts to pass legislation in their behalf have failed. The group credits Goldwater with securing the Congressional commitment to hold hearings on the matter.

Goldwater is "very hopeful of the success of the bill," according to his legislative aide. "The ladies will make tremendous witnesses."

A spokesman for the Veterans Administration did not rule out the possibility that, with the change of administration, the agency might soften in its opposition to extending benefits to the WASP members, but he said there would be no comment either way until the hearings.

Meanwhile, Arnold said, "The women do a lot of 'hangar-flying' when they get together, tell each other lies about what they did during the war, just like men do. Only I think they do it better than men."

#### JEWISH ACADEMY OF ARTS AND SCIENCES HOLDS 51ST CONVOCATION

##### HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. EILBERG. Mr. Speaker, on May 15, 1977, I had the honor of attending the 51st Convocation of the Jewish Academy of Arts and Sciences, at the Dropsie University in Philadelphia, Pa., where I was among seven persons re-

ceiving the academy's citation of Fellowship Award.

The proceedings were highlighted by an address by the Honorable Simcha Dinitz, Ambassador to the United States from the State of Israel.

The academy was founded in 1927 as an honor society of Jews who had attained distinction in the arts, sciences, and professions. It has enjoyed the leadership of several scholars who have served over the years as president, including Dr. Henry Keller, Dr. Morris Raphael Cohen, Dr. Chaim Tchernowitz, and Dr. Leo Jung. The academy's objectives are to encourage and promote the arts, sciences, and all other departments of knowledge; to stimulate an interchange of views on all branches of learning; and to maintain friendly intercourse among its members and fellows.

Today, Dr. Jung serves as president. Other guiding hands of the academy are Dr. Abraham I. Katsh, chairman of the board, and Dr. Hirsch Lazaar Silverman, secretary.

Those honored as fellows of the academy, beside myself, were Dr. Edward J. Bloustein, president of Rutgers, the State University of New Jersey; Ambassador Dinitz; Dr. Leon Nemoy, professor at the Dropsie University; the Honorable Maxwell M. Rabb, New York attorney; the Honorable William B. Thomas, university board chairman, New York; and Dr. David Wechsler, past chief psychologist at the Bellevue Hospital, New York City.

#### LET'S GET THE BUREAUCRATS OUT OF PRIVATE MEDICINE

##### HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. SYMMS. Mr. Speaker, for some time now there has been an increasing clamor for the enactment of universal, mandatory national health insurance, mainly confined to special interest groups and their advocates in the Government who seem to be oblivious to the enormous tax burden such a plan would entail, not to mention the disastrous effect it would have on health care in this country. President Carter has pledged to send an NHI proposal to Congress in 1978 and, in the meantime, has put forth plans to limit hospital costs and expand Federal health programs for children as steps toward the enactment of NHI.

Aside from the enormous costs of NHI or my philosophical opposition to the involvement of the Federal Government in an area which should properly be left to the free market, the Government's track record in the management of health programs, not to mention the U.S. Postal Service, leaves much to be desired. Costs in the medicare and medicaid programs have skyrocketed to the point where they represent over 80 percent of the Federal Government's expenditures for health. Fraud, abuse, and mismanagement in these programs have resulted in reform

legislation now pending before the Congress.

It should be obvious to even the short-sighted proponents of NHI that the problems with Government health begin with the bureaucracy, not with the medical profession. As with any Government program, more Federal involvement means more rules, regulations and paperwork which, in turn, lead to higher costs, decreased efficiency and a decline in the quality of service.

Our colleague, Congressman PHIL CRANE, has long been a staunch advocate of free enterprise health care. As a member of the Ways and Means Committee's Subcommittee on Health, he has a special insight of the problems associated with Government involvement in health care. In a recent article in *Private Practice* magazine, Mr. CRANE spelled out some of these problems and the legislative proposals he has offered to correct them.

Those who have resigned themselves to the inevitability of further encroachments by the Federal Government in the health care field and the eventual enactment of NHI should read Mr. CRANE's article and heed his advice. Unless we reverse the growing trend toward total Federal control of medical care and resist efforts to nationalize U.S. medicine, the chaos experienced by countries such as Great Britain and Sweden will result. If that situation should come about, the doctors would not be the only ones to suffer—the very health of every American will be at stake.

For the benefit of my colleagues, I am inserting Mr. CRANE's article in the RECORD at this point:

DOCTORS: LET'S GET THE BUREAUCRATS OUT OF PRIVATE MEDICINE!

(By Congressman PHILIP M. CRANE)

More than at any other time in recent years, the nation's private free-choice system of medical care is besieged by bureaucrats and politicians who would sink it under the weight of rules and regulations in the name of quality and cost control. Physician and patient alike are confused by the alphabet soup of medical bureaucracies—HMOs, UROs, PSROs, HSAs, etc. We are constantly being warned that our medical system is in a crisis state due to rising costs, and the medical profession itself is being portrayed as a group of greedy individuals more concerned with "ripping off" Medicare and Medicaid dollars than healing the sick.

And what is the solution being proffered to resolve this "crisis"? Why, National Health Insurance, of course. Rather than admit their premises were incorrect, the social tinkers ascribe the failures of their proposals to two limitations: not enough money and not enough regulations. If only they had more of these, they cry, their programs would have worked. Instead of shelving their experiments as wasteful expenditures of resources—be they Federal housing projects, job training programs, or social welfare schemes—more regulations and more money to throw down the rat holes are called for, with little concern for the taxpayers' pocketbooks.

It didn't take an expert to predict that, when Medicare and Medicaid were adopted a decade ago, costs would sky rocket, as inevitably happens with any open-ended program featuring wide eligibility and including little to discourage unnecessary utilization of available benefits. Now, it is fashionable to attack the medical profession for the ills in these programs instead of affixing the blame

to the bureaucrats responsible for administering them.

The medical profession, after a valiant resistance, lost the Medicare battle; but there are indications that it has already given in to NHI without a fight. Despite a campaign promise by Jimmy Carter to put NHI into effect early in his administration, many factors, such as the enormous price tag and procedural problems in the Congress, weigh against it. However, if the AMA and other organizations in the medical care field continue to support some form of NHI on the grounds it is "inevitable," then it becomes a self-fulfilling prophecy.

If our medical system is indeed approaching a crisis due to rising costs, it is not because of the lack of government planning or intervention, but rather because of the sheer weight of government programs, regulations, and the paperwork they entail. Instead of racing full steam ahead into National Health Insurance, which would lead to a disastrous socialized system of medical care, we need to relieve our private doctors and hospitals of the inhibitive controls and uncontrollable costs imposed on them by the Congress and the Federal bureaucracy. A government that can't even run a medical program for the poor and aged or deliver the mail on time can hardly call itself qualified to administer NHI.

To alleviate many of the detrimental side effects of Federal intervention under which our medical care system has suffered, I introduced a bill last August (HR 15043) that would guarantee quality medical care to all Americans by providing Congressional oversight of proposed regulations, eliminating utilization review and PSRO procedures, and insuring patients who are not receiving Federal assistance for medical care that their medical records will not be surveyed by the prying eyes of Federal bureaucrats.

All too often, Federal departments and agencies have adopted regulations contrary to the intent of Congress as set forth in the relevant legislation. The Congress then cries loudly about "bureaucratic bungling," and hastens to restate Congressional intent while ignoring the fact that it is the Congress' abdication of power that caused the problem in the first place. It is politically expedient to pass "consumer-oriented" legislation, then blame the bureaucrats when chaos erupts, as in OSHA, or the doctors in the case of Medicare and Medicaid.

A section of my comprehensive bill would provide for a Congressional review period of 90 legislative days before proposed Federal rules in the medical care field would go into effect, giving us the opportunity to examine all their ramifications, both good and bad. During that period, Congress could either pass a resolution opposing the rule, or allow it to go into effect automatically if no congressional action is taken within those 90 days. Though I am sure there would be some howling in both the bureaucracy and the Congress if this proposal were adopted, it is about time that we stopped passing bills to give Federal officials free rein and started taking responsibility for the Frankenstein monsters we have created.

Current regulations in the utilization review organizations, in the Medicare, Medicaid and child health programs, and in the Professional Standard Review Organizations (PSROs), pose a serious threat to the traditional doctor-patient relationship. Physicians are placed in the position of having to tread a narrow path within the bounds of PSRO norms and standards or be prepared to justify completely any deviation from the average. No longer can a doctor rely on his own good judgment in treating patients receiving Federal medical care benefits, unless he wishes to face a mountain of red tape and a review board. Thus, these regulations discourage individualized and innovative treatment and the develop-

ment of new medical techniques. In addition, there is always the possibility that a physician could be sued for malpractice if the patient didn't respond as expected to the treatment given in accordance with the norms set up by the PSRO. The confidentiality of patient medical records is threatened as PSRO clerks and other medical personnel punch these statistics into computers in order to determine PSRO standards and any deviation from them.

By far the greatest threat posed by PSROs is that they are the harbinger of things to come under NIH. In fact, HEW bureaucrats even boast that PSROs are the perfect vehicle for carrying out such a plan. Dr. Michael J. Goran, Director of the Bureau of Quality Assurance in HEW's Health Services Administration, stated in testimony before the House Committee on Interstate and Foreign Commerce last February:

The next 3 years will see the full implementation of PSROs in hospitals across the country. By the end of 1978 all Medicare and Medicaid hospital admissions will be under PSRO review. PSROs, which currently are conducting hospital review, will extend review to long-term care facilities. PSROs may also have expanded review for private insurance companies, an activity which we are encouraging once Federal review is in place. The surveillance which the PSROs apply to delivery of medical care should assure that services are rendered within accepted standards of efficiency and effectiveness. This PSRO review system will constitute a nationwide framework for quality assurance which will be available for National Health Insurance.

It is clear that while Congress may have intended PSROs to serve as quality and cost control mechanisms for Medicare and Medicaid, a worthy-sounding if somewhat dubious purpose, HEW bureaucrats are practically drooling over its potential relative to NHI.

Though the program started out slowly, PSROs are well on their way toward becoming institutions. Out of the 203 areas designated for PSROs, there are 100 conditional PSROs in existence receiving funds and performing review and 20 more are in the planning stage. Authorization has been given to start PSROs in the remaining areas in FY 1977. The PSRO budget for FY 1977 is \$90 million, including \$37 million in Social Security trust funds. The preliminary budget request for FY 1978 is \$150 million. PSROs reviewed over one million Federal admissions in FY 1976 and are expected to review five million Federal cases, or one-third of the total U.S. hospital admissions, when the program is fully implemented in 1978. Virtually no medical care institution or profession will be left untouched, and the effects of PSROs will be felt directly or indirectly by every private patient.

While the medical profession has resisted the implementation of PSROs in many areas and has taken the issue to court, there is a feeling among physicians that PSROs are an inevitability that must be lived with. The doomsayers moan that it is better to have a piece of the action than to let someone else run the game—or better to get stabbed in the back than shot through the head. But the battle isn't lost yet. In December 1975, Congress extended the date before which only physician groups can be designated as PSROs, until January 1, 1978. Under the process currently in operation, the Secretary of HEW must notify all doctors in a PSRO area of an application. If 10 percent report that the group requesting designation doesn't represent them, a poll is taken. If 50 percent of those responding to the poll state the group doesn't represent them, the group can't be contracted as a PSRO. However, after January 1, 1978, if an agency has been voted down through this polling process or if the local medical group has a policy in opposition to

PSROs, the Secretary of HEW can make a PSRO designated without having to submit it to a physician poll. Understandably, many physicians feel compelled to give in now while they have input into the designation process. But medical societies that have opposed PSROs should not give up now, with the deadline a year off, while there is still time to repeal the legislation or win the court challenges or both. To do so would be to widen the door for NHI.

With a growing awareness of the right to privacy, the lack of protection for confidential patient records is of great concern today, especially with the Federal government taking an ever-increasing role in providing medical care. Some government agencies now have the authority to inspect the records of all patients, not just those receiving Federal aid—a practice required of PSRO employees in order to set up their standards or norms for medical care.

Technically, PSROs are authorized and funded only to review Medicare, Medicaid, and child and maternal health cases. However, in order to determine these initial standards and norms, it is inevitable that private cases will have to be taken into account to provide a large enough sample for statistical purposes. In fact, HEW bureaucrats admit that PSROs are encouraged to contract with private plans (Blue Cross, for example) to conduct private reviews as well, though the Federal Government would only pay for the portion of cases reviewed that were under Federal care. At present, there is no real way of knowing whether PSROs are stepping outside their bounds and peering into private care records without authorization. My bill would forbid, under penalty of law, the acquisition or inspection of records of those not receiving Federal medical assistance without the patient's express written authorization.

While the passage of this legislation is not the whole answer to the problem of government intervention in medicine, it would resolve a number of problems. First of all, it would discourage malpractice suits due to perceived deviations from arbitrary "norms." Second, it would encourage innovation on the part of doctors in medical treatment and insure private patients that the nature of their treatment would be kept confidential. Third, it would promote the efficient utilization of manpower by lifting the paperwork burden. Fourth, it would maintain freedom of choice in the acquisition of medical care; and finally, it would hold down the spiral in medical costs due to factors other than inflation.

But as important as any benefits that might be gained from the passage of this bill is the need for the medical profession to stand fast and hold the line against further Federal encroachment. It is hard enough fighting the battle here in Congress without the loss of faith from within the ranks of the medical profession. Moreover, at the bargaining table, if you start from a compromise position, you shouldn't be surprised when the final agreement is even more of a compromise. Rather than support a half-hearted proposal for NHI in the mistaken belief that it has a chance of being adopted as a substitute for the radical comprehensive plans, professional organizations in the medical care field must firmly state their opposition to NHI and be willing to put their words into action. There's no use kidding ourselves—those who favor proposals such as Kennedy-Corman have no love, or even sympathy, for the medical profession.

I have been blunt, but there is no place for niceties when the existence of private medical care is at stake. In this comprehensive bill, which I will reintroduce early in 1977, I have attempted to reverse the growing trend toward total Federal control

of medical care. But much more effort is needed if we are to avoid the chaos experienced by such countries as Great Britain and Sweden. Whether it is forthcoming is up to you.

#### EXTENDING VETERANS EDUCATIONAL BENEFITS

**HON. BENJAMIN A. GILMAN**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. GILMAN. Mr. Speaker, I recently introduced H.R. 6775, legislation which would: First, entitle a veteran who served 18 months or more of active duty to 54 months of educational assistance; second, eliminate the time limitation for completing an approved program of study; and third, extend eligibility for these benefits to World War II veterans and veterans of the Korean and Vietnam conflicts.

Previous legislation providing veterans educational benefits has acknowledged this Nation's immense debt to its veterans. The legislation I introduced maximizes the opportunity a veteran will have to avail himself of these benefits.

Citing the responsibilities of raising children and developing a career, which often impinge upon the time a veteran may have to devote to continuing his education, I noted that there is little justice in terminating a veteran's eligibility for these benefits because his obligations to family and job have prevented him from completing formal course requirements within an arbitrarily restrictive time limit.

A number of my colleagues have indicated that they concur with these conclusions and wish to cosponsor this legislation. Accordingly, I insert the names of the Members cosponsoring H.R. 6775 to be listed at this point in the RECORD:

COSPONSORS OF H.R. 6775

Mr. Badillo, Mr. Baucus, Mr. Cornwell, Mr. Conyers, Mr. Corrada, Mr. D'Amours, Mr. Downey, Mr. Duncan of Tenn., Mr. Edwards of Okla., Mr. Fauntroy, Mr. Fithian, and Mr. Gephardt.

Mr. Hawkins, Mr. Hollenbeck, Mr. Kindness, Mrs. Lloyd of Tenn., Mr. Mineta, Mr. Mitchell of N.Y., Mr. Murphy of Pa., Mr. Ottinger, Mr. Pepper, Mr. Rangel, Mr. Spence, and Mr. Yatron.

#### A VICTORY FOR DISABLED VETERANS

**HON. CARLISS COLLINS**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, I wish to express my satisfaction over the passage of three bills by the House of Representatives on Monday, May 23: H.R. 1862, H.R. 6501, and H.R. 6502, which increase compensation benefits and extend automobile assistance to disabled veterans.

Former veterans whose livelihoods have been impaired by injuries resulting from military service will receive assistance through enactment of H.R. 1862.

This bill, the Veterans Disability Compensation and Survivors Benefits Act, also provides relief for the widows and children of veterans who die of a service-related cause. Six percent increases are also provided for: Disability compensation for disabled veterans; dependency and indemnity compensation for survivors of veterans; additional compensation given to dependents of veterans with service-connected disabilities of at least 50 percent; and grants an increase in the annual clothing allowance of approximately 6 percent.

By passage of H.R. 6501, Members of the House voted their support for increased compensation for certain disabled veterans who had suffered the loss of one of a pair of vital organs, such as the loss of one hand or one foot. Prior to this bill, these veterans so impaired could receive disability compensation at a rate applicable to the loss of both organs, only if that organ were an eye, kidney, or loss of hearing in an ear. The House-ratified bill extends the disability compensation to veterans who have lost a hand or foot due to service-related causes, and subsequently loses, or loses the use of, the other hand or foot due to nonservice-related causes.

Finally, in acknowledgment of the discrimination existing against disabled veterans of World War I in denying them eligibility for automobile assistance allowance and automotive adaptive equipment, my colleagues of the House of Representatives are to be applauded for waging a victorious battle in the offensive for equitable assistance for disabled veterans.

#### DR. BARRY COMMONER'S ARTICLE: THE HIDDEN JOKERS IN CARTER'S ENERGY DECK

**HON. RICHARD L. OTTINGER**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. OTTINGER. Mr. Speaker, last Sunday's Washington Post contains a very alarming analysis of President Carter's energy program by Dr. Barry Commoner, director of the Center for the Biology of Natural Systems at Washington University, St. Louis and chairman of the Scientists' Institute for Public Information. The column raises many important questions about the real impacts and effects of the Carter program, indicating in many respects consequences quite the opposite of those claimed by the administration for the program.

While the article may be unduly harsh, it deserves consideration because of the seriousness of the questions raised, and the need to address them in the actions we take on the program in Congress. I am inserting the article for the benefit of my colleagues who may have missed it while Congress was in recess:

THE HIDDEN JOKERS IN CARTER'S ENERGY DECK

(By Barry Commoner)

The popular response to the National Energy Plan is that, although President Carter

deserves credit for confronting the long-neglected energy crisis, his plan has many faults. In Congress, most of its numerous provisions have already come under attack. Presumably, the surviving fragments will eventually be patched together to legislate the great national effort which Carter has urged upon us as the "the moral equivalent of war."

But such piece-by-piece criticism will miss the plan's most serious fault: that, wittingly or not, it is a deception, an exercise in political sleight-of-hand in which the words about what the plan is supposed to achieve say one thing and the numerical facts about what it would achieve often tell us the opposite.

The plan claims to be an equitable program of energy conservation, but in fact saves little energy and heavily favors industry over consumers and the rich over the poor.

Carter has promised to use nuclear power as only a "last resort," but the plan proposes a sharp increase in nuclear power plant construction.

The plan claims to "... stimulate the development of a large solar market," but would in fact block solar energy from the markets that it could now enter.

The plan is supposed to be a means of gaining time before we decide how to make the inevitable transition to a long-term renewable energy source, but in fact it covertly makes that choice and commits us to a nuclear future.

And all this raises a final question: If the plan is not what it seems to be, then what is it really?

According to Carter, "... the cornerstone of our policy is to reduce demand through conservation," encouraging the popular impression that the plan is primarily a way of meeting the crisis by shrinking energy demand rather than by increasing supplies. It comes as something of a surprise therefore, to discover from the National Energy Plan (the detailed 103-page description recently released by the White House) that in 1985, the plan's target year, total U.S. energy demand would be the equivalent of 48.3 million barrels of oil per day without the plan and 46.4 million barrels of oil per day if the plan is implemented. This amounts to only a 4 per cent reduction in total demand.

However, it must be kept in mind that the total energy demand expected in 1985 is made up of the present actual demand plus the increase in demand anticipated in the next 8 years. The new plan can, of course, only affect this future period, so that it is pertinent to judge the plan by how it would meet the increase in energy demand that is expected to occur between now and 1985. According to the plan, between 1976 and 1985 16 per cent of the additional demand would be met through conservation and 84 per cent by increasing the energy supply. Coal would meet 50 per cent of the added energy demand; nuclear power, 23 per cent; domestic oil, 9 per cent; and solar energy, 1.6 per cent. Oil imports would remain essentially unchanged.

Judged by these numbers, rather than by its prose, the plan would rely more on nuclear power (23 per cent) than on conservation (16 per cent) to meet new demand. The plan's "cornerstone" would appear to be mislaid.

The administration's rhetoric is concentrated on the voluntary "sacrifices" needed to cut energy demands and on the plan's goal of equitably distributing this burden among different sectors of society. In fact, the main stress of the plan is to redistribute energy supply—and to do so inequitably.

BLOW TO THE CONSUMER

Consider, for example, how energy supply would be shared between consumers and industry. Their relative shares can be estimated from the division of demand among the three

conventional energy categories: residential and commercial (which supports consumers and the sale of consumer goods); industrial (which supports industrial production) and transportation (which is divided between consumer passenger traffic and the industrial freight).

In 1976, each of the first two sectors received about 37 per cent of the total energy budget and transportation received 26 per cent. With the plan in effect, only 15 per cent of the energy added during 1976-1985 would be allotted to residential/commercial demand and 74 per cent to industrial demand, with transportation receiving 11 per cent.

In mandating this drastic shift in energy allotments, the administration technicians have changed the ground rules that usually govern computations of future energy demand, which are customarily based on past trends. For the last 10 years, the share of the national energy budget devoted to residential and commercial uses has increased steadily while the share used by industry has declined. The projections on which the plan is based sharply reverse this trend. As a result, whereas the plan assigns 74 per cent of the increase in demand in 1976-1985 to industry, the comparable figure projected by the Federal Energy Administration on the basis of past trends is 44 per cent, with the residential/commercial sector receiving 56 per cent and transportation no increase at all. Although this shift in favor of industrial energy consumption is not attributed to the plan in the administration documents, it is in fact incorporated in it and is just as much a policy decision as the plan's other proposals.

The shift in demand projected by the plan would have serious consequences for consumers, who, under the plan, would be allotted much less energy than they would expect to receive in the next 8 years on the basis of other projections, such as FEA's. This amounts to a form of rationing, with all the problems entailed when involuntary restrictions are imposed on an economic good as essential to one's living standard as energy. Further, the plan imposes a much heavier burden of voluntary conservation on the residential/commercial sector than on the industrial sector, relative to their shares of added energy. Far from equitably distributing the burdens of the 1976-85 period of energy restrictions, the plan would heavily favor industry, assigning most of the burden to consumers.

Among the plan's more elaborate features are several for taxing fuel. Recognizing that the resultant increase in the price of energy would place an especially heavy burden on low-income families (energy costs take a relatively large part of their budgets), the plan envisages a system of rebates to relieve this burden. However, the complex bureaucratic machinery that would be created to administer such schemes would only encroach on the funds available for other government, social programs—given that Carter plans to balance the budget—on which the poor most heavily depend. Thus, the plan's acknowledged cost to the poor would only be transferred from one pocket to another, with the likelihood that the poor will only suffer in the process.

Once more, the plan's words and its proposed actions are in conflict. The plan speaks of equitably sharing the burden of conservation—of voluntary reductions in demand—but the real inequity of the plan lies elsewhere: in a thus-far unmentioned diversion of scarce energy supplies from consumers to industry and in a new bureaucracy that would further jeopardize the financial insecurity of the poor.

The plan, we are told, is supposed to solve energy problems "...while protecting jobs,

avoiding rampant inflation and maintaining economic growth." Here again, the plan's promising words point in one direction and its actions in another. It is widely recognized that the sharply increased energy prices mandated by the plan would only accelerate the current, unprecedented escalation of energy prices, which is already responsible for much of the recent increase in the rate of inflation. Also, since the sharp rise in energy prices makes predictions of future costs highly uncertain, it considerably increases the investment risks involved in building new industrial plants, contributing to the present lag in industrial capital investment.

#### WASTING CAPITAL

The plan, too, would reduce the efficiency with which capital is used to produce energy and therefore tend to worsen the shortage of investment capital. Capital invested in domestic oil production yielded annually (in 1974) about 17 million BTU (British thermal units) per dollar; about 2 million BTU per dollar when invested in strip-mined coal; 29,000 BTU per dollar for coal-fired electric power; and only 22,000 BTU per dollar for nuclear power. In general, the capital efficiency of energy production technologies is highest when fuels are used for direct heating and lowest when fuels are used to produce electricity. Yet, perversely, according to the National Energy Plan, 53 per cent of the energy added in 1976-85 would be used for electricity and 36 percent for direct heat, in contrast with 1976 when only 28 per cent of the national energy budget was used for electricity and 46 per cent for direct heat. This shift would sharply increase the average amount of capital needed to produce a unit of energy.

If the plan is implemented, in 1985 about 54 per cent of U.S. electricity would be produced by coal-fired plants, 25 per cent by nuclear power plants, 12 percent by oil-and gas-fired plants and 10 percent by renewable sources, chiefly hydroelectric power. This results from a plan-mandated shift from oil and natural gas to coal and nuclear power. Since the capital requirements of power plants fueled by oil or gas are relatively low, somewhat higher for coal-fired plants and highest for nuclear plants, the plan would reduce the overall efficiency with which invested capital produces electricity.

Thus, the plan would intensify the demand for capital for energy production, draining capital from other investments, so that the energy sector would be impeding the economic development of its own customers.

Moreover, by diverting energy supplies preferentially to industry, the administration's program would encourage the post-war trend toward energy-intensive industries (that is, those with a low economic yield relative to the amount of energy used). Inasmuch as industries that are energy-intensive are also capital-intensive, this aspect of the plan would also increase the overall industrial demand for capital. Since in the next decade the economy is expected to be nearly 30 per cent short of needed investment capital, the plan's heavy impact on the demand for capital is hardly a good way to "maintain economic growth."

Contrary to its claim of maintaining employment levels, the plan is likely to do the reverse. Many of the industrial sectors which use energy and capital intensively tend to be correspondingly low in their demand for labor. The outstanding example is the petrochemical industry, which not only burns energy but uses it as raw materials, flooding markets previously held by energy-conserving natural materials (such as leather, cotton and wool) with synthetics. As the energy-conserving, labor-intensive industries are displaced, technological unemployment—which now accounts for about half of the unemployment rates—is bound to increase.

Thus, rather than encouraging economic growth, the plan would affect the industrial uses of energy, capital and labor in ways that would worsen the basic problems that now threaten the economy—unemployment, inflation and the shortage of investment capital.

#### A HIDDEN NUCLEAR COMMITMENT

Finally, we come to the climax of this exercise in political conjuring, in which the plan—ostensibly a program to trim the fat out of the U.S. energy budget in order to facilitate a later shift to renewable sources of energy—turns into something quite different: a long-term commitment to breeder-supported nuclear power.

The plan acknowledges the well-known fact that the root cause of the energy crisis is our present, almost exclusive dependence on non-renewable energy sources. As supplies decrease, the law of diminishing returns takes hold and energy becomes ever more costly to produce, driving prices upward at an escalating rate. Obviously—as the plan also acknowledges—a transition from our present non-renewable energy sources to renewable sources is the only long-term solution.

In practical terms, only two renewable energy sources are in being and would be available at the turn of the century when, at the very latest, the transition would need to begin. One choice is solar energy. The other option is nuclear power, with breeder reactors used to extend the life of the non-renewable fissionable fuels—which would otherwise run out in 20 to 30 years—for perhaps 1,000 years or more.

As long-term solutions to the energy crisis, the nuclear and solar options are mutually exclusive. Nuclear power requires a highly centralized energy system, based on a relatively few very large and extremely expensive installations; it would produce only electricity for power-grid distribution. An energy system based on solar energy would be highly decentralized, consisting of numerous relatively small units; at present, it would produce only direct heat, and later, when solar electric power becomes economic, much of it will be produced directly where it is being used.

As a result, each source would require its own kind of national system with very little overlap; the nation, already short of capital, could afford to build only one of these systems. If the plan is indeed designed to gain time before the choice between two options is made, clearly it ought not foreclose one or the other of them.

As already indicated, the plan mandates the massive introduction of light water nuclear reactors at a rate far exceeding the pace achieved in the last few years. Although only a few nuclear plants have been ordered in the last two years, the 70-90 new 1,000-megawatt plants that the plan requires would need to be built in the next 8 years. By the turn of the century, nuclear power plants would generate a major part of the nation's power, and since we would then heavily depend on electricity, there would be no choice but to continue the nuclear fission systems. With uranium supplies depleting and rapidly rising in price, it would then be necessary to extend the supply of fissionable fuels—by adding breeders to the system.

In keeping with its proclivity for beguiling us with one goal while in fact moving toward another, the plan's commitment to a breeder-based nuclear program is artfully tucked away in a statement which refers to a presidential action that is widely regarded as anti-breeder: "It is the President's policy to defer any commitment to advanced nuclear technologies that are based on the use of plutonium while the United States seeks a better approach to the next generation of nuclear power than is provided by plutonium

recycling in the plutonium breeder . . . The President has proposed to reduce the funding for the existing breeder program, and to redirect it toward evaluation of alternative breeders, advanced converter reactors and other fuel cycles." (Emphasis added) By the turn of the century then, the nation would heavily depend on fuel-short nuclear reactors and, as promised by this statement, an "alternative breeder" would be ready to feed them for a thousand or more years.

Meanwhile, the plan would have effectively foreclosed the choice of the solar route. For one thing, research on alternative breeders—perhaps based on thorium rather than plutonium—would, like the present development of the plutonium breeder, be so expensive as to preclude all but minor research on other energy systems. Moreover, as anticipated by the National Energy Plan, electricity would heavily replace oil and natural gas in the residential/commercial sector—where the largest, unsaturated market for electrical appliances is in space heat, hot water and air-conditioning. This would effectively block solar energy from the one market that is presently open to it, which, as it happens, is also space heat, hot water and (shortly) air-conditioning. Thus, if we adopt the National Energy Plan, at the turn of the century, when the nation would have to choose its renewable energy source, we would find that this crucial decision had already, long ago, been made.

The decision is portentous. The nuclear route would saddle the country with the risks of radiation for thousands of years. It would concentrate the nation's energy system in a few, necessarily huge and expensive units that would inevitably fall under the control of either mammoth corporations or the government. The enormous damage that could be inflicted by even a few handfuls of stolen nuclear fuel—turned into home-made bombs, or even used deliberately to contaminate the environment—would, with equal inevitability, place nuclear installations under military control. The nuclear route could easily end with the nation's energy system, and therefore its entire life, or military force could capture control of its few, central generating stations.

The solar route goes the other way. Because sunshine falls everywhere and small solar installations are as efficient as large ones, solar energy is inherently decentralized; there is no economy of scale in most solar operations, and businesses of all sizes could compete equally. Solar energy can be directly controlled by those who use it. The solar route fosters democracy.

The nation's future hangs on the choice between these two routes. We cannot afford to make the choice in the dark, without open, public debate. But that is what would happen if the National Energy Plan were adopted as it now stands.

#### BUSINESSMAN'S BONANZA

How can we explain the striking disparities between what the plan says it would do and what it would actually do? The least interesting explanation would be that it is very difficult for a newly appointed staff in only three months to produce a consistent plan to reorganize the nation's fearfully complex energy system. It is more interesting to work backward from the real effects of the plan (as distinct from its claims) in trying to discover what unexpressed goal it might serve.

A major clue is that the plan would heavily divert energy supplies toward industry, while simultaneously worsening the shortage of investment capital, thereby severely limiting the ability of industrial development to absorb the new supply. However, another outstanding feature of the plan can resolve this seeming inconsistency; the missing capital could be provided by the huge

amounts of new taxes—estimated at \$80 billion per year by 1988—that, according to the plan, would be collected largely from consumers. Despite original claims that these funds would be returned to the people as rebates, the chairman of the House Energy Committee, Rep. L. Ashley (D-Ohio), has said that "... in this area, as in others he [Carter] has been soft."

Given the "flexibility" which Carter wants, the tax funds could be diverted to industry, Lockheed-style. A likely recipient of such subsidies might be the nuclear power industry. General Electric has already informed the administration that, because of continued unprofitability, it may abandon its nuclear operations. Government subsidies could be justified as a means of avoiding the demise of a major supplier of nuclear plants when the plan calls for building them at an unprecedented rate.

Such an approach would nicely fit a prescription for meeting the capital shortage that has been frequently voiced in business circles: to cut consumer spending so that savings will grow and produce more investment capital. As a New York Stock Exchange report has put it, "Essentially, the task of accumulating enough capital means that people must save more and consume less."

The plan's energy tax program could respond to this admonition in two ways: If, as the administration hopes, the stand-by gasoline tax successfully reduces consumption and the resulting savings were not devoured by inflation, they could be accumulated by the banks and thus increase the supply of investment capital. On the other hand, if the gasoline conservation program failed, and the tax was imposed, the resulting funds, accumulated by the government, could be used as subsidies for the capital-short energy industry.

This would bring us full circle, back to President Ford's proposal to spend \$100 billion of tax money to subsidize nuclear power, synthetic oil and other capital-intensive energy operations. The new administration's energy plan could accomplish the same thing, but this time under the banner of conservation—a way of convincing the public "to save more and consume less" that might be regarded less suspiciously than if its origins in the business community were more apparent.

This hypothesis might also explain one of the plan's most puzzling features—that support for mass transit and the railroads is wholly absent from the plan, although they are four to 10 times more fuel-efficient than autos, planes and trucks—far more effective ways to conserve energy than most of the plan's measures. This would require huge capital expenditures that would benefit consumers rather than industrial production. But that is not what the business community has in mind, for the capital shortage about which businessmen complain is for investment in profit-making enterprises, among which mass transit and most railroad operations are rarely included.

Behind these considerations lies a fundamental problem of the U.S. economic system—that its rate of investment in new productive machinery is lagging far behind the rest of the industrialized world. In the United States between 1960 and 1973, 13.6 per cent of the gross national product was devoted to industrial investment, less than Italy's 14.4 per cent and far less than our main competitors in world trade, Japan (29 per cent) and West Germany (20 per cent). This deficiency could be readily eliminated if the United States were to reduce the military budget's share of the GNP to match that of the losers of World War II.

As a result, in the last decade labor productivity (output per man hour) in U.S. manufacturing industry has increased at an average annual rate of only 2 per cent, com-

pared to Japan's 9.5 per cent, Italy's 5.7 per cent and West Germany's 5.3 per cent. Thus, the capital shortage threatens the long-held U.S. dominance of world markets for manufactured goods—a spectre which is likely to haunt the halls not only of the Chase Manhattan Bank but of the White House as well. Perhaps the National Energy Plan is really a response to this crisis, which in some quarters might be regarded as the more ominous threat.

All this suggests that the plan must be scrutinized more profoundly than it has been thus far. While its numerous, smaller defects can be corrected in Congress, there is one fundamental generic fault which cannot be reconciled by piecemeal modification: The plan would commit the country, without its consent, to an ominous nuclear future and deprive the people of the United States of their democratic right to direct the only step that can solve the energy crisis rather than delay it—the transition to renewable energy. The answer is to begin an open public debate on these, the real issues of the energy crisis.

#### JUVENILE JUSTICE

#### HON. CARLIS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, I am pleased by the passage of H.R. 6111, the Juvenile Justice and Delinquency Prevention Act Amendments, which extend related youth programs for an additional 3 years.

The need for such an extension was obvious to even the most cursory scanner of newspaper headlines. Day after day, one opens the chronicles to find blaring headlines about juvenile-committed violence in schools and vandalism are on the increase. Even more alarming is the fact that juvenile arrests for serious crimes—robbery, aggravated assault, forcible rape, and homicide—increased between 1960 and 1973 by 247 percent.

It is critically important to break the pattern of juvenile delinquency because studies have repeatedly shown that juveniles committing violent crimes will often continue to do so upon reaching adulthood. Not a problem that will be easily cured, it involves complex legal and social dilemmas. The passage of H.R. 6111 was an important and worthy action because it encourages a comprehensive approach toward creating a national strategy for dealing with juvenile delinquency.

I am particularly encouraged by the provision calling for the National Institute for Juvenile Justice and Delinquency Prevention to begin studies, "assessing the influence of family violence, sexual abuse and media violence on delinquency, interstate placement of juvenile offenders, the role of recreation and arts in delinquency prevention, and the extent and ramifications of disparate treatment of youngsters within the justice system on the basis of sex." I believe that this provision of the bill illustrates a real commitment toward developing alternative and innovative solutions to the juvenile delinquency problem. It is obvious that many of the solutions of the past have been less than effective.

# LEGISLATION TO RESTORE A BALANCED BUDGET AND A SOUND ECONOMY

**HON. LARRY McDONALD**

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. McDONALD. Mr. Speaker, today I am introducing legislation to stimulate the economy, create jobs and stabilize

the currency by reducing Government spending. It is the conservative alternative to the liberal policies of greater Government intervention and spending which have brought us inflation and recession.

For the past 40 years the dominant political trend has been the growth of the welfare state, which is a process of redistributing income from those who earn it to those who do not. As this redistribution process grows, so does the

Federal Government and its budget. In 1950 the Federal Government spent \$42.6 billion; the present estimate for 1978 is \$464 billion, a more than tenfold increase. In terms of Federal spending per person, the figure has risen from \$283 in 1950 to approximately \$2,100 per person this coming fiscal year.

The following table illustrates that this rapid growth in Federal spending is part of the welfare state-redistribution process:

[In billions of dollars]

| Year: | Federal outlays | Defense | Defense percent of outlays | Defense 1972 dollars | Defense percent of GNP | Health, Education, and Welfare | HEW (Percent) | HEW (Percent GNP) |
|-------|-----------------|---------|----------------------------|----------------------|------------------------|--------------------------------|---------------|-------------------|
| 1965  | 68.5            | 39.9    | 58.3                       | 75.9                 | 10.5                   |                                |               |                   |
| 1966  | 92.2            | 45.2    | 49.0                       | 73.9                 | 9.1                    |                                |               |                   |
| 1967  | 118.4           | 48.6    | 41.1                       | 71.0                 | 7.4                    | 29.7                           | 25.1          | 4.5               |
| 1968  | 196.6           | 79.3    | 40.3                       | 91.1                 | 8.3                    | 64.1                           | 32.6          | 6.7               |
| 1969  | 324.6           | 86.6    | 26.7                       | 67.0                 | 6.0                    | 151.4                          | 46.6          | 10.4              |
| 1970  | 464.3           | 109.9   | 23.7                       | 68.7                 | 5.4                    | 220.3                          | 47.5          | 10.8              |

The trend is obvious. In 1955 national defense constituted 58 percent of the Federal budget, but will account for only 23 percent this next fiscal year. Not only has defense spending declined as a percentage of our Gross National Product, from 10.5 to 5.4, but also in absolute terms. Adjusted to the value of 1972 dollars, we were actually spending more for national defense in 1955 than we will in 1978.

Redistributive spending, on the other hand, as measured by Federal outlays for welfare, education, and health, has soared from \$29.7 billion in 1965 to an estimated \$220.3 billion next year, approaching 50 percent of the Federal budget. These three categories are the largest areas of redistribution, but there are others.

Virtually all the welfare state programs are the result of the "New Deal" legislation of the 1930's and the "Great Society" legislation of the 1960's, all of which is the product of the liberal philosophy that government should control people's lives, becoming not their protector but their provider by taking from some and giving to others. These programs were continued by the recent Republican administrations and apparently will be expanded by President Carter.

This rapid increase in welfare spending is having very detrimental consequences, both economic and social. Direct taxes alone have not provided the necessary funds, so the Government has resorted to deficit spending. By the end of this next fiscal year the Federal debt will be \$792.5 billion, having increased by \$306 billion just since 1974. These deficits are financed either by borrowing or inflating the currency. Borrowing depletes the economy of the capital necessary to finance production and growth; inflation erodes the value of savings and income, hitting those on fixed incomes the hardest. The overall effect is to transfer resources away from production and into consumption, resulting in stagnation, recession, and higher unemployment.

Socially, the consequences are as bad, if not worse. The welfare state punishes

those who work and produce, but rewards those who do not. This discourages productivity and creates social strife and antagonism. As more and more of an individual's income is taken and redistributed to someone else, he is gradually forced into joining some pressure group to lobby for a return of at least some of his earnings. This political redistribution process breeds antagonism and conflict not only between the beneficiaries and the victims, but also among the beneficiaries themselves who are at odds about their "fair and proper" shares. As the noted Prof. Hans Sennholz has pointed out, the redistributive society is a conflict society that jeopardizes its individual freedoms and economic well being.

What has made this possible was the erosion of our constitutional form of government. The Constitution was designed to strictly limit the power of the Federal Government and, predominantly, served this purpose until the 1930's when the Roosevelt-packed Supreme Court began interpreting the Constitution so loosely that virtually any activity could fall under the general welfare or interstate commerce clauses. Once the limits on Federal authority were removed, politicians quickly stepped in with vote-buying promises.

If we are to preserve our freedom and prosperity, we must reverse this ominous trend toward total government. But this can only be done with the support of the public. I believe the vast majority of the American people do not want to lose their freedom and do not want inflation, recession and unemployment. But they have not been informed that it is the growth of Government that is responsible for these problems. As each new social welfare program achieves the exact opposite of its stated intention, the liberals and the news media blame free enterprise and propose another Government program to "solve" the problems created by the present Government program.

The purpose, therefore, of my legislation is twofold: to reverse the trend toward total government and to stimulate

public discussion of this trend. The legislation accomplishes this by doing the following:

First. Reducing all spending by the Federal Government for fiscal 1978 by 5 percent, except for national defense and security. This would reduce the fiscal 1978 budget by approximately \$17 billion.

Second. Reducing all spending for compensation of Federal employees, including Members of Congress and their staffs but not employees engaged in national defense or security, by 10 percent for fiscal 1978. Thus Federal salaries and/or the number of Federal employees would have to be reduced. However, the 5 percent reduction in Federal spending would allow the Government to operate with fewer employees and this reduction could be quickly achieved by a temporary ban on Federal hiring.

As the Federal Government reduces its spending, its demand for loan funds would decline immediately. The dollar would be stabilized and interest rates would decline substantially. A 2 percent decline, which would be a realistic expectation, would reduce the interest burden on the Federal debt by \$14 billion.

Altogether, this reform program would save the American taxpayer about \$33 billion during the next year. It would stabilize the U.S. dollar and halt the drift toward Government omnipotence and social strife.

It is, however, only the beginning and not the final solution. Once adopted it should be followed with another 5 percent reduction in each succeeding year until the budget is balanced and until the unconstitutional transfer payment segment of the Federal Government is eliminated.

Since the public is becoming aware that inflation is caused by deficit spending, we find much campaign rhetoric about balancing the budget. Therefore it should be emphasized that this legislation sets up a mechanism to actually achieve a balanced budget.

As Government spending is reduced, inflation will first decline and then disappear when the budget is balanced. Productivity will increase rapidly since the

Government will be transferring fewer resources out of the economy, and unemployment will drop swiftly.

In other words, the results of this program if carried out will be a tranquil society, with a stable dollar, a stable free enterprise economy, and a constitutionally limited Government.

#### ON THE NEED FOR LEGISLATION TO STOP CHILD PORNOGRAPHY

**HON. EDWARD I. KOCH**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. KOCH. Mr. Speaker, yesterday it was my privilege to testify at hearings of the Subcommittee on Select Education and Labor, held at the Covenant House in New York City, concerning legislation to prohibit the use of children in pornographic films or magazines. I was shocked to learn earlier this year that many young children have been used as performers in explicitly sexual movies and photographs, which are then distributed and sold throughout the country.

I believe that the Government has no business telling consenting adults what they should see, read, or do with respect to sex, as long as it does not involve children or impact adversely on other adults who do not wish to be involved. When children are involved, however, I believe the Government, both State and Federal, has a duty to protect children against their being used or abused in either hardcore or softcore pornographic scenes.

Many Members of Congress have introduced or cosponsored legislation to amend the Federal criminal laws and the Child Abuse and Treatment Act to make it a crime for any adult to produce, distribute, or sell material which employs children under 16 years old in a sexually explicit scene. I have introduced H.R. 7468, which also accomplishes these purposes.

I commend the efforts of Congressman JOHN M. MURPHY of New York and Congressman DALE KILDEE of Michigan, who have been instrumental in drafting legislation in this area and in obtaining hearings on the subject. With their cooperation and that of many other Members of Congress, I hope that we can adopt legislation this year that effectively ends this sordid problem of child pornography.

I am appending a copy of the testimony I gave at yesterday's hearings:

#### TESTIMONY OF HON. EDWARD I. KOCH

Mr. Chairman, I am pleased to be here this morning to state my concern that young children are being used and abused in the production of pornographic movies and photographs. It is a hopeful sign, that this hearing into these shocking abuses of young children is being held here at Covenant House—which is an institution providing refuge for teenagers and young adults.

Last winter I was dramatically introduced to some of the worst examples of movies and

magazines featuring children engaged in sexual acts. I viewed examples of this pornography at establishments located at 7th Avenue and 42d Street here in New York City. Other cities in this country also have bookstores and theaters featuring material using children. Through the crusading of Judge Anne Densen-gerber of Odyssey House and others concerned with the welfare of children, both this Committee and the Congress has been made aware of the need to put a stop to the abuse of children in pornographic scenes.

Members of this Committee have introduced legislation to amend both the federal criminal laws and the federal Child Abuse and Treatment Act to make it a crime for any adult to produce, distribute or sell material which employs or uses children under age 16 in a sexually explicit scene. I have also introduced H.R. 7468, which is similar to the bills introduced by Congressmen Murphy, Kildee, and Blagel, but with a few differences. Both those bills and my own outlaw the use of children in a number of explicit sexual activities, which we all agree are shocking for children to be exposed to. However, in my bill I do not outlaw absolutely "any other sexual activity" or "nudity," because I am concerned about the breadth of these terms. For instance, if Tom Sawyer kisses Becky in a movie based on Mark Twain, that should not automatically be banned. Thus my bill forbids certain explicit "sexual acts" and also "any other sexual activity or nudity, if depicted in a manner which appeals to the prurient interest and as part of a work which, taken as a whole, lacks serious literary, artistic, political, or scientific value and is patently offensive." Although this standard does require more proof, I believe it helps perfect the bill's important objectives without penalizing innocent behavior.

I would also like to make it clear that I believe the State has no business telling consenting adults what they should see, read or do with respect to sex, as long as it does not involve children or impact adversely on other adults who do not wish to be involved.

When one comes to children, however, I believe the State has to protect children against use or abuse, whether in hard or soft core pornographic situations. The use of children for such purposes cannot be tolerated yet it has escalated with pornographic films and peep shows which lewdly display children, some in explicit sex acts with other children and in some cases, adults. On the streets of New York one can buy today films and magazines with pictures that demean and use children, infants as well as teen agers, and their bodies. Many of the publications and films are produced out of state, but some are produced in New York State. It is the duty of the State and its law enforcement agencies to prosecute and where convictions result to heavily punish the abuses of children.

I am pleased that the New York legislature is considering legislation to forbid the use of children in any "sexual performance." According to information provided me by the Library of Congress, only six states now explicitly forbid the use of minors in an obscene performance. The federal statutes are also inadequate, because they focus on the importation or distribution of "obscene" material, rather than on the protection of children per se.

I consider the use and abuse of a child for sexual purposes to be equal in its impact on the victim and society as a crime of violence, and should have the same priority that we accord to serious crimes of violence. The sexual abuse of a child may injure that child for the rest of his or her natural life and prevent him or her from maturing into a healthy wholesome human being. The pornographers at every end of the spectrum using children, from the producer of the pic-

ture to the ultimate dispenser must know that such abuses now occurring not only in the City of New York but across the country will not be tolerated.

#### HELSINKI TO BELGRADE

**HON. EDWARD J. DERWINSKI**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. DERWINSKI. Mr. Speaker, prior to the convening of the Belgrade Conference, a very timely article, appearing in the May issue of the American Bulletin, a publication of the Czechoslovak National Council of America, concentrates specifically on the situation of the oppressed people of Czechoslovakia. However, with adjustments of personalities, geography, and the degree of Soviet interference, the same stories could be told for every country in Eastern Europe. I insert this commentary into the RECORD for the attention of the Members:

#### FROM HELSINKI TO BELGRADE

The Helsinki agreement was adopted in Helsinki on August 1, 1975. Americans of Central and East European background despaired at the time for they were convinced that the Soviet Union had no intention of observing Basket Three, the part dealing with human rights. The Soviets had reason to rejoice, for Basket One ratified their vast territorial grabs and Basket Two opened up new avenues for expansion of their commerce and economy. They gloated over Basket One, made full use of Basket Two, and ignored Basket Three.

The Soviet Union was somewhat surprised at our insistence on Basket Three. If the Soviets and satellites cannot divert our attention to Basket Two, to subjects of great interest to them, to energy, environment, economic cooperation etc., they will take the offensive and accuse us of being transgressors against human rights.

Soviet spokesmen and the Soviet press make this very clear. Moscow has kept up a steady drum fire of articles about the alleged violations of human rights in the United States and other Western countries." (Soviet World Outlook, May 15, 1977, Washington, D.C.). New Times (No. 17, April, 1977) insists that the human rights-information problem "is resolved in practice by each state within the context of its own sovereignty... It is racism, colonialism, rightist extremism, fascism, continuation of the arms race, that are jeopardizing basic human rights." Tass argues (April 25) that "the Belgrade meeting is a meeting at a working level, consultative in character; any attempt to modify Helsinki is doomed to failure."

An attack will be made on Radio Free Europe and Radio Liberty which broadcasts behind the Iron Curtain. "It is not a matter of freedom of exchange of ideas, because the Final Act of Helsinki simply does not include this or any similar situation," writes Kommunist, (No. 5, March 1977). Moscow was very angry when President Carter recommended to Congress that appropriations for broadcasting be doubled. Moscow is ready, it would seem, to jam any new transmissions.

In Washington, the Commission on Security and Cooperation in Europe, headed by Rep. Dante Fascell—consisting of six members of the House and 6 from the Senate and 3 from the Administration—has been preparing U.S. material for Belgrade. For weeks it has held hearings of exiles and

informed Americans about the situation in the captive nations. On March 15, the Commission called Czech writer Jan Benes and Mrs. Anna Faltus, representing the Czechoslovak National Council of America, to testify about Czechoslovakia. They submitted proof about divided families, travel and immigration violations. On May 9, Jiri Hochman, former Rudé Právo correspondent in Western Europe, Moscow and Washington, and former editor of Reporter, a liberal weekly under Dubcek, (now living in the United States), testified on the abuse of human rights in Czechoslovakia.

Finally, in response to the invitation of the Commission, the Czechoslovak National Council of America submitted the following report, as compiled by Prof. Francis Schwarzenberg and Vlasta Vraz:

The Czechoslovak National Council of America, as an organization devoted to the cause of freedom in general, and more specifically to a free Czechoslovakia, has been asked by the Commission on Security and Cooperation in Europe to submit a report on Czechoslovakia. The question is: Has respect for human rights in Czechoslovakia improved since the signing of the Helsinki agreement? Regrettably, the answer is categorically NO.

This organization has over the past year submitted a wealth of information concerning concrete cases of violations of the clauses of the Helsinki agreement. Most of the cases came under the heading of "Cooperation in humanitarian and other fields," commonly known as the "Third Basket." Predominantly, they dealt with separated families, delayed and refused visas and exit permits, travel for personal or professional reasons, conditions for tourism on an individual or collective basis, circulation of, access to, and exchange of oral and printed information and related problems.

At this time it appears advisable to stress the broader framework of continued repression, existing in an undiminished degree in Czechoslovakia, even after the signing, ratification and promulgation of the Helsinki agreements and other international treaties, such as the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights, signed by the Czechoslovak government.

Here the pertinent question may arise, to what extent the principles of the U.N. Charter and of the Universal Declaration of Human Rights constitute obligations in an area which has been traditionally considered to be the field of domestic jurisdiction.

Communist propaganda tries to confuse the issue by invoking exemption of matters of domestic jurisdiction from international scrutiny. It quotes the principles of "socialist international law" which differs from international law as generally accepted by civilized nations.

Before and after signing of the Final Act of Helsinki, the Soviet government, as well as the satellite governments, whenever challenged on a humanitarian question, have invoked the "7th Principle of the U.N. Charter." Yet it should be clear that these questions are no longer purely matters of domestic jurisdiction, but should be considered a proper concern for the community of nations since they are mentioned repeatedly in the U.N. Charter (Preamble: "faith in fundamental human rights, in the dignity and worth of human persons"; Art. 1, par. 2: "self-determination of peoples"; Art. 55: "universal rights and fundamental freedoms for all without distinction as to race, sex, language, or religion" etc.) Since 1945 and 1948 respectively, the development has progressed even further.

These principles of the U.N. Charter and of the Universal Declaration of Human Rights have been incorporated into the text of multilateral treaties, duly signed, ratified,

and promulgated by Communist governments, including the government of Czechoslovakia. They no longer represent a mere declaration of intentions, nor are they only "a matter of proper concern"; being an integral part of a multilateral treaty, they are binding in international law.

Thus it should be clear beyond any possible doubt that the exemption of "matters of domestic jurisdiction" from international scrutiny is no longer applicable, since obligations concerning human rights have been spelled out in binding international treaties.

Here the only applicable principle is the sanctity of treaties—*pacta sunt servanda*—the basic principle of all international intercourse among civilized nations.

Chapter VII of the Final Act of Helsinki is devoted to "Respect for human rights and fundamental freedoms, including the freedom of thought, conscience, religion or belief." The final paragraph refers to "the purposes and principles of the Charter of the United Nations and the Universal Declaration of Human Rights."

Since these two documents are specifically mentioned in the Final Act of Helsinki, the pertinent articles of the U.N. Charter and the Universal Declaration form an integral part of the Final Act of Helsinki. Therefore it is more than proper for signatory states of the Helsinki agreement to scrutinize the present situation existing in the other signatory states on the basis of all three above mentioned documents.

And thus we find that the government of Czechoslovakia falls short of its assumed obligations. A brief review of a number of articles in these three documents should be sufficient to prove this point.

#### PRINCIPLES OF THE U.N. CHARTER

The continued occupation of Czechoslovakia by the armed forces of the Soviet Union constitutes in itself a severe violation of the Principles of the U.N. Charter.

#### HELSINKI AGREEMENT

The Final Act establishes the right to opt for neutrality. This is what the citizens of Czechoslovakia clamored for in 1968—neutrality—in the very brief period of the Spring thaw. Current government propaganda in Prague is directed against those who would advocate neutrality for Czechoslovakia. Such a desire is called "the most vulgar form of anti-communism," "an attack on the Warsaw Pact alliance and the Soviet Union." People who under the guise of Helsinki advocate neutrality "do not really want peace and the lessening of tensions" (History and the Military, Prague, 1976, No. 2, pp. 60-72).

#### UNIVERSAL DECLARATION OF HUMAN RIGHTS

Although almost every article is violated, only the more blatant violations are mentioned here:

Art. 3: "Everyone has the right to life, liberty and the security of person."

Art. 6: "Everyone has the right to recognition everywhere as a person before the law."

Art. 7: "All are equal before the law; all are entitled to equal protection etc."

Art. 8: "Everyone has the right to an effective remedy by the competent national tribunal etc."

Art. 9: "No one shall be subjected to arbitrary arrest, detention or exile."

Art. 10: "Everyone is entitled to a fair and public hearing."

Art. 11: "Everyone has the right to be presumed innocent until proved guilty."

Amnesty International released in March 1977 a 16-page report that analyzes the violations of the above articles, namely: the existence and application of laws which prescribe imprisonment for the non-violent exercise of certain rights of conscience; the inadequacy of legal safeguards and the abuse of legal provisions relating to house search (without warrant) and pre-trial detention; the poor treatment and conditions of detention for individuals convicted of political

offenses, a treatment harsher than that inflicted on criminals; hardships and continued persecution of released prisoners of conscience.

Art. 12: "No one shall be subjected to arbitrary interference with his privacy, family, home, or correspondence."

Every family in an apartment is under surveillance by a house informer. Long distance telephone conversations are tapped and discontinued if anything but personal matters are discussed. Foreign mail is processed (especially from people who left illegally) by a special department of the Ministry of Interior, which is equipped with computers and detection devices. Some letters are copied and filed for future use by the State Security police.

Citizens corresponding with friends abroad were given the following questionnaire to fill out (reported to a friend in Australia, November 1976):

"I affirm that I have been duly informed of my duty: a) to report any written or personal contact with my close relatives who left the Republic illegally and to inform proper authorities of any changes pertaining to their residence (change of address, etc.); b) to report all my written and personal contacts with citizens of capitalistic states, including Yugoslavia; first, to ask permission of proper authorities in case I wish to come in contact with these citizens of capitalistic states and furthermore, to report subsequently should there have occurred any unscrupulous personal contact with these citizens, in which case the same ruling is applicable. I am required to report these facts to my direct supervisor and at the proper Special Designation (Zvláštního určení). I am to be held fully responsible for any violation of this ruling which is punishable by law."

Art. 13: "Everyone has the right to leave his country, including his own and return to his country."

It is common knowledge that Czechoslovakia's borders are surrounded by a no-man's land of mined fields, electrically charged wire-fences, manned by police etc. If citizens denied an exit permit decide to flee across the border, they are fired upon; if captured, they are sentenced from six months to five years prison, or to correction camps, or to loss of property (Penal Law, par. 109, 1966). Anyone caught helping others to escape is sentenced from three to ten years prison or to loss of property.

Art. 15: "No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality."

Due to the ambiguity of the legal problems and the arbitrary decisions of the Czechoslovak government, it is impossible to explain briefly the various violations of this article.

Art. 17: "No one shall be arbitrarily deprived of his property."

There is hardly any need to discuss this article as private ownership in Czechoslovakia has been limited to such a degree as to make it a mockery.

Art. 18: "The right to freedom of thought, conscience, and religion."

This basic right is completely disregarded in Czechoslovakia. The situation has not improved any after Helsinki, although the accused often refer to the Helsinki agreement in their defense (see Charter 77).

Communist control of the Church (Catholic, Protestant, Jewish, etc.), through a system of law and penal codes, is absolute. The Communist Government Bureau for Church Affairs has such wide jurisdiction that it is omnipotent: it has complete authority to approve (choose) the clergy, control their actions, sermons, finances, to penalize the clergy, divest them of their office. Communist Secretaries for Religious Affairs possess the right to issue or take away the state's "approval," i.e. the license for discharging

ministerial duties. They bar seminary graduates from entering their chosen profession and instead, many of them have to perform manual labor. The authorities approve—or do not approve—candidates for various offices within the church hierarchy, including the bishops.

The state is also in charge of church finances and pays ministerial salaries far below the scale applicable to any other profession: 650 crowns a month to a pastor; every three years this beggarly salary is increased by 30 crowns. Professionals in other fields receive from 2,000 to 4,000 crowns.

The Party screens candidates for the seminaries and has the final word who will be ordained. Their number is severely limited and decreasing year by year. (Five priests are ordained to replace 20 priests who died during the year).

A report on conditions in Czechoslovakia was presented at the International Eucharistic Congress in Philadelphia by the Most Reverend John L. Morkovsky, Bishop of Galveston-Houston, Texas (Congressional Record, Sept. 2, 1976, E 4859-4869).

A similar report on "Religious Oppression" of Slovak Ev. Lutheran Church was prepared by Dr. Martin Kvetko (Our Trends, March 1976). Persecution of churches has deepened to such an extent that informed observers speak of the "quiet liquidation of spiritual and religious life in the country."

Liquidation is the deliberate, insidious plan of the Communist Party, as outlined by Vasil Bejda in a secret protocol presented by the ideological department to the inner circle of the governing body of the Communist Party. (The protocol was smuggled out of the country and reprinted in part in *Listy*, No. 1, February 1976, Rome). Vasil Bejda is the right-hand man to the traitor Vasil Bilak, one of the most influential among Moscow's stooges.

Bejda speaks of the importance of spreading "the Marxist world view through scientific-atheistic propaganda." He complains that there are "strong remnants of various religious prejudice, some twenty sects in Czechoslovakia," which must be eliminated. He quotes President Husak as saying that the only political opposition in Slovakia is Catholicism. Four new bishops have been appointed illegally, which proves that the Communists practice freedom of religion. However, the Church must obey the law. "As soon as the bishops should disobey, we shall take justice into our own hands."

In Czech lands, the situation is somewhat different, says Bejda. Here the Protestants are practicing "the ideology of parasites"; they are advocating loafing. This "policy of do nothing" is intended to "undermine our socialist state and the socialist participation of our people." Bejda concludes that "war against religious delusions is inevitable" and that it is "vitaly important to spread scientific atheism . . . The primitive ideology (of religious delusions) finds support, understanding and action not only among our grandmothers and grandfathers, but also among our youth."

Art. 19: "Everyone has the right to freedom of opinion and expression."

On January 1, 1977, a group of Czech intellectuals presented a petition to their government, now known as Charter 77, signed by almost 300 and eventually by 600 citizens from all walks of life. It was an appeal to the government to abide by the Helsinki Agreement and by Law No. 120 of the Czechoslovak Collection of Laws, issued Oct. 13, 1976, which includes the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights.

The outcome of this petition is well known to us in the free West. The police cracked down on the "dissidents." Of the three spokesmen, playwright Vaclav Havel is in

jail since January, to be charged with "crimes" against the state; former Ambassador to the U.N., Dr. Jiri Hájek is under house arrest; Prof. Jan Patocka, distinguished scholar, is dead following exhausting police interrogations. Many signers are threatened with loss of job. The Communist regime has succeeded in isolating the dissidents by depriving them of their telephones, automobiles, and livelihood.

American and other Western correspondents have been refused visas to Czechoslovakia (see Eric Bourne's reports to the *Christian Science Monitor*, April 11 and 15, 1977). Others—foreign correspondent Tad Szulc, Disko Doder of the *Washington Post*, Reuters, etc. were denied visas earlier; Paul Hofman of the *New York Times* was mistreated (February 1977).

Art. 20: "Everyone has the right to freedom of peaceful assembly."

Right of Assembly is non-existent and even small meetings of friends in private homes are under police surveillance (Vaclav Havel, author Ludvik Vaculik, playwright Pavel Kohout, Dr. Jiri Hájek, etc.) Without a search warrant, police storm into their homes, ransack their apartments, confiscate their manuscripts (described by Malcolm W. Browne, *New York Times*, Jan. 16, 1977).

2) "No one may be compelled to belong to an association"

If a child hopes to acquire a better education or position, he signs at an early age in Pioneer and later in the youth organization *Svaz mládeže*. To resist signing up in the various professional and other organizations, all under Communist supervision, is an empty brave gesture which closes doors to promotion and advancement.

Art. 21: "Everyone has the right to free elections, the right to take part in the government, directly or through freely chosen representatives."

This article becomes a farcical travesty in any Communist country and especially in a country occupied by the Soviet army. There are no opposition parties or groups at elections. Everybody has to vote for the candidates already chosen by the local or central committee of the Communist Party. (For appearance sake, some of the names are listed as representing other affiliated parties, but this is window-dressing). Newly elected members of parliament are told how to vote by the instructors of the central committee of the Party.

Art. 23: "Everyone has the right to work, to free choice of employment, to form and join a union."

Transgressions against art. 23 were best illustrated by the protest of historians "Acta Persecutionis," a document presented to the XIVth International Congress of Historical Sciences, held in San Francisco, August 1975. It includes 147 names of former historians, who have all been ousted from their positions. The regime does not trust them that they would interpret Czechoslovak history from Moscow's standpoint. Most of them have been assigned menial jobs.

The situation has not improved since 1975; on the contrary, if any had dared to sign the Charter, they were undoubtedly evicted from their job.

Not only historians, but all other professions are treated similarly. Priests, nuns, teachers, former professors and lawyers, army officers, etc. are now janitors, garbage collectors, truck drivers, warehouse men, laborers. Many journalists, writers and radio commentators are harassed and as punishment for continued disobedience have been ousted even from their manual jobs. This places them in the category of "parasites" of society, which makes their situation all the more dangerous. (Example: writer and radio commentator Vladimir Skutina, who has twice served prison sentences.)

Unions exist in name only. Under Commu-

nist Party control they have become instruments of the Party, whose interests they serve. Strikes, bargaining, demand for higher wages and other benefits are unthinkable.

Art. 26: "Everyone has the right to education."

Top students with highest grades are usually barred from higher schools of learning because of the bourgeois background of their parents, or grandparents, although they are long dead and their property has been confiscated decades ago. Their religious belief, or that of their parents, also puts them at a great disadvantage. Almost from the cradle, parents pray and plan how to protect the future of their children against discrimination.

Poor students from Communist families have all the advantages; no school is closed to them, despite a low scholastic record.

Art. 27: "Everyone has the right to participate in the cultural life, etc."

Even painting and music, let alone literature, must conform to ideological orthodoxy. Everything must be created "in the interests of the state" (meaning the Communist Party) and must reflect "socialistic realism" and "class consciousness." Non-conformist playwrights cannot be present on opening night abroad (most recent example: Pavel Kohout); one writer was refused permission to collect a literary prize which had been awarded him. Painters and other creative artists are often not permitted to accept an invitation to exhibit in the West and if their work is exhibited, they are not allowed to be present at the installation. If their works are sold, they are advised one or two years later by the government bureau about the sales and are given less than half from the proceeds of the sales or of the royalties.

A group of non-conformist musicians was arrested at a private wedding party and tried on charges of hooliganism. "The Plastic People," a rock music group, claim to be apolitical but the Communist regime looks upon their performance as "a political statement which implies a rejection of the very basis of the Husak regime." Twenty-two were arrested; several were tried separately and were sentenced from eight to 30 months imprisonment ("Czech rock stars face the music," *The Chicago Tribune*, August 30, 1976).

Art. 28: "Everyone has duties to the community in which alone the free and full development of his personality is possible."

"Duties to the community" are interpreted as duties to the Communist Party, without any regard to one's inclination or belief.

From the above, it is evident that conditions concerning human rights have not improved since the signing at Helsinki. "Rude Pravo," the government mouthpiece, declared openly as recently as March 17, 1977: "Socialist states will never permit anybody to interfere in their internal affairs." Seemingly, the government has succeeded in silencing and isolating the signers of the Charter. Their harassment—unjustified as it is—nevertheless is less severe than it would have been some time ago. The people in Czechoslovakia are convinced that this is due to the West's new interest in human rights.

#### LEAA AT THE CROSSROADS

#### HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. DRINAN. Mr. Speaker, the Law Enforcement Administration has been the subject of much critical comment over the past few years. In part

that criticism is based on a growing disillusionment with the benefits of the program. Despite the spending of billions of dollars, LEAA-approved projects, it is said, have had little impact on crime and the improvement of the criminal justice systems.

Francis W. Sargent, former Governor of Massachusetts, recently addressed this issue in an article published in the Boston Globe. Rather than advocating abolition of the agency, Governor Sargent suggests improving the funding mechanisms presently used by LEAA. The new Administrator of LEAA should take seriously the considered opinions of knowledgeable persons, such as Governor Sargent. His monograph is inserted here for such consideration:

#### REMEDIES FOR THE LEAA AILMENT

(By Francis W. Sargent)

Some top cops were talking about crime this week, and the talk was optimistic for a change, different from the gloom and doom I usually hear in my work as chairman of the Police Foundation in Washington.

They were saying a new beginning is in the offing with the expected appointment of a new administrator of the Law Enforcement Assistance Administration (LEAA), the agency that parcels out Federal money to fight crime across the country.

They think new boss means a new approach to an agency its supervisor, Attorney General Griffin Bell, has called "a can of worms" and something "I can't get a handle on."

So far, LEAA has been nothing much more than a money-shipper. Presidents Johnson and Nixon both declared a "War on Crime" and tried throwing money at the problem, as much as \$800 million a year, in fact. LEAA did the throwing, and the fact is they weren't too fussy where they threw it. What a state proposed, LEAA funded. Believe it or not, in the history of LEAA, a state plan has never been rejected, whether it called for tanks, teargas or drum and bulge corps.

Few states thought in terms of the over-all criminal-justice system, or correction reform, or improvement of the causes and not just the effects of crime.

Now, it looks like change is on the way. Candidate Carter, by accident or design, never promised a "War on Crime," never talked about a secret plan to end such a war, hasn't oversold a program he might find he can't deliver.

So, not bound to the past or to a promise, he and a revitalized LEAA can go a different way, different, that is, from the way of heavy rhetoric, massive spending—and dubious results.

The pros I've talked to think the new way ought to go like this:

Washington should set clear goals, name the kind of programs that will get Federal help, set standards for states and cities to meet and make violent crime top priority.

Washington should require states to show how those Federal standards are going to be met. No vague state plan should be allowed. Chapter and verse of how the plan is going to work should be required.

Washington should monitor what it is financing. Progress must be noted, timetables set, impact measured, and what isn't working ought to be junked fast.

And that means, of course, that states will have to decide where their crime-fighting energy is going. In Massachusetts, for example, Boston, with 11 percent of the population, has 24 percent of the crime rate. Common sense indicates that major money ought to go to Boston.

And states have to do for cities and towns what Washington has to do for states: set standards, timetables and deadlines and es-

tablish a method of monitoring the results. If not, states will be doing nothing more than shoveling money along the line, and their role will be that of useless middleman.

Pat Murphy, president of the Police Foundation, said this week of the impending changes at the LEAA's highest level, "This appointment is vital because it can be a brand new start for crime-fighting in this country."

Amen. And the sooner the better.

#### THE NEXT RESOURCE CRISIS: WATER

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for June 1, 1977, into the CONGRESSIONAL RECORD:

#### THE NEXT RESOURCE CRISIS: WATER

Even as the country grapples with an oil and gas shortage, there are growing signs that the next resource crisis involves water.

This drought year is fixing attention on America's most vital resource—water—and it reminds us that the nation's water lifeline is slender. Water supply is largely taken for granted as a limitless resource, but increased population, the concentration of people in the cities, and the extravagant use of water is rapidly changing all of that.

The signs of growing concern about water are all around: in parts of California water is rationed; Montana is threatening to sue the State of Washington if it seeds the clouds and steals water that might have fallen on Montana; in Colorado ranchers kill off breeding stock because water-starved land cannot sustain them; wells are running dry, forcing farmers to dig deeper. So, water problems are substantial, and they will continue.

The growing demand for water over the next 25 years will compel us to find or make twice as much clean fresh water as the world already uses. 1200 billion gallons of water a day run through America's rivers and streams. In 1970 one-third of that was used, which was a 20% increase since 1965, but by the year 2000 this nation will use three-fourths of that fresh water. By that time only 3 out of 19 water regions in the United States (New England, the Ohio River Basin, and the South Atlantic-Eastern Gulf Area) will be able to live comfortably with its water supply.

Ironically, the world has plenty of water. The problem is that very little of it is directly useable by man. About 97.3% of all water is ocean water and three-fourths of the remaining fresh water is locked in glaciers or is otherwise inaccessible. Much less than 1% of the world's water supply is available for human use. Or, to put it another way, if all the world's water were represented in a half-gallon carton, the amount of fresh water available for human use would be one-half teaspoon.

The demand on this limited supply is increasing at ominous rates. Agriculture, which accounts for 80% of all the water used by people, and industry are using increasing amounts of water. Even farmers shake their heads at the amount of water they use; it takes 1000 tons of water to grow a ton of grain; 136 gallons to produce a loaf of bread; 900 gallons to produce cotton pajamas.

Water supply is increasingly becoming a concern for Hoosiers too. The United States Department of Interior has informed me that water supply problems for Ninth District counties could develop, especially if the

near-drought conditions of recent months continue. These counties lie south of the areas formed by the Wisconsin glacier, which means that the material above the bedrock is shallow, water runs off the land quickly, and most streams do not have a sustained flow. In the Department's view, neither surface water nor ground water is dependable in southeastern Indiana.

The Indiana Department of Natural Resources identified several Ninth District communities which need, or will soon need, additional water sources, including: Connersville, Corydon, Greensburg, North Vernon, Vernon, Osgood, Napoleon, Scottsburg, Versailles, Milan, Holton, and Westport. The water sources of the several rural water systems serving rural residents in the 9th District appear adequate, but increased usage could quickly change that outlook.

Effective management of water resources could probably solve most foreseeable problems. It would certainly conserve water. Americans, of course, waste water on a grand scale. New Yorkers, for example, use 270 gallons a day per person compared with 68 gallons a day for a resident of London. A recent GAO study shows that half of the water used for irrigation of crops is wasted.

Many methods are being used to increase the supply of water, including desalinization, deeper wells, recycling, and even diverting rivers. Water can be harvested by conserving water runoff in forest areas by managed tree growth, and better irrigation techniques can save vast quantities of water. It is estimated that 20 million acre feet of water are lost each year through seepage and evaporation in faulty irrigation systems. Urban landscaping with native desert plants can be used instead of trees, grass, and shrubs, and improved storage facilities can reduce evaporation from reservoirs.

A new look must be taken at long-range water problems. The nation should begin to be prepared for droughts, rather than to be surprised by them. Food reserves should be built in anticipation of droughts. Conservation of water should be encouraged on a regular basis, rather than only during a crisis. Greater soil conservation measures are necessary. A number of specialized technologies need to be developed, including trickle irrigation, which minimizes waste, prospecting for underground water by satellite, rainwater harvesting, and reducing loss of water from soils by chemical treatment.

Each day the world gets thirstier, and unless steps are taken now to reduce waste of water and to improve water management, the wells and streams and lakes could run dry tomorrow.

SALE OF CONTROL DATA CYBER 76  
ADVANCED COMPUTER TO THE  
SOVIET UNION MUST BE STOPPED

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. SYMMS. Mr. Speaker, recently I had reported to me some very astonishing events regarding the proposed sale of a Control Data Cyber 76 computer to the Soviet Union for weather prediction research. It is my understanding, from what I would consider to be a knowledgeable source, that in 1974 a private guest of Soviet Ambassador Anatoly Dobrynin in the United States was identified by our intelligence people as one of the top agents of the KGB. It is also my understanding, Mr. Speaker, that at that time, U.S. counter-intelligence alerted

Dr. Henry Kissinger and others as to the true identity of Ambassador Dobrynin's "guest" and revealed that this agent's real purpose for being in the United States was to make arrangements for the purchase by the Soviet Union of advanced computers from Control Data Corp.

In January of this year Control Data reapplied for an export permit for the sale of their advanced Cyber 76 computer to Russia for the purpose of performing research related to global weather prediction. Although it is claimed that the use of this machine in the Soviet Union will be monitored by Control Data personnel and/or others, I am strongly opposed to this proposed technology transfer. It is very difficult to prevent diversion of computer technology to military applications.

I do not know if the Cyber 76 sale proposed this year has any connection with the 1974 incident involving Ambassador Dobrynin's guest—which, by the way, was kept quiet by the U.S. Government so as not to upset detente I am told—but there are several points that should be brought out regarding the strategic military implication of high speed/high capacity computer capability on the part of the Soviet Union:

Specifically, the Cyber 7600 series computer could significantly increase Soviet air defense capability and could give them significant antiballistic missile—ABM—capability when combined with phased array radars and high-acceleration interceptors now in development. Also, with an effective civil defense program—which the Soviets may have—the ABM problem is dramatically simplified so that a single central computer such as the Cyber 76 could support a high-leverage ABM defense of several major Soviet cities.

With regard to air defense, U.S. bomber penetration capability is predicated on the assumption that the Soviet SAM's—surface-to-air missiles—cannot engage targets outside the field of vision of the SAM site radar. Increased computer capability could allow intercepts to be made at a point outside the field of vision of a particular missile site radar, thereby allowing the Soviets to use missile systems such as the SA-2 which are not now effective against low-flying bombers. One estimation given me is that the Cyber 76 could potentially increase by 100 fold the Soviet air defense capability.

The issue appears to be what margin of capability does the Cyber 76 provide that is not provided by the IBM 360's that the Soviets now possess. Cyber 76 is 16 to 64 times faster than the IBM 360 and has twice the word length, which doubles its precision in tracking. The Cyber 76 is basically the same as the CDC 7600 computer used at Kwajalein for the U.S. ballistic missile defense program. In short, the IBM 360 is basically a "business" machine while the Cyber 76 is an advanced high-speed scientific computer.

In view of the potential of the Cyber 76 to improve Soviet air defense effectiveness and possibly to provide some ABM capability in advanced air defense systems, it is crucial that a competent and thorough analysis of this issue be made, preferably by an independent agency, be-

fore this sale proceeds any further. Furthermore, it is known that the Cyber 76 system is especially suited for computation in nuclear weapon design problems and in high energy physics research. It is known that the Soviets have aggressive R. & D. efforts underway in these areas that are military related.

Again, it is stated that the Soviets want this machine, the Cyber 76, for weather prediction research programs. But, the question comes to mind as to why such a high-speed machine is needed for weather prediction work. What is it about this machine that cannot be fulfilled by the IBM 360?

In conclusion, I intend to raise these questions to the President and his national security advisor and to other appropriate levels of responsibility. I hope to have many of my colleagues in Congress join in this effort.

Mr. Speaker, I was pleased to see that columnist Jack Anderson devoted his May 24, 1977, column in the Washington Post to this issue. I was also pleased that he gave an accounting of the incidents surrounding Ambassador Dobrynin's "guest" that corroborated a statement that I made to the same effect on the floor of the House on Monday, May 23, 1977.

The Jack Anderson column reads as follows:

#### A SUPER-COMPUTER FOR THE SOVIETS

(By Jack Anderson and Les Whitten)

Control Data is preparing to sell the Soviets a \$13 million electronic brain, which could be turned against us to track U.S. missiles, planes and submarines. It is also capable of decoding sensitive U.S. intelligence transmissions.

The miracle machine is the Cyber 76, which will soon be on its way to the Soviet Union unless there is a last-minute stop order. It not only will be the largest computer ever delivered behind the Iron Curtain, but it is more than a decade ahead of the Soviets' own computer technology. It operates at least 20 times faster than anything the Soviets produce.

A top-secret, interagency study warns tersely that the Soviets can convert the Cyber 76 to military use. Not only can it be used for tracking and decoding, but it could also improve the production of nuclear warheads, multiple-headed missiles, aircraft and other military hardware.

There is no sure safeguard to prevent this, the study declares. An intelligence source put it more bluntly. "For a few bucks," he told us, "we're willing to give the Soviets the means to destroy us. We're becoming our own executioners."

Government officials, citing the strict secrecy, refused to show us a copy of the study. But sources with access to the original draft have told us of its warnings. They fear it may be softened in order to make the computer deal more palatable.

Control Data executives, in repeated meetings with U.S. officials, have insisted that the Cyber 76 will be used by the Soviets strictly to study the weather. The company kept hammering at Washington to get an export license. Final Commerce Department approval of the deal, according to our sources, was imminent until our inquiries caused some hesitation.

The sale of computers to Russia was pushed originally by ex-Secretary of State Henry A. Kissinger. Eager to promote detente, he overruled military objections to earlier computer sales. Now that the Soviets have already received lesser computers, they will be enraged if the Cyber 76 is withheld from them, say our sources.

One high official source, talking to us in confidence, related how a mysterious Soviet official showed up in the United States a few years ago. The Central Intelligence Agency immediately spotted him as a man with a purpose. He had come here, the CIA warned, to seek strategic U.S. computers.

The State Department, under Kissinger, persuaded the CIA to soften its warning and to pass off the visitor as merely the house guest of Soviet Ambassador Anatoli F. Dobrynin.

This helped lead to computer sales not only to Russia but also to China and Hungary. In return for these sophisticated computers, according to an International Trade Commission report, the Soviets have offered the U.S. "horses, asses and mules" at favored prices. Russia's famous vodka will also be sold to the United States at a tariff of \$1.25 a gallon, instead of the present \$5.

Frustrated U.S. officials complain that the Soviets are getting the best of the deal. They have gained strategic advances from the computers that have already been delivered, these officials assert. But the Cyber 76 would give them a technological boost that no amount of vodka could justify, they say.

The secret study declares categorically that the wonder machine both could and would be misused by the Kremlin for military purposes. Those officials who favor the sale contend, however, that the Soviets will use the Cyber 76 to increase their participation in a world meteorological network. The result, they say, would be better international weather data, larger crops and fewer unexpected natural disasters.

A spokesman for Control Data assured our reporter John Schuber that the computer can be set up in Moscow in a way to prevent any misuse. Any diversion to military use, he said, could be detected immediately. Then Control Data would pull out its technicians and refuse parts to the Soviets, thus crippling the electronic monster.

But other computer experts told our reporter, Tony Capaccio, that Control Data's arguments are spurious. One former Control Data executive, referring to the alleged safeguards, said derisively: "That's a joke." Other experts agreed that the Soviets could train their own technicians, and eventually locate parts from other countries.

Footnote: At the Commerce Department, spokesmen confirmed that the secret study disclosed "some problems" relating to safeguards against the misuse of the Cyber 76. But the draft report, said the spokesman wasn't final.

#### YOUTH EMPLOYMENT

#### HON. CARLIS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, the unemployment of an increasing proportion of our young people is one of the most serious results of the recent recession. Youths between the ages of 16 and 24 currently account for more than 46 percent of the jobless workers in the Nation. If the unemployment rate among white youths of between 16 and 19 years of age is serious enough at 18.6 percent to merit national attention, then the situation is more crucial for black youths of the same age exhibiting an unemployment rate of 37.7 percent. As the Representative of an inner city district in Chicago, I have more than a passing familiarity with the particular problem.

What is to become of our young people,

who, at the threshold of adulthood, are denied the opportunity to assume the responsibilities incumbent upon all of us as free citizens? How can we ask them to accept, if not defend, the economic and political system that we have developed and are continuing to improve upon, if we leave them without a productive role to fill within it? Our responsibilities in this matter begin with the task of making certain that everyone who is capable of working is able to find a productive job. Our further obligation is to see that work that needs doing is not left undone. The challenge, one that seems to have eluded us so far, is to match the unskilled jobseeker with the job that will train him or her in a productive skill.

In attempting this, it is important not to raise false hopes, in the form of temporary expedients that will, like a revolving door, deposit our youth back on the streets, jobless and unskilled, after a seasonal stint on the assembly line. We need jobs that will attack the roots of structural unemployment, programs aimed at youths from poor families in areas of the country where unemployment is a chronic problem. The work we provide must train our young people in skills for which there will be a steady and growing demand in the future.

There are those who claim that Government-mandated jobs are make-work jobs, and that such jobs do not really train the unskilled or accomplish anything of significance for society. Let me assure my colleagues that in supporting the recent passage of the Youth Employment and Training Act of 1977—H.R. 6138—I have considered all of these factors and determined that the jobs proposed in H.R. 6138 have nothing of the character of temporary or make-work jobs, but addressed essential needs in our society that might otherwise remain unmet.

There is indeed, no limit to the unfinished business of restoring our environment and rehabilitating our public facilities. These are precisely the areas that H.R. 6138, through the establishment of a young adult conservation corps and community demonstration projects, promises to develop in training participants in reforestation, wildlife preservation and soil enrichment along with urban development. These new programs will impart skills that will remain relevant to our needs so long as we continued to cherish our urban and rural environments.

For these reasons, I applaud my colleagues for supporting the passage of H.R. 6138 which, although a modest proposal, is a step in a necessary and right direction.

#### CHASTISING SINGLAUB

### HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

#### CHASTISING SINGLAUB WAS HYPOCRITICAL

(By Patrick J. Buchanan)

As commander-in-chief, President Carter was within his authority in firing Maj. Gen. John Singlaub from command of American forces in Korea. The general's publicized statement, "If we withdraw our ground forces (from Korea) on the schedule suggested, it will lead to war," clearly contradicted settled U.S. policy.

Yet the general merits his countrymen's admiration and respect. In risking his career to warn the nation of the consequences of what he believes is dangerous public policy, he has exhibited a moral courage to match the physical bravery that has marked a long military career.

In 1944, as a young lieutenant, John Singlaub was dropped behind the German lines to train French partisans. Transferred to the Far East, he led Chinese guerrillas in raids on Japanese positions along the India-China frontier. During the final days of World War II he was parachuted onto Hainan Island in a daring and successful raid to rescue 400 allied prisoners of war.

He served in Korea; and during Vietnam he led an American unit operating behind enemy lines in Laos. General Westmoreland specifically praised his heroism. His combat decorations include the Croix de Guerre, the Purple Heart, the Bronze Star, the Silver Star.

By expressing concern over the consequences of a U.S. withdrawal, Singlaub was only saying publicly what a majority of American officers are saying privately. He was acting in the tradition of Billy Mitchell and Douglas MacArthur, risking his career, rather than leaving his countrymen ignorant of the potential dangers of present policy.

Those delighted that Singlaub was dismissed might ask themselves how the general should have behaved, confronted with that question by *The Washington Post*. Should he have lied and denied any concern? Should he have hidden behind the guise of an "informed source"? Or should he have spoken his mind and accepted the consequences?

In recent years many of the editorialists most pleased at Singlaub's departure have deplored the absence of public officials willing to stand up and speak out in dissent against administration policy. Had the general denounced the South Korean Government as repressive and unworthy of our support, many of those hailing his departure would be singing hosannas to this "enlightened and courageous" soldier.

What makes this writer particularly unimpressed with Mr. Carter's public humiliation of the general is the spinelessness the President has exhibited in indulging the continuing idiocies and insubordinations of United Nations Ambassador Andrew Young.

Within 24 hours of Singlaub's public dissent, Andy was in Mozambique informing the collective thuggery that rules Black Africa that they had been "betrayed" by the United States. No word of protest from the White House, no order for Young to get on the next plane home. Indeed, that night Andy was photographed by *The Associated Press* jiggerbugging with one of the local belles in downtown Maputo.

President Carter says his U.N. ambassador is fast becoming a "hero to the third world." I do not doubt it, for the road to stardom in the Third World is to dump incessantly upon the United States, which is the specialty of our U.N. ambassador.

If, for a single indiscretion, the President finds it easy to ruin the career of a distinguished military officer, why does he find it impossible to bridle the braying donkey of American diplomacy? Was Singlaub's honest comment more damaging to U.S. policy than the uninterrupted jackassery of Young?

Contrast the record of the two men, and

the treatment accorded them. Singlaub, humiliated and fired, risked his life during three wars in furtherance of this nation's military and foreign policy. And Young, meanwhile, earned his battle stars integrating lunch counters and being hosed down by Dixie fire departments while singing "We Shall Overcome."

#### SYMPOSIUM ON GOVERNMENTAL FINANCIAL MANAGEMENT

### HON. GLADYS NOON SPELLMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mrs. SPELLMAN. Mr. Speaker, I would like to call the attention of my colleagues to a symposium on governmental financial management that promises to be an outstanding forum for professional presentations and discussions here in the Nation's Capital.

The symposium which is being sponsored by the Association of Government Accountants at the Sheraton Park Hotel, Washington, D.C., on June 27, 28, and 29, 1977, is built around the theme "Serving Government More Effectively." The association's 9,000 members in 75 chapters throughout the world look forward to this annual event as the medium to improve the state of their art and thus provide better professional service to Federal, State, and local governments.

The distinguished symposium speakers on the program represent a wide spectrum of affiliations, positions, and disciplines including:

Hon. Bert Lance, Director, Office of Management and Budget.

Hon. Richard M. Harden, Special Assistant to the President.

Hon. Elmer B. Staats, Comptroller General of the United States.

Hon. Jule M. Sugarman, Vice Chairman-nominee, U.S. Civil Service Commission.

Hon. JACK BROOKS, Congressman from Texas.

Hon. Robert D. Ray, Governor of Iowa.

Hon. Kenneth A. Gibson, mayor of Newark, N.J.

Ms. Julia M. Walsh, vice chairman of the board, Ferris Co.

Mr. Frederick Neuman, director, Defense Contract Audit Agency.

Mr. Ellsworth H. Morse, Jr., Assistant Comptroller General of the United States.

Mr. Harvey Kapnick, chairman and chief executive, Arthur Andersen & Co.

Mr. David Mosso, Fiscal Assistant Secretary, Department of the Treasury.

Mr. Theodore C. Barreaux, vice president, American Institute of Certified Public Accountants, Washington Office.

Mr. John J. Doyle, Jr., Peat, Marwick, Mitchell & Co.

Mr. Alan J. Reynolds, Director of Audit and Investigation, Department of Interior.

In addition, the symposium will feature 47 technical workshops involving 155 expert discussion leaders on every significant subject affecting governmental financial management. These work-

shops are recognized as important training media by the U.S. Civil Service Commission and various State boards of accountancy for continuing professional education.

A national awards banquet will conclude the symposium on the night of June 29, 1977, where recognition will be given to those members of the association who have distinguished themselves by outstanding service or accomplishments.

Mr. Speaker, I cannot recommend this symposium too highly for those of our colleagues and their constituents who are interested in improved financial management at all levels of government.

#### WORLD DAY FOR SOLIDARITY WITH SOVIET JEWRY

**HON. JAMES J. BLANCHARD**

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BLANCHARD. Mr. Speaker, next Thursday, June 12, will mark the observance of World Day for Solidarity with Soviet Jewry.

I would like to bring this occasion to the attention of my colleagues. I believe it is especially important to be aware of the plight of Jews in the Soviet Union at this time, since next month the signatories to the Helsinki Accord will meet in Belgrade, Yugoslavia, to review the results of the accord since its signing.

I think it is vital for Members of Congress to be aware that today, despite the Helsinki Accords' guarantee of freedom of religion and despite their reaffirmation of the right to emigrate freely, Jews in the Soviet Union are harassed regularly and continue to be denied permission to emigrate to Israel or the United States.

In May 1976, the Public Group to Promote the Observance of the Helsinki Agreements was formed by leaders of the Soviet Jewish community. Of 11 persons identified as leaders of the group, one has since emigrated. One has been exiled to Siberia, and three have been arrested. In the Soviet Union today, seeking to promote human rights is still an offense which can bring about punishment by the state.

From time to time, in accordance with the language endorsed by the U.S.S.R. in the Helsinki Agreement and in the 1948 Universal Declaration of Human Rights—that "everyone has a right to leave any country, including his own, and to return to his country"—I have written to the Soviet Union and to our own State Department on behalf of Jews seeking to emigrate from Russia.

A recent response which I have received from the State Department graphically illustrates the problem. It says, in part, that Secretary Vance "expressed our interest in the resolution of a large number of cases of Soviet Jews refused exit visas for Israel. A list of several hundred names \* \* \* was submitted to the Soviet Government."

Mr. Speaker, I endorse the human rights initiative which has been undertaken by President Carter, and I hope that the State Department will continue to do all it can on behalf of these people. The treatment of Jews in the Soviet Union remains a blot on the history of that nation—one which, on this coming day of solidarity with Soviet Jewry, we should all pause to remember.

#### DO CONSUMERS REALLY NEED ANOTHER FEDERAL AGENCY?

**HON. JACK EDWARDS**

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. EDWARDS of Alabama. Mr. Speaker, I would like to bring to your attention an article which appeared in the Mobile Press recently concerning the proposed Consumer Advocacy Agency. It is absurd to think that we can create a new Government agency with this broad responsibility and expect at the same time to be able to reduce the cost of Government and the mass of bureaucratic redtape already entangling the Government. I think the following article expresses the problem well:

#### DO CONSUMERS REALLY NEED ANOTHER FEDERAL AGENCY?

Legislation, supported by President Carter, is pending in Congress to create an independent agency with authority to intervene in the affairs of other federal agencies on behalf of consumers and consumer interests.

This measure sounds good on the surface but, in our studied opinion, it is flawed.

R. Heath Larry, chairman of the National Association of Manufacturers, puts the proposed legislation in its proper light:

"With all due respect to the President's proposal for a new consumer protection agency it must be said that the one thing the American consumer needs most is protection from government over-regulation. . . .

"Consumers, as taxpayers, are now paying \$4 billion a year to support the many federal agencies riding herd on business. Business itself, in turn, is spending untold billions more to comply with the thousands of government regulations which come under the heading of 'consumer protection.' These costs eventually must be paid by the consumers themselves.

"Congress will be doing a great service for America by rejecting this latest effort to add to regulatory overkill."

The idea is credited by many to consumer activist Ralph Nader, who sometimes goes into orbit in his attacks on business and industry.

The pending measure has its share of opponents, however. The main argument against it is that it would only add another stifling layer of red tape on top of the multitude of present layers, with consumers footing the bill.

In addition, there are already enough federal laws to protect consumers against almost everything except themselves.

If Congress passes this proposed legislation it will transfer its historic responsibility to exercise oversight of its regulatory bodies and other federal agencies to a single federal administrator.

And the cost of operating the new agency, as expensive as it would be, would be dwarfed by the expensive burden which would be

placed on business in any situation in which the agency chose to intervene. These inevitably translate into higher costs for consumer goods and services.

So who will gain extra protection from the new consumer protection agency? No one that we know of.

Who will be hurt by it? Every taxpayer and consumer in the country.

#### IMPROVING OUR POSTAL SYSTEM

**HON. DAVID W. EVANS**

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. EVANS of Indiana. Mr. Speaker, as with the other Members of this Chamber, I hope that this Congress will give serious attention to modernizing our postal system to make it more effective and efficient in meeting today's increasing needs and demands.

It is clear that we need postal reform, yet for too many years Congress has neglected this important service and has only offered band-aid solutions to some very complicated and perplexing Postal Service problems. The idea of establishing a Commission on Postal Service to study the system and make recommendations on improving it was honorable, but I must say their report and its proposed recommendations greatly concern me and the people of the Sixth Congressional District.

I am appalled at the possible cutting of delivery service from 6 to 5 days and the potential for closing many of our small and rural post offices. It was a pleasure to hear that the Postmaster General has stated his intention not to cut delivery service. The ramifications of such action would be negative and certainly would not be conducive to bettering our mail service nor would it help to reinforce our citizen's trust and confidence in it.

Not only would our residential customers be inconvenienced by delays in delivery, but also our rural areas and its residences would lose a certain identity and would be seriously inconvenienced in receiving and sending mail. Many of our businesses, both large and small, depend on Saturday deliveries to continue their commerce and to provide the services and benefits to their customers. Elimination of Saturday delivery could have serious economic ramifications for many of them. In addition, it has been estimated that approximately 23,000 jobs within the postal system would be lost as a result. The fact is that the elimination of Saturday delivery would save less than 1 cent on the cost of first-class stamps and any substantive cost-savings would not be realized for at least 2 years. For all the problems such action would cause, the price surely does not seem worth it.

Our Postal Service is an intricate part not only of our lifestyles but also of our economic growth and prosperity. I do not believe we can afford as a country to ignore this system or allow it to shrink its services nor shirk its respon-

sibility to the American people. Whether we like it or not, the postal system is currently a Government service. As such, we in Congress should be striving for comprehensive legislation to make it an effective service to our constituents at a reasonable cost.

#### LEGISLATION TO ELIMINATE BLOOD REPLACEMENT FEE

#### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. EDWARDS of California. Mr. Speaker, I am today introducing legislation to eliminate the "blood replacement fee" currently in effect under our medicare program. This burdensome requirement no longer serves any useful purpose for the Nation. My bill will relieve medicare recipients and the medicare program of this onerous and useless burden.

When medicare was first enacted we were under the belief that financial coercion to replace blood was necessary to insure an adequate supply. Therefore, we held the medicare recipient "responsible" for replacing the first 3 pints of blood transfused, either through donation of blood or by paying a replacement fee. The Federal Treasury pays the "replacement fee" beyond the first 3 pints.

Figures from HEW indicate that in 1971 and 1972, 64 percent of the elderly were unable to replace transfused blood and had to come up with the replacement fee penalty out of their limited, fixed incomes. In 1972, 1.2 million units provided to medicare recipients were not replaced. The elderly had to pay some \$13 million and the Government paid \$25 million from the Federal Treasury for blood processing fees for medicare patients.

Are these enormous costs really necessary to insure an adequate supply of blood? It appears not. Where an effort has been made to secure volunteer blood, as in my own Santa Clara County, adequate supplies are available. The Red Cross has never used the nonreplacement penalty and collects some 5 million pints a year. Our Nation's blood policy calls for a volunteer program and questions the propriety of the penalty fee. This bill is one step toward a volunteer blood program.

Irregularities in many nonvolunteer blood programs are focusing attention on this problem. I have recently learned that three Federal agencies are currently taking a look at possible abuses that may be occurring in the program. I am also informed that the California Department of Consumer Affairs has today filed suit against a blood bank which utilizes replacement fees in that State.

Many developed nations have all-volunteer programs. There is every reason to believe that we have sanctioned through this medicare provision, a mechanism which is ineffective in its stated purpose, and financially burdensome to

elderly people. We must move in the direction of a voluntary system by removing this callous burden from our elderly.

#### AMENDMENT TO THE DEPARTMENT OF ENERGY ORGANIZATION ACT

#### HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. CONYERS. Mr. Speaker, it is my intention to introduce three amendments to the Department of Energy Organization Act, H.R. 6804, when it is under consideration by the full House. The amendments are as follows:

A first amendment would eliminate the Economic Regulatory Administration in section 205 of the bill.

A second amendment would eliminate the Federal Energy Regulatory Commission in title IV, and replace it with a National Energy Board.

These amendments would, in combined effect, eliminate the regulatory apparatus within the Department of Energy, and create a new and independent regulatory board, the National Energy Board, which would be comprised of seven members selected to incorporate the full diversity of views on energy prices.

A third amendment would create, within the Department of Energy, a Public Energy Administration, which would, when directed specifically by the President, become the sole legal importer of foreign petroleum and refined products, and further, would implement a new leasing procedure in which the government would retain control over products extracted from Federal lands.

This third amendment is a proposal that would create new competition in both international and domestic petroleum markets. At present, negotiations with OPEC are carried out by an elite of global energy firms, clustered around the Seven Sisters of Oil. These multinational corporations have, in the words of Dr. Schlesinger, "mixed motives" with respect to the price of international crude oil, and in the eyes of more severe critics, little motive to minimize the price of oil. Not only do higher international oil prices protect these firms' massive investments in shale oil, and new coal and natural gas technology, but now that the Carter program ties the price of new oil and gas to the international OPEC price, higher prices in the international market translate directly into higher profits for these corporations. It is essential that we change this institutional setting in which foreign petroleum is purchased. A Government importer would be able to pursue the most competitive price, free of the conflicting objectives a corporate negotiator would bring to bear.

Furthermore, the auctioning of imported petroleum within the United States would give independent refiners and distributors the opportunity to have the same access to crude products as do the majors. By creating a strong group

of independent oil operators, competitive pressure on domestic oil prices would ensue. Thus, a competitive energy sector could be achieved without confiscatory measures of a government bureaucracy over production.

The amendment also suggests a new leasing procedure. In section 302 of the bill, the Secretary of Energy is directed to implement new procedures that would foster competition, establish diligence requirements, and implement alternative bidding procedures for Federal properties. Such a procedure would be that proposed in our amendment; the Government would pay firms that presented sealed, competitive bids with contracts to produce from Federal lands. The products would then be auctioned together with imported products here in the United States. Leasing procedures traditionally employed, in which firms pay to work Federal reserves and then sell those products that they have extracted, have been subject to a wide series of abuses, ranging from underreporting of reserves for the purpose of deceiving the Government over the royalty payment, to the creation of bidding consortiums that prompted antitrust recommendations within the Department of Justice. These abuses would be eliminated, along with the possibility of nonproducing wells such as those that occurred last winter, by our procedure, in which firms bid for the right to manage the Government's reserves and do so with strict specifications as to production scheduling.

My goals in preparing these amendments have been to minimize the creation of a Federal bureaucracy yet at the same time to define a planning role for Government that allows for profitable activity by the private sector. These amendments have found that middle ground.

The text of the amendments follow:

#### AMENDMENT TO H.R. 6804, AS REPORTED, OFFERED BY MR. CONYERS

On page 69, strike out line 6 and all that follows down through line 4 on page 70, and redesignate the following sections in Title II accordingly.

Staff are authorized and directed to make technical and conforming changes as are necessary to incorporate the above amendment into the bill.

#### AMENDMENT TO H.R. 6804, AS REPORTED, OFFERED BY MR. CONYERS

On page 84, strike out line 17 and all that follows down through line 14 on page 90 and insert in lieu thereof the following new title:

#### TITLE IV—NATIONAL ENERGY BOARD

SEC. 401. (a) (1) There is hereby established an independent regulatory board to be known as the National Energy Board (hereinafter referred to in this title as the "Board").

(2) There are hereby transferred to, and vested in the Board (A) all functions and authority of the Federal Power Commission under the Federal Power Act and the Natural Gas Act which are not specifically transferred to, and vested in, the Secretary pursuant to section 301(b) of this Act, (B) all functions transferred to the Secretary by section 301(b) of this Act which relate to establishment of rates and charges under the Federal Power Act and the Natural Gas Act, (C) all functions which may be delegated by the President under the Emergency

Petroleum Allocation Act of 1973, (D) all functions of the Energy Research and Development Administration with respect to uranium enrichment prices under the Energy Reorganization Act, and (E) all other functions transferred by title III of this Act which involve an agency determination required by law to be made on the record after opportunity for an agency hearing.

(3) Notwithstanding section 301(b)(1), the Board shall have the authority to prescribe, issue, make, amend, and rescind rules, regulations, and statements of policy under section 309 of the Federal Power Act and section 16 of the Natural Gas Act.

(b) The Board shall be comprised of seven members appointed by the President, by and with the advice and consent of the Senate. One of the members shall be designated by the President as Chairman. Members shall hold office for a term of four years and may be removed by the President only for inefficiency, neglect of duty, or malfeasance in office. Appointments shall be made with due regard for maximizing the diversity of representation on the Board and for considering the views of recognized interest groups, including, but not limited to, groups involving consumers, environmentalists, labor and management from energy and nonenergy industries, agriculture and different regions of the country. The terms of the members first taking office shall expire (as designated by the President at the time of appointment), two at the end of two years, two at the end of three years, two at the end of four years, and one at the end of five years. Not more than four members of the Board shall be members of the same political party. Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. A member may continue to serve after the expiration of this term until his successor has taken office, except that he may not so continue to serve more than one year after the date on which his term would otherwise expire under this subsection.

(c) (1) The Chairman shall be responsible on behalf of the Board for the executive and administrative operation of the Board, including functions of the Board with respect to (A) the appointment of such hearing examiners as he deems necessary to assist in the performance of the Board's functions and to fix their compensation in accordance with the provisions of title 5, United States Code, except that assignment, removal, and compensation of such hearing examiners shall be in accordance with sections 3105, 3314, 5302, and 7521 of title 5, United States Code, (B) the selection, appointment, and supervision of personnel employed by or assigned to the Board, except that each member of the Board may select and supervise personnel for his personal staff, (C) the distribution of business among personnel and among administrative units of the Board, and (D) the use and expenditure of funds appropriated for Board functions. The Secretary shall provide to the Board such support and facilities as the Board may need to carry out its functions.

(2) The hearing examiners appointed pursuant to this section shall be subject to the laws governing employees in the classified civil service, except that appointments shall be made without regard to section 5108 of title 5, United States Code.

(d) In each annual authorization and appropriation request for the Board under this Act, the Chairman shall include a statement showing (1) the amount requested by the Board in its budgetary presentation to the Office of Management and Budget and (2) an assessment of the budgetary needs of the Board. Whenever the Board submits any legislative recommendation or testimony, or comments on legislation, to the Secretary, the President, or the Office of Management

and Budget, it shall concurrently transmit a copy thereof to the appropriate committees of Congress.

(e) A decision of the Board shall be a final agency action within the meaning of section 704 of title 5, United States Code, with respect to matters within the Board's jurisdiction.

(f) The Chairman of the Board may from time to time designate any other member of the Board as Acting Chairman to act in the place and stead of the Chairman during his absence. The Chairman (or the Acting Chairman in the absence of the Chairman) shall preside at all sessions of the Board and a quorum for the transaction of business shall consist of at least four members present. Each member of the Board, including the Chairman, shall have one vote. Actions of the Board shall be determined by a majority vote of the members present. The Board shall have an official seal which shall be judicially noticed.

(g) The Board is authorized to establish such procedural and administrative rules as are necessary to the exercise of its functions. Until changed by the Board, the rules of the Federal Power Commission shall continue in effect.

(h) In carrying out all its functions, the Board shall have the powers authorized by the Federal Power Act and the Natural Gas Act to hold hearings, sign and issue subpoenas, administer oaths, examine witnesses, and receive evidence at any place in the United States it may designate. The Board may, by one or more of its members or by such agents as it may designate, conduct any hearing or other inquiry necessary or appropriate to its functions.

Sec. 402. (a) No person in the employ of, or holding any official relation to, any person, firm, association, or corporation engaged in the production, generation, transmission, distribution, or sale of electric power, petroleum, petroleum products, natural gas, coal, nuclear material, synthetic fuels, or energy from renewable resources, wastes, or geothermal steam, or in energy research or development, or owning stock or bonds thereof, or who has a pecuniary interest therein, shall enter upon the duties of, or hold the office of, Board member. Members shall not engage in any other business, vocation, or employment while members of the Board.

Sec. 403. The principal office of the Board shall be in or near the District of Columbia, where its general session shall be held; but the Board may sit anywhere in the United States.

Sec. 404. Subject to applicable provisions of law, officers of all Departments of the Government and all Federal agencies shall cooperate with the Board in providing, upon request, such information as it may require.

Sec. 405. Nothing in this title shall be construed in any way to limit the functions of the Secretary relating to activities within the jurisdiction of the Secretary, including any shared with the Board.

Sec. 406. The Secretary may as of right intervene or otherwise participate in any adjudicatory proceeding before the Board. The Secretary shall comply with rules of procedure of general applicability governing the timing of intervention or participation in such proceeding or activity and, upon intervening or participating therein, shall comply with rules of procedure of general applicability governing the conduct thereof. The intervention or participation of the Secretary in any proceeding or activity shall not affect the obligation of the Board to assure procedural fairness to all participants.

Sec. 407. For the purpose of section 552b of title 5, United States Code, the Board shall be deemed to be an agency.

Sec. 408. Section 4 of the Emergency Petroleum Allocation Act of 1973 is amended

by adding at the end thereof the following new subsection:

"(h) (1) The National Energy Board, upon consultation with the Secretary, is authorized to promulgate a rule which shall be deemed a part of the regulation issued under subsection (a) and which shall provide, consistent with the objectives of subsection (b), for the establishment of a program for the rationing and ordering of priorities among classes of end-users of crude oil, residual fuel oil, or any refined petroleum product, and for the assignment to end-users of such products of rights, and evidence of such rights, entitling them to obtain such products in precedence to other classes of end-users not similarly entitled.

"(2) The rule under paragraph (1) of this subsection shall take effect only if the National Energy Board, upon consultation with the Secretary, finds that (A) national or regional energy shortage conditions exist which are of such severity or scope as to require the exercise of the end-use rationing authority, or (B) available petroleum products are or are likely to be no more than sixteen million barrels a day.

"(3) Recognizing that gasoline usage may vary according to characteristics of individual regions of the country, in establishing standards of end-use gasoline rationing under paragraph (1) of this title, the National Energy Board, upon consultation with the Secretary, shall designate individual regions of the country as (A) rural, (B) suburban, or (C) urban, on the basis of population density and establish variable gasoline allocation criteria accordingly.

"(4) The National Energy Board, upon consultation with the Secretary, shall provide for procedures by which any end-user of crude oil, residual fuel oil or refined petroleum products for which priorities and entitlements are established under paragraph (1) of this subsection may petition for review and reclassification or modification of any determination made under such paragraph with respect to his rationing priority or entitlement. Such procedures may include procedures with respect to such local boards as may be authorized to carry out functions under this subsection pursuant to section 120 of the Standby Energy Emergency Authorities Act.

"(5) No rule or order under this section may impose any tax or user fee, or provide for a credit or deduction in computing any tax.

"(6) Nothing in this act may be construed to prohibit the legal sale of gasoline coupon rations by holders of such coupons.

"(7) (a) Action taken under authority of this Act, the Emergency Petroleum Allocation Act of 1973, or other Federal law resulting in the allocation of petroleum products and electrical energy among classes of users or resulting in restrictions on use of petroleum products and electric energy, shall be equitable, shall not be arbitrary or capricious, and shall not unreasonably discriminate among classes of users, unless the Administrator determines that such a policy would be inconsistent with the purposes of this Act, or other Federal laws and publishes his findings in the Federal Register. Allocations shall contain provisions designed to foster reciprocal and nondiscriminatory treatment by foreign countries of United States citizens engaged in commerce.

"(b) To the maximum extent practicable, any restriction on the use of energy shall be designed to be carried out in such manner so as to be fair and to create a reasonable distribution of the burden of such restriction on all sectors of the economy without imposing an unreasonably disproportionate share of such burden on any specific industry, business, or commercial enterprise, or on any individual segment thereof and shall give due consideration to the needs of commercial, retail, and service establishments

whose function is to supply goods and services of an essential nature."

Staff are authorized and directed to make such technical and conforming changes as are necessary to incorporate the above amendment into the bill.

AMENDMENT TO H.R. 6804, AS REPORTED  
OFFERED BY MR. CONYERS

On page 90, after line 20, insert the following new title:

TITLE V—PUBLIC ENERGY  
ADMINISTRATION

PART A—DEFINITIONS, ESTABLISHMENT, FUNCTIONS, AND AUTHORITY

SEC. 501. For purposes of this title, the term—

(1) "Administration" means the Public Energy Administration.

(2) "United States" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, and the United States Virgin Islands.

(3) "Crude oil" includes natural gas, liquefied natural gas, and natural gasoline.

(4) "Refined petroleum products" includes all products refined or manufactured from crude oil with the exception of petrochemicals and manufactured products containing petrochemicals.

(5) "Qualified buyer" means a citizen of the United States, or a domestic corporation, or any department, agency, or other instrumentality of the United States or any State.

(6) "Person" includes any individual, corporation, governmental agency, department, or instrumentality, or other entity.

SEC. 502. (a) There is established within the Department of Energy the Public Energy Administration (hereinafter referred to in this title as the "Administration"). The Administration shall be headed by an Administrator who shall be appointed by the President, by and with the advice and consent of the Senate. Under the supervision and direction of the Secretary, the Administrator shall be responsible for the exercise of all powers and the discharge of all duties of the Administration, and shall have authority and control of all personnel and activities of the Administration.

(b) There shall be in the Administration a Deputy Administrator who shall be appointed, by and with the advice and consent of the Senate, and who shall perform such duties and exercise such powers as the Administrator may prescribe. The Deputy Administrator shall act as, and exercise the powers of, the Administrator during his absence or disability.

SEC. 503. When authorized by the President, the Administration shall, by regulation, provide that no person shall import into the United States any crude oil or refined petroleum product unless:

(1) said crude oil or refined petroleum products have been purchased from the Administration, and a copy of the bill of sale verifying such purchase is submitted to the customs officer at the point or port of entry,

(2) said refined petroleum product is manufactured from crude oil purchased from the Administration, and an affidavit attesting to such manufacture, together with a copy of the bill of sale verifying the original purchase of crude oil, is submitted to the customs officer at the point or port of entry, or

(3) the person importing such oil is in possession of a valid import permit, issued by the Administration pursuant to section 504(h) and permitting the importation of the type, grade, and quantity of crude oil or refined petroleum product being imported and submits said import permit to the customs officer at the point or port of entry.

SEC. 504. (a) When authorized by the President, the Administration shall, by regula-

tion, provide that the Administration shall act as the exclusive agent of the United States in—

(1) purchasing crude oil produced outside the United States for importation into the United States,

(2) purchasing crude oil produced outside the United States for sale to refiners outside the United States pursuant to subsection (g) of this section, and

(3) purchasing refined petroleum products outside the United States for importation into the United States.

(b) All crude oil and refined petroleum products purchased by the Administration pursuant to subsection (a) of this section shall be sold to qualified buyers free on board the point of purchase. The Administration shall not engage in the business of producing, transporting, or refining crude oil or refined petroleum products on its own account or on the account of others.

(c) The Administration shall endeavor to buy and sell pursuant to this section without profit or loss. It may, however, in the case of any individual transaction, sell crude oil or refined petroleum products at a price above or below the cost of same if, in the judgment of the Administrator, such sales may result in progress toward a lower price for oil sold in international commerce.

(d) The Administration may buy crude oil and refined petroleum products pursuant to this section through direct purchase, through barter, through the acceptance of sealed offers of sale, or through any other means which, in the judgment of the Administrator will enable the Administration to secure these commodities at the lowest real cost.

(e) The terms of any contract or agreement entered into by the Administration to purchase crude oil or refined petroleum products pursuant to this section shall, to the maximum extent practicable, be kept secret by the Administration, its officers and employees.

(f) (1) The Administrator shall by the issuance of regulations, determine the system by which sales of crude oil and refined petroleum products purchased by the Administration pursuant to this section shall be made to qualified buyers.

(2) No regulation shall be promulgated under authority of this subsection without full public notice and hearing on same prior to its promulgation.

(3) Any regulation promulgated under authority of this subsection shall (A) encourage competition within the domestic petroleum industry, (B) allocate available supplies of crude oil and refined petroleum products equitably on a geographical basis, and (C) insure the maximum utilization of petroleum refining facilities located within the United States.

(g) The Administration shall sell crude oil and refined petroleum products pursuant to this section exclusively for importation into the United States, except that the Administration may sell crude oil to qualified buyers intending to refine it outside the United States for future importation into the United States in the form of refined petroleum products, if the following conditions are met:

(1) The refinery in which the crude oil in question is to be run is owned directly by a qualified buyer, and not owned through a foreign subsidiary or affiliate of same;

(2) The qualified buyer has contracted with the Administration to import into the United States all refined petroleum products manufactured by it from crude oil sold to it by the Administration; and

(3) The Administration has taken care, pursuant to subsection (f) (3) of this section, to insure the maximum utilization of petroleum refining facilities located within the United States.

(h) The Administration may, in an emergency as determined by the President, permit the importation into the United States of crude oil and refined petroleum products not purchased from it by qualified buyers. When the Administrator determines that such action under this subsection is in the national interest, permits to import specified quantities, types, and grades of crude oil and refined petroleum products shall be auctioned by the Administration under a system of sealed bids. All such import permits issued by the Administration shall be fully transferable to persons other than the original purchaser.

SEC. 505. Any procedure provided for in an amendment to a regulation made by the President pursuant to section 13 of the Emergency Petroleum Allocation Act of 1973 shall provide that the import and purchase of any product which is the subject of such amendment shall be carried out by the Administration in accordance with sections 503 and 504.

SEC. 506. (a) In the performance of its functions the Administration is authorized:

(1) to make, promulgate, issue, rescind, and amend rules and regulations governing the manner of its operation and the exercise of powers vested in it by those laws;

(2) to appoint and fix compensation of such officers and employees as may be necessary to carry out such functions, and, to the extent that it determines such action necessary to the discharge of its responsibilities, to appoint, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, scientific, engineering, and administrative personnel and compensate such personnel without regard to the provision of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, but in no event in excess of the maximum rate of GS-18 of the General Schedule under section 5332 of title 5, United States Code;

(3) to contract for the purchase of crude oil and refined petroleum products from any private individual, foreign state, or foreign or domestic corporation;

(4) to contract for the purchase of manufactured goods, commodities, and technical and managerial expertise within the United States for use in barter arrangements with seller of crude oil or refined petroleum products;

(5) without regard to section 3648 of the Revised Statutes (31 U.S.C. 529), to enter into and perform such contracts, leases, cooperative agreements and other transactions and to make such grants as may be necessary in the conduct of its work and on such terms as it may deem appropriate, with any agency or instrumentality of the United States, or with any State, territory, or possession of the United States, or with any political subdivision thereof, or with any other person; and

(6) to sue and be sued in its own name in any court of the United States.

(b) All contracts and other obligations entered into by the Administration shall be guaranteed by the full faith and credit of the United States.

SEC. 507. There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this title.

SEC. 508. (a) The Administration shall submit to the Secretary for transmittal to the Congress in January of each year a report which shall include a comprehensive description of the activities of the Administration during the prior calendar year.

(b) Any report made under this section shall contain such recommendations and additional legislation as the Administrator, the Secretary, or the President may consider necessary or desirable to accomplish the purposes of this Act.

SEC. 509. Chapter 93 of title 18, United

States Code, is amended by adding at the end the following new section:

"§ 1924. Disclosure of information concerning crude oil or refined petroleum products and speculation thereon

"Whoever, being an officer, employee or person acting for or on behalf of the United States or any department or agency thereof, and having by virtue of his office, employment, or position, become possessed of information which might influence or affect the market value of crude oil or refined petroleum products, which information is by law or by the rules of such department or agency required to be withheld from publication until a fixed time, willfully imparts, directly or indirectly, such information, or any part thereof, to any person not entitled under the law or the rules of the department or agency to receive the same; or, before such information is made public through regular official channels, directly or indirectly speculates in any such product by buying or selling the same in any quantity; shall be fined not more than \$10,000 or imprisoned not more than ten years, or both.

"No person shall be deemed guilty of a violation of any such rules, unless prior to such alleged violation he shall have had actual knowledge thereof."

#### PART B—DOMESTIC EXPLORATION AND EXTRACTION

Sec. 511. (a) When authorized by the President, the Public Energy Administration—

(1) shall have exclusive authority to contract for—

(A) the exploration of Federal lands and waters, and

(B) the construction and management of extractive facilities (including any mine, rig, well, platform, or in situ excavation) on such lands and waters,

for energy-related purposes on the basis of sealed bids submitted to the Administrator, except that no such contract for management of extraction facilities which has a term of more than five years may be entered into by the Administration.

(b) The Administration may not, notwithstanding any other provision of law, enter into a lease, contract, or other transaction which divests the United States of its ownership or any other interest in or control over extracted crude oil or other energy products, including, but not limited to, coal, uranium, and shale oil, or reserves of any of the foregoing.

(c) The Administration may not, notwithstanding any other provision of law, accept any consideration (including any royalty, payment, license, or fee) on behalf of the United States with respect to any contract entered into pursuant to paragraph (1).

(d) The Administration shall sell all energy products extracted under its authority from Federal lands and waters in the manner prescribed in part A (relating to importation of crude oil and refined petroleum products).

And redesignate succeeding titles, sections, and references thereto accordingly.

#### SOUTH KOREA NEEDS U.S. TROOPS

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. McDONALD. Mr. Speaker, in all the recent furor over the statement by General Singlaub relative to the possibility of renewed war in Korea following the scheduled withdrawal of American

forces, several cogent factors appear to have been overlooked. First and foremost the effect on Japan's security and United States-Japanese relations have been largely overlooked. Japan could well choose to seek further accommodations with the Asian Communist powers rather than bear the financial burden of more substantial rearmament in the face of our retreat. In either case, the choice will be painful.

Second, both Japan and the United States have a large economic stake in Korea and if the climate generated by an American withdrawal results in a lack of confidence the South Korean economy could suffer seriously. Indirectly, our economy would suffer also.

These and other factors such as the effect on Taiwan and other friendly Asian nations will be considerable, and therefore, I commend to the attention of my colleagues the editorial by David Rees, which appeared in the London Daily Telegraph of May 10, 1977. The editorial follows:

#### SOUTH KOREA NEEDS U.S. TROOPS

(By David Rees)

Mr. Carter's pledge last December that he expected to conduct a "gradual and slow" withdrawal of the American troops in South Korea has opened a Pandora's box of strategic and political problems in north-east Asia.

In January, Vice-President Walter Mondale arrived in Tokyo to seek Japan's approval for the new policy. After talks with the new Japanese Premier, Takeo Fukuda, an *anodyne* communiqué confirmed the projected troop withdrawal from the Republic of Korea. Mr. Fukuda stated that the matter was a bilateral one between Washington and Seoul, a statement that was probably made for protocol purposes.

However, following these talks in Tokyo, Mr. Mondale emphasised that the withdrawal of troops would be carefully phased, that it would be implemented in consultation with Seoul and Tokyo, and that American air units would remain in South Korea. Altogether about 33,000 troops are based in South Korea, mostly in the American 2nd Infantry Division. There are also about 8,000 Air Force personnel from the 314th Air Division, with its headquarters at Osan, about 40 miles south of Seoul. Last August, following the axe-slaying of two American officers by North Korean guards at Panmunjom, the United States mounted a powerful demonstration of its ability to send air reinforcements to South Korea. Phantom jets were flown up from Okinawa, B-52s arrived from Guam, and even F-111s were sent from the United States.

It was an impressive show of strength. But as everyone in South Korea and Japan knows, it is the presence of troops that provides the real American commitment to South Korea. It is these troops that underwrite the mutual security treaty signed between the two countries in 1953. So whatever the mellifluous phrases used by Mr. Mondale in Tokyo, the retention of the ground troops in South Korea can no longer be taken for granted. The Mondale mission was thus the beginning, and not the end, of mounting apprehension in Japan and South Korea over America's real intentions in northeast Asia.

At the centre of the heightened concern is a new awareness of Korea's strategic situation. The security interests of the world's four largest countries converge on this small, heavily armed peninsula. Well over a million armed men stand on either side of the demilitarised zone (DMZ) which divides the two Koreas.

Tension remains high in the peninsula be-

cause the real source of anxiety is the self-proclaimed ambition of Kim Il Sung, the megalomaniac ruler of North Korea, to impose Communism on the South. But since the 1953 Korean armistice, an effective balance of power has existed in the region due to the United States presence in South Korea. The preservation of this stability over a quarter of a century has materially contributed to the rise of the mighty Japanese economy. At the same time, the American guarantee, combined with large-scale investment, has helped South Korea to embark on its own economic miracle.

Now this balance of power is placed in quite gratuitous jeopardy by the new troop withdrawal policy. For in both Seoul and Tokyo it is well remembered that American troops have been withdrawn once before from South Korea, with disastrous results. This happened during 1949, following the establishment of the Republic of Korea the previous year. In January 1950, Secretary of State Dean Acheson specifically excluded South Korea from the American "defensive perimeter" in the West Pacific.

Then, as now, Kim Il Sung was eager to conquer the South. Five months after Acheson's speech, the Communists struck over the 38th Parallel, the United States and the United Nations intervened and only after three years' fighting was the *status quo* restored. The lesson is that any change in the carefully-poised Korean balance of power could result in new aggression from the North.

#### INVASION "TRIPWIRE"

It is not only the presence of American troops in South Korea that is important. Their very disposition is significant as a "tripwire" against renewed aggression. The U.S. 2nd Infantry Division, guards the western extremity of the DMZ. This straddles the primary invasion route towards Seoul.

Here only 30 miles separates the South Korean capital, with its seven million inhabitants, from the DMZ, north of the Imjin. Seoul is also within range of North Korean Frog surface-to-surface missiles based near Kaesong and Kumsong. So there is a profound awareness in South Korea of the potential vulnerability of this sector.

Successive defence lines extend in this sector from Munsan into the suburbs of Seoul. But South Koreans remember that Communist tanks advanced swiftly along this route to capture Seoul in June, 1950. The following year, the Chinese Communist host moved southwards through these same hills, only to have its spearhead blunted by the gallant Glosters at Solma-ri.

All the arguments are well understood in Tokyo, where South Korea's security is considered inseparable from that of Japan's. Barely a hundred miles separates the two countries across the Tsushima straits. Even before Mr. Mondale's Tokyo visit, the Japanese Foreign Ministry had announced a significant recasting of the country's defence plans. Because of the Carter policy over Korea, contingency planning for the Japanese Self-Defence Forces now envisages the transfer of Army units away from Hokkaido and the north to Japan's western coast. Another factor in Japan's strong reaction to Mr. Carter's plan is the future of the country's £2,000 million investment in South Korea, now Japan's largest market in Asia.

The Japanese possess considerable leverage with the new American administration. Mr. Carter needs the support of Japan in his world economic summitry. Another very strong card held by the Japanese is the probability that American troop withdrawal from Korea would almost certainly result in some form of Japanese rearmament, including the development of nuclear capability. Japanese defence spending is minimal at present, yet any decisive rearmament would shatter the tacit, *de facto* alliance between Japan,

China, and the United States. American influence in north-east Asia would contract. Only the Russians would benefit.

The South Korean regime has recently attracted much criticism in the West. Yet, so carefully poised is the military situation along the DMZ that the majority of South Koreans, including the legal parliamentary opposition, accepts the need for extraordinary internal security measures. Even the jailed dissident leader, Kim Dae Jung, has declared his opposition to the troop cuts, as this might encourage Kim Il Sung to invade the South.

Finally, perhaps, it should be noted that Korea was unique in being colonized by another Asian Power. The liberation from Imperial Japan in 1945 thus encouraged a flood of sentiment towards the West that still endures. Perhaps the gravest aspect of troop cuts would be the alienating, demoralizing effect on a brave and loyal ally of the West. In an uncertain world, where the balance of forces continues to tilt against the West, this would surely be the most unforgiving folly of all.

### LET'S KEEP COOL AND SEE HOW BEGIN DOES IN TOP SPOT

**HON. EDWARD J. DERWINSKI**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. DERWINSKI. Mr. Speaker, I believe it would be a practical recommendation for both administration spokesmen and Members of Congress to give the new Israel Government a chance to organize their administration.

An article in the Chicago Tribune of May 27 by Nick Thimmesch, comments on the recent political developments in Israel and the reaction in the United States to these election results:

LET'S KEEP COOL AND SEE HOW BEGIN DOES IN THE TOP SPOT

(By Nick Thimmesch)

WASHINGTON.—One reaction here to the extraordinary election results in Israel was a feeling of extreme concern, especially over whether there still remained a possibility of a Middle East settlement this year, Jimmy Carter style. One would have thought that the peace dove had flown the coop after Israel's "super hawk," Menachem Begin, had taken over.

The defeat of Israel's Labor Party, not exactly a habitat for doves, and the victory of Begin's Likud bloc could understandably cause professional worrywarts here to wrinkle their brows anew. But it's always best to see just what kind of government will be formed, and how all the parties in the Middle East drama ultimately react.

Begin is regarded by most Palestinians as a "war criminal," not a statesman. In the late '40s, Begin, as founder and leader of the Irgun guerrillas, got into bloody escapades.

His group shot and killed British troops and Arabs, pulled reprisal raids, and became known to Zionists as "patriots" and to the other side as "terrorists."

To this day, Palestinian terrorists cite the death-dealing Irgun and Begin as compelling reasons to fight back in kind.

But Israel's new prime minister isn't likely to be an Attila the Hun, looking for Arabs to kill. Begin does have a strong sense of Jewish identity, has been a Zionist since youth, and is deeply scarred by memories of his father's execution by the Nazis. He is a tough-minded guy in a tough nation, and evidently a col-

lection of nonestablishment, "forgotten" Israelis felt it was time for his kind of spice.

Begin says that he will invite Arab leaders to sit down and talk over what he says Israel is striving for, "peace."

But he won't say Israel has "occupied territories." He invokes biblical history to call them "liberated territories," and that characterization could be trouble.

Several Arab governments have put considerable pressure on President Carter and his administration for an authentic peace effort this year. Always, the Arab leaders insist that it will take American pressure on its friend, Israel, to achieve this peace.

The Arab drive and the dictum that the United States must pressure Israel irk the Israelis. They believe a solid peace will come only when they engage in direct negotiations with the Arab states, and when there is no outside imposition of peace by powers like the U.S. and the Soviet Union.

Moreover, the Israelis aren't exactly enchanted with the way Carter has conducted himself on the Middle East situation. They question his single-minded determination to make 1977 the magic year for peace.

Nor do they like the way Carter, in their view, wavers on language. One day he supported "defensible borders," the code term which reassures Israelis, and the next day he took it back by describing that phrase as "just semantics." Finally, Carter's casual remarks about a homeland for Palestinians, some Israelis believe, made Israeli voters anxious and less confident in the ruling Labor Party. In effect, they turned to a George Wallace for security in this election.

The realities seem to be these: There is unrest in Israel over its external affairs and its security. Thus, the "Ins" are out. There is a moderate tone in the pronouncements of a growing number of Arab leaders, and there is good reason for the Saudis, for example, to want a quick peace settlement.

So, as usual, the Middle East situation is clouded. What a pity that the striving Arab nations and besieged Israel can't make peace and together build a prosperous Middle East.

In the meantime, though, I think that we should give Israel's next prime minister the opportunity to show that the reputation he built years ago doesn't apply now. At 63, and in command of a nation which needs diplomatic skill as much as it needs raids on neighboring villages, he is in a far different role than the violent Irgun days.

Let Prime Minister Begin begin.

### THE FEDERAL THREAT TO ACADEMIC FREEDOM

**HON. WILLIAM L. ARMSTRONG**

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. ARMSTRONG. Mr. Speaker, under the guise of aiding higher education, the Federal Government is beginning to exert an ominous degree of influence over the Nation's colleges and universities.

Prominent scholars and administrators warn that Federal programs are subtly, and in some instances not so subtly, interfering with academic freedom. If they are right, and I am convinced they are, this is a problem of utmost concern to every thoughtful person.

This issue is brought into sharp focus by a thought-provoking article published recently by Christianity Today. In the

November 5, 1976, issue, Dr. Dennis F. Kinlaw, president of Asbury College of Wilmore, Ky., forcefully and persuasively calls our attention to this threat against academic freedom and religious liberty which is inherent in Federal involvement on campus. I commend this worthwhile article to the attention of my colleagues:

### OF EQUAL OPPORTUNITY AND OTHER BUREAUCRATIC INTRUSIONS

(By Dennis F. Kinlaw)

A revolution has taken place in American life and thought. Few have taken note of it, and even those who have seem unaware how radical the change has been and how important the long-range implications are for us all. The revolution is in the relation of the government to higher education.

One great strength of the American way has been its careful separation of powers. We have just gone through a traumatic reaffirmation of the integrity of the legislative and judicial branches in the face of pressure from the executive branch. In another balance of power we have historically declared that the family, the church, the school, and the press are to be free from governmental control. Recent Supreme Court decisions have reaffirmed the separation of church and state and the freedom of the press, but a vast change has occurred in relation to the school.

As late as the 1930s the federal government had little or no control over higher education. Laws such as those providing for social security, workmen's compensation, and unemployment insurance, binding upon almost every other sector of society, specifically exempted educational institutions.

Just a little over two decades ago the Commission on Financing Higher Education declared that the strength of higher education was in its freedom and that this freedom "must be protected at all costs." It predicted that federal financing would bring federal controls that would be destructive to originality and diversity and would finally produce uniformity, mediocrity, and complacency. But in 1952 this was only a prediction.

Independence characterized American higher education from its start. When Harvard College was founded in 1636, the question was raised as to whether it could grant a degree. In England at that time, Oxford and Cambridge had royal charters to grant degrees and thus had a monopoly on higher education. With their religious tests for admission they gave to the Anglican church a favored position that guaranteed both a political and a religious elite. In 1642 when President Henry Dunster and his colleagues assumed for Harvard the right to grant degrees, they assumed a right reserved in England only for those institutions with special royal favor. Less than a century later Yale College followed suit. The result was that when the Revolutionary War broke out, nine institutions in the young republic were granting degrees that only Oxford and Cambridge could give in England. The groundwork was laid for equal educational opportunity for all, and that without governmental involvement. The result has been an educational system unique among the nations of the world.

Despite the urging of many, the U.S. government has never established a national university. It has entered the higher educational domain only with its service academies like West Point and Annapolis, though even here the accreditation of the academic programs has never been done by the government. The value and acceptability of the work in these national academies is determined by regional accrediting agencies in the private sector.

We have benefited from this "arm's length"

relationship. President Derek Bok of Harvard in his most recent presidential report was able to say without fear of contradiction:

"In an era of universal dissatisfaction, it is well to begin by pointing out that our system of higher education, for all its faults, has emerged as the best in the world in the eyes of almost every qualified observer. In terms of the quality of our research, the eminence of our leading universities, the degree of access afforded to all groups and income strata, and the responsiveness of the system to widely varying student needs, higher education in this country has no equal. Pre-eminence of this kind is a precious asset. It is a status that cannot be claimed for the quality of our government service, the achievements of primary and secondary education, the performance of our labor unions or the record of many of our older institutions" (*The President's Report*, Harvard University, 1974-75, p. 5).

The values of this independent educational system to our country have been incalculable. Persons educated in institutions not controlled by the government were able to develop their minds and critical faculties freely and bring them to bear fearlessly upon our national problems. What a resource!

Unquestionably the freedom of Americans to organize religious colleges that grant accredited degrees (a privilege almost unknown outside the United States) has been a major factor in the strength of the religious element of American life. No religious group was by governmental decree kept on the margin of American life. The center was open to all.

But the careful respect by the government for the independence of the educational world is long gone. Non-involvement has changed to intrusion, respect to financial and regulatory control. The extent is frightening.

President Bok reports that compliance with federal regulations in 1974-75 at Harvard consumed over 60,000 hours of faculty time. President Willis Weatherford of Berea College says that one-fourth of his time this past year has been spent on governmental matters. Bok estimates that the cost to Harvard in the same year was between \$4.6 million and \$8.3 million. The American Council on Education reported in 1975 that the equivalent of 5 to 18 per cent of tuition revenues was spent on the implementation of federally required social programs. *Change* magazine estimates that the cost of such programs to higher educational institutions last year equaled the total of all voluntary giving to such institutions, just over \$2 billion. So we run our development programs, not to sustain or strengthen our educational program, but to appease the government so that we can stay in business.

Nor is the cost in dollars and time alone. In most meetings of educational organizations today, any creative discussion of education is at a disadvantage in competing for a place on the agenda with the problems of governmental regulations. Energies that should go into education are spent elsewhere. The 1952 warning of the Commission on Financing Higher Education that heavy federal involvement would produce mediocrity and uniformity will soon be fulfilled simply by pre-emption. Time, energies, and resources necessary for first-rate education will have been spent on compliance.

The problem now is more than one of intrusion. It is rapidly becoming one of control. Federal regulations now determine decisions in areas once considered vital to academic integrity. Decisions on admission, selection of faculty, curriculum, and expenditure of institutional funds that could once be made with eyes wholly on the quality of the educational process must now be made with one eye on a multitude of federal regulations. Many decisions once made by school administrators are now being made by the decrees of bureaucrats in Washington.

Someone may say that the schools deserve their fate because they were foolish enough to accept federal funds. A number of administrators felt that with federal money would come controls, and so they courageously resisted the urge to enjoy the benefits of government aid. It is instructive to see how they have fared. One regulation from the Department of Health, Education, and Welfare on July 21, 1975, simply redefined the term "recipient" of federal financial assistance. Title IX of the Education Amendments of 1972 declared any institution to which "federal financial assistance was extended directly or through another recipient" (italics mine) to be officially and legally a recipient of federal aid and thus bound by all the governmental regulations that control such recipients. To have one veteran attending on the G.I. bill puts the institution in the "recipient" category. No institution is now exempt. President Kingman Brewster of Yale suggested that the government's philosophy is, "Now that I have bought the button, I have a right to design the coat."

How did this involvement become so deep so fast? It was not done without reasons, even good reasons. The Second World War, Sputnik, and the post-war social problems made all America aware that scientific discovery and new knowledge were essential to national security and well-being. The best place to get these things was in the colleges and universities. Their resources were not substantial, and so the government offered assistance. With assistance, though, goes accountability, and with accountability, controls. Then came the quickened social conscience of the fifties and sixties. The government assumed responsibility for guaranteeing social justice, equal opportunity, and consumer protection. When the passage of laws did not seem to be enough, other means were sought. "Reception" of federal monies became the key. Executive orders and bureaucratic regulations followed that produced the maze in which we are now trapped.

All this happened in a period of great difficulty for the colleges and universities. They were all struggling with inflation, recession, and declining enrollments. Private colleges were unsure they could survive, and many pled for help from Washington. When survival and integrity are the options, integrity finds itself upstaged.

In a society where great social programs like those adopted within the last forty years involve the great majority of our citizens, the federal dollar is almost omnipresent. The young share in educational-assistance programs and the old in social security. Every tax-exempt organization stands in a federally protected position. Reception of benefits from a federal program became the key to getting near universal compliance with the federal strategies for achieving social justice, equal opportunity, and consumer protection. Executive orders and bureaucratic regulations followed that now are covering us all.

But the cause is good. To object to fight virtues more noble than motherhood and love of country. Should we not comply joyously?

Some observations are in order here. First, there is a difference between law and regulations Congress passed a law against discrimination on the basis of sex. Thirty-seven words of law were turned by HEW into eighteen triple column pages of fine print. When legislators who passed the law learned of the contents of the regulation, many of them insisted that they had not intended this when they passed the law. The regulation carries the same weight as law. Yet none of these rules and regulations has ever been voted upon directly by the people who represent the electorate. And some suggest that it would be an intrusion of the legislative into the executive domain for Congress to get very concerned about this. Anonymous writers of regulations beyond the reach of the people,

what some call "the fourth branch of government," are now determining the character of much of American life.

Second, our government is now becoming the judge of matters of deep religious import. Some areas intended by the writers of the Constitution to be kept inviolate from governmental intrusion are now under federal regulation. Consider four areas of concern under Title IX:

**Marital status.** In the Christian religion, marriage is held to be an enduring, God-ordained relationship. Every Christian institution wants to put examples of marital success and stability before its young. Yet today a Christian college "shall not make pre-employment inquiry as to the marital status of an applicant for employment." Thus reads Section 86.60(a) of Title IX of the Education Amendments of 1972.

**Pregnancy.** In the Christian perspective, the conception of a child within a proper marriage is a reason for joy; outside marriage it is tragic and wrong. Yet according to current federal regulations, pregnancy outside marriage is to be considered a "temporary disability." A Christian college is now precluded from dismissing or disciplining a teacher or administrator for an extramarital pregnancy, and from refusing to hire an applicant on these grounds. The regulation, Title IX, Section 86.57(b), hold that we "shall not discriminate against or exclude from employment any employee or applicant for employment on the basis of pregnancy, childbirth, false pregnancy, termination of pregnancy, or recovery therefrom."

**Abortion.** To the Christian, the sacredness of human life has the binding effect of law. The termination by one person of another's life is a religious question. Yet we are not to discriminate against an employee or applicant for "termination of pregnancy." It is now wrong to treat a person, single or married, who has an abortion differently from one who develops the fetus.

**Human sexuality.** The Scripture says that in the beginning God made human beings male and female. In other words, one's sexuality or gender is not an accident of nature but an essential part of one's personhood. It is not like race or national origin. There is a profound difference between a male and a female, a divinely wrought difference. One's fulfillment individually should be sought in terms of one's divinely wrought personhood. Therefore a truly Christian educational program must on occasion recognize the gender difference and treat people for what they are, male or female, in order not to discriminate against them. But that is now counter to federal regulations.

Academic freedom and religious liberty have been vital parts of the atmosphere that has enabled American democracy to flourish. Both are fragile and need some protection. It is an illusion to think that political liberty will long survive if these freedoms go. Today the balance that has made possible American academic freedom and American religious liberty, to the envy of much of the world, is threatened. How tragic if in the fight for social reform, very valid in its own right, we should destroy the integrity of the institutions essential for achieving social justice and equal opportunity.

Few people are aware of the unique role that evangelical colleges have played in the development of America and in producing Christian leadership for the world. A look at Christian leaders around the world will show that a handful of small schools have had a disproportionate influence. These are a priceless resource that we can ill afford to lose now. Some semblance of autonomy, both financial and philosophical, is essential if they are to survive. They never have flourished elsewhere. If the trend of the last decade cannot be reversed, they will not survive here.

If they go, it will not be the Christian

world alone that suffers. The conditions under which they flourish are the same as those required for a truly free university. If a government can impose its secular moral philosophy upon all our institutions today, it can impose its political philosophy tomorrow. The pattern and the machinery will already be in place. More than academic or religious freedom is at stake.

# WATER, ENERGY, AND BOOKS— COMPETITION, WILL IT HELP OR HURT?

**HON. PAUL SIMON**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. SIMON. Mr. Speaker, for some time I have been concerned about the increasing concentration of media power in the hands of fewer and fewer people. Roy Fisher, dean of the University of Missouri School of Journalism, is one who has spoken out on this issue.

Another is our colleague from Arizona, MORRIS UDALL. A few weeks ago he spoke to the Association of American Publishers, the Nation's major book publishers, at their national convention, talking candidly about the problems of diminishing competition in this country. Like on other issues, Mr. UDALL has brought both wit and wisdom to bear on this matter, and I urge my colleagues to read his speech, which I am inserting in the RECORD:

# WATER, ENERGY, AND BOOKS—COMPETITION, WILL IT HELP OR HURT?

(By Morris K. Udall)

I come before you today, a man chastened by experience. First, a bloody battle with the newspaper publishers, the subject of three weeks of editorials in such august journals as *Editor and Publisher* and *Publishers Auxiliary*. And I'm reminded of the old story about the fellow who pressed the local editor about his stand on a controversial issue, and he said, "Listen son, I haven't made up my mind, but when I do I'll be bitter." That's been the attitude of some reaction, but not all. And why was all this attention directed at the Chairman of the House Interior Committee? Well, it seems in a recent speech before the Press Club in Washington, I had the effrontery to suggest the trend toward concentrated power—economic and editorial—in the newspaper industry was something that troubled me.

An old Washington figure, Tom L. Johnson, said, "When you see a situation you cannot understand, look for the financial interest." So I come to Bermuda to address this group of influential Americans, not fully understanding the publishing industry, and therefore, this last week I looked at the financial interest. I have some thing to say which will be greeted, no doubt, with less than total acclaim. But my good friends, I see similarities in your industry and the newspaper publishers. Indeed, in some cases you represent the two combined. And while I'm quoting Johnson, let me go back to old Samuel Johnson in setting the stage for some comments on publishers and publisher reaction. He said, "The liberty of the press is a blessing when we are inclined to write against others, and a calamity when we find ourselves overborne by the multitude of our assailants."

My Washington Press Club speech revolved around a central theme: That a shift of global wind had dumped 10 feet of snow

on Buffalo, giving us the toughest winter in history, and reminded us that the natural gas that runs our homes and factories is running out. That the same shift of winds reminded us that we are running out of water in the West, and that this is a key shortage which may be next. That another kind of cold wind was blowing out the local independent publisher, and that lack of competition was now a key factor more and more in our society.

So I will have something to say tonight about publishers and broadcasters and the book fraternity. But what I have to say on this subject and on energy and resources blows from some of my basic assumptions and beliefs. In not every case will they be yours, but you will better understand what I have to say when I lay them out in the beginning. These basic assumptions and beliefs are three:

1. Competition is essential to American life. Sometimes it is unpleasant and harsh. It's the law of the jungle that eliminates one drug store in a town too small to support two. But those who preach the most about competition sometimes practice it the least and understand it only slightly. There was a Sinclair Lewis character in the 1930's that reminded me of a man in my hometown. Of such people it was said, "He would have been as horrified to have heard Christianity doubted as he would have been to see it practiced." Thus it is with the Chamber of Commerce, the NAM, and I'm afraid some publishers. All of them ought to be backing the Udall program for divestiture of oil companies. For unless we save competition, our system can collapse. For it is a system that succeeds on incentives, on the freedom to innovate, and rewards those who produce the most.

2. The second basic belief is the concern about bigness. I'm not against bigness per se, and I'm not going to shed too many nostalgic tears over the corner grocery or the hometown brewery. A complex society requires big institutions, bigger than yesteryear. I draw a distinction between accepting a measure of bigness necessary for our time and our society, and the mad rush to conglomerates and multinationals which threatens to destroy the central principles upon which our economy is built. Over the last thirty years, without deciding to do so, we have let our tax laws and the incentives that are available reward tycoons who give you IT&T. I don't think we get better rent-a-cars or hotels because IT&T gobbles up Avis and Sheraton. We probably get worse.

I lament the old dream of the man who owned a hardware or drug store, who maybe wanted to take his son into the business to expand into two or three. Well now he is gone, gobbled up by a local group and then a chain, and then the chain by a conglomerate, and a conglomerate by a multinational headquartered in Cleveland or someplace, and who couldn't care less about your neighborhood. Just twenty years ago, 400 companies owned two-thirds of the manufacturing assets in America. Today, it's down to 200 companies. At the rate we are going, it will be 100 within another decade. This alarms me and saddens me, and threatens things that I think are basic.

3. When I call for breaking up oil companies, I still believe in free enterprise. We need oil companies; they need to be quite large given the risks and the money involved. Oil companies need incentive and rewards, and they ought to be able to make a bundle of money finding the remaining oil and gas to be found. So, I speak tonight of economic concentration in the communications industry that has three television networks holding the nation's national television news firmly in their grasp. Of a trend towards concentration in newspaper publishing that

saw the daily independent newspaper in my hometown become one of seventy-three "properties" (a terrible word making my hometown newspaper sound like a racetrack, or a book sound like a can of beans). My hometown newspaper was absorbed by Gannett in a trend that now has twenty-five newspaper chains controlling more than half the daily circulation in the country, and even in publishing where some 58 mergers or acquisitions last year reduced the number of competitors and saw the Justice Department cast a critical eye at this trend.

But first, just a few thoughts on competition (or the lack of it) in the search for energy and new resources that must be a key to solving the serious problems I've outlined. I believe that competition must play a vital role in this energy issue, that we will fail if it does not.

We Americans are accustomed to expecting the big problems to be solved by big exotic, sexy solutions. In energy for a long time, it was nuclear power. We were told by Admiral Strauss in the 1950's, nuclear power would be so cheap by 1979 that we would not have to meter it. In the 1980's nuclear probably has some kind of a role. But I have a feeling that the eventual solution will come, not from one grand answer, but a dozen component parts—solar, coal, conservation, wind and even firewood might be part of the picture—5% here, 2% there and 25% from conservation. We will see the inventiveness of Americans come to our aid if we do it right. But none of this will come to pass unless we restore true competition to the energy industry. I think of my friend Congressman Reuss, who has a windmill that provides electricity for his house and feeds back into the Wisconsin power grid what he is not using, taking dollars off his bill. I think of the little hydrogen car which takes the hydrogen out of water, compresses it into a tank, plug it into your Oldsmobile and it will drive you around the block. I helped such a car be demonstrated on Capitol Hill.

There is an even more compelling reason why competition must be restored, and that is this: no energy program will ever succeed without sacrifice and a real change in the way Americans live and travel and work. No matter how many times the President appears on our television screens and asks for sacrifice, until the oil companies show some sacrifice, the American people are going to continue to believe that they are being ripped off, that energy crisis is not real, that it is the creature of big oil that will fatten their profits. The best way, indeed maybe the only way to break through that confidence barrier, is for a little sacrifice on Wall Street and Houston, through vertical and horizontal divestiture of these energy conglomerates. The reality of the matter is that Shell is not about to let its coal subsidiary undercut its oil sales in 1978, nor will it in 1988. The Exxon refineries are not about to sharpen their marketing pencils when they own their own gas stations.

Why does the tide of concentration go only one way? I read every week of more concentration, more mergers, more acquisitions. We almost never read of spin-offs, but only of the mad rush to dinosaurs. It's a one way street. Most executives in this room tonight know of still another merger in the making. Are we really better off because of this? When will the day come when the Wall Street Journal might report in today's issue that the X Company, in the interest of efficiency and stockholder strength, is spinning off a division, turn it loose on its own, and not to be a captive, stifled by a giant global octopus.

Divestiture and a turn in the other direction might be good for us, and it might even be exciting for oil executives. Back in 1911, they broke up Standard Oil, the Rockefeller

trust, into 33 companies, and panic was almost in the air. Two years later, it turned out to be good for everybody. If you owned a share of stock in 1911 worth \$600, two years later, you owned 33 shares in divested companies worth \$900. It was good for consumers, stockholders, and even good for oil executives. Some of them who were third Vice Presidents going nowhere in a giant company, were having a wonderful time running their own little independent companies, competing, innovating, and really experiencing the competition they had preached.

This year I propose one major step back toward old fashioned competition, a step that might bring us some of the new energy we need. Let me put it into focus. In this time of difficulty, the American people get one great break for a change. Most of the remaining energy reserves—off-shore oil, oil shale, geothermal, western coal—are owned by the public, they are on the public lands. I've introduced a bill that might bring some competition to the energy industry by limiting the leasing of those lands to those companies that are non-integrated, independent concerns. We wouldn't be forcing anyone to divest, but we would encourage new companies to enter the field and that's the point. Competition breeds innovation and efficiency. Absent competition, industry gets lazy and sometimes fails to pay sufficient attention to anything more than a profit/loss statement. So, my bill says that by 1980, if you want to lease the federal energy reserves, you better be an independent oil company or an independent coal company. We'll give the little guy a chance. If Exxon wants to get in on the act, let them try a spin-off, let them create a producing division that will be eligible for oil and gas, because it is not vertically integrated or owning assets in uranium and coal.

There are some social responsibilities that are part of doing business in our world, but they are being lost in some industries, notably in the newspaper industry, and perhaps in the book publishing industry.

First, a whack at the newspapers, if I can, and then I'll get back to you. Just a generation ago, nearly every American city had two or more daily newspapers. This was a healthy thing, a valuable source of news and opinion. The hometown publisher and editor was a key figure in making decisions. The local publisher carried a passion for the good of the community absent in the board rooms of the big chains. And now today we have 97.5% of the cities with daily newspapers having no local competition. The trend of acquisition of newspapers by chains has escalated to having chains buying other chains, like the giant fish swallowing the big fish who swallows the little fish. When will the publishing industry stop wringing its hands, defending this trend and telling us it is inevitable? When will they start to ask whether the British are really better off to have an American oil company running one of their dailies? Or whether it's really in anyone's interest to have Rupert Murdoch, honorable and brilliant though he may be, running newspapers in San Antonio and Manhattan and Greenwich Village.

This trend toward bigness and absentee ownership signifies a real loss to American society: in this case, a publisher without roots in the community. If the trend in concentration goes on, so too will the likelihood that we'll lose forever the independent spirit in the community who had the power, and sometimes the disposition to blow the whistle on the politicians and the promoters.

The agitation that followed my press club speech ranged from oratory by the President of Knight-Ridder to a visit to my office by the Chairman of the Board of the Gannett chain, and a complimentary letter from an old adversary, William Loeb of Manchester,

New Hampshire. Many of them said I was trying to relive the good old days, but that the tax codes and higher priced paper and computers all dictated a change to bigness. And they reminded me, correctly, that not all chain papers are bad and that there are independents like Loeb who aren't always good or responsible. Well, let's change the tax code then. We did it to save the family farm, surely the local newspaper is a valuable enough institution to give attention to the ills that beset the industry. My bill calling for an industry-by-industry review by a special blue ribbon Commission may give us the means to assist and not hurt these troubled industries. Let me give a brief explanation of my bill.

The Commission would take three years looking over those industries to see how they are performing, considering such criteria as efficiency, innovation, social impact, price and profit. For those that are performing well, it may make little difference whether there are two competitors or 200, though in case of doubt we should favor the latter. For those not performing well, the Commission's analysis would show what particular factors contribute to the problem and would prescribe a set of remedies tailored to the specific conditions.

These remedies will probably include the tax code, with its unintentional bias toward centralization and conglomerate. Perhaps we will need tougher antitrust laws in some cases, legislated divestiture in others, while in others the conventional suit under present laws would be enough. Exemptions from antitrust law may also need reexamination, to see if they are meeting the intended purpose. In some manufacturing fields, we may need tax incentives or temporary direct subsidies to new entrants, while in other simple changes in federal procurement policies may help open up the market. We ought to consider every kind of action that might help.

And now to book publishing. A statistic came to my attention recently and it fits into my concern about concentration of power in any industry. It is a fact that there were 58 mergers or acquisitions in the printing and publishing field in 1976, a sizable increase over the previous year. Off-setting this trend of concentration somewhat is a growing number of new publishing companies in the industry, but with increasing frequency we see the giants getting bigger and more influential within industry.

Policies and trends in your industry soon may not reflect the spirit of innovation, creativity and courage that has always been a cherished part of publishing in giving the unknown author a chance. What will be the impact of conglomerate ownership such as CBS owning Holt, Rinehart and Winston, and now Fawcett, or RCA's ownership of Random House, or RCA owning G. P. Putnam's, and Gulf and Western owning Simon and Schuster. Or the newspaper corporations such as the New York Times and Dow Jones and Times-Mirror who publish books? Like IT&T with Avlis, maybe there might be some gain. But do we really get better books, more chance for unknown authors, or merely more profits for the conglomerate entrepreneurs?

Many in this room will disagree. Some will agree privately. But my purpose is to begin a dialog, to establish that there may be a problem to force the spokesmen of this industry to examine it and its social implications.

For if any industry has a social responsibility, it is publishers of books. For we face the loss of communication and an acute absence of ideas in almost every other medium, the principal culprit being concentration and lust for the dollar. Yours is a healthy industry. Your receipts were up 7% in 1976 and an anticipated 8% in this year up to \$4.1 billion. But earning reports

are the siren song of concentration. An industry has the capability of monitoring its own trends and warning against what may be attractive to the accountants, but may be bitter to society. Must we always surrender to a profit? The people of this nation sense the corporate growth to bigness, and similar to their healthy disbelief in the protestations of the oil companies that their profits are not large enough, they may soon tire of the trade publishers spoon-feeding best sellers and leaving the fresh and the bold to fend for themselves.

The history of our country and economic system has been the need every 40 or 50 years to rejuvenate and revive and make fundamental change when the system breaks down. Theodore Roosevelt did it when the trusts dominated America, and Franklin Roosevelt came along in the 1930's to set the stage for the great economic expansion of our own time. FDR used to tell the story on himself of the tycoon who arrived at his Wall Street office every morning in the '30s, bought a paper from the boy for a nickel, looked at the front page and cursed and threw it into the trash. After a week, the boy said to the publisher, "Sir, why do you waste your money, pay me a nickel, curse, and throw the paper in the trash?" The tycoon said, "Son, it's none of your business, but to be honest I am looking for an obituary." The boy said, "But sir, the obituaries are not found on the front page, but on the back of the paper." The tycoon responded, "Listen kid, believe me, the obituary I'm looking for will be on the front page."

Maybe the obituary for our economic system or a free independent publishing industry may not be on the front page, if that day ever comes. These great central values may just slip away, merger by merger, acquisition by acquisition, stock split by stock split.

Albert Schweitzer said that the city of truth cannot be built on the swampy ground of skepticism and so it is with people's minds. Don't abandon ideas, don't abandon competition. All we have to lose is everything this country is about.

#### THE CLEAN AIR ACT OF 1970

#### HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. FRENZEL. Mr. Speaker, the Clean Air Act of 1970 was a giant step forward in our efforts to clean up the environment. It was conceived with the best of intentions and passed by this body with the highest of hopes. However, we are back here today, as we were in the last session's futile attempt, to construct a reasonable program based upon what this Nation can do rather than what we would ideally like to have it do.

We can continue to grow and expand as a nation only if we do it with care and concern for the land we live on and the air we breathe. It may be difficult to achieve that measure of balance but I think we can take a step forward in that effort by supporting several amendments to today's bill.

In the 94th Congress, I supported the Dingell-Broyhill amendments on mobile source, or automobile, emission requirements. This session I have cosponsored their measure and believe that its pas-

sage is necessary if we are to meet our national energy goals and continue our progress out of the latest recession. Other Members have expounded at length upon the specifics of NO<sub>x</sub> and CO requirements. I cannot claim to explain it as well as they have, but I do realize that the cost of improving the last 10 percent of our emission levels will be many times greater than the cost of the first 90 percent.

According to the EPA, the fuel penalty will be around 8 percent and other reliable estimates have placed it as high as 20 percent. The cumulative penalty cited by the administration for model years 1978 through 1985 is in excess of 15 billion gallons or 140,000 barrels per day. This is excessive. In addition, I believe that we should not restrict industry options, in performing up to our criteria, to catalytic converters alone. We should allow the additional leadtime required for effective implementation.

One of the most glaring flaws in our 1970 act was the inclusion of a 5-year or 50,000-mile warranty on emissions systems. I agree completely with the Justice Department statements that—

We are not convinced that expanding the warranty—in effect, transforming it into a performance guarantee will lead to an improvement in its cost effectiveness. The potential cost of extending the present production warranty to control emissions subsequent to vehicle purchase will in all probability, far outweigh the potential benefits. . . . The Federally mandated warranty would have severe implications for the long run viability of independent garages and service stations. . . . it would become impossible for the independent service stations to compete with the service departments of dealers that are franchised by the national automobile manufacturers. Concentration in the automobile aftermarket would increase substantially and the advantages of free competition would be lost.

The only comment that could add to the Department's statement would be the unanimous conclusion of the Small Business Committee that—

The performance warranty of the Clean Air Act is anti-consumer, anti-competitive and unnecessary to the maintenance of clean air.

Both the Dingell amendments and the committee bill act to rectify this situation by establishing a 18-month/18,000-mile warranty. However, here I must differ with Representatives DINGELL and BRODYHILL. I believe that the committee bill will more adequately preserve competition, prevent monopoly development, and permit a complete scientific examination of the consequences of our new regulations.

The intent of the Clean Air Act was to establish a set of national standards. However, in the drafting process we seem to have left a number of vital questions unanswered. First among these to be judicially settled was the question of significant deterioration. Congress, in its deliberations, carefully plotted levels of primary and secondary standards necessary to protect the public's health and welfare. We measured variances and deliberated on maximum levels, but we left it to the Federal district court to determine that the nondegradation of air

quality already cleaner than the national ambient standards was mandated.

I for one am not convinced that this body would have passed that language in 1970 and am not certain that it is appropriate for 1977. I will be supporting measures to study this question further and to preserve the rights of our States in these determinations.

Explained in very simplistic terms the "nonattainment" provisions of the 1970 act meant that, under law, if a geographic area could not attain the ambient air standards set for it there would be no major new or expanded sources permitted. This effectively prohibited 88 percent of the areas monitored from considering major growth. This is a part of the logic which lead the committee to make significant amendments in these provisions. However, I do not believe that the committee's tradeoff or offset policy is the best answer. I am not sure that it is legal and I am even less convinced that it is fair. Under the present language, pollution and polluting industries may become a marketable commodity. Therefore, I will be supporting amendments to permit waiver of the offset policy and adjustments to grant further flexibility to the States in meeting photochemical oxidant standards.

We can continue to make great progress in cleaning up our air and in preserving those gains which we have already made. I believe that this bill, with some amendment, can accomplish that goal. I also believe that we owe a vote of thanks to the committee members and organizations which have devoted so many hundreds of hours to its development.

#### THE STORY OF NICOLAE DASCALU

#### HON. JAMES J. BLANCHARD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BLANCHARD. Mr. Speaker, the Washington Star last Friday carried the tragic account of Nicolae Dascalu, a 32-year-old dissident in Romania.

Inasmuch as the question of extending "most-favored-nation" trade status to Romania is likely to be before us again in the next few months, I want to bring this report to the attention of my colleagues.

It is my hope that at the very least, we will again consider the questions of human rights and emigration in Romania when this legislation is brought up.

The article follows:

ENCOUNTER WITH A DISSIDENT IN DESPAIR—ROMANIAN IS BEATEN AFTER SIGNING PROTEST; U.S. ASYLUM REFUSED

(By William Beecher)

BUCHAREST, ROMANIA.—Nicolae Dascalu had fear in his eyes, but resignation, too.

"I'm not strong enough to take my own life. So I came to the American Embassy to seek political asylum. It was my last chance, but they cannot help me. But I'm not going to become an informer, and I'm not going to take any more beatings. So, if I am not arrested when I leave here, I'll go to my home village of Stejaru near the border with

Yugoslavia. I haven't seen my parents for two years. They don't know about my trouble. I don't know how I'll tell them, but I must.

"Maybe when the police come to arrest me I'll resist and they will have to use their pistols. I cannot. And it will be over."

Nicolae Dascalu, a 32-year-old teacher of English at a high school here, is resigned to the fact that he has no future.

He is a Romanian dissident who is a victim of the government's decision to nip dissidence in the bud before it can blossom into a significant movement.

When asylum was refused on Monday, he asked if an American correspondent was around. I happened to be, so we met and his story can be told to an audience he never expected to reach.

He is a slight, wirey man, about 5-feet-8, with bushy brown hair, a full beard and mustache, and a ruddy complexion. There are deep laugh lines around his eyes, suggesting his personality in happier times.

But this is not a happy time for him. It started in March when he read a story in the International Herald Tribune reporting a letter by Romanian novelist Paul Goma calling for the government to live up to its promises of free expression and other human rights in its own constitution.

"I thought this was wonderful, finally someone was standing up for human rights here. I felt everyone should rush to sign his letter. I did, with two friends.

"Goma heard about this fellow who could write English. He wanted to meet me. I went to his apartment. There were eight there signing the letter. He asked me to stay behind to talk, but when the eighth man signed, the police broke in. I never had a chance to talk with him.

"The police took our identity cards, took down the names, then let all but two men go. I was released," he said.

It should be explained here that at that time the Romanian government was trying to decide how to handle the dissident problem. For a while it was very forbearing, trying to show the world that it was different, less severe than the Soviet Union and Czechoslovakia in responding to the challenge.

But on April 2 Goma and a number of other dissidents were arrested. Perhaps the government wanted to stifle their efforts well before the preliminary conference on the Helsinki agreement to take place in Belgrade in June. Perhaps it had lost its patience when, in the face of the need for national unity to snap back from a devastation of the March earthquake, a handful of men were sowing discontent.

"For me," Dascalu said, "life became hell on April 15. For 10 days running I was brought to security headquarters for from three to eight hours of interrogation every day. On April 18, the questions, the beatings, the threats lasted for 16 hours. They threatened me with death many times. They said they'd cut my body into little pieces and throw them in the river and no one would know what happened to me.

"They would beat me and then ask me to write statements, such as that I only signed the Goma letter because I wanted a passport, that all other human rights were all right. I wrote. Over 10 days I wrote hundreds of pages."

Dascalu sat straight in his chair. He kept wringing his hands as he talked. His was an intelligent, good looking, friendly face, but his eyes looked out of red sockets. I've seen that look in Vietnam, on the faces of men who had seen too much combat. It is a haunting look of humans who have been pushed beyond the brink of endurance, who have experienced unspeakable things, yet who survive.

He spoke good English, with a trace of a British accent. Had he been schooled in England? No, he had done a lot of summer work as a tour guide with British visitors, he said, and listens often to the BBC.

He had hoped to write. "I have the ideas for 15 novels in my head. But they wouldn't be published here. They would be too honest. So I postponed and postponed and postponed, telling myself one day the time would be right."

"In the meantime, I wanted to study medicine, to keep my mind busy, otherwise I would go mad. I was going to take an examination this summer. But I have no more plans now."

The final straw, he said, came last Sunday. He had been left alone for two to three weeks. "They called me in at 10 o'clock in the morning. As soon as I entered they started beating me. They asked about everyone I had seen the previous week and what was said. They kept me until 1 p.m. They said they would beat me until I'm their best informer. I didn't talk. I just wanted to come out."

"I then realized that the only chance I have now is suicide—but I'm not strong enough to do it. Last night I prayed my heart would fail me. That would solve the problem. But I must be too strong. So I came here, to the American embassy, as my last chance. But they cannot help me."

"What bothers me right now is not to get arrested when I leave here so I can see my parents. My father had a small farm. It was collectivized. He had to work on construction for about 10 years but now is pensioned. He is a simple man, but my brothers and my sister and I all got educations."

"I don't know how to break the news to my parents. I was supposed to go to security headquarters at four o'clock today. Instead I came here."

"I'm leaving Bucharest because I have no purpose here. I have no plan. I'll just wait for them to arrest me."

"I think they must be waiting for me outside. I saw the policemen. But maybe not."

He said goodbye and thanked me for listening to his story. "Maybe it will give others courage," was the last thing he said to me as we shook hands.

I don't know whether Nicolae Dascalu made it past the police, made it to his parents' cottage in Stejaru. As he left the embassy I was called to the phone. An appointment with an official to talk about economic recovery had been arranged. I hope he made it home.

## RANGER BATTALIONS

HON. BO GINN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. GINN. Mr. Speaker, the men who make up the elite fighting force of the United States are the men of the Ranger Battalions of the U.S. Army. These personnel are the most proficient and professional soldiers I have ever had the honor of meeting, and it is an object of great pride to me that the Army's 1st Battalion of Rangers is stationed at Fort Stewart, Ga., in my congressional district.

The work of the Rangers is one of those tasks that go largely unnoticed by the general public. And yet it is on men such as these that the freedom and safety of all of our people depend. We owe the Rangers and the other men and women of our Armed Forces a prayer of thanks

each day for making the sacrifices and enduring the hardships of military training so that our Nation is free from foreign military intrigue.

The story of the modern Rangers is a great one, and it is a story that was recently recounted in the May issue of Army magazine. Without objection, I include this article in the Record at this point:

### THE BLACK BERETS

(By Lt. Col. Tom Hamrick, U.S. Army, Retired)

One thousand-plus supermen—there just are no other words to describe them—are standing in the wings ready for instant blast-off if Washington ever demands a distant show of force or finds itself with an Entebbe of its own thousands of miles away.

They are the "Black Berets," the Army's tough and effective Ranger units.

Two battalions strong, one stationed on the east coast, the other on the west, these airborne Rangers are intended as a versatile fighting force constantly on push-button alert.

By day and night, their training program and reason for being reads like an 007 script. The two battalions constitute a battle team which is prepared to drop behind unfriendly lines tonight, march 100 miles into combat carrying everything from bullets to dehydrated beans on its back, and conduct a successful strike.

Moreover, either battalion is ready to then infiltrate its way back to a pickup zone or delay an enemy long enough—as much as five days—until resupply and reinforcement come along.

The name of the game for the 1st and 2nd Battalions of Airborne Rangers is the accomplishment of "Mission Impossible" through a combination of paradrop, foot-mobility, stealth, surprise, combat savvy, audacity and pure guts.

A ready-for-anything kind of military organization, the Rangers are trail-blazers in an army which often requires months to move from camp to combat. If need be, the Rangers are prepared to strike now and return home, errand fulfilled, before the story hits the headlines. What they might be called upon to do, to free hostages or even capture an aggressive dictator in his own capital, could conceivably prevent an incident from becoming a war.

The two battalions are designed to give the United States a Sunday punch which would preclude a cliff-hanging scurry to improvise a slapped-together task force which still might take days in the making.

The battalions are the muscle-plated responses to a drawing board dream of the late Gen. Creighton Abrams when he was Army chief of staff in 1973. His format, which became reality the following January, demanded "an elite, light and most proficient infantry battalion in the world, a battalion that can do things with its hands and weapons better than anyone."

Today, ready to go, with its all-man-trans-portable equipment pre-palletized at nearby airlift points, the 590-man 1st Battalion is located at Fort Stewart, Ga. Across the nation, at Fort Lewis, Wash., a counterpart unit has been honed to move out on a battalion-sized blitz in the other half of the world.

The geographic battle zone should not be a problem. The Rangers think they are prepared for anything. Rugged, realistic practice in arms routinely carries them on arduous training stints ranging from the steaming jungle to the icy Arctic, or splashing ashore amphibiously. Two weeks a month in the field has become routine; no-notice alerts are the expected.

Once airborne, they know they may be dropped on an unannounced mission hun-

dreds of miles away. They never know where morning coffee will be held when they participate in an alert.

"If we had an Entebbe of our own and the Army didn't call on us, we'd be pretty damned mad," is the way 1st Battalion commander Lt. Col. Edward Yaugo puts it. "We are the cream of the Army. The Entebbe thing is just what we're trained to do."

Every Black Beret would tell you that the Rangers could carry out a shock treatment just as effectively as the Israelis did in Uganda, and some of them would swear they could do it better—morale is that tall.

So is pride in preparedness. Col. Yaugo has had to post an order insisting that no off-duty training be undertaken voluntarily without his permission.

"Some of these guys are workaholics," he claims. "They're forever wanting to get in what they call 'a little extra training.'"

You volunteer to join and if you want out, you just ask. But grown men, being forced out for minor disciplinary infractions or because they did not measure up, have been known to beg for a second chance. A unit personnel officer had to check his records to determine when the last AWOL cropped up; it was six months ago.

"Some of our people consider themselves so important they won't take leave," Col. Yaugo said. At 38, Col. Yaugo claims he feels like a "granddaddy" by comparison. "You ever see a soldier before who had virtually to be forced to take leave? Happens here," he said.

Whatever the holiday, 85 percent of the battalions' strength is on tap. If Washington blew the whistle a minute from now, advance elements would be expected to be airborne in a couple of hours; the rest of the unit would be following by nightfall. If the unit can't carry it, it doesn't own it. On-post mechanization is limited to two jeeps a battalion.

"This is a great place to build up your ankles," said one young Ranger.

Foot-mobility is indeed the standing order of the day. Dawn sees every trooper undertaking physical training, followed by a three-to-five-mile road march to further warm up for an exhausting day. It is SOP for a Ranger to be able to hoist upward of 100 pounds of personal and unit gear on his spine and march 12 miles in three hours. A 20-mile spurt in eight hours is normal.

Entebbe-type practice runs were a battalion routine long before the Israeli rescue raid made headlines last 3 July.

"If we were given orders to rescue the governor of Pennsylvania who was being held somewhere in the world, all we'd need is a picture of him, know who was holding him and how his captors were armed," a unit officer said. "We'd be ready to take it from there."

During last year's training stint, as a typical example, Rangers conducted a series of full-scale exercises to "rescue" political hostages. They stormed a desert hideaway in Texas to free an American consul and liberated an American ambassador held behind barbed wire. A month before the real Entebbe raid, the 1st Battalion swooped down on a make-believe oil refinery to rescue 30 American workers being held hostage.

Realism is built-in. In the latter instance, a mock-up refinery was constructed, hostages were imprisoned and antiaircraft missiles were installed around the site. Before the subsequent surprise strike, Rangers studied aerial photographs of the sector and devised a two-step strategy. (They prefer to strike by night.)

Nine 11-man squads parachuted from Chinook helicopters under cover of darkness and moved into positions around the refinery. When they seized the antiaircraft weapons, 500 more Rangers pivoted down from C-130s to land inside the refinery area.

"It went like it was written by Columbia Pictures," boasted a Ranger sergeant.

You won't get an argument from at least one general officer. Although his division had been alerted to expect a Ranger assault during a war game in Germany, the general still had his command post infiltrated and knocked over. He became POW Number 1.

"We think we really shake up people when they're trying to guard against us," Col. Yaugo said. "And when we're successful, and we expect to be successful, the guys get a huge charge out of it."

His battalion is thick with such men: combat veterans personally familiar with the power of surprise after two or more battle tours in wartime Indochina.

Even minus their Pentagon-authorized black berets, members of two battalions stand out. Every Ranger has a skin-tight haircut and his camouflage jungle fatigues are tailored and starched, not by Army order but rather by individual preference.

A Ranger salute is brittle, as militarily immaculate as a how-to demonstration in an Army training film. You can almost hear the elbow snap. And every salute is accompanied by the claim, "Rangers lead the way, sir." Respect runs so high that it isn't unusual to see privates saluting sergeants. It isn't required; they just do it. "All the way" is the reply.

The same degree of high esprit pervades Ranger families, too. Wife Carol Norton is "just one of the women around here who is terribly proud to be married to a soldier in the finest unit in the whole Army." With the Rangers away so much, wives link together in their absence for coffee, spaghetti suppers and shopping tours. "We try to be like a big family, supporting those guys any way we can," reports Mrs. Norton.

Unit officers keep wives briefed to maximum. As far as Rangers are concerned, by unofficial edict the wives are members of the organization, too. They know that women married to that kind of man can have rough edges: when two troopers became entangled in a demonstration parachute before the horrified eyes of 1st Battalion wives last year, and then plummeted to their deaths before a stunned audience, troop leaders anticipated a mass submission, prompted by wives, of transfer requests. Not one was turned in.

Individual dedication among Rangers almost shouts. "This is no place at all for a coward or a goldbrick," said one private. "If you don't act like a Ranger, the people around here will turn your life into a living hell. When we tell somebody we're Rangers, we want it to mean something."

Unit sick books tell a story of their own. Ranger sick call reportedly runs about ten percent of the Army norm. The Fort Stewart hospital commander, Col. Arthur Buswell, grumbles that his staff hates to perform an appendectomy on a Ranger. "We have to go through all that muscle."

How good, really, are the Rangers? Officers and NCOs point to past records for proof. The Rangers have scored toweringly in every competitive field exercise on home or alien turf, matching their brags with hard statistics. Letters from pleased visiting generals and such ranking personages as cabinet members ring with praise.

A war-experienced newsman reported to Forces Command commander Gen. Frederick J. Kroesen that after several days with the Rangers, "If a Ranger bet me five dollars he could walk on water, I wouldn't take the bet."

The reporter asked Gen. Kroesen his evaluation of the Rangers, compared to the rest of the Army.

The general hedged, diplomatically. He couldn't answer the question, comparing one unit to others with an entire Army looking

on, but he conceded that "I'm sure your observations are as good as mine."

Training is merciless and demanding. Every Ranger is cross-skilled to do his job and somebody else's. Every Ranger knows first aid and he is expected to be as familiar with some foreign arms as he is with his own.

"We would expect to use anybody else's weapons we could capture," Col. Yaugo notes. Use of demolitions is another aspect of training.

Endless hours are spent in fire proficiency. A Ranger receives perhaps five to six times as much practice with an M16 as the average infantryman, unit officers say. Hand-to-hand combat is also ever on the training ticket. A Ranger is expected to know how to kill quietly, if it comes to that, and to believe that his bayonet can be as good a buddy in a showdown as his rifle.

In a strike, Rangers are trained to exercise ingenuity and survive by their wits. In a real Entebbe situation, one or both of the battalions might expect to be out of contact with the outside world until the mission was completed. Their short-range communications equipment is designed primarily for intra-unit usage. A signal might get out—or it might not.

The Rangers have stuck rigidly to Gen. Abrams' own-what-you-can-carry directive. A company's man-movable fire support is limited to nine M60 machine guns, two 60-mm mortars and three 90-mm antitank weapons. In the field, a Ranger would regard even a pup tent as a luxury; whatever the weather, his shelter by night is his poncho. Battalion headquarters in the rough is a pair of ponchos strung together.

Because Rangers cannot anticipate where they might be sent to serve, their training program reads like a travel folder. They parachute by night at least once a month and their "battlefield" may be the rattlesnake-infested swamps and pine woods of coastal Georgia, the fetid back jungles of Panama or a target zone atop an Alaskan mountain at the end of a rope climb. Their next training mission could carry them to a surprise training assault at an Army post hundreds of miles away, to a barren strip of Southwestern desert or a landing by sea somewhere on Chesapeake Bay.

A Ranger on a five-day field exercise is burdened down with everything he thinks he may use, including dehydrated rations he stuffs into every crevice in his pack of clothing. If he cannot build a fire to heat water to make his dry supper more palatable, he is expected to grin and use whatever liquid at whatever temperature his pair of canteens holds.

They may be tigers in the outback, but on and off post a Ranger must be every inch a gentleman in khaki. When Gen. Abrams created his Rangers, he insisted that "hoodlums and brigands" would not be tolerated, and they are not. Discipline is as tough as the training.

A fight in a tavern in the town can lead to quick expulsion. ("We know that most of our men could easily beat another man," said Col. Yaugo.) Two tickets for driving under the influence of alcohol also mean the gate. If a Ranger is caught using drugs, "there isn't any acceptable excuse," reports headquarters commandant Capt. Frank Norton. He's got to go. We have to be able to depend on a man 24 hours a day because we face the constant possibility we may be called out a minute from now. And the way we're trained, his buddies must be able to count on him, too.

By Pentagon decree, the Ranger mission calls for the battalions "to conduct special military operations in support of the policy and objectives of the United States of America." The fine print is more definite, almost as if it had been ripped from the pages of an imaginative adventure novel.

Preparedness orders to the Rangers detail them to be ready for "raids or special operations against deep enemy targets, that is, nuclear storage sites, missile sites, key enemy personnel or resources." The same Pentagon planning alerts them to be geared to "rescue U.S. POWs or political hostages" and to "safeguard U.S. citizens, property or investments." Other directives have them standing by to tie into heavier forces in an operation or to conduct show-of-force assignments.

Overall, insists the same edict, the Ranger battalions "must also be able to perform all traditional light infantry missions, to include movement to contact, the daylight contact, the night attack, delays and withdrawals, the defense and other missions."

Not a line of this directive is an in-house secret. Word for word, it is published in a pamphlet for visitors. Ranger chiefs hope that trotting it all out into the open will preclude any public misconception that the Army has an unsavory secret weapon which might be too embarrassing to talk about. "In no way do we want the public or other soldiers to think of us as a hot blood-and-guts outfit," said Col. Yaugo.

The battalions do nothing to stir up public interest or news coverage. On paper, the 1st Battalion has a public information officer, but he generates no publicity. Even photo coverage is bone-bare, almost nonexistent. What few photos one reporter visiting Fort Stewart found available "were generally limited to some atrocious color stuff made by members of the unit themselves." If the Pentagon decided tomorrow to start churning the publicity crank, it might find past photo records of these unique elements woefully inadequate.

There is no plan in mind to alter this course of inaction. "We're just not interested in creating sensationalism," said Col. Yaugo. "We're afraid we just might project the wrong kind of image to the public."

Rangers appear too proud of themselves not to lay it on the line. One reporter came away unexpectedly surprised, and pleased, that "they give you answers, honestly and without any attempt at evasion. You don't feel that they're trying to keep secrets from the taxpayer." Consequently, what minimum coverage the Rangers have received has invariably been good.

Yet, the Rangers admit that they have a clinging, ill-conceived tough-guy image to overcome, even from some Army generals they feel ought to know better. Twice, on foreign assignment, the 1st Battalion has found local commanders suggesting installation of a special guard perimeter around a Ranger encampment for skimpily defined "protective" measures.

"We tell 'em right quick we're not there to rip anything down," Col. Yaugo said. "When we leave, we expect to leave behind a favorable reputation, and we do."

There is a waiting line of volunteers and Ranger selectees are handpicked. Officer or EM, every incoming Ranger undergoes a 30-day trial period. Men who do not measure up to the Ranger standard are ousted in a hurry, a power delegated to the battalion commander.

The battalion loses a dozen or so volunteers a month because of the demanding criteria. Some fall by the wayside because, as Sgt. Maj. Henry Caro said, "they can't take the Spartan life we lead." Still, reenlistment runs to 60 percent or better.

The senior citizen of the 1st Battalion, CWO José Ibarra, at 48, is one such constant face in the lineup. Leaving the outfit would be akin to the world's ending for him. He gets a raft of ribbing from fellow officers who are non-Rangers.

"They tell me I'm nuts to keep going through all this rugged stuff," said Mr. Ibarra. But in his mind, "They're just

jealous." He's been jumping out of planes since 1949. "It's the only way to travel," he asserted.

Individual and unit esprit hits you in the eye. Even six men on litter-pickup detail went about their assignment with grins and snatches.

"Nobody around here sloughs off," said Sp. 4 Bernard Larsen. "It's easy to be gung ho, even picking up gum wrappers."

S. Sgt. William H. Abebes, who joined the 1st Battalion at its founding in early 1974, agrees that "you just don't see people like this in the rest of the Army. Working with men of this caliber, guys who have drive, pride and ambition, makes Ranger service a pleasure."

Do they moan about training? Sure they do. "Everybody complains, but at nights and their days off you see these same jokers running out in the field or working out in the gym or doing some of the same stuff they did all day long," remarked an amazed Pvt. Mark Polunci three days after he joined the Rangers.

"You couldn't run 'em out of the Rangers with a cannon," Pvt. Polunci believes. If there's ever an American Entebbe, the Pentagon is going to have some mad hornets on its hands if the Rangers don't get the job. Count on it.

#### LOUISE DARLING HONORED BY VETERANS OF FOREIGN WARS

#### HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. MOAKLEY. Mr. Speaker, I rise today in order to share with my distinguished colleagues of the Congress an article which appeared in the May 3, 1977, edition of one of the Nation's great dailies, the Boston Herald-American. The notable career of Cambridge Police Officer Louise Darling is highlighted in the newspaper's report. For 27 years, Mrs. Darling has performed her official duties with competence and diligence. Because of this eventful history of community service, she was recently honored by the Veterans of Foreign Wars which named her Massachusetts Police Officer of the Year. Through professional dedication and outstanding work, she has achieved the esteemed recognition which she so richly deserves. Her spirit of self-sacrifice, quiet reliability, and steadfast resourcefulness serves as a beacon to us all. Louise is truly one of Massachusetts' finest. I join the VFW in congratulating her for a remarkable record of many successful efforts. It is both an honor and a pleasure to bring the accomplishments of this peerless public servant to the attention of the House of Representatives and the American public:

WOMAN OFFICER WINS VFW HOOVER AWARD  
(By Dan McLaughlin)

The top police officer in Massachusetts this year, as chosen by the Veterans of Foreign Wars, is Cambridge Officer Louise Darling, 57, a veteran of 27 years on the department.

She will be presented the VFW's J. Edgar Hoover Gold Medal Award during the organization's state convention in Springfield June 17.

Officer Darling was sponsored by the Russell E. Hoyt V.F.W. Post 299 of Cambridge. She will compete later with officers from the

other 49 states for the national officer of the year award.

Darling has worked in every facet of police work during her career, and was one of three Cambridge officers in the original arrest of the so-called Boston Strangler, Albert DeSalvo. The other two were Sgts. Duncan McNeill and John Gallagher.

Darling recalled DeSalvo was arrested at the corner of Concord and Huron Aves, after Det. Paul Leonard supplied a picture of him. He had been wanted in several surrounding communities for questioning about sex offenses.

The only comment she had about the suspect was, "I always thought that he was the strangler."

During World War II, Darling served in the WACS from 1943 to 1945 with part of her duty in New Guinea and Manila. Her four brothers also were in the service during the war.

Selection for the annual Gold Medal Award is based on four requirements. They are: A contribution to the preservation of and perpetuation of the ideals of law and justice upon which our government is based; Recognition by her colleagues of her service, whether that service be one of quiet dedication of one achieving wide publicity to the best and highest interests of the nation, her community and law and order.

The third is unswerving loyalty to, and active performance in the defense and security of the nation, against its foes, and the last, dedication to her official responsibility over a period of years and continues growth in her responsibility and experience.

Darling lives in Cambridge with her husband, Ralph J., supervisor of fire alarm for the City of Cambridge, her daughter, Lesley, 22, who is studying for her master's degree in public administration at Suffolk University, and her son, Toby, 19, a freshman at Stonehill College in Easton.

#### ZERO-BASE BUDGETING

#### HON. MAX BAUCUS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BAUCUS. Mr. Speaker, because of the current interest in zero-base budgeting, I am submitting for the RECORD an article describing our recent Appropriations Committee experiment with ZBB and a letter to President Carter explaining some of the results of that experiment.

One interesting observation is that, while ZBB can be a valuable tool for holding down the Federal budget, the President may be implementing ZBB in every Federal agency too fast to give the technique a fair trial.

The article and letter follow:

[From the Wall Street Journal, May 24, 1977]

#### APPLYING ZERO-BASE BUDGETING

(By Arien J. Large)

WASHINGTON.—Less than a month after seating himself in the Oval Office Jimmy Carter told the bureaucracy to use a zero-base system in preparing the budget he'll submit to Congress next January. "By working together under a zero-base budgeting system," said the President, "we can reduce costs and make the federal government more efficient and effective."

Even as he wrote that, however, an actual test of zero-base budgeting was in progress

for three tiny parts of the government. The guinea pig agencies were busily converting their portions of President Ford's farewell budget into "decision packages" and other trappings of zero-base budgeting. This new-fangled paperwork was submitted to a subcommittee of the House Appropriations Committee which, after Mr. Carter won the Democratic nomination last summer, decided it ought to get some early practice.

The experiment comes to an end today when the full House Appropriations Committee meets to vote on the agencies' money for the 1978 fiscal year starting next Oct. 1. It will be the first appropriations bill ever written that is derived, in part, from a zero-base budget request. Rep. Edward Boland (D., Mass.), chairman of the appropriations subcommittee that ran the experiment, tells how this bill differs from those of earlier years: "Very little. Very little."

Yet like everyone else involved, Mr. Boland says "It's been a useful exercise." At least a part of Congress has had some exposure to the government-wide budget concepts it will be facing next January. Officials of the agencies involved have had some experience in imposing the mental discipline of zero-base budgeting on their comfortable we've-always-done-it-that-way plans for spending tax money. Above all, the participants have learned something about the limitations of Mr. Carter's magic budget wand, limitations that appear to give self-protective bureaucrats plenty of room to hide from zero-base economizers.

#### NO SPECTACULAR RESULTS

"There will be no spectacular results," says Rep. Max Baucus (D., Mont.), a two-term member of the subcommittee who suggested the experiment to chairman Boland. "ZBB is going to chip away at little bits here and there. It will force the agencies to think twice about what their purpose is."

Indeed, Mr. Baucus and others think the new process will be more useful to Executive Branch managers who formulate the budget than to the Congressmen who later scrutinize it. "It would be an impossible task for Congress itself to get into the maze of paperwork that ZBB generates," says Rep. Boland.

In a bureaucratic cycle as regular as the seasons the annual federal budget originates deep in the bowels of each agency. Traditionally, existing programs are regarded as eternal and agency budget officers think only about the increments by which funds should be increased. In the fall, Cabinet members and agency heads send their proposed budgets to the White House Office of Management and Budget. These draft budgets are widely assumed to be padded in anticipation of OMB cuts. Late in the year the President himself settles major disputes between the agencies and OMB, and each January the final product is sent to Capitol Hill.

Earlier this month OMB Director Bert Lance told the agencies how this basic cycle will be modified by zero-base budgeting for fiscal 1979. Each of an agency's identifiable activities will become a "decision package," with goals specifically described. Agency managers are to rank each decision package in relative importance. Each decision package is to carry at least two future budget projections, a roughly current level of spending and a lower "minimum" level. It's presumed that any cut below the minimum level would make the activity not worth doing at all. "When appropriate," a decision package may get a proposed budget increase.

#### THE FINAL WORD

Decision packages are to be lumped together, or culled out, as the budget proposals climb the agency's management hierarchy. As now, OMB and the President will have the final word on what ultimately goes to Congress.

When a presidential budget hits Congress it's split up into 13 appropriations bills, each handled by a specialized subcommittee in the House and Senate. Chairman Boland's subcommittee handles money for housing and for a collection of agencies that don't have an appropriations home elsewhere. He and Mr. Baucus picked two of these for the zero-base experiment with the Ford budget: the Consumer Product Safety Commission, a young agency that's already acquired a reputation for wheel-spinning inertia; and the National Aeronautics and Space Administration, known as a crisp performer of its expensive feats in the solar system.

Sen. William Proxmire (D., Wis.), chairman of the counterpart Senate subcommittee, also decided to try out the new procedure. He asked the Environmental Protection Agency to submit decision packages for its research and development projects related to energy.

The guinea pig agencies promised to cooperate in the experiment. NASA officials boned up on the writings of Peter Pyhrr, a pioneer of zero-base budgeting in private business. The Consumer Product Safety Commission sent a team to Georgia, where former Gov. Carter had applied the technique to state budgeting. Fiscal experts at the Congressional Budget Office coached the agencies on the new paperwork required, with forms based on those used in Georgia.

Rep. Boland's subcommittee opened hearing on the Consumer Product Safety Commission's zero-base budget submissions on March 16. "We really do appreciate this opportunity to be part of this experiment," commission Chairman John Byington told the Congressmen. But a little later, he was saying that zero-base budgeting didn't quite fit with the way the commission operates.

Rep. Baucus asked why the commission had failed to rank its 21 decision packages against each other in importance, as requested. "Trying to rank our programs against each other would be like in Georgia ranking the highway department against the health department," said Mr. Byington. "I personally think that ZBB is an excellent management tool, but I think in its classical sense it may be a little unwieldy as a total budget document. I think that it can be adapted."

Four of the commission's decision packages involved purely administrative functions of helping the five commissioners decide things and pay the bills. Or, in the eye-glazing lingo of bureaucrats everywhere, the job of the decision package labeled "commission direction" is: "to translate concrete staff operating plans for a finite number of product/project-specific priority product areas, as well as a limited number of new areas emerging during the year which cannot now be forecast, and a given number of resource commitments, into actions designed to maximize the present value of reduced injuries consistent with other general commission policies, objectives and priorities."

The commission, which has authorized slots for 890 employees, said it will need 194 slots earmarked for administrative people. That's just about the "minimum" level the commission insisted; any cut would "lessen both the quantity and quality" of help to the commissioners. But it gave the subcommittee little supporting evidence of that, and the members agreed to cut the administrative slots to 164. It's not clear how much zero-base thinking was involved in that decision; the subcommittee last year, before the arrival of the new technique, had warned the commission about administrative fat.

Later in March, the subcommittee held a hearing on NASA's budget request. The ex-

periment applied only to the operations of the Johnson Space Center in Texas, the Marshall Space Flight Center in Alabama and the Kennedy Space Center in Florida. Once again, the officials said they were pleased to be part of the experiment, and once again they explained why zero-base budgeting didn't quite apply to everything they do. Lee Scherer, director of the Kennedy Center, testified it's his job to launch anything sent him from the rest of the agency, "so there aren't many decision-package levels that I can see."

#### LEGISLATIVE TRADE-OFF

The subcommittee settled some key NASA budget decisions without using a zero-base rationale at all. One was the fate of the space telescope the agency wants to put in orbit. Members finally decided to grant the money for this telescope, but only after denying funds for a new spacecraft trip to Jupiter. That's the kind of legislative trade-off made all the time in Congress. "We could arrive at that decision without the budget being zero-based," acknowledges Rep. Boland.

The subcommittee's bill probably contains all the zero-base thinking it will receive in the House. The technique may be mentioned but not actually used at this afternoon's meeting of the full 55-member Appropriations Committee, which traditionally ratifies most of its subcommittees' decisions before sending bills to the House floor.

So the experiment has shown to the satisfaction of Reps. Boland and Baucus that zero-base budgeting's greatest potential impact will occur in the bureaucracy "downtown" before the budget ever reaches Capitol Hill. There, the limited exercise in producing actual decision packages points up a potential danger that any initial impact of zero-base budgeting may just fade away in bureaucratic time unless the Carterites are watchful.

Mayors skilled at getting money out of the government practice an art called "grantsmanship." Federal employees seeking to have their skins may quickly learn an analogous skill—decision package management?—in describing their programs to higher-ups in terms suggesting doomsday if the knife falls. Mr. Carter can only hope the bureaucracy doesn't learn very fast.

HOUSE OF REPRESENTATIVES,  
Washington, May 24, 1977.

HON. JIMMY CARTER,  
President of the United States, The White House, Washington, D.C.

DEAR MR. PRESIDENT: It is gratifying to see that you are following through strongly on your campaign pledge to implement zero-base budgeting in the federal government. I have been a strong advocate of ZBB here in the House of Representatives.

Following my recommendations, the HUD and Independent Agencies Subcommittee of the House Appropriations Committee recently engaged in an extensive experiment with zero-base budgeting. I have enclosed a copy of the report for the FY 1978 HUD-Independent Agencies Appropriations bill, which explains the experiment in detail, but would like to outline for you the Committee's major conclusions from that study.

Our primary conclusion from the experiment was that time is the crucial factor in the preparation of useful ZBB budget materials. In brief, we wanted succinct, useful information in decision package form with very little added paperwork. What we received was marginally improved analysis and reams of useless paper. We think that this is because the agencies were pushed to do too much too soon. If every federal agency is forced to do a complete ZBB presentation for the entire agency in the space of only a few months, no real analysis will go into the budget submissions. We feel that it is unrealistic to expect line managers, budget

analysts, and planners to be able to do any real analysis in a ZBB context in such a short period of time. And, lacking the hard, substantive work that must go into these preparations, I fear that the paperwork will be voluminous and the "meat" sparse. It is also unrealistic to expect that OMB, which is already greatly overextended, can review the submissions in any depth for either content or failures in ZBB analysis.

While I realize that the OMB instructions of May 2 mandate across-the-board ZBB presentations for the entire federal government in FY 1979, I think that the massive size of the initial job and the speed with which it is being carried out will greatly compromise the tremendous promise that ZBB has to offer. Thus, I would urge that only selected agencies be required to implement ZBB across the board this year and that all other agencies be required to analyze only selected portions of their budget for FY 1979. This would allow OMB the time and manpower to fully analyze the submissions of the few agencies and closely monitor their implementation progress. It would also allow the other agencies to learn from the many mistakes that the lead agencies will assuredly make in the next few months.

While the problem of "too much too soon" was the primary focus of our Subcommittee's report, there were several other recommendations I think you will find interesting. First, the Committee feels that the upper level ranking of decision packages should be by both organizational units and by programs. In our hearings on the Consumer Product Safety Commission, it became clear that the Commission needed to establish priorities among organizational units, among programs which cut across organizational units, and among the products which it was charged to regulate. The usefulness of each type of ranking cannot be pre-set by overall regulations. Each agency must carefully work out which type of ranking will prove most useful and do that ranking in a flexible format.

Next, the Committee feels strongly that it will be reasonable for the Executive Branch to transmit traditional, incremental budget books to Congress while working on the ZBB process only if two other requirements are met. There should be no fall-off in quality of the incremental books due to the diversion of budget analysts into ZBB work. And, Congress should have access to all ZBB materials within each agency, particularly those at the higher aggregation levels. Finally, we have asked the General Accounting Office to analyze the broader implications of Congressional involvement in the ZBB process. While the GAO report has not been finalized, I think that the major GAO conclusions will be an important supplement to the Subcommittee report. While GAO has several recommendations, I would like to emphasize only their two most important ones at this time. First, GAO feels strongly that priority rankings must be available to Congress in both the form and the detail that allows Congressional ranking of the decision packages. There should be a clear array of agency rankings at the top managerial level, revised agency rankings at the secretarial level, and the final revised OMB rankings. This will allow Congress to base its funding decisions partially on Executive Branch analysis rather than on unsubstantiated Executive Branch conclusions that could lead to blind "tinkering" with the budget.

Also, Congress must see the agencies' program goals and objectives in order to know whether Congressional intent is being interpreted correctly by each agency. We must see not only alternative means to attain each objective, but alternative objectives to

gain the major goals of each agency. As an example, the OMB guidelines of May 2 state a goal in the mental health field which seems thoroughly reasonable, but the major objective under that goal is more the summation of the means chosen to arrive at that goal than any policy decision resulting from consideration of alternative major objectives to accomplish the goal. I shall make the GAO report immediately available to you when it is completed.

I hope that these thoughts and recommendations will be useful to you as you continue to monitor OMB's progress in initiating ZBB in the federal government. I think that it might be useful for me to meet with OMB on ways to make the implementation of ZBB a success and would be pleased to do so if you or they desire it.

With best personal regards, I am

Sincerely,

MAX BAUCUS.

## BOSS TWEED WOULD HAVE LIKED UNIVERSAL VOTER REGISTRATION

**HON. WILLIAM L. ARMSTRONG**

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. ARMSTRONG. Mr. Speaker, somewhere, Boss Tweed is smiling.

William Marcy Tweed departed this life on April 12, 1878, under rather unpleasant circumstances. He died in jail, following his conviction on more than 200 counts of fraud, extortion, and bribery.

From 1866 to 1871, the Tweed Ring had a stranglehold on New York City government, and nearly as firm a grip on the State government in Albany.

Tweed owed his wealth and power to the reliable regularity with which New York City voters elected Tweed-backed candidates to local, State, and Federal offices.

Tweed's success was due primarily to the bold and imaginative ways in which he extended the franchise. Tweed voted people who were late getting to the polls, or who were out of town. He voted people who were underage, people who were dead, people who had never been born. Voter turnout in Tweed's precincts was always high, often exceeding 100 percent.

Tweed's bones lie moldering in the Greenwood Cemetery in Brooklyn, but his spirit lives on in President Carter's proposal for universal voter registration.

Universal voter registration—UVR—is the rather optimistic name the President has given to his plan to permit persons old enough to vote to register at the polls on election day and then immediately cast ballots for Federal candidates. It includes grants to entice States to adopt similar provisions for their own elections, and sets new penalties for vote fraud.

Supporters of UVR describe it as the best possible means of arresting the steady decline in voter turnout, which slumped to 53.4 percent in 1976. There is some evidence to support this view.

Minnesota and Wisconsin adopted universal voter registration in 1976. Voter turnout in these two States was up 4

percentage points from 1972, as opposed to a 2- to 8-point decline in other Northern States. Political analyst Kevin Phillips estimates that if it were applied nationally, UVR could swell turnout in 1980 by 6 to 10 percentage points.

On the other hand, turnout was also up in most Southern States, and they did not have UVR.

Despite the lack of evidence to support their view, supporters of UVR are hailing it as the next great leap forward in voting rights, of a kind with woman suffrage and abolition of the poll tax.

Attorney General Griffin Bell has described the proposal as "the logical next step in the historic trend toward greater democracy in America."

Bell's enthusiasm is not shared by Craig Donsanto, the nonpolitical chief of the election unit of the Justice Department's Criminal Division.

"I oppose the concept embodied in H.R. 5400—the universal voter registration bill—as a dangerous relaxation of what precious few safeguards presently exist against abuse of the franchise," Donsanto wrote in a memorandum to his superiors.

"The experience of the Criminal Division in enforcing the Federal election laws indicates there is a tremendous potential for fraud in H.R. 5400," Donsanto said.

Lest it be thought Donsanto is merely an overzealous cop standing in the way of progress, it should be noted that about two-thirds of all election officials share his concern about the potential for vote fraud in UVR.

That concern is especially strong in Chicago, the city where Boss Tweed's maxim of "vote early and often" has been most faithfully observed.

John Hanly, a Democrat who is chairman of the board of election commissioners in Chicago told the Senate Rules Committee:

Election day registration will set the cause of honest elections back many years. It will erode the integrity of our election . . . it will congest and disrupt our polling places and certainly turn off, if not away, the voter who is civic-minded enough to get registered in the normal way.

Franklin J. Lunding, chairman of the Illinois State Board of Elections, said UVR "would severely damage the integrity of the electoral process and would pose almost insurmountable administrative problems."

Steven Klein, director of the Americans for Democratic Action affiliate in Illinois, said UVR would mean "the enfranchisement of every tombstone, firehouse, and lamppost in the city of Chicago."

Robert F. Burns, Rhode Island's secretary of state, described UVR as "an election day gimmick designed to accommodate the few at the peril of many."

"This bill not only invites fraud, it makes it easy," Burns said.

Harold Tyrell, chairman of the Cook County, Chicago, Republican Committee, is even more succinct: "since this is a license to steal," he said, "you ought to charge a fee."

Donsanto explained in his Justice De-

partment memo why the safeguards the Carter plan would wipe out are so vital:

First, the fact that a prospective voter is required to appear in person and to provide pertinent information about his qualification to vote at least 30 days before an election provides local election officials with ample time to check the veracity of his claim to the franchise to assure that previous registrations he may have had are voided before the election takes place. This in turn assures that a registrant is indeed qualified to vote in the place where he is seeking the franchise, and that he is permitted to vote only in that one place.

Second, by providing for a "control" sample of a registrant's signature, registration laws enable many states to protect themselves from vote fraud by additionally requiring a voter to sign a roster at the polling station itself.

Abolition of pre-election registration will, for all intents and purposes, prevent the states from protecting themselves against individuals who may seek to vote at several locations where they are known, as well as prevent them from assuring that a voter is indeed qualified to vote before he casts his ballot.

Donsanto dismissed the antifraud provisions of the Carter plan as "inadequate."

In the first place, Donsanto said, there are already on the books a large number of laws containing severe penalties for vote fraud. If they have not been able to discourage fraud, he said, an additional penalty is likely to be "of little foreseeable help."

The effect of the antifraud provisions in UVR are watered down even further because enforcement would be turned over to the overworked, understaffed Federal Elections Commission rather than to the Department of Justice, Donsanto said.

But most important is the fact that the President's plan could not prevent vote fraud; at best it could detect it after it had occurred. Once a fraudulent ballot has been cast, it looks like any other, and there is no way to get it back. The damage has been done.

Concern about vote fraud clearly is not idle. Donsanto, speaking from his years of experience in the Justice Department, says flatly: "Election fraud is widespread in both State and Federal elections."

Examples of vote fraud abound. Just in this last month, the House had to vote on five congressional races in which allegations of voting irregularities had delayed certification of who won and who lost, and a U.S. Congressman and 25 election officials were indicted in Louisiana for multiple voting in a House race in 1976.

It would not take much of an increase in vote fraud to have a drastic impact on the political future of this country. A change of roughly one vote per precinct would have altered the result of every Presidential election but two since 1960.

Supporters of UVR pooh-pooh the prospect of fraud. They cite a Government Accounting Office survey which reported only 3 percent of election boards reported charges of registration fraud, and the fact that there have been no vote fraud convictions in Wisconsin and Minnesota following adoption of UVR.

What UVR supporters do not say is that a 3-percent rate of fraud is quite

enough to change the outcome of a great many elections, and that that rate is certain to increase if election rules are liberalized.

It is true that as of now there have been no convictions of vote fraud in Wisconsin or Minnesota. But wait awhile. Investigations by local district attorneys are still underway. In Milwaukee County alone, 2,421 cases of possible fraud have been under investigation.

Furthermore, Wisconsin and Minnesota have the reputation of being exceptionally "clean" States in politics, and should not be regarded as typical. Other States, such as Illinois, Louisiana, Maryland, and New Jersey have a far different reputation.

The potential for vote fraud is the principal, but far from the only, objection that has been raised to UVR.

Local officials who testified at Senate and House hearings said UVR would cost far more to administer than proposed Federal subsidies would cover; that it would be difficult to recruit and train the additional election workers who would be needed, and that voters would experience long delays at the polling places.

Their concern about administrative overload was borne out in Wisconsin, where voters in some precincts were waiting in line at midnight in order to cast their votes.

Despite all these objections and a distinct lack of enthusiasm for it on the part of the American people—a recent Gallup poll indicated 55 percent opposed—backers of UVR are pushing on.

There are those who believe that the reason for this has rather little to do with the high ideals that have been piously invoked since the drive for UVR began.

Virtually all supporters of UVR are Democrats, and they are buoyed in their zeal to extend the franchise by the expectation that most of the new votes will go to the Democrats.

Opponents of UVR, most of them Republicans, are reinforced in their concern for the integrity of the electoral process by the suspicion that what the Democrats think about the way the new voters will vote is accurate.

Last December, Patrick Caddell, President Carter's pollster, wrote a 56-page memorandum on political strategy. On pages 30 and 30a of that confidential memo, Caddell advised the then President-elect:

One item that does not fit in this outline is voter registration and turnout. A simple explanation of the election numbers makes it imperative that the postcard registration take place nationally. Beyond that there needs to be some study of ways to induce voters to vote. Part of the problem, of course, is the lack of efficacy voters feel which can only be solved by responsive and successful government. However, perhaps there are other incentives, whether they be tax credits or the like, that can be devised to induce people to go to the polls and vote. Increasingly higher turnouts almost certainly mean a greater political success for Governor Carter; lower turnouts put his political future in some jeopardy.

Whatever the motives of those behind it, UVR is moving steadily along, and likely will pass—there being more Democrats in Congress than Republicans.

The irony of it all is that a survey by the U.S. Bureau of Census in November 1976 found that fewer than 2 percent of persons surveyed cited registration difficulties as a reason for not registering or voting.

The Census Bureau survey confirmed the findings of a September 1976 poll by Peter D. Hart Research Associates, which determined that attitudinal factors were more important than structural ones in explaining nonvoting. The reasons most often cited for not voting, Hart found, were: "candidates say one thing and do another," and "it doesn't make any difference who is elected because things never seem to work out right."

Politicians will have to look elsewhere—perhaps in a mirror—to find the real reasons for declining voter turnouts.

## HOW NOT TO SERVE THE ENERGY PROBLEM

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BAUMAN. Mr. Speaker, later this week we will be asked to pass judgment on H.R. 6804 which creates for the first time a Federal Department of Energy which has been billed as part of a solution to our national energy shortages and problems. Before we rush headlong into approving this new bureaucratic creation, we ought to seriously recall that it has been the Federal Government's policies and agencies which have created many of our current energy problems, including the natural gas shortage and declining production of domestic oil supplies, to name but a few.

Will the creation of this new super-agency really help the situation all that much? Or would not it be better, as the gentlemen from New York, Mr. WYDLER, suggests in his opposing views on the bill, to carefully review the roles of the many agencies we now have.

Well-known columnist John D. Lofton, Jr., writing in this week's *Human Events*, points out the grave risk contained in this legislation and his words are worthwhile reading before we vote.

The column follows:

THE DEPARTMENT OF ENERGY BOONDOGGLE

(By John D. Lofton Jr.)

The problem with many Republicans is that to the extent they have any convictions at all, they lack the courage to follow through on these convictions. A classic example of this failure of leadership is the recent 74-10 Senate passage of S. 826 which establishes a new Department of Energy that will cost \$10 billion initially and employ 20,000 bureaucrats.

The ostensible purpose of this bill was the need to consolidate the activities of three existing energy agencies: the Federal Energy Administration, the Federal Power Commission, and the Energy Research and Development Administration. But the legislation's real purpose was a power grab, plain and simple, designed to increase the Carter Administration's control over all energy matters, both large and small.

A week prior to the passage of S. 826 on May 18, all 38 GOP senators offered an energy

initiative of their own as an alternative to the Carter energy plan. This initiative was founded on solid, traditional Republican principles. It declared:

"The Administration proposals, despite their pious hopes for increased energy resources, call for more of the same measures that created our national inability to respond swiftly and adequately to the problems created by the OPEC oil embargo.

"The only practical way in which solutions can be found for our energy crisis is by greater reliance on competitive pricing and on the resilience, resourcefulness and the drive of our market system when confronted with difficult challenges."

Denouncing the Carter Administration's energy proposals for offering only "further regulation, further bureaucratization, further governmental intervention into every facet of the energy problem," the Republican senators stated:

"We must return to a competitive market in energy. The collective decisions of Americans will make better energy policy than any system of regulations or allocations through a government agency."

So, along comes S. 826, the first opportunity for Senate Republicans to put their professed principles into action. And what happens? Twenty-two Republicans vote for this monstrosity, nine vote against it, and five don't vote at all. The GOP senators who opposed this measure are: Garn (Utah), Goldwater (Ariz.), Hansen (Wyo.), Hatch (Utah), Helms (N.C.), Laxalt (Nev.), McClure (Idaho), Scott (Va.) and Tower (Tex.). The lone Democrat voting "no" was Sen. John Durkin of New Hampshire.

Explaining why he would vote for S. 826, Senate GOP "leader" Howard Baker of Tennessee expressed "certain reservations" yet, he observed, the bill was largely "organizational and procedural." But, it is nothing of the kind. As the floor manager of the bill, Sen. Abraham Ribicoff (D.-Conn.), candidly admitted, the legislation gives the new Energy Department "extensive powers to set prices and make other far-reaching regulatory decisions."

Writing in his column in *Newsweek* magazine, Dr. Milton Friedman, the Nobel Prize-winning economist, says of the new federal Energy Department:

"It enthrones a bureaucracy that would have a self-interest in expanding in size and power and would have the means to do so—both directly, through exercising price control and other powers, and indirectly, through propagandizing the public and the Congress for still broader powers. The new Energy Department will produce distortions and disruptions, with its secretary and its bureaucrats will take not as evidence of their own malfeasance but as demonstrating the need for still broader powers.

"The scenario is by no means purely hypothetical. The Federal Energy Administration was established in 1973 in response to the Arab boycott. After several extensions, its staff has gone from zero to 4,000 in less than four years. And by now, it is only one of no one knows how many agencies that have mushroomed to 'solve' the energy crisis that the FEA and its associated agencies have created. We are now at the next stage: the drive to consolidate them into a department—to start out with nearly 20,000 employees. . . .

"A Department of Energy has the potential of being the most powerful, and the most harmful, of all federal agencies. It would control the life-blood of our economic system. Its tentacles would reach into every factory, into every dwelling in the land."

Anyone who takes the time to read S. 826, and admittedly this is a chore, will see that what Dr. Friedman says is true. The new Energy Department perpetuates precisely what the 38 GOP senators said in their state-

ment they are against, that is, the "further regulation, further bureaucratization, further governmental intervention into every facet of the energy problem."

Just to hit a few low-lights of S 826:

Title I, Section 102 lists the purposes of the department which include providing for "permanent mechanisms" to implement and develop a comprehensive national energy policy; facilitating the establishment of a strategy for "distributing and allocating" fuels in periods of short supply; and protecting the interests of consumers in "an adequate and reliable supply of energy at reasonable cost." Not until purpose number 19 is private enterprise even mentioned! And then it is only said that "to the maximum extent practicable" will the private sector be "utilized" in the development of the purposes already mentioned.

Title II, Section 205 establishes within the department an Economic Regulatory Administration, to be headed by an administrator appointed by the President with the advice and consent of the Senate. This person, it is said, shall be someone qualified to "assess fairly the interest and needs of producers, consumers, and users of energy." How such distinctions are to be made is, naturally, not explained. Perhaps this is because producers and consumers are energy users and, in many cases, vice versa.

Title VII, headed "Energy Planning," Section 6 (b) (1) allows the President to "establish energy production, utilization, and conservation objectives, for periods of five and 10 years, necessary to satisfy projected energy needs of the U.S. to meet the requirements of the general welfare of the people of the U.S. and the commercial and the industrial life of the nation, paying particular attention to the needs for full employment, price stability, energy security, economic growth, environmental protection, special regional needs, and the efficient utilization of public and private resources."

Speaking recently to the graduating class at Salem College, Sen. Daniel Moynihan (D-N.Y.) noted that while we, as a nation, have organized our internal defenses against the abuse of governmental power, what we have not done so carefully is to cultivate a sensibility to that deformation of a political system which arises simply from the enlargement of power: that is, not the misuse of government, but its growth.

Commenting on President Carter's use of the William James quote, the need for a "moral equivalent of war," to describe his plan to solve the energy crisis, Sen. Moynihan observed:

"A splendid phrase that. And yet how ironic it would be if James' concern to support the pacifist movement of his time . . . should now become the battle cry of a not less fatal enterprise, the irreversible growth of the power of government here in the United States. In the modern age, nothing has so much enlarged the power and scope of government as war. Should we not assume that simulated war will do as much?"

Most assuredly we should assume this. Because it will. And how ironic that Sen. Moynihan was one of the 74 senators who voted for a new federal Department of Energy.

Having passed the Senate, President Carter's proposal for a new Department of Energy now heads for the House floor where in early June it is expected to be scheduled for three hours of debate, plus five minutes each for any amendments offered.

The House version of the Senate bill—HR 6804—is much closer to what President Carter wants. In that it gives the prospective Secretary of Energy, Dr. James Schlesinger, significantly more energy pricing authority than does S 826, which invests this authority in the Energy Regulatory Board.

## BOUTIQUE CONSERVATIONISTS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

"BOUTIQUE CONSERVATIONISTS" MAY SUCCEED IN KILLING AN ENTIRE INDUSTRY

A newcomer has joined the furbish louseward and snail darter on the endangered species list. It's the American tuna fisherman.

Soon, if the environmental fanatics have their way, there will be no U.S. tuna fishing industry. Americans will still be able to eat tuna sandwiches, however, because foreign fishing fleets are rushing in to catch and sell to us the tuna which U.S. fishermen normally would bring in.

The reason for this bizarre state of affairs is the environmentalists' concern over killing of porpoises incidental to the "purse-seining" of tuna.

Fishermen catch tuna by trapping them in huge nets. Because porpoises swim along with the tuna, fishermen use them as a guide for setting their nets.

But the air-breathing porpoises drown if not released from the underwater nets, so fishermen—prodded by the 1972 Marine Mammal Protection Act—have developed methods whereby nearly 99 per cent of the trapped porpoises can be freed to swim to safety.

That still leaves one per cent of the porpoises to die—sacrificed, at least until better methods are developed, to the need for tuna.

Such a sacrifice so far has been too much for what the Washington Star calls the "boutique conservationists" who scream "for an environmental impact statement before Grandma cuts off a chicken's head for Sunday dinner."

Groups such as the Committee on Humane Legislation recently have won legal battles forcing an interpretation of the 1972 law which, in effect, bans the taking of tuna by "fishing on porpoise."

American tuna fishermen, based in San Pedro and San Diego, Calif., have fought in vain for a more liberal interpretation of the law.

Sen. S. I. Hayakawa (R-Calif.) has introduced a bill to change the law, but it has gone nowhere. Sen. Alan Cranston (D-Calif.) is trying to arrange a compromise. Several California representatives have spoken in support of the fishermen.

But little has been done on the congressional front, and the fishermen say it is obvious that the environmentalists—more practiced in such matters—have intimidated many congressmen.

Fishermen point to numerous "Save the Porpoise" ads on television stations, particularly in the East, and to one-sided information presented to school children. The latter resulted in thousands of letters to congressmen protesting the "murder" of friendly, fun-loving porpoises by greedy fishermen.

The environmentalists—but not the porpoises—are aided in the battle by a loophole in the 1972 law, which bans the importation of tuna caught in violation of U.S. mammal-protection standards—but makes no provision for checking foreign fishing fleets.

As a result, Japanese, Russian and other fishermen can kill as many porpoises as they want, yet still sell tuna to the U.S. merely by lying about their fishing methods. Such illicit tuna presumably will be sold to U.S. canneries in increasing quantities to satisfy consumer demand.

And that means fishermen may not be able to enlist the aid of consumers in their efforts to persuade Congress to change the law.

One wonders: Are the environmentalists still eating tuna sandwiches?

## AN AMERICAN HERO

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. DERWINSKI. Mr. Speaker, it was especially appropriate that Mrs. Charles Lindbergh accompanied the U.S. delegation, headed by Secretary of Transportation, Brock Adams, to the Paris Air Show this past weekend, as this month commemorates the 50th anniversary of her husband's solo transatlantic flight to Paris.

The Chicago Tribune of May 22, remembers Charles Lindbergh not only for his famous flight from New York to Paris and as a pioneer in air travel, but also as an American hero. I insert this fine tribute in the RECORD at this time:

### REMEMBERING LINDBERGH'S FAMOUS FLIGHT

Time may indeed be one of the few constants in life, but to anyone past the half century mark a famous event that took place 50 years ago this month may make them feel that "time's winged chariot" is hurrying by faster than ever. It also compels attention to the dramatic advances in aviation technology during that period.

The event, of course, was the historic solo flight of Charles A. Lindbergh nonstop across the Atlantic from New York to Paris. In his single-engine "Spirit of St. Louis," the former U.S. air mail pilot spanned the 3,610 miles in 33½ hours—an astonishing feat for the day. (Today the supersonic Concorde makes the same flight in 3½ hours.)

Overnight, Lindbergh became an international figure of epic proportions. He was idolized everywhere and all sorts of honors were heaped upon him. Lindbergh, of course, was not the first person to fly the Atlantic nonstop (Alcock and Brown had done it in 1919, from Newfoundland to Ireland). But Lindbergh did it alone—and that made a big difference. Besides, he was young (25), he was handsome and he was very modest. (Upon landing in Paris he resisted all efforts to give him a medical examination, exclaiming: "Don't bother. I am all right. I would like to have a bath and a glass of milk.") The public ate it up.

Returning to New York, the intrepid flier was accorded the largest ticker-tape parade in the city's history, which launched him upon a remarkable career as an authentic American hero.

Few men and events in modern history have so captured the popular imagination and affection as Lindbergh and his epoch-making flight. It was just the right thing at the right time needed to win greater public acceptance of the fledgling aviation industry.

Of those early days, Lindbergh once said: "The hazards of aviation loomed high during the night of ignorance, and shrank with the dawn of knowledge."

Lindbergh himself, although he never claimed as much, contributed a great deal to helping to push back the barriers of ignorance. He also went on to score achievements in other fields—science, conservation and the protection of wildlife. It is for his flight across the Atlantic May 20-21, 1927, however,

that he will be forever remembered. And it all happened just 50 years ago.

We are all closer to our roots than we think.

## WHEN THE DOOR IS CLOSED TO ILLEGAL ALIENS, WHO PAYS?

**HON. DON EDWARDS**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. EDWARDS of California. Mr. Speaker, the perplexing problem of illegal aliens is analyzed in an article by Wayne A. Cornelius, associate professor of political science at the Massachusetts Institute of Technology and director of a 4-year study of Mexican migration to the United States sponsored by the National Institute of Child Health and Human Development of the National Institutes of Health.

I commend this incisive article to my colleagues:

WHEN THE DOOR IS CLOSED TO ILLEGAL  
ALIENS, WHO PAYS?

(By Wayne A. Cornelius)

CAMBRIDGE, MASS.—A very predictable thing happens in this country whenever the economy takes a sharp turn for the worst: The illegal alien is rediscovered. Politicians, journalists, organized labor, and other interest groups rush to blame him for every imaginable problem afflicting American society, from high unemployment to rising crime rates, escalating social-service costs, overpopulation, and balance-of-payments deficits.

Immigration authorities crank out ever-more-frightening "guess-timates" of the numbers of illegal aliens "silently invading" the country. The public is warned in urgent and ominous tones that illegal aliens are out to take their jobs away and add billions of dollars to their tax bills.

We are now witnessing yet another "rediscovery" of the illegal alien. Pressures for new restrictive measures—particularly legislation that would impose civil or criminal penalties and fines on United States employers who "knowingly" hire illegal aliens—have mounted steadily. Such restrictive measures form the core of the policy package reportedly recommended to President Carter by his Cabinet-level task force on illegal aliens, and they have been proposed repeatedly by various members of Congress.

The case for a more restrictive immigration policy is based on three principal assumptions: that illegal aliens compete effectively with, and displace, large numbers of American workers; that the benefits to American society resulting from the aliens' contribution of low-cost labor are exceeded by the "social costs" resulting from their presence here; and that most illegal aliens entering the United States eventually settle here permanently, thus imposing an increasingly heavy, long-term burden upon the society.

There is as yet no direct evidence to support any of these assumptions, at least with respect to illegal aliens from Mexico, who still constitute at least 60 to 65 percent of the total flow and more than 90 percent of the illegal aliens apprehended each year.

Where careful independent studies of the impact of illegal immigration on local labor markets have been made, they have found no evidence of large-scale displacement of legal resident workers by illegal aliens. Studies have also shown that Mexican illegals make amazingly little use of tax-supported social services while they are in the United States, and that the cost of the services they do use

is far outweighed by their contributions to Social Security and income tax revenues.

There is also abundant evidence indicating that the vast majority of illegal aliens from Mexico continue to maintain a pattern of "shuttle" migration, most of them returning to Mexico after six months or less of employment in the United States. In fact, studies have shown that only a small minority of Mexican illegals even aspire to settle permanently in the United States.

While illegal aliens from countries other than Mexico do seem to stay longer and make more use of social services, there is still no reliable evidence that they compete effectively with American workers for desirable jobs. The typical job held by the illegal alien, regardless of nationality, would not provide the average American family with more than a subsistence standard of living. In most states, it would provide less income than welfare payments.

Certainly in some geographic areas, types of enterprises, and job categories, illegal aliens may depress wage levels or "take jobs away" from American workers. But there is simply no hard evidence that these effects are as widespread or as serious as most policymakers and the general public seem to believe.

The notion that curtailing illegal immigration will significantly reduce unemployment among the young, the unskilled, members of minority groups, and other sectors of the United States population allegedly being displaced by illegal aliens may prove to be a cruel illusion.

Many of the jobs "liberated" in this way are likely to be eliminated through mechanization or through bankruptcy of the enterprises involved, and many others cannot be "upgraded" sufficiently—even with higher wages and shorter hours—to make them attractive to native workers.

While the benefits of a more restrictive immigration policy to the American worker have been grossly exaggerated, the costs of such a policy to both the United States and the illegal aliens' countries of origin have been consistently underestimated.

The impact of "closing the door" to illegal aliens will be felt by the American consumer, in the form of higher prices for food and many other products currently produced with alien labor. Failures among small businesses—those with 25 or fewer employees, which hire more than half of the illegal aliens from Mexico—will also increase, eliminating jobs not only for illegals but for native Americans.

But the adverse impact of restrictive measures will be felt most intensely in Mexico, which is currently struggling to recover from its most serious economic crisis since the 1930's. At least 20 percent of the population—and a much higher proportion of the rural poor—depend upon wages earned in the United States for a large share of their cash income.

An employer-sanction law that is even partly effective in denying jobs to illegal aliens is likely to produce economic dislocations and human suffering on a massive scale within Mexico. This will not be simply a problem for Mexico; the implications for United States economic and foreign policy interests are obvious.

All available evidence indicates that employer sanctions and other restrictive measures—short of erecting a Berlin-type wall—will fail to deter economically desperate Mexicans from seeking employment in the United States.

In the long run, every dollar that is spent trying to enforce new restrictive policies would be much better spent on programs to reduce the "push" factors within Mexico and other sending countries that are primarily responsible for illegal immigration: rural unemployment and underemployment, low incomes, and rapid population growth.

For example, studies indicate that resources invested in labor-intensive, small-scale rural industries could significantly reduce the flow of illegal aliens within five to eight years.

In the short run, the best approach would be an expanded program of temporary worker visas permitting up to six months of employment in the United States each year. A temporary-worker program that did not require a prearranged contract between the alien worker and a particular United States employer (in contrast to the former *bracero* program of contract labor) would minimize exploitation of alien workers while reducing illegal immigration and keeping open a critically important safety valve for Mexico. It would also benefit United States workers, since the use of legal alien labor is likely to have a less depressing effect on wages and working conditions than the use of illegal alien labor.

It is ironic that a more restrictive immigration policy is being advocated by many at a point in our history when declining birth rates, the end of unlimited legal immigration, and an American labor force with more education and higher job expectations than ever before all foreshadow a shortage of workers to fill low-skill, low-wage, low-status jobs in the United States economy. When this occurs, in the not-too-distant future, the aliens who are now viewed as a burden on United States society may be seen as a highly valuable asset.

## THE REAL CRISIS

**HON. HAROLD E. FORD**

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. FORD of Tennessee. Mr. Speaker, I rise today to call the attention of my colleagues in the House to the continuing problem of welfare reform. I have been critical of the administration's handling of its welfare reform package, because of the long delay that will come in implementing it. The President's welfare message of last month stated broad goals that are acceptable to most of us, but did not mention any specifics. It is clear to me that welfare reform is not the high priority item with the administration that it should be.

I would like to share with my colleagues a recent article by noted columnist Carl Rowan, outlining the problem and its urgency. I am sure this article will enlighten most of us, and I now insert it in the RECORD:

## THE REAL CRISIS

(By Carl T. Rowan)

WASHINGTON.—The Carter Administration rushed glibly into the "welfare reform" thicket and retreated faster than a rabbit that had bumped into a porcupine.

You wonder why?

The word is that Jimmy Carter wants to reform welfare on the cheap—that is, without spending any more money—and the social and moral trend in America is such that that is just not possible.

We are in the midst of rapid erosion of the American family. This is reflected in the fact that the divorce rate has doubled in a decade. There were more than a million divorces last year, with even more separations and desertions. Government analysts estimate that of every five couples who marry this year, three will not remain together.

This produces the growing phenomenon of the single-parent family. We had 3,260,000 of

them in 1970. Last year we had 4,900,000. And all but 500,000 of these single-parent families were headed by women.

To understand the impact of this, you have to understand that single-parent families are the poorest in the land—especially those 4,400,000 families headed by women. If you want a grim summary of what has happened to the American family, ponder these statistics:

More than 11 million children under age 18—that's one out of every six—now live with only one parent.

Eleven percent of all white children live in homes where the father is absent.

Forty-one percent of all black children live in homes where the father is absent.

Of the white children who live with their mothers, 37 percent live below the poverty line.

Of the black children who have only a mother present, two out of three live in poverty.

The trend toward single-parent families grows because of another social-moral phenomenon. I reported in an earlier column that this country has an epidemic of teenage pregnancies, with some 200,000 teenagers bearing babies out of wedlock every year.

With movie stars and other celebrities now openly bearing babies outside marriage, a lot of the stigma of "illegitimacy" is off. Thus more than half our pregnant teenagers now want to keep their babies.

This adds immensely to the cost and complications of welfare. The nation's largest cash assistance welfare program is Aid to Families with Dependent Children (AFDC). HEW reports that there were 11,215,436 recipients in January, an increase of 31,902 over December. The total cost in January was \$844,787,000.

Now, the federal government paid only 55 percent of that AFDC tab in January. Unless President Carter wants the governors, mayors and other local officials beating down the gates to the White House, his welfare reform had better say that the federal government will now pay 100 percent of the AFDC bill.

There is just no way Uncle Sam can do that and meet Carter's dream of welfare reform without spending any more federal dollars. It can't even be done without raising the total overall cost of welfare.

That ought to suggest to someone that this country's greatest problem is not the energy crisis, or crime, or the Soviet military threat. Our great weakness lies in the fact that we have 11 million children in single-parent families, many of whom know nothing but instability of family life, poverty, hopelessness.

The crucial question before the Carter Administration is this: Does anybody there really know how to "reform" welfare so as to enable these children to later join in producing stable, productive families?

**PROF. MILTON FRIEDMAN SUGGESTS THAT THE NEW DEPARTMENT OF ENERGY WOULD BE A TROJAN HORSE**

**HON. JACK F. KEMP**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. KEMP. Mr. Speaker, the House is on the verge of considering a bill to establish a \$10 billion Department of Energy. I believe that such an agency is entirely unnecessary, unlikely to do anything except perpetuate the Government controls which caused our present energy problems, and likely to become the vehicle of special interests who will use it

to increase Government spending on favored energy projects and increase the power of energy bureaucrats. Consequently, I hope my colleagues will think twice about the need for a super energy agency and I hope they will take the time to read Prof. Milton Friedman's analysis of such an agency:

**A DEPARTMENT OF ENERGY?**

(By Milton Friedman)

Recent news stories on President Carter's energy proposals stress an alleged contrast between rhetoric and substance. The rhetoric is tough—talk of the "moral equivalent of war," the need to change life-styles, the sacrifices that citizens will be asked to bear. The substance, it is said, is mild—a hypothetical future gas tax, every stick to the consumer balanced by a carrot, the invisible corporation rather than the visible household to bear the brunt of costly conservation. Even the President is reported as telling lawmakers that the program is not really so tough.

**A TROJAN HORSE**

I submit that these news stories overlook, or take as innocuous, the key element in the proposal. If it alone were adopted, it would presage a major revolution in the institutional arrangements for producing and distributing energy. That element is the establishment of a Federal Department of Energy with far-reaching powers. This is the Trojan Horse, or to mix metaphors, the entering wedge, that is camouflaged by the 103 specific pieces of the complex Carter-Schlesinger program.

Why is the establishment of a Department of Energy so important? Because it enthrones a bureaucracy that would have a self-interest in expanding in size and power and would have the means to do so—both directly, through exercising price control and other powers, and indirectly, through propagandizing the public and the Congress for still broader powers. The new Energy Department will produce distortions and disruptions, which its Secretary and its bureaucrats will take not as evidence of their own malfeasance but as demonstrating the need for still broader powers.

This scenario is by no means purely hypothetical. The Federal Energy Administration was established in 1973 in response to the Arab boycott. After several extensions, its staff has gone from zero to 4,000 in less than four years. And by now, it is only one of no one knows how many agencies that have mushroomed to "solve" the energy crisis that the FEA and its associated agencies have created. We are now at the next stage: the drive to consolidate them into a department—to start out with nearly 20,000 employees.

Moreover, the experience is by no means unique to energy. For example, the Department of Health, Education and Welfare was established in 1953 to consolidate a growing number of separate agencies. Its total spending has exploded from less than \$7 billion in 1954 to about \$160 billion currently; the number of bureaucrats, from fewer than 36,000 to more than 140,000. It now has the largest budget of any Cabinet department, and no end is in sight.

It would be child's play to multiply examples. The typical Federal agency starts small, grows slowly for a while, and then explodes.

**TOWARD A CORPORATE STATE**

A Department of Energy has the potential of being the most powerful, and the most harmful, of all Federal agencies. It would control the lifeblood of our economic system. Its tentacles would reach into every factory, into every dwelling in the land. Our economic system has been able to survive the U.S. Postal Service. It has been able to survive Amtrak. I suspect that it will survive Conrail—though Conrail is potentially more

harmful than its predecessors. But can our economic system survive Federal control of the pricing, the production, the distribution, the import of energy?

Do not be misled into supposing that the energy problem is a purely technical problem that engineers can solve. No government engineer is in as good a position as you are to decide whether you would rather use expensive energy for heating your home, driving your car, or helping to produce one or another product for you to buy. No government engineer is in as good a position as the owner of a factory to choose the most economical fuel for his purposes or the cheapest way to conserve energy. No government engineer can replace the market in calculating the indirect effects of energy use or conservation. And no government engineer will enforce the ever more numerous edicts that will come down from on high. That will be done by policemen.

Make no mistake about it. The establishment of a Department of Energy, with the powers requested by the President, would be a further major step toward converting our free-enterprise system into a corporate state.

**THE HOSPITAL COST CONTAINMENT ACT OF 1977**

**HON. DOUGLAS WALGREN**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1977

Mr. WALGREN. Mr. Speaker, the AFL-CIO is supporting the objectives of President Carter's hospital cost containment proposal. The AFL-CIO's legislative director, Andrew J. Biemiller, testified on May 11, 1977, in support of the basic thrust of H.R. 6575, the administration measure, and suggested some amendments to the bill.

Mr. Biemiller testified at a joint hearing of the Health Subcommittees of the Ways and Means and Commerce Committees. I include his statement at this point in the RECORD and urge that my colleagues take time to read it:

On behalf of the AFL-CIO I wish to thank you for the opportunity to share with the Health Subcommittees of the House Ways and Means Committee and the Interstate and Foreign Commerce Committee our views with regard to H.R. 6575, the Hospital Cost Containment Act of 1977.

This bill would establish a Federal program to place a ceiling on hospital revenue increases of about nine percent per year, allow states with established hospital cost containment programs and some others to opt out of the Federal program, provide for an automatic adjustment to the ceiling for hospitals in growing communities and declining communities and allow for an exception process for hospitals which might experience hardship in meeting the ceiling. Since wages of nonsupervisory workers have not contributed significantly to hospital cost inflation, they are appropriately not taken into account in determining the ceiling under the Federal program. The bill has minimal disclosure provisions and Title II would place a limit on hospital capital expenditures.

The average cost per day of a hospital stay has been increasing at a rate of about double the rate of increase of the Consumers Price Index. According to the Council on Wage and Price Stability the average cost per day of a hospital confinement was \$191 in September 1976. This represents an 18.4 percent increase over the same month in the previous year.

Clearly, something must be done.

We believe the basic approach of H. R. 6575 is a feasible one over the short run. It will not be, nor can it ever be, a permanent solution to the escalating cost of health care. Any attempt to single out a single industry to the exclusion of others tends to build up distortions and stresses with respect to the allocation of manpower and capital resources.

Moreover, H. R. 6575 singles out only one segment of the health industry, albeit a large segment, without controlling physician fees and incomes, the high cost of drugs, nursing home care and home health services and without recognizing the inevitable impact on costs of dumping expensive long-term chronically ill patients onto the public hospital sector.

A far more effective and flexible means of cost control over hospital expenditures would be to phase-in coverage for hospitalization under the principles of the Health Security Bill (H. R. 21 and S. 3) introduced by Representative Corman (D-Calif.) and Senator Kennedy (D-Mass.). Under the Health Security Program the Health Security Board would have the leverage of being the sole source of payment for hospital services. This establishes a situation where negotiation between two parties, each having considerable power, can strike a bargain as to each hospital's total budget. These negotiations would take place on a hospital-by-hospital basis to provide maximum flexibility, equity and adaptation to local circumstances. Under Health Security there would be no arbitrary ceilings, no complicated prospective reimbursement formulas nor a deluge of complicated regulations.

It should be pointed out that negotiation between payors and providers of health services is a characteristic of western European national health insurance schemes. Payors and providers mutually respect the power and integrity of each other. In this country, the providers have all the power to set charges and fees and all third parties play the passive role of paying bills unilaterally determined by the providers. America has made a rather unique contribution to provider reimbursement in that the United States is the only country in the world that reimburses hospitals and physicians retroactively, that is, by cost-plus reimbursement of hospitals and usual and customary fees for physicians. No wonder the United States has outstripped every other country in the world in the percentage of the gross national product it devotes to health care. For example, in the year ending June 30, 1975 Canada spent 7.0 percent of their GNP on comprehensive health services without any deductibles and covered 99 percent of their population while the United States spent 8.3 percent of the GNP for health care with deductibles, with substantial benefit gaps and left 12 percent of the population without any health insurance at all, public or private.

But for the short run, in general, the AFL-CIO supports the Administration's plan to establish limits on total hospital revenues, or hospital budgets, especially since, unlike current programs, such limits would apply equally to all third party payors including Blue Cross, Blue Shield and commercial insurance as well as to Federal reimbursement under the Medicare, Medicaid and Maternal and Child Health Programs.

President Carter's health message stated with respect to the Hospital Cost Containment Program:

"This legislation is not a wage-price control program. It places no restrictions on the hospital's ability to determine its charges for any particular service. It places no limit on the size of any wage demand or settlement. The program establishes an overall limit on the rate of increase in reimbursements, per-

mitting doctors and hospital administrators to allocate their own resources efficiently."

Commenting on the President's statement, AFL-CIO President George Meany on April 25, 1977 stated:

"In his message, the President recognizes that hospital workers have not been responsible for hospital cost inflation and proposes adjustments in the containment formula for wage increases for nonsupervisory hospital employees." (The complete text of President Meany's release is attached as Appendix A of this statement).

We strongly support the concept that the wages of nonsupervisory employees must be determined by free collective bargaining.

Hospital wages still lag behind the average wage for all private nonsupervisory employees and even behind the average wage for service employees. In 1976, the average hourly earnings of nonsupervisory employees in all nonfarm employment amounted to \$4.87. For service employees, it was \$4.36 and for hospital workers only \$4.18. Assuming a full work-year of 2080 hours, the annual earnings of the average hospital worker would come to \$8694, substantially below the level of an average worker of \$10,041 for a family of four in an urban community. From 1968 to 1976 the wages of hospital employees increased by only 1.87 while those of employees in service jobs increased by 1.93 and of all nonsupervisory employees in private industry by 2.02 even though it was during this period that hospital employees gained coverage under the Fair Labor Standards Act and for the first time large numbers of them were benefited by collective bargaining negotiations. (See Appendix B for the average hourly earnings for all private employment, all service employment and hospital employment from 1968 to 1976).

Clearly, hospital workers are still underpaid.

The Administration hopes that through this program, hospital expenditures can be contained to about a nine percent increase annually. Elimination of wages from the base will not compromise this goal. In fact, an average wage increase of nine percent per year is better than what unions in this industry have been achieving. Collective bargaining settlements have averaged much less. In 1975, the median bargained wage increase amounted to 7.7 percent. In that year, the cost-of-living rose 9.1 percent. Even organized hospitals were unable to keep up with the cost-of-living. In 1976, the average negotiated wage increase amounted to 6.4 percent while the cost-of-living increased 5.8 percent which still meant a drop in real wages over the two-year period. Nor do anticipated wage increases in this industry represent a threat to the nine percent ceiling.

The AFL-CIO unions with substantial membership in the hospital industry are the Service Employees International Union, the American Federation of State, County and Municipal Employees and Local 1199, of the Retail, Wholesale and Department Store Union. These unions will be testifying in more detail with respect to wages in the hospital industry and their collective bargaining contracts.

The recent staff report of the Council on Wage and Price Stability, "The Rapid Rise of Hospital Costs," clearly shows that hospital wages have only been a minor factor in escalating hospital costs. Total labor costs were the source of only about one-tenth of the annual increase in average costs per patient, per day. According to the American Hospital Association, payroll expenses have steadily declined as a proportion of total hospital expenses from 66 percent in 1962 to 51 percent in the last quarter of 1976. But AHA payroll data includes salaries of supervisory employees. The percent of hospital expenses represented by nonsupervisory employees is only 35 percent.

Thus, since wage increases of nonsupervisory employees have no bearing on the runaway inflation in hospital costs, we strongly urge the exclusion of the wages of nonsupervisory employees from the hospital's base accounting year for purposes of determining the allowable increase.

However, request for such exclusion should not be optional with the hospitals as is provided in Section 124 of H. R. 6575. This section purports to exempt nonsupervisory personnel wage increases from the hospital revenue limit. Instead, it provides an incentive for hospitals to continue to increase expenditures in those areas which have been most responsible for health care inflation. This loophole is provided by the optional nature of the recalculation of revenue limits as stated in Section 124. In short, if hospitals request a modification of their revenues to eliminate the effects of nonsupervisory wages, then nonlabor costs can only rise by the permissible limit (e.g., nine percent). If, on the other hand, a hospital does not request such a modification, then it is possible for nonlabor costs to rise by as much as 14 percent by shifting the burden of the program onto the shoulders of low-wage workers by not granting such workers any increases.

The following numerical example illustrates the problem:

Assumptions:

1. Nonsupervisory labor costs=35 percent of total operating costs.
2. Nonlabor expenses plus administrative salaries=65 percent of total operating costs.
3. Cap=nine percent.

If a hospital can hold wage increases to zero percent the net effect is as follows:

Labor costs held to 0 percent  $\times .35 = 0$   
Nonlabor costs rise by 13.85 percent  $\times .65 =$   
9 percent

Total increase, 9 percent

In other words, nonlabor costs which have been the source of health care inflation could increase by nearly 14 percent.

The solution to this flaw in the legislation is to require the Secretary to modify for all hospitals the inpatient hospital revenue limit to assure exclusion from the base of wage increases of nonsupervisory employees.

This can readily be accomplished by dropping the language at the beginning of Section 124(a) which states:

"At the request of any hospital which is subject to the provisions of this title and which provides the data necessary for the required calculation."

Section 124(a) would then begin:

"The Secretary shall modify . . . etc.

The principal cause of hospital cost inflation is not wages but the control doctors exercise over the manpower and capital resources of the hospital. This control in voluntary hospitals is exercised without any accountability to either the hospital or to the public. The result is dual administration, poor planning, duplication of expensive and seldom used equipment and the purchase of new equipment the effectiveness of which is seldom evaluated.

Unfortunately, the bill provides initially for the exclusion of at least six states, provided the Governors of these states request exclusion and the Secretary of the Department of Health, Education and Welfare approves. The states that could opt out of the program under Section 117(a) include: Massachusetts, Connecticut, Maryland and Washington. Section 117(b) would also allow the states of New York and New Jersey to opt out of the Federal program.

The AFL-CIO strongly favors a national program with uniform standards and uniform administration. We find no convincing evidence that these states have performed an effective job of controlling hospital costs. A study conducted by ICF Incorporated for the Federation of American Hospitals indicates that in 1974-75 the states with manda-

tory rate-setting programs had slightly smaller increases in hospital expenditures per case than states without controls. However, this reduction was more than offset by increased utilization. The result was that the annual increase in hospital expenditures on a per capita basis was 19.1 percent for the states with controls versus 18.7 percent for the states with no controls for the years 1974 and 1975.

Furthermore, Section 117 would leave the door wide open for other states to opt out of the Federal program in the future. Section 118 would also allow any state to opt out of the Federal Hospital Cost Containment Law simply by establishing an experimental or demonstration program of prospective reimbursement under Medicare. Sections 117 and 118 are nothing less than an invitation to the states to assume the responsibility for hospital cost containment, a task they have been unable to perform in a satisfactory manner in the past.

However, if despite our recommendations, the possibility for states to opt out remains, then state hospital cost containment programs must include all of the requirements of the Federal law including the exclusion of nonsupervisory wages from the nine percent ceiling. The President's health message clearly stated:

"Allow states which operate cost containment programs, and are capable of meeting the Federal program's criteria, to continue their own regulatory approaches."

H.R. 6575 does not conform to the President's message. One of the specific criteria stated by the President is "an adjustment for hospitals which provide wage increases to their nonsupervisory employees." But H.R. 6575 would not make receipt of a waiver by a state conditional upon meeting that criterion. If waivers are to be permitted, this must be made explicit in the statute.

Section 124(d) would single out for review the adjustment to hospital revenue that would result from the exclusion of nonsupervisory wages from the base year. Wages should not be singled out for review in eighteen months. The AFL-CIO believes the whole program should be reviewed within eighteen months by Congress and not only by the Administration. The dislocations and inequities that will inevitably develop through time of a ceiling on one industry's expenditures would require annual review in our opinion. Eighteen months is the maximum amount of time that should be allowed for the Administration and Congress to review the whole program.

#### DISCLOSURE

One of the major disappointments of the Administration's bill is the weak disclosure provisions. The Medicare Cost Report (SSA Form 2552) is a potentially useful but baffling mass of data covering some 33 pages. The Report is unquestionably designed to meet the needs of fiscal intermediaries, but it is of limited use to consumers and hospital employees. It fails to list specific administrative salary and major cost information on such important areas as pathology and radiology. In fact, only a trained hospital accountant could conceivably make good use of the Medicare Cost Report.

As stated by President Meany, "the President's proposal also lacks adequate disclosure provisions of hospital finances and expenses. For too long, hospitals have operated under a veil of secrecy, despite the fact that tax dollars are a major source of hospital income. Taxpayers have a right to know how these funds are expended and we will urge Congress to include adequate disclosure provisions in the final bill."

Unfortunately, H.R. 6575 does not meet the President's commitment for adequate disclosure. Therefore, with respect to disclosure, we urge the following:

Each hospital should provide promptly on request by any citizen all cost reports submitted to Medicare, Medicaid and third-party payors during 1975 through the present. In addition, the hospital should disclose on request its IRS Form 990 or an equivalent complete listing of its total receipts, expenses and disbursements, including its total assets and liabilities for the period 1975 through the present.

Each hospital should disclose on request the total wages, including all fringes and benefits (for example automobile, housing, etc.) paid to its ten highest paid employees; and in the case of hospitals which pay such salaries, the hospital should disclose the names, salaries and all fringe benefits of employees receiving in excess of \$30,000 per year.

Detailed conflict of interest statements should be disclosed by the hospital on request for all hospital governing board members, administrative staff and medical staff chairmen. Conflict of interest statements must list all investments and holdings representing an interest in excess of 0.5 percent in any concern doing business with the hospital.

The hospital should disclose on request for the current and three most recent fiscal years, the total receipts of its pathology and radiology departments, including the gross income received by the physicians in charge of these departments. In the case of anesthesiologists, pathologists and radiologists who practice in the hospital but who bill separately for services, all such physicians should disclose their gross and net incomes for the current and three most recent fiscal years.

In addition, it would be desirable to disclose the following:

Each health systems agency should have authority to collect from each hospital in its health service area a listing of the total cost for an average stay in the hospital for the ten most common medical and ten most common surgical procedures performed by acute care hospitals in the health service area at least every six months. The health systems agency should be required to promptly compile the listings and each hospital should prominently post the listings at its main entrance area and make the listing available on request to any person.

Each hospital should prominently post in its main entrance area the following information:

(1) whether or not the hospital conducts preadmission certification for all elective admissions.

(2) whether or not the hospital requires a second opinion for all elective surgery.

(3) whether or not the hospital shares services with other neighboring hospitals and what services are shared.

We are concerned about another problem. For-profit and voluntary nonprofit hospitals should not be allowed to transfer their underinsured patients—those without Medicare, Medicaid or private insurance or with minimal private insurance—on public hospitals. A ceiling on hospital revenues will provide an incentive to private hospitals to accelerate and expand such practices which already are all too prevalent.

We, therefore, recommend that H.R. 6575 contain strong provisions forbidding hospitals to reduce their share of care of "unprofitable" patients except within the context of a coordinated and systematic community health plan. Hospitals should be required to maintain their patient mix, bad debt ratio and gross to net revenue ratio.

Allowable cost reimbursement formulas can be adjusted to reward hospitals which continue to serve the poor and underinsured and penalize those which transfer such patients onto public hospitals. Section 126 attempts to meet this problem by allowing an aggrieved hospital to file a complaint with

the local Health Systems Agency. The HSA is authorized to investigate the complaint and upon a finding that the complaint is justified, the Secretary may exclude the offending hospital from participation in Medicare, Medicaid and the Maternal and Child Health Programs.

This section is not strong enough. For one thing, the Health Systems Agencies have insufficient funds to conduct such investigations nor are they staffed to perform this function. We believe this section should be strengthened by providing incentives for voluntary hospitals not to transfer unprofitable patients and reward public hospitals for accepting such patients.

#### TITLE II—LIMITATIONS ON HOSPITAL CAPITAL EXPENDITURES

This title would set an annual national limit on new capital expenditures for hospital construction. The national limit would be allocated to the states on a formula basis which would also take into account other factors such as the number of beds in the state or local service area.

The AFL-CIO strongly supports this limit on new hospital construction. As stated by President Meany, "we endorse the Administration's plan to limit capital expenditures for new hospitals and the proposed efforts to encourage Health Maintenance Organizations." With respect to the construction of new hospitals for HMOs, the construction or modernization of a one hundred bed hospital would reduce the need for hospital beds in a given community by more than two hundred beds. Prepaid group practice plans only need 1.5 beds per thousand subscribers while the standard for fee-for-service hospitals is 4.0 beds per thousand. Priority should be given, therefore, to construction funds for HMO hospitals.

In conclusion, Mr. Chairman, we approve the basic thrust of this bill which would establish a ceiling on hospital cost increases but the burden of cost containment must not be borne by low-paid hospital employees. We strongly urge that the improvements we have suggested be incorporated into the final bill that is reported out and passed by the House of Representatives.

#### APPENDIX A

*Statement of AFL-CIO President George Meany, on Administration's Hospital Cost Containment Program, April 25, 1977*

AFL-CIO President George Meany today made the following comment on President Carter's health message:

President Carter's health message has focused public attention on the need to contain hospital costs now rising at a rate of more than 15 percent annually.

The AFL-CIO has a long history of supporting efforts to achieve effective and equitable containment of health care costs. In fact, the Health Security bill, which we support, contains the most stringent and effective cost controls of any national health insurance proposal.

The President's program, however, will only restrain and not stop the escalation in health care costs, for example there are no controls over physician fees.

Union-negotiated health plans are under extreme pressure to reduce benefits because of unacceptable extravagance in the hospital industry. Waste, unnecessary hospitalization and surgery, duplication of expensive hospital services and outlandish salaries and fees, such as those paid to radiologists and pathologists, must be brought under control.

Specifically, we endorse the Administration's plan to limit capital expenditures for new hospitals and the proposed efforts to encourage Health Maintenance Organizations.

In his message, the President recognizes that hospital workers have not been responsible for hospital cost inflation and proposes adjustments in the containment formula for

wage increases for nonsupervisory hospital employees.

If states are permitted to operate their own hospital cost containment programs, as the President proposes, their programs must meet all of the criteria of the federal program, including the provisions concerning wage increases for hospital employees. We will ask Congress to make this explicit in any legislation.

The President's proposal also lacks adequate disclosure provisions of hospital finances and expenses. For too long, hospitals have operated under a veil of secrecy, despite the fact that tax dollars are a major source of hospital income. Taxpayers have a right to know how these funds are expended, and we will urge Congress to include adequate disclosure provisions in the final bill.

The President's message also outlines a \$180 million program to extend benefits and expand availability of comprehensive health services for low-income children, which the AFL-CIO strongly supports.

Further, we welcome the President's renewed commitment to developing a workable program of national health insurance. We believe that the Health Security bill presently pending in the Congress is such a program and can truly contain health care costs and provide comprehensive health care services to all Americans.

#### APPENDIX B

##### Average hourly earnings

[Nonsupervisory employees]

|                 | Total<br>private | Service | Hospitals |
|-----------------|------------------|---------|-----------|
| 1968 -----      | \$2.85           | \$2.43  | \$2.31    |
| 1969 -----      | 3.04             | 2.61    | 2.57      |
| 1970 -----      | 3.22             | 2.81    | 2.79      |
| 1971 -----      | 3.43             | 3.01    | 2.96      |
| 1972 -----      | 3.65             | 3.40    | 3.08      |
| 1973 -----      | 3.92             | 3.46    | 3.22      |
| 1974 -----      | 4.22             | 3.76    | 3.45      |
| 1975 -----      | 4.54             | 4.06    | 3.83      |

#### SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

#### MEETINGS SCHEDULED

JUNE 3

11:00 a.m.  
Joint Economic  
To hold hearings to receive testimony on the employment/unemployment situation in May.

1202 Dirksen Building  
JUNE 6

9:00 a.m.  
Judiciary  
Improvements in Judicial Machinery Subcommittee  
To hold hearings on S. 1612 and S. 1613, to expand the jurisdiction of U.S. Magistrates.

2228 Dirksen Building

9:30 a.m.  
Commerce, Science, and Transportation  
To hold hearings on the nomination of Robert A. Froesch, to be Administrator of NASA.

5110 Dirksen Building

10:00 a.m.  
Banking, Housing, and Urban Affairs  
To hold hearings on H.R. 5675, to authorize the Treasury Department to make short-term investments of any portion of its excess operating cash balance.

5302 Dirksen Building

Commerce, Science, and Transportation  
Communications Subcommittee  
To hold oversight hearings on the cable TV system.

235 Russell Building

Select Indian Affairs  
To hold oversight hearings on the Indian Education Reform Act (Public Law 93-638).

Room to be announced

2:00 p.m.  
\*Commerce, Science, and Transportation  
To hold hearings on the nomination of Alfred Edward Kahn, to be a member of the Civil Aeronautics Board.

5110 Dirksen Building  
JUNE 7

8:30 a.m.  
Finance  
Health Subcommittee  
To hold hearings on S. 1470, Medicare and Medicaid Administrative and Reimbursement Reform Act.

2221 Dirksen Building

9:30 a.m.  
Energy and Natural Resources  
To receive testimony on part D (natural gas pricing) of S. 1460, National Energy Act.

3110 Dirksen Building

\*Judiciary  
Criminal Laws and Procedures Subcommittee  
To hold hearings on S. 1437, Criminal Code Reform Act of 1977, and the following criminal sentencing bills: S. 31, 45, 181, 204, 260, 888, 979, and 1221.

2228 Dirksen Building

Select Small Business  
To resume hearings on alleged restrictive and anticompetitive practices in the eyeglass industry.

424 Russell Building

10:00 a.m.  
Banking, Housing, and Urban Affairs  
To hold hearings on S. 1397, to increase from 16 to 19 the size of the Board of Directors of FNMA.

5302 Dirksen Building

Commerce, Science, and Transportation  
Communications Subcommittee  
To continue oversight hearings on the cable TV system.

253 Russell Building

Foreign Relations  
To consider the nomination of John C. West, to be Ambassador to the King-

dom of Saudi Arabia, and to hold hearings on an agreement with Canada concerning the transit oil pipeline (Exec. F, 95th Cong., 1st sess.), and the Inter-American Treaty of Reciprocal Assistance (Exec. J., 94th Cong., 1st sess.).

4221 Dirksen Building

Governmental Affairs  
Intergovernmental Relations Subcommittee

To resume hearings on S. 600, the Regulatory Reform Act of 1977.

6226 Dirksen Building

Human Resources  
Health and Scientific Research Subcommittee

To hold hearings to evaluate information upon which the FDA based its decision to propose regulations banning the use of saccharin.

4232 Dirksen Building

Joint Economic  
Economic Growth and Stabilization Subcommittee

To hold hearings on economic development in rural areas.

1202 Dirksen Building

Select Indian Affairs  
To continue oversight hearings on the Indian Education Reform Act (P.L. 93-638).

Room to be announced

10:30 a.m.  
Appropriations  
Transportation Subcommittee  
To mark up proposed appropriations for fiscal year 1978 for the Department of Transportation.

S-128, Capitol

JUNE 8

8:00 a.m.  
Agriculture, Nutrition, and Forestry  
Agricultural Research and General Legislation Subcommittee  
To hold hearings on proposed legislation to extend the authorization of the Federal Insecticide, Fungicide, and Rodenticide Act.

Until 10:30 a.m. 324 Russell Building

Judiciary  
Improvements in Judicial Machinery Subcommittee

To continue hearings on S. 1612 and S. 1613, to expand the jurisdiction of U.S. Magistrates.

2228 Dirksen Building

8:30 a.m.  
Finance  
Health Subcommittee  
To continue hearings on S. 1470, Medicare and Medicaid Administrative and Reimbursement Reform Act.

2221 Dirksen Building

9:00 a.m.  
Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee  
To hold hearings on S. 421, to establish a program to educate the public in understanding climatic dynamics.

4221 Dirksen Building

## HOUSE OF REPRESENTATIVES—Thursday, June 2, 1977

The House met at 10 o'clock a.m.

Father John Putka, S.M., Covington Catholic High School, Covington, Ky., offered the following prayer:

Our Father, You have assured us through Your Psalmist that—

*Those who trust in God are like Mount Zion, unshakable, standing forever.—*  
Psalms 125: 1.

This House has proclaimed its trust in You by causing to be engraved over its dais the motto "In God we trust." Grant

to the Speaker and the Members who deliberate here the wisdom to sincerely discern Your divine will in all that they do, so that they may effectively govern Your people according to Your truth.

We ask this through Jesus Christ, Your Son and our Lord. Amen.

## THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

### TRIBUTE TO FATHER JOHN PUTKA, S.M.

Mr. SNYDER. Mr. Speaker, I take great pleasure, along with the other Members of the House, in welcoming Father John Putka to offer the opening prayer today.

Father John is a native of Cleveland, Ohio, and an adopted son of Kentucky.

He entered the religious order known as the Society of Mary, or Marianists, in 1957, being ordained to the priesthood in 1969. He has been in Kentucky ever since.

His education consists of a bachelor's degree from the University of Dayton; a master's degree from St. Louis University; a degree in theology from the University of Fribourg, Switzerland; and he is now completing the writing of his dissertation for a Ph. D. in political science at the University of Cincinnati. The subject for his thesis for the doctorate is: "The Supreme Court's Abortion Decisions."

I might say he knows his political science activities well for he serves his country and his party as a precinct captain and he teaches political science in Thomas More College and teaches at Covington Catholic High School. Since 1970 he has been bringing the American history class of Covington High School to Washington.

He is a past recipient of the Outstanding Educator of the Year Award by the Covington-Kenton County Jaycees. He has served on Kentucky's Citizen Committee on Consumer Protection, by appointment of Gov. Louie B. Nunn.

He is a great friend and student of the Congress and a great student of politics, generally, and I might say he is my personal friend. Along with the other Members I am pleased to welcome him here today.

### PROVIDING FOR CONSIDERATION OF H.R. 6804, DEPARTMENT OF ENERGY ORGANIZATION ACT

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 603 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. Res. 603

*Resolved*, That upon the adoption of this resolution it shall be in order to move, section 402(a) of the Congressional Budget Act of 1974 (Public Law 93-344) to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 6804) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Gov-

ernment in order to secure effective management to assure a coordinated national energy policy, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed three hours, two and one-half hours to be equally divided and controlled by the chairman and ranking minority member of the Committee on Government Operations and one-half hour to be equally divided and controlled by the chairman and ranking minority member of the Committee on Post Office and Civil Service, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Government Operations now printed in the bill as an original bill for the purpose of amendment under the five-minute rule, said substitute shall be read for amendment by titles instead of by sections, and all points of order against said amendment for failure to comply with the provisions of clause 5 of rule XXI are hereby waived. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions. After the passage of H.R. 6804, the House shall proceed to the consideration of the bill S. 826, section 402 (a) of the Congressional Budget Act to the contrary notwithstanding, and it shall be in order in the House to move to strike out all after the enacting clause of said Senate bill and insert in lieu thereof the provisions contained in H.R. 6804 as passed by the House.

The SPEAKER. The gentleman from Missouri (Mr. BOLLING) is recognized for 60 minutes.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Tennessee (Mr. QUILLEN), pending which I yield myself such time as I may consume.

Mr. Speaker, this is a relatively complicated rule on a relatively complicated matter. There are a number of waivers. The chairman of the Committee on the Budget appeared with regard to the waivers in the Budget Act.

Another waiver has to do with the possible interpretation of some language to be making appropriations on a legislative bill.

The rule is open. It makes the committee amendment in order as a substitute. It provides that the committee amendment be read by titles, rather than by sections, for purposes of amendment.

It also makes it in order to go to conference with the Senate after consideration of the bill.

There was absolutely no controversy before the Committee on Rules concerning the rule.

The division of time is 2½ hours to the Committee on Government Operations and one-half hour to the Committee on Post Office and Civil Service.

The rule apparently was agreed to by both committees and both the majority and minority on each committee.

I know of no controversy on the rule.

I see no reason to take further time at this time.

I reserve the balance of my time.

Mr. QUILLEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the gentleman from Missouri (Mr. BOLLING) has explained the situation exactly as it is. I know of no objection to the rule. Whatever feelings we might have on the bill while it is debated for 3 hours, when it reaches the floor of the House, we can express our views then.

Mr. Speaker, I rise in support of House Resolution 603, the rule making in order the consideration of H.R. 6804, the Department of Energy Organization Act. As the able gentleman from Missouri (Mr. BOLLING) has described, the rule provides a waiver of section 402(a) of the Congressional Budget Act, a waiver of the provisions of clause 5 of rule XXI, and 3 hours of general debate, 2½ to be divided and controlled by the Committee on Government Operations and one-half hour to be divided and controlled by the Committee on Post Office and Civil Service.

The rule further provides that after the passage of H.R. 6804, the House shall proceed to the consideration of the bill S. 826, section 402(a) of the Congressional Budget Act notwithstanding, and that it shall be in order to move to strike out all after the enacting clause of S. 826 and insert in lieu thereof the provisions of H.R. 6804 as passed by the House.

This is an open rule which permits the offering of any germane amendments, and although there are some controversial provisions in the bill, I know of no opposition to the rule.

H.R. 6804 was reported out of the Committee on Government Operations on a vote of 37 to 2 and was reported out of the Committee on Post Office and Civil Service on a vote of 25 to 0. There are certain provisions of considerable importance contained in H.R. 6804 which are in conflict with provisions of S. 826, the companion bill of the other body. These issues can be fully debated under this rule.

The most important difference between the two bills is, perhaps, the differing approaches in regard to the pricing of oil and natural gas. H.R. 6804 permits, as the administration requests, the new Secretary of Energy to set oil and natural gas prices, while the language of S. 826 places such authority in a semi-independent, three-member board. The power to establish energy prices is central to the development of a national energy policy, but valid questions have been raised that such power ought not be vested in the Office of the Secretary of Energy to be created by this bill.

Mr. Speaker, H.R. 6804, as reported from the Committee on Government Operations is, despite a number of amendments, substantially the administration bill proposed by the President 3 months ago.

The bill creates a new Department of Energy by combining all of the powers and functions now held by the Federal Power Commission, the Federal Energy Administration, and the Energy Research and Development Administration.

Additionally, H.R. 6804 provides that the new Energy Department would inherit the building standards program from the Department of Housing and Urban Development, the industrial compliance program from the Department of Commerce, jurisdiction over three naval petroleum reserves and three oil shale reserves from the Department of Defense, regulatory authority over oil pipelines from the Interstate Commerce Commission, and many marketing, data collection, and public land leasing powers now exercised by the Department of the Interior.

Mr. Speaker, we are talking about a big new Government department with a big budget and a very great deal of authority. Too much authority in the considered judgment of some of our colleagues, and certainly their arguments, especially in regard to energy pricing powers, appear to have some merit.

But aside from certain controversial sections, there is very strong support for placing the Federal Government's energy policy operations under one strong department so that the management of our national energy policy will be conducted efficiently and smoothly.

It is essential that this new Department of Energy provide the unified policy and management direction that the country demands. It is also essential that this new Department follow the mandate that the Congress is charging it with by acting on this bill. The last thing the Federal Government needs or the American people can tolerate is the creation of another bureaucratic nightmare of endless redtape, inefficiency, and confusion. What is urgently required is a strong new Department of Energy in charge and in control of the total national energy program. We need a unified approach without overlapping jurisdictions and interagency bickering. We need a department moving decisively in the right direction and moving with dispatch and purpose. This is my own intention. This is what I will support.

Mr. Speaker, the new Department of Energy to be established by this legislation will not in itself solve our energy problems. We are in serious trouble if we continue to waste fuel, if we do not provide incentives to increase domestic fuel production and reduce our dangerous dependence on foreign supplies, and if we do not rapidly develop new alternative sources of energy such as solar, synthetic, and geothermal steam. All of this and more is urgently required in order to halt the spiraling rise in energy costs and to provide the energy we need to increase our standard of living and to provide more jobs for our workers.

Nevertheless, the creation of a new Department of Energy will provide the vehicle and the structure to devise and to implement a coherent and comprehensive national energy policy which is so urgently needed.

Mr. Speaker, I urge adoption of the rule so that we may begin debating what I consider to be one of the most important bills we are likely to act on during this Congress.

Mr. Speaker, I reserve the balance of my time.

Mr. ARMSTRONG. Mr. Speaker, will the gentleman yield?

Mr. QUILLEN. I yield to the gentleman from Colorado.

Mr. ARMSTRONG. Mr. Speaker, I have not asked for time to speak to the merits of the bill, but I would like to call attention to the handful of Members in the Chamber. H.R. 6804 is no mere reorganization or housekeeping measure, as many have been assuming. This bill makes drastic changes in very long-standing policies relating to the energy and economy of this Nation, changes which I think are quite undesirable, at least in part; so I am hoping that the Chamber will soon fill and Members will pay utmost attention to the debate on this legislation, because this is a very, very important bill, not just a routine measure.

Mr. QUILLEN. Mr. Speaker, the gentleman is correct. I appreciate the gentleman's contribution.

Mr. Speaker, I reserve the balance of my time.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. BROOMFIELD. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 345, nays 2, not voting 86, as follows:

 Mr. Downey with Mr. McKinney.  
 Mr. Dellums with Mr. Sebelius.  
 Mr. Aspin with Mr. Steers.  
 Mr. Miller of California with Mr. Young of Alaska.  
 Mr. Wylder with Mr. Bob Wilson.  
 Mr. Whitehurst with Mr. Skubitz.  
 Mr. Taylor with Mr. Vander Jagt.  
 Mr. Koch with Mr. Jeffords.

So the resolution was agreed to.  
 The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

#### THE CONTINUING INHUMANE EMIGRATION POLICY OF THE SOVIET UNION

(Mr. RUSSO asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. RUSSO. Mr. Speaker, over a year ago I addressed the House on the plight of Celia and Josef Kats and their son Albert, a family being forcibly detained in the Soviet Union. Sadly, I again have the opportunity to speak on their behalf. Celia's mother, Goldetha Fooxman, lives alone in Bat Yam, Israel. For her the pain of separation is an ever-present heartache.

All of the nations which signed the Helsinki Final Act, including the Soviet Union, pledged to do everything possible to reunite families separated by political boundaries. I find it unconscionable that the Soviet Union is not living up to that pledge. Because of this situation Members of Congress are conducting a vigil on behalf of the families that remain separated.

A recent letter from Mrs. Fooxman dramatically details this tragic problem:

I, mother Goldea Mozithevna Fooxman, repatriated to Israel in 1973 and settled down there. After my arrival in Israel my daughter and her family were refused an exit visa to Israel because my son-in-law served in the army and therefore cannot be allowed to leave the country for five years after service.

To the best of my knowledge he hasn't had any access to secret materials and things of such nature. Thus the reason given for refusal above was completely untruthful. In two-and-one-half years, my children received thirty-four refusals. Of note, five years have already passed since his army service now, but no definite decision toward my children's destiny has been made by the Russian authorities.

Please understand, such separation is a tragedy for me and my children. Please help us to rejoin our family as soon as possible. I am relying on your help...

It is my fervent hope that this is the last statement I will make on behalf of the Kats family. The tragic circumstances of this family, and so many others like them, is beyond words. I can only say that taking note of the Kats family that this House be moved to protest the present inhumane emigration policy of the Soviet Union.

#### PERMISSION TO FILE REPORT ON INTERPARLIAMENTARY UNION

Mr. PEPPER. Mr. Speaker, I ask unanimous consent that I may file today my report from the Interparliamentary Union Conference to be included with the special order report of the gentleman from Illinois (Mr. DERWINSKI) last week.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

#### NEW HAMPSHIRE LEGISLATURE VOTES TO PERMIT PRAYERS IN SCHOOLS

(Mr. WYLIE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. WYLIE. Mr. Speaker, I note with pleasure in this morning's Washington Post an article reporting that the Legislature of the State of New Hampshire has given its final approval to a bill to permit voluntary religious exercises—including prayers—in public schools.

As the sponsor of a constitutional amendment, narrowly rejected by this House a few years ago, to do just this to offset the effect of a Supreme Court ruling that cast doubt as to whether public school prayer services were unconstitutional, I welcome the action of the New Hampshire Legislature and express the hope that other States will take similar

action. The Associated Press newsstory follows:

#### NEW HAMPSHIRE LEGISLATURE VOTES TO PERMIT PRAYERS IN SCHOOLS

CONCORD, N.H., June 1.—The New Hampshire House has given final legislative approval of a bill to allow voluntary religious exercises in public schools.

The House Tuesday voted 199 to 110 to support a Senate-passed bill providing for a five-minute period before the start of school during which students could participate in religious exercises if they chose. The bill now goes to Gov. Meldrim Thomson, who is expected to sign it.

The House Constitutional Revision Committee had recommended defeat of the bill, citing the constitutional and legal problems associated with school prayer bills.

#### REPORT ON H.R. 7552, TREASURY DEPARTMENT, U.S. POSTAL SERVICE, EXECUTIVE OFFICE OF PRESIDENT, AND CERTAIN INDEPENDENT AGENCIES APPROPRIATIONS FOR FISCAL YEAR ENDING SEPTEMBER 30, 1978

Mr. STEED, from the Committee on Appropriations, submitted a privileged report (Rept. 95-378) on the bill (H.R. 7552) making appropriations for the Treasury Department, the U.S. Postal Service, the Executive Office of the President, and certain independent agencies for the fiscal year ending September 30, 1978, and for other purposes, which was referred to the Union Calendar and ordered to be printed.

Mr. MILLER of Ohio reserved all points of order on the bill.

#### REPORT ON H.R. 7553, MAKING APPROPRIATIONS FOR PUBLIC WORKS FOR WATER AND POWER DEVELOPMENT AND ENERGY RESEARCH FOR FISCAL YEAR ENDING SEPTEMBER 30, 1978

Mr. BEVILL, from the Committee on Appropriations, submitted a privileged report (Rept. 95-379) on the bill (H.R. 7553) making appropriations for public works for water and power development and energy research for the fiscal year ending September 30, 1978, and for other purposes, which was referred to the Union Calendar and ordered to be printed.

Mr. CONTE reserved all points of order on the bill on behalf of the minority.

#### REPORT ON H.R. 7554, APPROPRIATIONS FOR DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT AND SUNDRY INDEPENDENT EXECUTIVE AGENCIES, BOARDS, BUREAUS, COMMISSIONS, CORPORATIONS, AND OFFICES FOR FISCAL YEAR ENDING SEPTEMBER 30, 1978

Mr. BOLAND, from the Committee on Appropriations, submitted a privileged report (Rept. 95-380) on the bill (H.R. 7554) making appropriations for the Department of Housing and Urban Development and for sundry independent executive agencies, boards, bureaus, com-

missions, corporations, and offices for the fiscal year ending September 30, 1978, and for other purposes, which was referred to the Union Calendar and ordered to be printed.

Mr. COUGHLIN reserved all points of order on the bill.

**REPORT ON H.R. 7555, APPROPRIATIONS FOR DEPARTMENTS OF LABOR AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES, FOR FISCAL YEAR ENDING SEPTEMBER 30, 1978**

Mr. NATCHER, from the Committee on Appropriations, submitted a privileged report (Rept. 95-381) on the bill (H.R. 7555) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies for the fiscal year ending September 30, 1978, and for other purposes, which was referred to the Union Calendar and ordered to be printed.

Mr. CONTE reserved all points of order on the bill on behalf of the minority.

**REPORT ON H.R. 7556, MAKING APPROPRIATIONS FOR THE DEPARTMENTS OF STATE, JUSTICE, AND COMMERCE, THE JUDICIARY, AND RELATED AGENCIES FOR FISCAL YEAR ENDING SEPTEMBER 30, 1978**

Mr. SLACK, from the Committee on Appropriations, submitted a privileged report (Report No. 95-382), on the bill (H.R. 7556) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending September 30, 1978, and for other purposes, which was referred to the Union Calendar and ordered to be printed.

Mr. CONTE reserved all points of order on the bill.

**REPORT ON H.R. 7557, MAKING APPROPRIATIONS FOR THE DEPARTMENT OF TRANSPORTATION AND RELATED AGENCIES FOR FISCAL YEAR ENDING SEPTEMBER 30, 1978**

Mr. McFALL, from the Committee on Appropriations submitted a privileged report (Report No. 95-383), on the bill (H.R. 7557) making appropriations for the Department of Transportation and related agencies for the fiscal year ending September 30, 1978, and for other purposes, which was referred to the Union Calendar and ordered to be printed.

Mr. CONTE reserved all points of order on the bill.

**REPORT ON H.R. 7558, MAKING APPROPRIATIONS FOR AGRICULTURE AND RELATED AGENCIES PROGRAMS FOR THE FISCAL YEAR ENDING SEPTEMBER 30, 1978**

Mr. WHITTEN, from the Committee on Appropriations submitted a privileged

report (Report No. 95-384), on the bill (H.R. 7558) making appropriations for Agriculture and related agencies programs for the fiscal year ending September 30, 1978, and for other purposes, which was referred to the Union Calendar and ordered to be printed.

Mr. CONTE reserved all points of order on the bill.

**PERMISSION FOR COMMITTEE ON APPROPRIATIONS TO FILE PRIVILEGED REPORT ON MILITARY CONSTRUCTION APPROPRIATIONS**

Mr. McKAY. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to file a privileged report on the bill making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Utah? There was no objection.

Mr. CONTE reserved all points of order on the bill.

**CONFERENCE REPORT ON S. 521, AUTHORIZING FUNDS TO REPAIR ROOF LEAK AT KENNEDY CENTER FOR THE PERFORMING ARTS**

Mr. JOHNSON of California submitted the following conference report and statement on the Senate bill (S. 521) to amend the John F. Kennedy Center Act to authorize funds for the repair of leaks:

**CONFERENCE REPORT (H. REPT. NO. 95-385)**

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 521) to amend the John F. Kennedy Center Act to authorize funds for the repair of leaks, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the House amendment insert the following:

That (a) section 8 of the John F. Kennedy Center Act (Public Law 85-874, as amended) is amended by adding the following new subsection:

"(c) There are authorized to be appropriated to the Secretary of the Interior, acting through the National Park Service, not to exceed \$4,700,000 for repair, renovation, and reconstruction of the John F. Kennedy Center for the Performing Arts necessary to correct water leaks in the roof, the terraces, the kitchen, and the East Plaza Drive and to correct any damage which has resulted from those leaks. No contract shall be entered into for any property or services necessary to carry out this subsection unless such contract has been approved by the Board, and no final payment for such property or services shall be made under any such contract unless such payment has been approved by the Board. No part of the funds authorized by this subsection shall be expended under any cost-plus-a-percentage-of-cost, cost-plus-a-fixed-fee, or similar incentive-type contract. Funds authorized by this subsection shall be expended under a contract only after advertising and competitive bidding for the property or services to be provided by such contract."

(b) Subsection (a) of section 8 of such Act is amended by striking out "section." and inserting in lieu thereof "subsection."

Sec. 2. Subsection (e) of section 6 of the John F. Kennedy Center Act is amended by striking out the second sentence thereof, and in the last sentence thereof by striking out "and" and the period at the end thereof and inserting in lieu thereof a comma and the following: "and \$4,000,000 for the fiscal year ending September 30, 1978."

And the House agree to the same.

HAROLD T. JOHNSON,  
NORMAN Y. MINETA,  
TENO RONCALIO,  
BO GINN,  
DOUGLAS APPELGADE,  
WM. H. HARSHA,  
WILLIAM F. WALSH,

*Managers on the Part of the House.*

QUENTIN N. BURDICK,  
LLOYD BENTSEN,  
WENDELL R. ANDERSON,  
JAMES A. MCCLURE,  
PETE V. DOMENICI,

*Managers on the Part of the Senate.*

**JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE**

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 521) to amend the John F. Kennedy Center Act to authorize funds for the repair of leaks, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The House amendment struck out all of the Senate bill after the enacting clause and inserted a substitute text.

The Senate recedes from its disagreement to the amendment of the House with an amendment which is a substitute for the Senate bill and the House amendment. The differences between the Senate bill, the House amendment, and the substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarifying changes.

**SENATE BILL**

The Senate bill provides an authorization to the Secretary of the Interior, of \$4,500,000 for repairing, renovating, and reconstructing the John F. Kennedy Center for the Performing Arts to correct water leaks and other damage.

**HOUSE AMENDMENT**

The House amendment authorizes \$4,700,000 to the Board of Trustees of the John F. Kennedy Center for the Performing Arts to correct water leaks in the roof and other damage. These funds are not to be expended under any incentive-type contract but only under contracts entered into after advertising and competitive bidding. In addition, the Board is required to appoint a comptroller as disbursing officer for these funds and the comptroller is given appropriate authority for disbursing and auditing the account.

**CONFERENCE SUBSTITUTE**

The conference substitute authorizes \$4,700,000 to be appropriated to the Secretary of the Interior, acting through the National Park Service for repairing, renovating, and reconstructing the John F. Kennedy Center for the Performing Arts to correct water leaks and other damage. No contract is to be entered into for property or services necessary to carry out this provision unless the contract has been approved by the Board and no final payment is to be made on any such contract unless such payment has also been approved by the Board. The prohibition against incentive-type contracts and the requirements of advertising and competitive

bidding contained in the House amendment have been retained in this conference substitute.

The final payment referred to is intended to be that payment representing the bulk of the work actually done and not any amounts which may be set aside in escrow for final settlement of minor claims.

The conferees agree that the situation dealt with by this legislation is extraordinary, and the methodology chosen for its resolution should in no way be construed to diminish the jurisdictions of the Senate Committee on Environment and Public Works and the House Committee on Public Works and Transportation over the John F. Kennedy Center for the Performing Arts.

Further, the conferees expect the Board of Trustees and the Secretary of the Interior each to submit a report to the Committee on Public Works and Transportation of the House and the Committee on Environment and Public Works of the Senate by July 1, 1977, and monthly thereafter, on the progress being made on the work authorized by this legislation, together with a listing of expenditures to date, by category, of the funds authorized by this legislation.

#### APPOINTMENT OF CONFEREES ON H.R. 6668, TO AMEND AGE DIS- CRIMINATION ACT OF 1975

Mr. PERKINS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 6668) to amend the Age Discrimination Act of 1975 to extend the date upon which the U.S. Commission on Civil Rights is required to file its report under such act, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky? The Chair hears none, and appoints the following conferees:

Messrs. PERKINS, BRADEMANS, BEARD of Rhode Island, MILLER of California, KILDEE, HEFTL, HAWKINS, BIAGGI, QUIE, JEFFORDS and PRESSLER.

#### TO EXTEND AND REVISE THE LI- BRARY SERVICES AND CON- STRUCTION ACT

Mr. PERKINS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the Senate bill (S. 602) to extend and revise the Library Services and Construction Act, and for other purposes, and ask for its immediate consideration.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The Clerk read the Senate bill, as follows:

S. 602

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Library Services and Construction Act Amendments of 1977".

SEC. 2. (a) Section 4(a)(1) of the Library Services and Construction Act is amended by striking out "and" and by inserting before the period a comma and the following: "and \$150,000,000 for the fiscal year 1978 and for each succeeding fiscal year ending prior to October 1, 1982".

(b) Section 4(a)(2) of such Act is amended by inserting before the period a comma and the following: "and for the fiscal year 1978 and for each succeeding fiscal year ending prior to October 1, 1982".

(c) Section 4(a)(3) of such Act is amended by striking out the word "and", and by inserting before the period a comma and the following "and \$20,000,000 for the fiscal year 1978 and for each succeeding fiscal year ending prior to October 1, 1982".

(d) Section 4(a)(4) of such Act is amended by striking out "and", and by inserting before the period a comma and the following: "and for the fiscal year 1978 and for each succeeding fiscal year ending prior to October 1, 1982".

SEC. 3. (a) Section 2(a) of the Library Services and Construction Act is amended by striking out "and in promoting" and by inserting in lieu thereof "in promoting", and by adding before the period at the end thereof a comma and the following: "and in strengthening major urban resource libraries".

(b) Section 3 of such Act is amended by adding at the end thereof the following:

"(14) 'Major urban resource library' means any public library which serves a major portion of the residents of a city having a population of one hundred thousand or more individuals, as determined pursuant to regulations of the Commissioner.

"(15) 'Designated urban area' means any city in which a major urban resource library is located, or in a State which has no such city, a city designated in accordance with section 6(b)(4) of this Act."

(c) Section 101 of such Act is amended by striking out "and" the third time it appears in such section, and by inserting before the period a comma and the following: "and in strengthening major urban resource libraries".

(d)(1) Section 5(a)(2) of such Act is amended by striking out "From" and inserting in lieu thereof "Except as provided in subsection (c) and section 102(c), from".

(2) Section 5 of such Act is amended by adding at the end thereof the following:

"(c) From allotments available under this section for title I, no State shall receive in any fiscal year an amount less than the amount received in fiscal year 1977. In the event that funds available are insufficient to pay all the allotments required by the preceding sentence, the allotments shall be ratably reduced."

(e) Section 6(b) of such Act is amended by striking out "and" at the end of clause (3), redesignating clause (4), and all references thereto, as clause (5), and by inserting after clause (3) the following new clause:

"(4) in the case of any State in which there is no major urban resource library, designates a city for the purpose of section 102(a)(3)(B); and."

(f) Section 102(a) of such Act is amended—  
(1) by inserting "and subsection (c) of this section" after "5(a)" in the matter preceding clause (1) of such section;

(2) by striking out "and" at the end of clause (1);

(3) by striking out the period at the end

of clause (2) and inserting in lieu thereof a semicolon and the word "and".

(4) by adding at the end thereof the following new clause:

"(3) for (A) supporting and expanding library services of major urban resource libraries which, because of the value of the collections of such libraries to individual users and to other libraries, need special assistance to furnish services at a level required to meet the demands made for such services, and (B) supporting and expanding library services for a public library in a city designated in accordance with section 6(b)(4) in any State in which there is no major urban resource library," and

(5) by adding at the end thereof the following new sentence: "No grant may be made under clause (3) of this subsection unless the major urban resource library or the public library designated under clause (3)(B) provides services to users throughout the regional area in which such library is located."

(g) Section 102 of such Act is amended by inserting at the end thereof the following new subsection:

"(c) Subject to such criteria as the Commissioner shall establish by regulation, in any fiscal year in which sums appropriated pursuant to paragraph (1) of section 4(a) exceed \$60,000,000—

"(1) 50 per centum of the amount in excess of \$60,000,000 for that year shall be allotted by the Commissioner to each State in an amount which bears the same ratio to such 50 per centum as the population of all designated urban areas in that State bears to the population of all such designated urban areas in all States; and

"(2) 50 per centum of the amount in excess of \$60,000,000 for that fiscal year shall be allotted in accordance with section 5 of this Act.

For the purpose of allotments made under this subsection the designated urban area having the largest population in each State shall be deemed to have a population of 250,000 individuals or the actual number of individuals, as determined pursuant to most recent satisfactory data available to the Commissioner, whichever is greater. For the purpose of clause (1) of the first sentence of this subsection, the term "State" shall not include American Samoa, Guam, the Virgin Islands, or the Trust Territory of the Pacific Islands."

(h)(1) Section 103(1) of such Act is amended by inserting "subject to clause (2) of this section," after "program" the first time it appears in such section.

(2) Section 103 of such Act is amended by redesignating clauses (2), (3), and (4) of such section as clauses (3), (4), and (5), respectively, and by inserting after clause (1) the following new clause:

"(2) set forth a program for the year submitted under which the amount allotted to the State under clause (1) of section 102(c) will be used for the purposes set forth in clause (3) of section 102(a);"

(3) Section 103 of such Act is further amended by adding at the end thereof the following new sentence: "No State shall, in carrying out the provisions of clause (2) of this section, reduce the amount paid to an urban resource library or a public library designated under subclause (B) of section 102(a)(3) below the amount that such library received in the year preceding the year for which the determination is made under such clause (2)."

SEC. 4. Section 103(3) of the Library Services and Construction Act (as redesignated by this Act) is amended by striking out "the fiscal year ending June 30, 1971" and inserting in lieu thereof the following: "the second fiscal year preceding the fiscal year for which the determination is made."

SEC. 5. The second sentence of section 202

of the Library Services and Construction Act is amended by inserting after "libraries" a comma and the following: "for the remodeling of public libraries necessary to meet standards adopted pursuant to the Act of August 12, 1968, commonly known as the Architectural Barriers Act of 1968, and for remodeling designed to conserve energy in the operation of public libraries".

SEC. 6. The Library Services and Construction Act is amended by adding at the end thereof the following new title:

**"TITLE V—URBAN LIBRARY DEVELOPMENT PROGRAM"**

**"GRANTS TO STATES TO IMPROVE URBAN LIBRARY PROGRAMS"**

"SEC. 501. The Commissioner is authorized to carry out a program of making grants to States which have an approved plan under section 6, and an application approved under section 503 which is consistent with the long-range program and the annual plan submitted under this Act, to enable such States to improve the capability of public libraries in urban areas to undertake innovative, demonstration, and special development projects.

**"USES OF FEDERAL FUNDS"**

"SEC. 502. Funds appropriated pursuant to section 504 shall be available for grants to States having applications approved by the Commissioner under section 503. Such grants shall be used—

"(1) for special programs of a pilot and demonstration nature designed to improve the quality, availability, accessibility, visibility, and understanding of library services in urban areas; and

"(2) for assessment, evaluation, and measurement of the impacts and consequences of such programs, including implications for the coordination of urban libraries with other institutions crucial to the functioning of urban areas.

**"APPLICATION"**

"SEC. 503. (a) Any State desiring to receive a grant under this title for any fiscal year shall submit an application at such time, in such manner, and containing or accompanied by such information as the Commissioner may reasonably require. Each such application shall—

"(1) be developed and submitted by the State library administrative agency;

"(2) set forth a program for the year submitted under which funds paid to the State will be used, consistent with the long-range program of the State, for the purposes set forth in section 502, and set forth a detailed description of the projects for which assistance under this title is sought; and

"(3) set forth assurances that an opportunity will be provided to public libraries throughout the State to be heard in the development of the application.

"(b) The Commissioner shall approve applications which meet the requirements of subsection (a) and the following criteria:

"(1) The projects described in the application shall serve public libraries in high-density population areas.

"(2) The State developing and submitting the application is either relatively densely or relatively sparsely populated.

"(3) The projects described in the application will aid the State library administrative agency in developing, implementing, and evaluating new urban-focused library services programs.

"(4) The findings of, and the experience under, projects described in the application when disseminated will aid all State library administrative agencies in the country in developing, implementing, and evaluating new urban-focused library services programs.

**"AUTHORIZATION OF APPROPRIATIONS"**

"SEC. 504. For the purpose of making grants to States for the improvement of urban

library programs under this title, there are authorized to be appropriated \$20,000,000 for the fiscal year 1978, \$25,000,000 for the fiscal year 1979 and for each succeeding fiscal year ending prior to October 1, 1982."

**MOTION OFFERED BY MR. PERKINS**

Mr. PERKINS. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. PERKINS moves to strike out all after the enacting clause of the Senate bill S. 602 and to insert in lieu thereof the text of the House bill, H.R. 3712, as passed by the House on March 21, 1977, as follows:

That (a) section 4(a) (1) of the Library Services and Construction Act (20 U.S.C. 351b (a) (1)) is amended by striking out "and" immediately after "1975," and by inserting immediately before the period at the end thereof the following: "\$110,000,000 for the fiscal year ending September 30, 1978, \$130,000,000 for the fiscal year ending September 30, 1979, and such sums as may be necessary for the fiscal years ending September 30, 1980, and September 30, 1981".

(b) Section 4(a) (2) of the Library Services and Construction Act (20 U.S.C. 351b (a) (2)) is amended by striking out "and" immediately after "1975," and by inserting immediately before the period at the end thereof the following: ", and such sums as may be necessary for the fiscal years ending September 30, 1978, September 30, 1979, September 30, 1980, and September 30, 1981".

(c) Section 4(a) (3) of the Library Services and Construction Act (20 U.S.C. 351b (a) (3)) is amended by striking out "and" immediately after "1975," and by inserting immediately before the period at the end thereof the following: "\$15,000,000 for the fiscal year ending September 30, 1978, \$20,000,000 for the fiscal year ending September 30, 1979, and such sums as may be necessary for the fiscal years ending September 30, 1980, and September 30, 1981".

(d) Section 4(a) (4) of the Library Services and Construction Act (20 U.S.C. 351b (a) (4)) is amended by striking out "and" immediately after "1975," and by inserting immediately before the period at the end thereof the following: "and the fiscal year ending September 30, 1978, September 30, 1979, September 30, 1980, and September 30, 1981".

SEC. 2. (a) The Act (20 U.S.C. 351 et seq.) is amended by inserting immediately after section 7 the following new section:

**"ADMINISTRATIVE COSTS"**

"SEC. 8. The amount expended by any State, from an allotment received under this Act for any fiscal year, for administrative costs in connection with any program or activity carried out by such State under this Act shall be matched by such State from funds other than Federal funds."

(b) Section 102(b) of the Act (20 U.S.C. 353(b)) is amended by inserting immediately after "Subject to" the following: "the provisions of section 8 and".

Mr. PERKINS (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the motion be dispensed with and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Kentucky (Mr. PERKINS).

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. PERKINS. Mr. Speaker, I ask unanimous consent that the House insist on its amendment to the Senate bill, S. 602, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky? The Chair hears none and appoints the following conferees: Messrs. PERKINS, BRADEMANS, BEARD of Rhode Island, and QUIE.

**DEPARTMENT OF ENERGY ORGANIZATION ACT**

Mr. BROOKS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 6804) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

**IN THE COMMITTEE OF THE WHOLE**

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 6804, with Mr. NEDZI in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Texas (Mr. BROOKS) will be recognized for 1 hour, 15 minutes; the gentleman from New York (Mr. HORTON) will be recognized for 1 hour, 15 minutes; the gentleman from Colorado, (Mrs. SCHROEDER) will be recognized for 15 minutes; and the gentleman from New York (Mr. GILMAN) will be recognized for 15 minutes.

The Chair recognizes the gentleman from Texas (Mr. BROOKS).

Mr. BROOKS. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, in recent months, America has become increasingly conscious of the challenges facing us in meeting our energy needs in the coming years. The Arab oil embargo of 1973, the extremely cold winter of 1976-77, and the diminishing reserves of domestic natural gas supplies have focused the spotlight on our severe energy problems. Congress has reacted to meet the short-term needs with such legislation as the Emergency Petroleum Allocation Act, the Federal Energy Administration Act, and the Energy Research and Development Act. We are now grappling with establishing a long-term national energy policy and there is presently pending the National Energy Act.

While there will be vast differences of opinion as to what the policy should be, there seems to be general agreement that any national policy will require a single unified structure in the executive branch of the Government through which we can deal with our energy prob-

lems in a comprehensive manner. H.R. 6804 creates such a structure.

The Department of Energy that would be established by the bill will be a Cabinet-level department in which all the energy-related functions of the Federal Government will be consolidated. It will be responsible for developing national policy, for the collection and analysis of energy data and information, for research, development and demonstration of various energy resources, and for most energy regulatory activities. It will be concerned with the conservation of energy and the protection of the environment, and with fostering competition in the energy field.

These functions are now scattered throughout the Government, with no individual or organization in a position to coordinate them into a broad, national policy that will help us meet the difficult times we know are ahead.

There are now over 40 executive departments and agencies gathering information about fuel supplies and reserves, about consumption and future needs. Research and development goals in the energy field are now pursued independently, often in competition with each other.

The same arbitrary divisions exist in the pricing and allocation of fuels, with different agencies responsible for regulating different fuels—greatly complicating efforts to manage fuel supplies in times of emergency such as we experienced last winter.

In H.R. 6804, we have tried to bring all these functions into a balanced organization with sufficient power to develop and carry out a national policy, but with sufficient safeguards to make sure that power is not abused.

Three agencies—the Energy Research and Development Administration, the Federal Energy Administration, and the Federal Power Commission—would be abolished by this legislation, with all their functions and personnel transferred to the Department of Energy.

From the Department of the Interior, the new department would receive the functions of the Bonneville, Alaska, Southwestern and Southeastern Power Administrations, and the marketing of power by the Bureau of Reclamation. It would also receive the Bureau of Mines' coal production research functions, and some of the Interior Department's responsibilities relating to the leasing of federally owned energy resources.

The new department would take over the industrial energy conservation program now operated by the Department of Commerce, and the authority to develop energy conservation standards in new buildings now exercised by the Department of Housing and Urban Development.

The regulation of oil pipelines would be transferred to the Energy Department from the Interstate Commerce Commission, and it would get authority over three petroleum reserves and three oil shale reserves from the Defense Department.

In putting together this organization, Mr. Chairman, our committee was concerned with the extent of power that

would be vested in the Secretary who will run it. One point I want to emphasize is that this bill does not create any new authority, power, or programs. The Government Operations Committee has made every effort to avoid altering any substantive laws. It is the intent of the committee that neither the Secretary nor any other officer of the department have any authority that does not presently exist somewhere in the Federal Government.

The purpose of this bill is to pull those authorities together. Obviously, decisions have to be made as to where the authority will reside in the new department. One issue that has raised particular concern involves the transfer of some of the regulatory functions of the Federal Power Commission to the Secretary of Energy. The legislation before us does not change the substance of, or authority contained in, the Natural Gas Act or the Federal Power Act. But, the Government Operations Committee did decide that certain functions should be placed in the Secretary rather than a board. In the committee bill, the Secretary would be authorized to assume the functions of the Federal Power Commission under the Natural Gas Act and the Federal Power Act which involve the issuance of rules and regulations of general applicability, including the function commonly referred to as wellhead pricing of natural gas. It is the position of the committee that the rulemaking power of general applicability should reside in the head of the department as an essential element of his policymaking role.

On the other hand, the committee felt the Secretary should not have the function of adjudicating specific case-by-case determinations. The Federal Power Commission's functions of an adjudicatory nature have been transferred to a five-member Federal Energy Regulatory Commission, which, although established within the department, will be independent of the Secretary and other department officials.

The five members will be appointed by the President and confirmed by the Senate. They will hire their own staff and hearing examiners, and the commission will have a separately identified allocation in the Department's budget. This commission will perform all the case-by-case adjudications now carried out by the FPC, preserving all the elements of due process that are now provided.

That is not all the committee has done to limit the authority of the Secretary of Energy. The vitally important Energy Information Administration established as part of the Department will be headed by an administrator appointed by the President and confirmed by the Senate. And this administrator will not be responsible to, or subject to the direction of, the Secretary or any other official of the Department.

The Administrator of the Economic Regulatory Administration, another division of the Department that will carry out the regulatory functions not transferred from FPC to the new five-member commission, will also be appointed by the President and confirmed by the Senate.

And we have established an Office of

Inspector General in the Department, who, while under the general supervision of the Secretary, can only be removed from office by the President. One of the duties of the Inspector General will be to keep Congress fully and currently informed of any problems or abuses in the administration of the Department's programs.

Finally, I want to again emphasize that the Secretary will not have any powers that have not been created by Congress. What Congress gives, it can take away.

I believe, Mr. Chairman, that far from creating an energy "czar" who will have dictatorial powers over our lives and economy, we have created an office with balanced, carefully prescribed powers.

We are dealing with a grave issue affecting the lives of every one of us, and the future of our country. We must have an organization that can respond to this massive challenge. H.R. 6804 establishes such an organization, and I urge the Members to support it.

Mr. WYLIE. Mr. Chairman, will the gentleman yield?

Mr. BROOKS. I would be pleased to yield.

Mr. WYLIE. Mr. Chairman, what would be the additional cost to the Government in the creation of this new Department of Energy?

Mr. BROOKS. We do not anticipate any additional cost. The thrust of this legislation is to coordinate and pull together the divergent authorities now existing in Government and their staffs. This does not contemplate any additional cost. There is plenty of cost already incurred in the existing authorized agencies.

Mr. WYLIE. Mr. Chairman, if the gentleman will yield further, so any money authorized to other agencies, such as ERDA, will be transferred to this new Department of Energy and it is not anticipated that additional money will be asked for in the form of appropriations?

Mr. BROOKS. The gentleman is correct.

Mr. WYLIE. One additional question, if the gentleman will yield further. Is it contemplated that additional Federal employees would be required to administer the new Department of Energy?

Mr. BROOKS. It is not.

Mr. WYLIE. Mr. Chairman, I thank the gentleman from Texas.

The CHAIRMAN. The time of the gentleman from Texas (Mr. Brooks) has expired.

Mr. BROOKS. Mr. Chairman, I yield myself 1 additional minute.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. BROOKS. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, on page 76, of the bill and page 77, there is a provision transferring, as I understand it, the powers of the Federal Power Commission respecting rates and charges of natural gas sold for resale in interstate commerce under the Natural Gas Act to the Secretary of the Department of Energy.

Now, I think I understand the provisions correctly, but I would like to ask the distinguished gentleman from Texas: This does not create any new or addi-

tional powers in the Secretary of the Department of Energy. It merely transfers such powers as presently exist in the Federal Power Commission respecting first sale of natural gas in interstate commerce to the Secretary.

Mr. BROOKS. Mr. Chairman, the gentleman is correct.

Mr. ECKHARDT. So as the gentleman says, the bill is procedural, rather than substantive?

Mr. BROOKS. That is correct.

The CHAIRMAN. The time of the gentleman from Texas (Mr. Brooks) has again expired.

Mr. BROOKS. Mr. Chairman, I yield myself 1 more minute.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield further?

Mr. BROOKS. I yield to the gentleman.

Mr. ECKHARDT. Mr. Chairman, I ask this to clarify a matter in my own mind. Does the Federal Power Commission stay in effect with respect to other functions, other than the pricing of natural gas at the producer level?

Mr. BROOKS. All the existing authority within the Federal Power Commission is transferred to the new Department and whatever authority they have now is transferred to the new Department for exercise by that Department.

Mr. ECKHARDT. Not only with respect to price at the wellhead, but also with respect to transmission?

Mr. BROOKS. Would the gentleman repeat that.

Mr. ECKHARDT. I think the gentleman has answered it very comprehensively that, in effect, the bill would discontinue the Federal Power Commission and transfer its authority to the agency.

Mr. HORTON. Mr. Chairman, I yield myself 11 minutes.

Mr. Chirman, I rise in support of H.R. 6804, a bill to create a Department of Energy. I want to express at the outset my sincere congratulations to the chairman of the Government Operations Committee, the gentleman from Texas (Mr. Brooks) for the outstanding job he did in shepherding this legislation through lengthy hearings, a very thorough subcommittee markup and a spirited and objective consideration by the full committee.

The entire legislative process undertaken by the committee was a comprehensive attempt to provide an opportunity for all interested parties to express their concern about the administration's original legislative proposal and offer alternatives. The Chairman also provided a substantial opportunity for other committees of the House to present their views, and in many instances have their recommendations included in the final product approved by the full committee. Involved in the deliberations were the House Committees on Interstate and Foreign Commerce, Science and Technology, Interior and Insular Affairs, and Post Office and Civil Service.

It is important to emphasize the thoroughness of the hearings and the markup process because one theme seemed to prevail as the committee received vol-

umes of testimony. Witness after witness supported the creation of the Department of Energy except for the provision which directly affected his area of interest. This position was repeated time and time again by private industry; public interest groups and, yes, even some Members of Congress.

These qualified endorsements underscore for me a major reason for the creation of the Department of Energy. Despite the Arab oil embargo, or the subsequent inaction by the Congress for 3 years on the development of a comprehensive national energy policy, or the nearly disastrous impact of the "winter of 1977," a great number of interested parties are unwilling to accept the need for a major overhaul of the energy decisionmaking machinery of the Federal Government.

For the most part, testimony received by the Legislation and National Security Subcommittee contained few recommendations on how to improve this decisionmaking process. Instead, virtually everyone wanted to retain the status quo while tacitly supporting a cosmetic change which would have little impact on resolving the problems facing the many agencies involved in making the energy decisions during the years ahead.

The committee report defined succinctly the need for the creation of a new Department. It says in part:

Present organization and arrangements for handling energy problems within the Federal Government are clearly inadequate. Responsibility is scattered and there is no single point from which energy policy can be developed and effectively carried out. Different agencies administer different programs or different aspects of the same program often with contrary results.

As examples of this type of fragmentation we need only to look at the testimony developed during hearings. No single agency has the responsibility or accountability for the development and execution of a national energy policy.

There are currently 261 energy data programs operated by over 40 executive departments and agencies.

Five Federal agencies share responsibility for energy conservation programs.

Energy research and development, despite the creation of ERDA 2 years ago remains partially fragmented and in many instances independent of national energy priorities.

In the area of regulation of energy supplies, the situation is equally fragmented. The Federal Power Commission regulates the price and allocation of interstate natural gas, electricity, and hydroelectric power. The Federal Energy Administration regulates oil prices. ERDA determines the price of enriched uranium.

Virtually all of the Federal energy agencies have some jurisdiction over resource development. Quoting the committee report, the record developed during hearings shows that—

As a result, individual programs for development of coal, oil, natural gas, and uranium, as well as geothermal and solar energy have suffered from a lack of overall focus and sense of urgency.

We have come to a critical juncture in our deliberations during the 95th Congress about the future of the energy policy of this country. We are now in the process through committees of the House and Senate, of seeking to define that policy. But history and common sense tell us that if we do not give the executive branch the necessary means by which to execute this policy, legislation written with the wisdom of Solomon will not solve the energy problem.

That is why we need the Department of Energy now. There is no question that the way in which a policy will be administered is affected by the structure of the agencies involved. But can any Member of this Chamber objectively say that the present bureaucratic nightmare has been effective?

The Federal establishment has been incapable of responding to the energy problems of the past 5 years. It boggles my mind to contemplate how the present structure would react to the complicated legislation now being considered by the Congress.

The Congress has not been extremely helpful in resolving the problem because we have never defined our national energy policy. That is why the time for action on the Department is now; not when the energy policy is decided.

There have been a number of controversial issues attendant to the consideration of H.R. 6804. None has been more widely debated nor more effectively confused than the question of how the regulatory functions of the Federal Power Commission and the Federal Energy Administration will be folded into the new Department.

I want to try to set the record straight at the beginning of this debate about the manner in which these functions will be handled if the committee approved bill is adopted by the House.

H.R. 6804 establishes a Federal Energy Regulatory Commission and an Economic Regulatory Administration.

The Commission, to be composed of five members, received special attention by the committee to insure its independence. The members will be appointed by the President and confirmed by the Senate. The Commission will have jurisdiction to determine the rates charged by wholesale distributors of natural gas and electric power, and may also receive other functions as the Secretary may decide. The Secretary may intervene in an action before the Commission, but the decisions of the Commission will be final for the Department.

The Economic Regulatory Administration will be the vehicle by which the Secretary carries out the responsibilities of issuing rules and rates of general applicability. This includes the regulatory activities now accomplished by the Federal Energy Administration, for the pricing and allocation of petroleum and petroleum products as well as the initial pricing of natural gas presently performed by the Federal Power Commission. The exceptions and appeals process presently utilized by the FEA will be continued.

There is no attempt in this bill to eliminate, reduce or restrict the rights of

any party; not for private parties, public interest groups or a Government agency which presently might possess such a right.

There is an attempt to provide some symmetry to the process by which decisions are made. It seems to me ironic that many individuals bitterly critical of the Federal Power Commission are now concerned that it might be eliminated. In fact, every procedure of the FPC will be transferred to the Commission or to the Economic Regulatory Administration.

This issue is but one of many which occupied the time and consideration of the committee. It is but one example of an element of the legislation which has been opposed because it changes the status quo.

We need to face clearly the question before us today. Are we capable as a legislative body of recognizing the seriousness of the problem and responding to it with a positive, constructive remedy? Support for H.R. 6804 would be a resounding answer in the affirmative.

I urge my colleagues to consider carefully the contents of the bill approved by the committee. I would urge the same care during the consideration of amendments. What may be offered under the guise of protecting rights of interested parties, is in reality an institutionalization of a process which has been uncoordinated and unproductive.

Mr. Chairman, I urge prompt approval of H.R. 6804.

Mr. WYLIE. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I yield to the gentleman from Ohio.

Mr. WYLIE. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would point out that I like the concept of the bill's consolidation of function, and I like the rifle-shot approach to the problem of energy, but, on the other hand, I do not want this to become another layer of bureaucracy.

I asked a question along that line of the distinguished chairman of the Government Operations Committee a little earlier. I asked if carrying out the purposes of this bill would require any more Federal funds, and he said it would require none. I asked him how many more Federal employees would be required to administer the Act, and he said it would require none.

I would like to ask the gentleman from New York (Mr. HORTON) this question: How does that square with the language on pages 104 and 105 of the bill which authorizes the Secretary to appoint 14 executive level IV and V employees and up to 105 supergrade employees under the civil service law, in addition to supergrade employees transferred into the department?

Mr. HORTON. Mr. Chairman, we have put a limit on the number of supergrades, and there cannot be any more supergrade employees appointed than now exist or are authorized in the agencies that are being transferred, those agencies being FEA, ERDA, and the Federal Power Commission. Therefore, there are no additional supergrades.

Mr. WYLIE. So there will be no additional supergrades created by this bill,

and there will be no additional Federal employees required?

Mr. HORTON. No. We felt very strongly about that. The number of employees transferred is the same number of employees now authorized for the three agencies. I think that amounts to something over 19,000 employees.

Mr. WYLIE. Mr. Chairman, I thank the gentleman.

Mr. BROOKS. Mr. Chairman, I yield 2 minutes to the gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. Mr. Chairman, today the House of Representatives considers what may well be the single most important ingredient in the establishment of a comprehensive national energy policy. In order for the other parts of the President's National Energy Conservation Plan to be effective, they must be implemented through an effective, coordinated mechanism. This bill provides that essential mechanism. To insure that the existing Federal energy programs work, they too must be carried out in a coordinated manner. H.R. 6804 will achieve this coordination.

The committee-reported bill will bring together all functions of ERDA and FEA. It will also bring into the Department certain energy-related functions from the Department of the Interior, Department of Commerce, Department of Housing and Urban Development, Interstate Commerce Commission, and the Department of Defense. These functions will go far in allowing the proper implementation of a national energy policy.

However, just as important as these functions are those being transferred to the Department from the Federal Power Commission. In order to successfully coordinate a national energy policy there are certain functions under the Natural Gas Act and Federal Power Act which must be transferred to the Secretary of DOE. Particularly important among these functions are general rulemaking authority and the establishment of the wellhead price of natural gas under the Natural Gas Act. I would like to make it very clear that in transferring these authorities to the Secretary, which are so important to policymaking, no procedural safeguards guaranteed by the Federal Power Act or Natural Gas Act would be compromised. For example, the substantial evidence test upon which all actions of the FPC must be justified would apply to the Secretary.

Mr. Chairman, the bill reported by the Committee on Government Operations under the dedicated and able leadership of the chairman, is very specific in transferring authorities to the Secretary which are essential to national energy policy. The other functions of the FPC are placed in an independent Commission within the Department. I urge my fellow Members not to tamper with the delicate balance contained in H.R. 6804.

I fully support this measure, compliment the chairman and the ranking Republican member, Mr. HORTON, on a superb effort and urge prompt passage of H.R. 6804.

Mr. HORTON. Mr. Chairman, I yield 5 minutes to the gentleman from Colorado (Mr. ARMSTRONG).

Mr. ARMSTRONG. Mr. Chairman, I am grateful to my colleague, the gentle-

man from New York (Mr. HORTON), for yielding this time to me.

I would like very much to support this bill. The idea of voting to reorganize the sprawling bureaucracy which is our energy establishment, to streamline it, and to somehow bring order out of chaos is very appealing.

But H.R. 6804 goes far beyond reorganization. It makes some drastic and unfavorable changes in longstanding policies. It is, as Dr. Friedman described it recently, a "Trojan horse."

Mr. Chairman, we are getting the cart before the horse. We do not know what the Nation's energy policy will be after Congress has massaged the proposal sent to us by the Carter administration, a proposal which the President himself has described as one of the most complex ever submitted by a President to the Congress. I think that is a fair evaluation. In addition, there are pending other proposals by Members of Congress and other interested persons which are going to require very extensive hearings and serious consideration.

It is the expectation of many of us that the plan submitted by the White House will not be approved in its present form. Yet, we are bringing to the floor today a bill which has been tailored to the Carter administration energy program.

Would it not make sense to wait and see what the policy is before we create an apparatus to administer that policy?

May I also point out that this will be a very costly agency. I would like to quote briefly from an editorial in yesterday's Wall Street Journal which well sums up this issue:

A Chevron statistician has been sizing up the \$10.6 billion budget of the proposed new Department of Energy. For example, it is about double the value of all the oil the U.S. imported from Saudi Arabia last year. It exceeds capital and exploration expenditures by the petroleum industry to find and produce oil, gas and gas liquids in the U.S. in 1975. It exceeds by \$800 million the 1974 profits of the seven largest international oil companies.

Mr. Chairman, the editorial continues but I will skip to the last line of the editorial. I quote:

One should keep in mind that the \$10.6 billion is only the cost of the newly born baby. The Department of Energy thinks it will cost more when it grows up.

Mr. Chairman, I am well aware this spending is already occurring, but, for the most part, these are expenditures by agencies which did not even exist a few years ago.

What concerns me is that when we create a new agency with an ill-defined purpose to administer a policy not yet in existence that the increase in expenditure in the future is likely to be very great.

Mr. LEVITAS. Mr. Chairman, will the gentleman yield?

Mr. ARMSTRONG. I yield to the gentleman from Georgia.

Mr. LEVITAS. Mr. Chairman, I thank the gentleman for yielding.

I want to emphasize the point the gentleman just made because that article or editorial in the Wall Street Journal on the Chevron statistician seemed to imply that this was an additional \$10 billion.

It is my understanding that the \$10 billion referred to is the existing cost of operating those agencies, bureaus, and boards which are presently in existence. It may be that those are not proper expenditures in and of themselves, but I think it would be unfair and inaccurate to suggest that this is an additional \$10 billion.

Mr. ARMSTRONG. Mr. Chairman, I believe the gentleman is correct; but I think he would also agree that these are expenditures, in large measure, for agencies that did not exist just 4 years ago.

Third and most important, I think there is a truly ominous aspect in concentrating as much power as is proposed by this bill in the hands of a single politically appointed administrator. It has been asserted here that we are not giving new power to the Secretary of Energy, that we are merely consolidating power that already exists; but at least in some instances, in the present form of the bill, we are consolidating power which has been exercised by an independent regulatory agency, an agency bound by certain safeguards, procedural requirements, and which is, to some degree, at least, insulated from political pressure and, least to some degree, isolated from the temptations of corruption. We are taking decisions out of that kind of regulatory setting, and the power in the hands of one person.

Mr. Chairman, by consolidating this power in one person, we are making that person, the new Secretary, more powerful in the energy field than anybody has ever been before. Since every business, every farm, every job in this Nation depends to a greater or lesser extent on energy, we give the Secretary of Energy the right to say who gets to keep his job and who does not.

The CHAIRMAN. The time of the gentleman from Colorado (Mr. ARMSTRONG) has expired.

Mr. HORTON. Mr. Chairman, I yield 2 additional minutes to the gentleman from Colorado.

Mr. ARMSTRONG. Mr. Chairman, I thank the gentleman for yielding further.

To continue, Mr. Chairman, we are talking about the life and death power over every farm, business, job, community, and region of this Nation. No matter who exercises that power, I suggest that such discretion should not be given to any one person in a country that prizes economic freedom.

Under the circumstances, Mr. Chairman, I could propose a great many amendments to this bill, and it is possible that I will propose at least one to correct what I see as one of the outstanding problems. However, in view of the concerns which I have expressed and which have been even more forcefully expressed by others about the concentration of power, about cost, about the fact that we are putting the cart before the horse, would it not be a good idea to send this bill back to committee so that we can first formulate our policy, get a better handle on the cost, and then when we bring the legislation back to the floor, to create a Department of Energy, if that is what we are going to do, to pro-

vide a degree of isolation from political pressure, provide procedural safeguards, separate the rulemaking function from the day-to-day administration of programs? I think this would be wise.

Therefore, Mr. Chairman, for those reasons, I hope that if a motion to recommit is offered, it will be adopted so this bill will be given some further study. Otherwise the bill should be defeated.

Mr. BROOKS. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from California (Mr. MOSS).

Mr. MOSS. Mr. Chairman, I rise in support of the main thrust of this bill. The creation of a Department of Energy is a desirable move by this Congress and I will vote to create that department. But I have spoken bluntly in the past of my reservations about the miracles which are claimed to flow from this bill. Most of the structure it seeks to create is worth a try, but I do not think we should be overly optimistic that it is going to accomplish many of the things claimed for it.

There are elements of the structure which are contained in the administration's proposal which should be modified. I have the greatest respect for President Carter and I have the highest regard for the man who will probably serve as the first Secretary of the Department of Energy, the very distinguished former Secretary of Defense, James Schlesinger, but it is our duty as Members of this House to recognize that this department will long outlast the present administration. My comments are predicated upon that long term view—not today's personalities, although, in all candor, I would propose them whether or not I had assurances that those who administer the programs would continue in office in perpetuity.

From that perspective, Mr. Chairman, I think many will agree that the structure established by the bill before us is deficient in four important ways.

First, the bill does not create a clear focus for energy research activities within the new department. Five of the nine assistant secretaries created by this legislation will have some research responsibilities. Clearly this will involve problems of coordination and possible fragmentation of our critical energy research efforts. This is particularly acute in areas of basic research which will be the fountainhead of energy technologies which we will and must use in the future.

To cure this problem I will offer an amendment to the legislation to create an office of energy research within the Department of Energy which will advise the Secretary on research matters, manage portions of our basic energy related physical research and administer such other research programs as directed by the Secretary, including those which are necessary but not strictly within the responsibility of any of the nine assistant secretaries.

Second, H.R. 6804 seeks to vest far too much power in a single individual, a Secretary of Energy appointed by the President of the moment. In particular, H.R. 6804 would create a Secretary of Energy with authority to set the well-head prices of natural gas and issue rules of general applicability under the Na-

tural Gas and Power Acts, including presumably rules relating to construction work in progress, wholesale power rates, and the wheeling of electrical energy.

The amendment to be offered by me, with the support of my distinguished friend, the gentleman from Ohio (Mr. BROWN) solves this problem by vesting these general authorities in the new Federal Energy Regulatory Commission created by the bill. The amendment is supported by a broad coalition of Members and organizations who believe that at least until a far more specific mandate is given the executive through substantive amendment of the law, these general authorities should remain within a collegial regulatory agency.

Third, the bill makes substantive changes in the administrative procedures which have been employed in the laws which are being made the responsibility of the Secretary of Energy. This is not the bill to make such changes. As a consequence, I urge Members to support the amendment to be offered by the distinguished chairman of the Subcommittee on Energy, the gentleman from Michigan (Mr. DINGELL).

Finally, the bill is deficient in that the Federal Energy Regulatory Commission created by section 401 is not clearly granted the status of an independent regulatory commission for purposes of the Executive Reorganization Act. This oversight will be addressed by a technical amendment which I will offer later in the day.

In closing, let us support the main points of this bill, but let us make the changes we must make in order to guarantee that the structure to be created by H.R. 6804 works for the public interest in this and in succeeding administrations.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BROOKS. Mr. Chairman, I yield 2 additional minutes to the gentleman from California.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from Texas.

Mr. ECKHARDT. I thank the gentleman for yielding.

I wonder if the gentleman has noted that this bill also rewrites administrative procedures and judicial review that now exists in FEA, but apparently these might well be extended to the enlarged functions provided with respect to regulating the price of natural gas. Under title V the only matters that are subject to the Administrative Procedure Act, as I read the bill, are things in the nature of a rule and not enforcement orders.

Mr. MOSS. That is correct.

Mr. ECKHARDT. Presently the FEA exerts enormous authority in its enforcement orders, and if we extend greater authority to this department beyond those that the FEA now utilizes, it seems to me that we leave an administrator with almost czarlike powers with respect to enforcement orders.

Mr. MOSS. I agree with the gentleman completely, and I think that the powers granted by this bill are far in excess of what is necessary to reasonably carry

out the duties imposed on a head of energy.

Mr. ECKHARDT. I thank the gentleman.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HORTON. Mr. Chairman, I yield 2 additional minutes to the gentleman from California.

Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from New York.

Mr. HORTON. I thank the gentleman for yielding.

I want to commend the gentleman on the work that he did in the subcommittee, and in the full committee. He was most helpful in arriving at a compromise agreement which established the Federal Energy Regulatory Commission. It was the work of the gentleman from California (Mr. Moss), the gentleman from Texas (Mr. Brooks) and myself that resulted in the establishment of this new Commission.

I just want to ask whether or not the gentleman is satisfied that we did all we could to try to create as independent an agency as we could under the circumstances.

Mr. MOSS. I think we did almost all, and I hope that we do that additional necessary thing today by making it subject to the same limitation on reorganization as applies to other independent commissions. I would not want to see us create this, and then 6 months from now have it reorganized out of existence.

Mr. HORTON. Is the gentleman making the point that this would not be subject to the Reorganization Act?

Mr. MOSS. It would as the bill is now written, but with the amendment I will offer, if adopted, it would then be subject to the same limitation on reorganization we impose in the reorganization of all other independent regulatory commissions.

Mr. HORTON. There have been some questions with regard to whether or not this is truly an independent agency, and people have asked whether or not the head of this Commission would be responsible for appointment of personnel. What we tried to do in the subcommittee and full committee was to make it as completely independent as possible. As I understand it, the Commission would be responsible for the appointment and control of its own personnel, would have separate budget items, and would not be subject to control in any manner by the Secretary of the Department of Energy, that all this Secretary could do would be to intervene in matters before the Commission as in any other forum. Is this the gentleman's understanding?

Mr. MOSS. That is my understanding, again with the caveat that we need to make it clearly subject to the same limitation on reorganization that we have made other independent regulatory agencies.

Mr. HORTON. Is it the gentleman's feeling if we do not accept his amendment that this Commission could be reorganized by the Commission or by the Secretary or by the President?

Mr. MOSS. That is my conviction.

Mr. HORTON. Either one or all three? Mr. MOSS. It could be reorganized by the President. It could be reorganized by the departmental Secretary, under delegation from the President.

Mr. HORTON. I certainly would agree with the gentleman we want to make certain that is not going to happen and it sounds as though this amendment would get to that, and I certainly would be interested in having that amendment offered to make certain that this is an independent agency.

Mr. MOSS. I thank the gentleman. Mr. HORTON. Mr. Chairman, I yield 5 minutes to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Chairman, it is not just a cliché to say about the legislation before us today that we are indeed dealing with the lifeblood of our Nation. Energy resources are the basis of our economy and national power.

A few weeks ago I had the unhappy duty, as the ranking minority member of the Subcommittee on Energy and the Environment of the Committee on the Interior, of handling the opposition to the strip mining bill, which I feel will strongly curtail the production of coal in this Nation and goes in the opposite direction of what I understand to be President Carter's desire to win this war against the energy problem.

Today we have before us a bill that has been put forth by some of its sponsors as being little more than a modest reorganization of existing governmental agencies and personnel. I am indebted to my colleague, the gentleman from Colorado (Mr. ARMSTRONG), for his very persuasive statement pointing out many of the defects of this legislation.

Mr. Chairman, again like the strip mining bill, in this bill we seem to be going in the wrong direction. The energy problem has been with us for nearly 4 years now, and the winter of our discontent, during the 1973-74 Arab boycott, is still vivid in the memories of the watermen on the eastern shore of Maryland, the farmers who had to curtail their activities and the commuters who had no mass transit to use then or now and those who waited in the long lines, frustrated and angry.

It seems to me in the creation of this new monster bureaucracy, to be known as the Department of Energy or DOE, we are in fact totally ignoring the basic causes of our national energy problem. This bill might however give you some comfort, some reason to pat yourselves on the back or to tell your constituents that you are voting for energy once again by reorganizing and creating this new Federal department.

Long ago in one of the middle years of the Roman Empire one of the observers of that epic era, Gaius Petronius, Governor of Bithynia, I believe it was in A.D. 75 or before, said:

We tend to meet any new situation by reorganizing and a wonderful method it can be for creating the illusion of progress while producing confusion, inefficiency and demoralization.

Of course, he was talking about imperial matters, but the same sort of all too human factors are still operable in

the current bureaucracy. If we did not learn from the decline of the Roman Empire, we certainly ought to learn from the marked decline of the operation of the Government of the United States we have seen in recent years.

The basic and underlying assumption implicit in the legislation before us, if we read the policy objectives stated in the first few pages of the bill, is that the Government can do it better, but the Government is nothing more than a collective of individuals who know no more and no less than the people engaged in the private sector in the energy industry. In fact, the Government has a track record of seriously holding back the production of needed resources, such as natural gas, to the point that factories had to be closed in Baltimore and other cities last winter. In fact, there have been no new hookups for commercial or home use natural gas in Maryland for several years. Other States suffer similar problems.

It is the same Government which, in the face of the continuing energy crisis stood by and watched petroleum imports soar while petroleum production in this country has declined to the point where half of the products we need now come from abroad.

So again today, not only are we concerned or should we be concerned about the massive power that will be placed in the hands of the apostate Republican, Mr. Schlesinger who apparently will be our new Secretary of Energy, who will with all the zeal that he opposed the Soviets and called for military supremacy, now calls for bureaucratic supremacy in the field of energy. I have no great sympathy for big oil companies or big labor or any undue concentrations of power. But the same rule must apply to big government.

I could perhaps support this legislation, and I would hope that some of the amendments to be offered will be accepted, as they will assuage some of my fears; but just like the FEA before, this new baby doe, soon do grow will not produce one drop of oil, one cupful of gas, nor will it in any way enhance the energy potential of this great Nation, if history is any lesson. Quite the contrary it may well make any rational solution impossible. As it is presently before us, I urge defeat of this bill.

Mr. BROOKS. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan (Mr. CONYERS).

Mr. CONYERS. Mr. Chairman, the bill that we have before us contains several basic deficiencies. Therefore, I would like to describe two amendments that remedy these problems and, after briefly describing them, I will later offer them to the floor for consideration.

The first amendment would create a National Energy Board based on the premise that we should have an independent regulatory body outside of the Department of Energy. My amendment challenges the motion that, within the Department of Energy, we can actually have an independent regulatory agency.

My first amendment would go one step beyond the position advocated by my friend and colleague, the gentleman from

California (Mr. Moss), who seeks to separate the FPC from the Department of Energy. Under my amendment, in addition to taking the natural gas pricing power out of the Department of Energy, I want to remove the FEA's oil pricing powers from the Department and place the energy pricing powers of both FPC and FEA in a single, independent regulatory agency, which I have designated the National Energy Board.

Under H.R. 6804, we would have in one office of the giant energy bureaucracy an independent agency—the Economic Regulatory Administration—that supposedly would tell the new super-agency Secretary—and the President—that they are wrong. Instead, I believe we need a multifaceted body, representing many divergent views, composed of seven members appointed by the President.

I hope that the Members of Congress will realize that it is their policymaking power that under H.R. 6804 that will be swept into one agency under a single person. I was pleased that, on a 12 to 19 vote in the committee, I received bipartisan support for preventing this result.

If it can be argued that under my first amendment I am taking some power away from the Secretary of Energy, under the second amendment I would offer I want to provide him with some additional power. My second amendment would give to the Department of Energy the authority to purchase imported oil from OPEC nations and from any other foreign sources. This authority would be vested in a Public Energy Administration whose Administrator, under auction bidding procedures, would buy imported oil in a manner that has been discussed and debated at length in committee hearings and has been studied and recommended many times in the past 3 years.

As a matter of fact, the Presidential authority to do this already is in the law since 1974. In this reorganization proposal, my second amendment merely provides the office for this function to be used at the discretion of the Secretary. And I would hope that the Secretary and the President would use it.

In the haste and innocence with which this bill was put together, we seem to have forgotten where we are obtaining 50 percent of our oil supplies—from foreign sources. Unless we have such purchasing authority located in the Department of Energy, the new Secretary will have to read the morning newspaper to find out what the latest import price of oil per barrel is because, within his huge superagency, he will have no powers whatsoever over its costs.

In my second amendment, I would add to that power the authority of the Department to implement a new leasing procedure for domestic oil. Under this procedure, the private sector would manage extraction of crude oil on a contractual basis for fee, permitting the U.S. Government to own those products after extraction but to pass them on in sequential bidding operations.

Mr. HORTON. Mr. Chairman, I yield 10 minutes to the gentleman from Arizona (Mr. RUDD).

Mr. RUDD. Mr. Chairman, this bill to

create a super new Department of Energy should be defeated.

The Federal Government's bureaucratic interference to date in the energy area has only led to higher prices and less supplies of energy.

It has even led to the suppression of data demonstrating that an end to Federal price regulation of energy would allow enough domestic energy production to provide all our energy needs at current levels of consumption for generations to come.

Look at the record with natural gas—the cleanest form of energy—which is regulated by the Federal Government.

The wellhead price of natural gas is currently held at the artificially low price of \$1.42 per thousand cubic feet.

This wellhead price accounts for only 10 to 18 percent of the price that consumers pay for home heating. The rest of the consumer price is pipeline costs, other incremental costs, and a small profit.

But the fact that Federal regulation has kept the wellhead price of natural gas artificially low has discouraged and prevented exploration and development of natural gas.

This is because costs of drilling an average well increased 62 percent in just 3 years between 1971 and 1974, while Federal regulators kept the wellhead selling price at the artificially low level.

The result was very little natural gas production during those years when additional natural gas was desperately needed—and a 42 percent decline in total U.S. natural gas reserves since 1968.

Staff analysts of the Energy Research and Development Administration's market oriented program planning study recently developed data to prove that an end to Federal control of natural gas prices could solve the energy problem for a millennium or more.

The MOPPS analysis estimated that at \$2.50 per thousand cubic feet, the United States would have about 45 years' worth of natural gas at current levels of consumption.

Estimates are that at a slightly higher price, energy producers would be able to develop approximately 500 trillion cubic feet of geopressured methane under the 400-square-mile basin in Texas, New Mexico, and parts of the Gulf of Mexico.

But ERDA's original MOPPS analysis demonstrating the need for deregulation of natural gas did not agree with the administration's position that natural gas prices should continue to be regulated, and allowed to rise to a wellhead price of no more than \$1.75 per thousand cubic feet.

And so the ERDA MOPPS analysis was deep-sixed and suppressed.

The MOPPS study later released for public consumption was laundered by ERDA officials to fit the administration's preconceived policy in favor of continued natural gas regulation.

Mr. Chairman, the facts of this cover-up would probably not be known today were it not for the enterprising investigative work of the Wall Street Journal, which published the news of this "ERDA-gate."

I would like to include the Wall Street Journal's May 20 editorial at this point in the Record:

[From the Wall Street Journal, May 20, 1977]

ERDAGATE!

We were frankly astonished at the reaction to our April 27 editorial, "1,001 Years of Natural Gas": telephone messages from high officials, a deputation from Exxon, an urgent letter from Robert Fri, acting administrator of the Energy Research and Development Administration. Naturally, the attention made us curious.

Having put together most of the pieces, we can now report on the cause of the excitement. Deep in the bowels of ERDA, an outfit called the Market Oriented Program Planning Study (MOPPS) has solved the energy crisis for five days in April. It took that long for the administration, the oil companies and ERDA to snuff out the solution and get the crisis back on the track. They thought they had driven a wooden stake through the heart of the MOPPS solution, but here in our editorial the monster was rising again.

In January, about 70 ERDA people were thrown into a task force to study potential supply and demand. In most resource studies, such a thing as prices never appears. So apparently nobody thought it was necessary to warn the MOPPS people against calculating supply curves, that is, calculating how much gas would be available at different prices in an unregulated environment. In their innocence, they tried to apply a little economics.

The study estimated that at \$2.25 per thousand cubic feet (mcf) the nation would be awash in natural gas. From \$2.50 to \$3 we'd be engulfed with it. MOPPS reckoned that at \$2.50 the U.S. would have about 45 years' worth of natural gas at current levels of consumption. The price would have to go higher to tap some of the unconventional sources, like geopressured methane, which conceptually would last us for a thousand years. But why would anyone worry about these exotic sources if we had 45 years' worth of the usual stuff likely to be available at lower prices?

Indeed if that were true how could there be an energy crisis? How could the President go on television with ringing calls for sacrifice? Why should American taxpayers be scared into coughing up billions of dollars—something like 5% of GNP—to cause conservation? How could Exxon recoup its investments in gasification research and coal properties by supplying gas from these sources at \$3.75 per mcf?

The innocent scientists and technicians in MOPPS had no idea what vested interests their simple calculations threatened. Even more to the point, bearing this unwanted message to the White House would be a black mark against the ERDA bureaucracy. The Federal Energy Administration would be in a position to gobble up all of the best spots when the two were merged into the new Department of Energy.

Given these realities, there was only one answer to the no-energy-crisis crisis. The ERDA brass recalled the MOPPS study, and threw out all the charts that had been so innocently put together over the months. By April 6, it had a "revised" MOPPS study, with the charts looking much like those from the FEA.

In these five days, the price projections jumped so high that the energy crisis was back in business. Mr. Carter's regulated gas price of \$1.75 looked good, because MOPPS II showed that higher prices in an unregulated market won't do much good anyway. And surely it would be prudent to give Exxon and other coal-gasification people a few billion dollars of tax money to spend on their plants.

A higher price can even be given to exotic

sources like geopressed methane; Mr. Fri assures us ERDA will do the research on that. Gas sources of two or three generations hence do not threaten anyone. The problem is allowing prices of ordinary gas to rise into the \$1.75-\$3.00 range, where if MOPPS I is right they would bring on the next generation of gas at threateningly low prices. While promising to do the research, ERDA has disbanded the MOPPS I crew, reassigning its members to study almost anything else but natural gas.

Now we have no idea whether the price figures in MOPPS I are correct. It is certainly possible for other groups in the administration to dispute them in all good faith. And clearly Exxon has made serious investment decisions on the basis of other numbers though perhaps tempered with "political reality." But to us the MOPPS I estimates seem not at all implausible, given the one thing we know for sure about natural gas: Since the Phillips decision in 1954 its price has been held at not only artificially but, in recent years, ridiculously low levels. Most of the gas found has only been a by-product of oil exploration. It stands to reason that if looking for gas suddenly becomes profitable a lot will suddenly be found. But the point is—the point of our original editorial was—that no one will know until the price is deregulated.

MOPPS certainly does show, though, how many vested interests need the energy crisis. The President needs a war to fight. Without an energy crisis the energy bureaucracies cannot grow. The energy companies are turning into a regulated industry, all of which try to dampen innovation. We now hear energy czar James Schlesinger bragging that privately most companies do not favor deregulation. This is not yet true, but in time the proposed policies certainly would reduce the oil companies to the state of the airlines.

With all of this clout behind the energy crisis, it is scarcely surprising that a crude but effective message goes out: By gosh, boys, there has to be an energy crisis, so don't nobody find no energy.

Mr. Chairman, I submit that passage of this bill would only invite more of this kind of deception at the hands of Federal energy planners and bureaucrats.

If Congress approves this super new Department of Energy—centralizing all Federal energy functions and powers in the hands of one agency administered by one energy czar—the scenario will likely follow the usual bureaucratic pattern.

This energy department will continue to plan and regulate our Nation into increased energy shortages and higher prices for consumers—rather than allowing the market to operate freely to provide abundant energy at lower prices for our citizens.

The Federal energy czar and his army of energy bureaucrats will then justify existence and growth of the Department of Energy on this continuing energy crisis of the Federal Government's own making.

The Department will inevitably mushroom from its current proposed collection of 20,000 employees from existing Federal energy offices—and its \$10.6 billion annual budget—to 100,000 or more Federal employees and a \$60 or \$100 billion budget a few years from now.

This growth is predictable, based upon the history of the Department of Health, Education, and Welfare, and similar agencies.

To compound this bureaucratic disruption of our economy, and this unwar-

ranted growth of the bureaucracy, we have this problem of deception and manipulation by the energy bureaucracy to force its policy initiatives onto the people.

With any powerful, centralized bureaucracy of the type proposed by this legislation, there is always the dangerous possibility that this department will manipulate or deep-six data that disagrees with or disapproves the bureaucratic mind-set as a means to control public opinion, our national economy, and public policy in the entire energy area.

For these reasons, I urge defeat of this legislation and passage instead of alternate energy proposals to eliminate Federal interference and control of our economy in the energy area.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. RUDD. Yes, I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate my colleague's yielding.

I want to compliment my colleague, the gentleman from Arizona (Mr. RUDD), on his statement, especially the point he is making that this is a major step toward the nationalization of a major industry in this country. I think that is an unfortunate step. I do not think it is for the betterment of our country or of mankind.

I think we should have learned, from the results of England's having nationalized so many industries, that nationalization really does not encourage competition or production and it tends to centralize the decisionmaking process.

Mr. Chairman, I believe that the several points the gentleman from Arizona (Mr. RUDD) has made are correct, and that he is to be complimented for a very, very thoughtful statement.

It is unfortunate that during these floor debates so many of our colleagues are unable to be present. Of course, many of them are attending other committee meetings, and for that reason many Members do not always get the benefits of all the statements made during general debate.

Mr. Chairman, I feel that my colleague, the gentleman from Arizona (Mr. RUDD), who is a new Member, has spoken very thoughtfully and that he has given us a great deal of good material which we can digest. I thank the gentleman for his contribution.

Mr. RUDD. Mr. Chairman, I thank the gentleman from California (Mr. ROUSSELOT) for his remarks.

Mr. BROOKS. Mr. Chairman, I yield 2 minutes to the gentleman from Florida (Mr. FUQUA).

Mr. FUQUA. Mr. Chairman, today we are to consider perhaps the most important legislation to date in the 95th Congress. The act to create a new Department of Energy is a good one and I urge my colleagues to support H.R. 6804.

For far too many years, responsibility for energy research, development and demonstration has been scattered among a multitude of agencies. Although it would be easy to criticize some of the workings of these agencies, I believe they have all done their best to be responsive.

The lack of one central control over energy matters at the national level, however, is all too evident and, by creating the Department of Energy, we will achieve the necessary control.

Only an ostrich with his head in the sand would not recognize the serious and critical nature of our present energy situation. We can and must become less dependent on foreign sources for our energy needs and this can only be accomplished by the creation of one agency, and one cabinet officer, responsible to the President, Congress and the American people for the majority of energy-related matters.

The divisions established for research, at the Assistant Secretary level, are logical ones and are not restrictive. New technologies we have not even dreamed of may be developed and there is certainly a place for them under this agency.

Some may argue that the powers and responsibilities given the Secretary of Energy are excessive. They are, no doubt, enormous powers to deal with an enormous problem. It is high time that we set up one agency to be responsible for the diverse energy questions we face if we are to solve this most crucial of problems.

The new Secretary of Energy will not be a czar. The Subcommittee in Legislation and National Security and the House Government Operations Committee have seen to that. We were presented with a complex piece of legislation that demanded many hours of work and modification was certainly in order. As with all proposals Congress receives from a President, this one shifted too much authority to an administrative agency and too little congressional control and oversight was mandated.

We have changed all that. For example, the administration wanted to control the financing of one small segment of the electric utility industry, the REA's. Their proposal would have shifted ultimate control over REA's from the Department of Agriculture, where they are accorded priority status, to the Department of Energy which will have far bigger fish to fry. The result would have been a gross delay in loan applications and endless bureaucracy. No other segment of the electric industry was singled out for this treatment and I was gratified when an amendment I introduced to remove the veto power was approved.

The administration bill would also have limited reports to Congress and contained no provision for an Inspector General with responsibility to root out wrongdoing within the agency. These, too, were changed in our desire to create a new agency to handle energy without creating a Frankenstein's monster to terrorize small business and run amuck with no way to rein it in.

My friend and colleague, BEN ROSENTHAL, introduced an amendment to strengthen the conflict of interest provisions and I supported his efforts in committee. We must assure the American people that the people running this department are working for them and are not just there for a couple of years in the hope of landing a good job with industry. This problem, too, has been solved.

Yes, the Department of Energy does have enormous powers. It can set the price of wellhead oil and natural gas and can ultimately have a great impact on the energy supply in the country. But we have the power to control this agency and we have already in place the restrictions felt necessary to keep the agency in line.

The powers retained by the various other departments concerned with energy matters are retained because of their logical connection to that Department's specialty. The Secretary of Energy will hopefully be able to coordinate activities with these other agencies and I believe the results will not be bureaucratic redtape but, rather, consultations at the highest level of Government officials.

Let me turn my attention briefly to the powers we do give the Secretary. Trusting that my colleagues have read the bill, the committee's report and other extraneous matter on the legislation, I will not dwell on the specifics. Let me add only that I firmly believe that with the passage of this act, we will have made a great stride in our energy independence drive.

Coordination and simplification, the elimination of overlapping functions and bureaucratic entanglements, the concentration of research programs and demonstration projects and the accountability we so desperately need will be advanced by H.R. 6804. I do not offer this new Department of Energy as a panacea but, rather, as a hopeful bright new beginning in our energy effort.

Mr. BROOKS. Mr. Chairman, I yield 2 minutes to the gentleman from North Carolina (Mr. ROSE).

Mr. ROSE. Mr. Chairman, I rise in support of this bill, H.R. 6804.

I have a great deal of confidence that our President is serious about attacking the energy crisis in this Nation, and I think that by the passage of this legislation we will give him the tools that he needs to accomplish that goal.

However, I want to talk for just a brief moment about the energy needs of agriculture and the energy needs of rural America.

Mr. Chairman, one of the things that we do well in this country is to produce food and fiber for ourselves and for a hungry world. In the course of consideration of amendments to this bill, I will offer two short amendments that will simply say that it shall be the policy of this country to give equal consideration to the energy needs of both urban and rural segments of our economy, and that in the report that the administrator of this department submits to the Congress each year, he shall supply us with data indicating the energy needs of those elements of our country that are outside of standard metropolitan statistical areas.

Mr. Chairman, we cannot produce agriculture with the same efficiency with which we produce it today if we are not sensitive to the energy needs of agriculture, and the energy needs of those people who live in rural areas to produce this great agricultural system that we have.

Mr. Chairman, the other body has adopted amendments similar to those that I will offer.

I urge my colleagues to support this legislation, and I hope that they can help in the adoption of my amendments.

Mr. BROOKS. Mr. Chairman, I yield 3 minutes to the gentleman from Missouri (Mr. SKELTON).

Mr. SKELTON. Mr. Chairman, I rise in support of this measure, urging the passage of this bill to create a Department of Energy.

I think that at this time in history we are reaching another milestone in meeting the needs of Americans, and one thing that we hope to do is to create a better government which works better for the people of our country.

Mr. Chairman, historically, the executive departments have been developed in response to fundamental needs of the people of our country.

The first Congress in 1789 established three executive departments, the Departments of State, War, and Treasury. In addition, at that time they had two other posts that were not actually department posts, but they did create the offices of Attorney General and Postmaster General.

As time passed and the needs of the country increased, Congress responded with new executive departments. In 1798 the Department of the Navy was established. In 1849 Congress created the Department of the Interior.

After the War Between the States, Congress provided for the Department of Justice, the Post Office Department, and the very important Department of Agriculture.

By the early 1900's, the United States was becoming an industrial giant, and its growth in industry and commerce was making commercial history. Also, at that time the activities of the unions and labor were in need. This prompted Congress in 1903 to create the Department of Commerce and Labor. In 1913 these two areas were divided into two separate departments, the Department of Commerce and the Department of Labor.

In 1949 the Department of Defense was established combining the Departments of War and Navy.

Of course, more recently, in 1953, the Department of Health, Education, and Welfare came about and the Department of Housing and Urban Development in 1965 and, most recently, the Department of Transportation.

Mr. Chairman, as we now see ourselves, we find that a specter of energy uncertainty has arisen. We find energy needs and problems that were undreamed of a decade ago—oil embargoes, fuel shortages, a need for new types of energy and a need for conserving the energy we have on hand.

Consequently I feel that we are at a milestone. We should have one department, one head, where we can say this is where the decisions lie. I have the privilege of representing the district of former President Harry Truman. He was known for saying that "the buck stops here." I think we should have a department

where we can say, "The buck stops here," to create a single department so as to give energy leadership to this country. I hope by doing so, in reaching this milestone, we can make our Government work better for our people.

Mr. BROOKS. Mr. Chairman, I yield 2 minutes to the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I thank the distinguished chairman of the Committee on Government Operations, the gentleman from Texas (Mr. Brooks) for yielding to me and I want to compliment the gentleman, in the beginning, for his healthy skepticism toward this entire problem but, at the same time his cooperative and instructive approach.

I should like to ask the gentleman concerning title V on page 90 of the bill.

As I understand title V, in section 501 (a) it provides that the Administrative Procedures Act shall apply to a rule or an order having the effect of a rule. Of course, in so applying, it would require the type of hearing afforded under section 553 of the Administrative Procedures Act in rulemaking, as I understand it. But it does not seem to me to extend to an enforcement order the provisions of section 554 of the Administrative Procedures Act.

Would the gentleman from Texas construe the matter in that way?

Mr. BROOKS. I do not believe that necessarily does, unless they are subject to that now. This is not intended to write a new law, but to transfer the necessary substantive law.

Mr. ECKHARDT. If I understand what the present law is, I think that FEA is not now required in an enforcement order to follow any particular procedural process, or, at any rate, it is not now doing so. FEA was set up in a rather emergency situation and its enforcement orders I do not believe are subject to the adjudicatory process of the Administrative Procedures Act.

Mr. BROOKS. I think that is correct, and I do not think they would be under this legislation. This is not changing.

Mr. ECKHARDT. I understand that. I thank the gentleman.

Mr. ERLÉNBERG. Mr. Chairman, I yield 10 minutes to the gentleman from Idaho (Mr. SYMMS).

Mr. SYMMS. I thank the gentleman from Illinois for yielding the time.

Mr. Chairman, I am very concerned with a number of aspects of this new Department of Energy. I know that the proponents of this Department have said that if we consolidate all existing energy agencies into one department, we will increase efficiency. However, if we look at the record, there is absolutely no proof that this will happen. With the merging of the already large agencies such as FEA, ERDA, and the Federal Power Commission into a larger, more powerful department, the Department of Energy, we are creating an even larger bureaucracy.

By the President's own account it shows that he will have about 19,767 people working in the Department of Energy. How are we going to know that the Department of Energy is not going to grow larger? The fact is that we have a

very good example that we can look to just recently with respect to energy. It is called the Federal Energy Administration, an agency that we never should have created in the first place, an agency that has done nothing to help solve the energy problem, but will only raise taxes and harass American citizens in general.

The FEA people are now spending their time in Idaho going around to petroleum dealers trying to find out how much they charged for products from October 1973 through March 1974, and how much they had on inventory. These same petroleum dealers seemed to have a lot of customers, happy customers, but with these little Government bureaucrats running around harassing them daily with figures, they are costing them an outrageous amount of money in just bookkeeping charges, doing nothing to produce needed energy.

In those 4 short years this FEA, this nonproductive agency, has gone from a staff of zero people to 4,000 people. Are we so naive as to think that the same process will not happen to the Department of Energy?

The power granted to the Department of Energy is absolutely awesome. Dr. Milton Friedman, Nobel prizewinner in economics, recently addressed this in his *Newsweek* column, and I quote:

A Department of Energy has the potential of being the most powerful, and the most harmful of all Federal agencies. It would control the life-blood of our economic system. Its tentacles would reach into every factory, into every dwelling in the land.

What about the Department of Energy makes Professor Friedman so apprehensive about its functions? A short perusal of these proposals will reveal plenty to be worried about.

For instance, in title VII, headed "Energy Planning," section 6(B) (1) allows the President to "Establish energy production, utilization, and conservation objectives, for periods of 5 and 10 years, necessary to satisfy projected energy needs of the United States to meet the requirements of the general welfare of the people of the United States and the commercial and the industrial life of the Nation, paying particular attention to the needs for full employment, price stability, energy security, economic growth, environmental protection, special regional needs, and the efficient utilization of public and private resources."

It is going to take a smart fellow to do that; that is all I can say. We are going to trust that to one agency, one person, and give him unlimited power to do all of these things?

With such a full menu as that, no wonder the distinguished Senator ABRAHAM RIBICOFF admitted that this legislation gives the Energy Department "extensive powers to set prices and make other far-reaching decisions."

It, therefore, appears that even though Mr. Friedman and Senator RIBICOFF have different views on the necessity of this Energy Department, they at least agree on the enormous power this agency will have.

Finally, the cost to the taxpayer for this new Department is massive, to say

the least. Initial budget outlays for fiscal year 1978 will be \$10,612 million, in other words, \$10.6 billion. Anyone who believes that the cost of this white elephant will not increase progressively should have his head examined. There is only one thing we can be really sure of: the cost of government goes up, and it will increase progressively, as I said. Unfortunately, we do not know the additional cost on energy exploration and development that will be caused by the untold red tape and paper-shuffling that will be created by this new bureaucracy.

Mr. Chairman, most of this energy crisis was caused by government regulation and harassment instead of letting the free market rule. It seems that the White House has not learned this lesson and, unfortunately, the taxpayers are going to get shafted again by Washington. I, for one, will not take part in this shafting of the American people by this legislation.

Mr. Chairman, there are many, many more arguments I would like to make and I hope to make as the debate goes on today, but I think the major thrust of what is happening today, and we are missing the whole point, is if Congress had the guts to deregulate the price at the well-head of natural gas and oil in the United States, much of this problem would disappear. There is something called supply and demand. But Government people think like supply clerks and think there is only so much energy and we are going to run out. That is ridiculous. We are not going to run out. We only run out at 52 cents c.f.w.; if the price were \$2.50 c.f.w. there would be plenty.

My distinguished friend, the gentleman from Missouri (Mr. SKELTON), made the point that as time goes along it becomes time for Government action, but if 100 years ago today the Government or the Congress, in its lack of wisdom, had created a Department of Energy, I would say we would have collapsed economically before now and we would have run out of whale oil. But here we are today, because we have a little shortage of energy, because the Congress stayed out of it. Today we are refusing to allow the marketplace to work; we are calling for the whips and guns of Government force to allocate scarce resources.

Mr. Chairman, under leave I will obtain in the House, I include at this point a copy of a Wall Street Journal article, dated May 27, 1977, and entitled "The 'Energy Crisis' Explained," and I will just say it goes into detail about what will happen.

The article is as follows:

#### THE "ENERGY CRISIS" EXPLAINED

The energy crisis is a snare and a delusion. Worse, it's a hustle. We're now prepared to explain it once and for all.

We would be the first to affirm that the subject of energy is enmeshed in a very real intellectual and political crisis. There is also a real national security problem, which deserves to be treated separately. For now, suffice it to say that the emergency stockpile program is the one good part of current energy policy, and that we really ought to stop taxing domestic energy production in order to subsidize imports from OPEC (see Hall and Pindyck in the adjacent readings). But what "energy crisis" usually means is

that one fine morning we will look on the shelf and exclaim, "My God, we've run out of energy." Then civilization will grind to a halt and we will all freeze in the dark.

This is nonsense.

The best way to understand why is to distinguish two views of the world. You can look at the world the way economists do, which is to look at prices. Or you can look at the world the way inventory clerks do, trying to tally up the resources in the earth's crust.

Economists, or anyway most of them, view the world like this:

(Chart not reproduced.)

This view of the world has invariably worked in the past. At least, it is difficult if not impossible to find historical examples of commodities for which it failed. Nor is it suspended because a cartel someplace controls a lot of production. Higher prices still reduce demand and increase supplies, which is how cartels are broken.

Following the Club of Rome's startling discovery that the weight of the earth is finite, the public mind has been gripped by the inventory-clerk's view of the world. This view pervades not only the Carter administration's energy offices, but also the oil companies, the recent CIA study of resources and the MIT Workshop of Alternative Energy Strategies. In the inventory-clerk's world, there are "gaps" between supply and demand. Its version of the curves looks like this:

(Chart not reproduced.)

A number of things should be observed. First, in the inventory-clerk's world, prices never appear. But in those demand and supply curves, a price assumption is always implicit. We have drawn that assumption in the shaded area of the chart above, adding it to the usual version. It is the assumption that price will remain constant that causes the "gaps" between supply and demand.

Second, the inventory-clerk's view of the world is absolutely correct in one circumstance. It is precisely the way the world does behave when governments prohibit prices from moving to equilibrate supply and demand. It is in fact the way the world has reacted to control of U.S. natural gas prices.

Third, the inventory-clerk's view of the world is based not only on the truism that the amounts of oil, gas, uranium and so on in the earth's crust are finite, but also on the assumption that the clerks know what those amounts happen to be. Against their own better judgments, geologists do make such predictions; their track record is ludicrous (see readings). Of course, it is always conceivable that sometime the inventory clerks may be right. But to sustain the comfortable assumptions about its own infallibility, the Carter administration already has had to start suppressing natural gas reports by its own experts, as we have previously reported.

The current administration, in fact, is so confident about its geologists and inventory clerks that it knows not only how much energy is in the earth's crust, but what price will be necessary to call it all forth. Its policy for natural gas, for example, is based on the following supply curve:

(Chart not reproduced.)

A natural gas price of \$1.75, far less than the energy equivalent of the world oil price, will be "sufficient incentive" to drain the earth of usual forms of natural gas. Once this is sucked out, the next source of gas will be synthetic gas from coal, which will cost \$3.75. To the inventory clerk, the policy prescription is obvious: You outlaw the sale of gas at prices above \$1.75, except that you subsidize the production of gas at prices above \$3.75. This is the Carter policy in a nutshell.

All of which brings us to the vested interests. We have seen this kind of supply

curve before. In arguing for subsidies for plutonium recycle and the breeder reactor, the nuclear industry offers a uranium supply curve with the same zigs and zags—flat from \$40 a pound to \$125 a pound. In the sense that nothing in the universe is impossible, the actual supply curves may look just like that. But to us, the zig-zags look as if they were drawn by folks who are after a lot of taxpayer money. To breed plutonium at \$125, or gasify coal at \$3.75. Or worse, by folks who want protection from competition of gas at prices between \$1.75 and \$3.75. As we said, a hustle.

Now, down at Charlottesville the other day, Energy Czar James Schlesinger hectoring the local free marketeers with a Mark II version of the inventory-clerk's argument, centering on the capital stock. Not only does he know the exact price "sufficient" to drain the last drop of natural gas from the earth's crust, he also knows exactly what must be done today to achieve the optimal capital stock in 1995. Come now. Allocating the capital stock is the job of the financial markets, and anyone who can outsmart them would be rich. The markets are the collective result of thousands of individual decisions; vagaries of human judgment wash out and facts prevail. They will always beat any individual, even as brilliant as Mr. Schlesinger.

To be specific, the administration proposals would require industry to invest enormous amounts of capital converting from gas to coal. If the suppressed natural gas report happens to be right, by 1995 natural gas is likely to be our most plentiful and cheapest source of energy. Maybe the report is right; maybe Mr. Schlesinger is right. How many billions do you want to bet on one throw of the dice? How many percent of GNP?

To meet energy or capital needs of 1995, we need above all a system that provides flexibility, that allows us to correct human mistakes gradually and without huge costs. Policies based on a static and conjunctural inventory of the earth's crust, or on the zig-zag curves above, freeze us on a set course. Above all, they create new vested interests. The more you induce Octopus Oil to invest in gasification or LNG at \$3.75, the harder it will be to unleash competition at \$2.25.

This is why anyone with the economist's view of the world prescribes price decontrol. This provides the incentive to find the cheapest form of energy, whether or not the White House finds it first. Decontrol might cost five or six cents a gallon on gasoline, which is anyway less than Mr. Carter's proposal. We think it would be free for the consumer (see Phelps and Smith in readings), though costly for some oil companies with a vested interest in the entitlement program.

Decontrol, accordingly, might or might not create "windfall" profits. The more we understand the "energy crisis," the less affection we ourselves have for oil companies. Still, we would prefer that any windfall go to them, where it would be put into investment, rather than to the government, where it would be put into consumption. But if someone wants a windfall profits tax, that is a small matter compared with the imperative of restoring markets.

There is one way to cut through the intellectual and political morass that has been labeled the "energy crisis," and one way to ensure energy for 1995. This is to decontrol prices. By the way, there is also one way to keep the oil and other energy companies in check. This is to stop giving subsidies to those with the brightest lobbyists, and to stop legislating price controls where a comma here or there determines which company gains and which loses. Free the price, and let the companies fight it out not in Washington but in the marketplace.

I think the distinguished gentleman from Arizona (Mr. RUDD) mentioned the article about "ERDA-gate" and made the point that we had plenty of natural gas but it is not available at 52 cents c.f.w. but it is at \$2.50. If we get our price in line with how much it is going to cost to extract the gas from the ground we would have plenty of energy.

Mr. Chairman, a distinguished gentleman from San Francisco, Calif., Sam H. Husbands, Jr., started writing letters back and forth to a friend of his, Mr. Arntz, who works at 111 Pine Street in San Francisco, and who is Director of the FEA on the west coast. I want to read into the record one of the pieces of correspondence from Mr. Husbands to Mr. Arntz, because Mr. Husbands had written earlier that the Wall Street Journal considered we have 1,000 years supply of natural gas and many people actually consider we have 4,000 years supply in the United States if we would just have the courage to deregulate the price of natural gas, but they came up with a figure of 1,000 years of natural gas. Through this correspondence Arntz wrote back to Husbands, and then this is the reply of Husbands to Arntz which I will read into the record because I think it is so important for Members of Congress to hear this message. It reads:

SAN FRANCISCO, CALIF.,  
May 16, 1977.

MR. WILLIAM C. ARNTZ,  
Federal Energy Administration,  
San Francisco, Calif.

DEAR BILL: I appreciate your reply to the note I sent with the Wall Street Journal editorial.

To be fair, I don't think there is any thinking person living today who doesn't believe we have an energy problem. The difference of opinion comes in the question of what it is that causes an energy problem.

Carter talks of ten year reserves of natural gas, and putting the nation on a "war footing" to conserve energy, and never once mentions price as being the determinate of how much we have in energy reserves. Unless price is considered in any supply and demand equation, reserves and availability mean nothing. The next question is, who should determine price, the market or bureaucrats?

Since the Wall Street Journal was simply quoting a different Government source than Carter, I don't see how they can be accused of "jiggling the numbers around." Carter was talking of reserves at 52 cents/thousand feet, and ERDA was talking of reserves \$2.25/thousand feet and up. A Rolls Royce sedan if priced at \$5,000 will be in perpetual shortage, and allocation will be made by bribery, favor, or ten-year waiting lists. Priced at \$50,000, there are just enough buyers to meet the supply of automobiles, and the market clears in an orderly fashion.

To those of us who value personal freedom, as I know you do, the specter of Government assuming an ever increasing role in the producing and distribution of energy should be seen as an ominous development. It sounds too similar to that debate between Helmut Schacht, Hitler's Economic Minister, and his boss over the merit of autarchy (national economic independence), as recounted in John Toland's new biography of Hitler.

Were one to contrive the shortest step to the corporate state and fascism, in its Italian and early German manifestations, the control over energy would be the quickest way of achieving it without having to directly nationalize industry.

You are right in implying that spokesmen from the two previous administrations and

much of the industrialized world believe that Government should be used as the major allocator of scarce resources.

However, I might in return note that there are two recent Nobel Laureate Economists (Hayek and Friedman), a growing list of academicians, some individuals within both major parties, and certainly the membership of a dozen foundations and the Libertarian Party, who would share my belief that the source of the energy shortage is nothing more than a surplus of Government.

You are right, we'll just have to redouble our efforts.

Regards,

SAM H. HUSBANDS, JR.

Mr. Chairman, I thank the committee for its indulgence. I would urge the defeat of this monstrosity of the Department of Energy that will be paid for by the taxpayers of this country and will be doing nothing to solve the problem of production of energy that the United States needs so badly at this time in our history.

Mr. Chairman, the issue, is freedom versus Government coercion and harassment—we should be here today calling for a removal from producers the glut of surplus Government; in short, what is needed is not more Government, but repeal, repeal, repeal.

Why not try freedom, it has always worked in the past, why abandon our faith in free men working through free institutions to solve our problems?

Mr. BROOKS. Mr. Chairman, I yield 3 minutes to the gentleman from Kansas (Mr. GLICKMAN).

Mr. GLICKMAN. Mr. Chairman, I would like to ask the distinguished chairman of the Committee on Government Operations a couple questions. I have serious concerns about the continuity of functions that are presently handled by the Federal Power Commission, FEA, and the other energy-related agencies. I have a substantial number of oil and gas producers in my district who feel there will be a lack of continuity that will result in the following three areas:

No. 1, existing rules promulgated by the FPC and what will be the effect on those rules, regulations, and pronouncements.

No. 2, court cases presently on appeal in circuit courts of appeals are of concern. People in Kansas are concerned about to whom in this new Energy Department will decisions be remanded.

No. 3, what is going to happen during the period of time that the Agency and the Department gets started, this 18-month period where we have a broad array, a backlog of existing cases; rate cases.

Mr. Chairman, these are of serious concern to all oil and gas producers, particularly independents.

I would like to see if we can get some sort of clarification on these questions.

Mr. BROOKS. Mr. Chairman, my feeling is that the rules will remain the same. This is a transfer of existing rulemaking authority and of the existing rules and regulations.

As to any delay in the organization of that new Department, we are going to move in place the given agencies. We will move in place virtually the same people, the same personnel, the same expertise.

I would think there will be less delay

in the functioning of this Department than any department we have ever created.

Mr. GLICKMAN. Mr. Chairman, in order to perhaps assure some of these people that the substantive rules and substantive procedures, as opposed to procedural aspects of this bill, remain exactly the same, there is no alteration whatsoever in substantive rules and practices of constituency, agencies, and departments to be combined into the new Department of Energy.

Mr. BROOKS. That is correct.

Mr. GLICKMAN. And all the existing rulemaking procedures by the FPC or FEA or whatever, good or bad, remain in effect; they are all here?

Mr. BROOKS. That is correct; they are all transferred.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. BROOKS. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, if I could ask the distinguished chairman in the same line of questioning, will all the powers that this Congress gave to the executive branch under the Emergency Petroleum Allocation Act of 1973 be transferred to this new energy agency?

Mr. BROOKS. That is correct, yes.

Mr. ROUSSELOT. So the power we gave in certain price-fixing and allocation of various resources of petroleum, those powers are all transferred? If so, I have an amendment to reduce some of those authorities.

Mr. BROOKS. Most all of that is; some of that power was vested in the President of the United States, as the gentleman recalls; so that part would not be changed.

Mr. Chairman, I yield 2 minutes to the gentleman from Wyoming (Mr. RONCALIO).

Mr. RONCALIO. Mr. Chairman, I thank my long-standing, eminent friend from Texas (Mr. BROOKS).

Mr. Chairman, I did want to take a few minutes to congratulate the gentleman from Texas (Mr. Jack Brooks), and particularly commend him on the graciousness and good philosophic understanding the gentleman has used with President Carter in the last 3 months in bringing this legislation to the floor. There is no question but what it is a most important lawmaking function before us today. It is therefore ironic that so few Members are on the floor of the House right now taking part in this great debate. A few minority spokesmen tell us we will nationalize the oil and gas industry. It is almost enough to make one shake one's head in dismay.

#### WATER IS ENERGY

I hope no amendments will be offered, Mr. Chairman, that would seek to permit the slurring of coal from Rocky Mountain States, where coal is in great abundance, without requiring the recycling of water used therein, which is in great scarcity.

I call attention to the fact that recently Texas—that great State from which Mr. JACK BROOKS comes—and Oklahoma, another great oil-producing

State, have both recently passed State laws stipulating that in their slurry right-of-way bills, none of the water of Texas or none of the water of Oklahoma shall be used to slurry coal through those States. I find that of great interest, and I call it to the attention of the gentle and lovely lady from Colorado, because I see that the Colorado Legislature is now working on legislation also stating that none of their water shall be used to slurry coal. So let us not do unto my beloved Wyoming what we would not do unto ourselves, my dear Texas and Oklahoma colleagues.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. BROOKS. Mr. Chairman, I yield 1 additional minute to the gentleman.

Mr. RONCALIO. So, let us not be victimized by efforts that would permit the slurring of coal from any Western State without requiring the recycling of the water to be used. Only in this way can we treat with some degree of fairness the States of the Rocky Mountain area with severe water problems.

Mr. Chairman, my statement includes letters to President Carter and Dr. Schlesinger including this plea from the State of Wyoming.

The letters follow:

HOUSE OF REPRESENTATIVES,  
Washington, D.C., June 2, 1977.

The President,  
The White House,  
Washington, D.C.

DEAR MR. PRESIDENT: So far the concept of coal slurry pipelines omits recognition of the serious problem of consuming vast quantities of scarce western water. I write in the hope that your consideration of coal slurry pipelines will include the ramifications of the water issue.

Legislation pending in the Congress to grant the right of eminent domain to coal slurry pipelines fails to provide any protection for our scarce western water. With this in mind, I propose a single amendment to the bill, requiring companies to recycle a substantial portion of the water used to lubricate slurry lines. I hope, Mr. President, you will consider such an amendment and will support it.

I also encourage you to promote a program to study and develop alternative means of slurry line lubrication. Methods have been devised to reduce water requirements by up to 50 percent, yet these findings have not been incorporated into slurry line proposals. Energy companies, intent upon moving coal at the lowest possible cost regardless of the consequences to Wyoming, have disregarded these alternative technologies.

Mr. President, I respectfully seek your cooperation and help on this matter of most serious concern to the people of Wyoming and the arid West.

Respectfully yours,

TENO RONCALIO,  
Congressman for Wyoming.

HOUSE OF REPRESENTATIVES,  
Washington, D.C., June 2, 1977.

Dr. JAMES R. SCHLESINGER,  
Assistant to the President, The White House,  
Washington, D.C.

DEAR DR. SCHLESINGER: I respectfully request and urge you to help initiate a crash program to investigate technologies of coal slurry pipelines.

While coal slurry pipelines may be economically feasible and environmentally acceptable, the use of water from the arid western coal producing states is just plainly an affront to the people of these states.

Products are already available which can

reduce water requirements by 50 percent when added to the slurry mixture, yet energy companies intent on lowest possible costs, have not incorporated such ideas into their slurry proposals. What has happened to research into moving coal with pneumatic lines instead of water?

Such a study should include, but not be limited to, costs of recycling water used in slurry lines, the feasibility of pneumatic lines, and the possibility of alternative lubricating agents to reduce or eliminate the use of water in slurry lines.

I'd be grateful for your help.

Respectfully yours,

TENO RONCALIO,  
Congressman for Wyoming.

Mr. BROOKS. Mr. Chairman, I reserve the balance of my time.

Mr. HORTON. Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The Chair recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Chairman, I yield myself as much time as I may consume.

Mr. Chairman, the Committee on Post Office and Civil Service, having the bill, H.R. 6804, by sequential referral procedures, ordered the bill reported with six amendments relating to the committee's subject matter jurisdiction over the bill.

The amendments are as follows: First, there is an amendment to strike the provision of the bill which would make the Inspector General of the Energy Department subject to the Hatch Act's prohibition with regard to political campaigning.

Second, there is an amendment which will assure Department of Energy hearing examiners the same rights as other hearing examiners and assure their independence from the Energy Department by placing them into the Civil Service pool from which the bulk of the Government's hearing examiners are chosen.

Third, there is an amendment which amends the Government Operations Committee bill to remove the special employment authorities for the Department and replace them within the framework of the existing law which most Federal employees and Federal agencies must and do deal.

Fourth, there is an amendment which will delete the extraordinary authority in the Government Operations bill which would permit the loaning of Federal employees to other agencies, State and local governments and foreign governments, and the borrowing of employees from these entities, outside of present standards, restrictions, and programs on such borrowing and lending.

Fifth, there is an amendment to delete language from the bill which may have the unintended effect of transferring not only employees, but positions for such employees outside of Civil Service Commission purview, into the Department.

Sixth, there is an amendment which will require the Civil Service Commission to report to the Congress on this first of many reorganizations planned by the Administration, so that we all may be better informed.

These amendments are the result of long and hard work by the Committee. Mr. Chairman, I can assure my col-

leagues that in our expert opinion, these amendments will not and do not intend to hamper the mission, the functions, or the organizational structure of the Department. Rather, these amendments work with existing law to assure—with tested devices—that the mission, functions, and organization of the Department will be better. These amendments do this within the civil service merit system, a system which having seen us through wars is well in tune to see us through the moral equivalent of war.

Mr. Chairman, the view has been expressed that these amendments we will offer somehow cut back or limit the number of supergrades for the new Department under the levels which are presently at work in the agencies and offices which will be transferred to it. I must stress that this is neither the intention nor the fact of the amendments; and the amendments, if accepted, will mean that the same number of supergrade or supergrade equivalents as the Government Operations Committee saw fit to grant will exist. Very simply, the 689 supergrade employees authorized now at agencies and departments performing functions which are transferred will be at the Department.

The only thing that the committee intends is that proper accountability for these positions exist.

Generally, H.R. 6804 provides that employees of the new Department shall be appointed in accordance with existing civil service laws and that the personnel authorities of the Department will be consistent with career merit system authorities. There are, however, significant exceptions which we believe are unwarranted and contrary to the efforts our Committee, and all my colleagues, should be making to insure effective control of a bureaucracy which is becoming unmanageable.

Specifically, H.R. 6804, as reported by the Government Operations Committee, authorizes the Secretary of Energy to appoint without regard to civil service laws the number of scientific, engineering, and professional executive personnel—GS 16, 17, and 18—who are currently employed in excepted positions in the Energy Research and Development Administration. In addition, the bill authorizes a special agency authority for 105 more supergrades subject to the standards and procedures of Title 5, United States Code, but not within the Civil Service Commission pool. Moreover, the bill would permit an unspecified number of supergrade administrative law judges to be appointed for the use of the Energy Regulatory Commission and removed from the Civil Service Commission administrative law judge pool which most other agencies have to use.

We do not believe that such special authorities are fair to other departments and agencies, nor will they effectuate good management of high level Federal employees. The committee amendments will impose a measure of fairness and good management by first, eliminating the special administrative law judge pool; second, creating 350 new supergrade slots in the Civil Service

Commission pool earmarked for Energy Department personnel moving into them, and creating another 200 slots earmarked by the Energy Department within the "quota" scientific and professional personnel category of supergrades; and third, relying upon two laws now in effect—one of which permits the Civil Service Commission to create by regulation scientific and professional personnel, the other of which permits the President to create expected positions—to add flexibility to the system to accommodate the rest of the employees affected by the transfer.

In addition, of the up to 350 employees who will be accommodated by the "quota" or regular supergrade positions, there is a "grandfather clause" to assure that these provisions may be used to fill any type of position including scientific, engineering, and professional jobs, as long as the duties are similar in nature to the ones from which the employee was transferred and for so long as the appointment is held by an employee transferred into the agency by the act.

Mr. Chairman, I will explain more fully the remainder of amendments when the time for offering them arrives, however, as I have stressed with the ones of most concern to us, they are built on what the committee believes is a sound basis: that the happenstance created by a Government reorganization is not the time for laboratory experiments in changing the manner in which the Civil Service is to be run. I urge the adoption of the committee's amendments.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mrs. SCHROEDER. I yield to the gentleman from New York (Mr. HORTON).

Mr. HORTON. I thank the gentleman for yielding.

With respect to the Inspector General, the gentleman's amendment concerning the Hatch Act seems to be predicated upon the passage of H.R. 10. What happens to the Inspector General if H.R. 10 is not enacted?

Mrs. SCHROEDER. No. Actually, my amendment is not predicated upon the passage of H.R. 10. What I am saying is that some of the reasons that people wanted the Inspector General exempted is that they do not like the way the Hatch Act is now. There are a lot of people in the Federal civil service who do not like the way the Hatch Act is written, but if we start to take each department and exempt the different classifications because we do not like the way the Hatch Act is written, I do not think that is a good way to do business. We have a law, and that is the Hatch Act, and everybody is to be under it. If we do not like the way it is written, then we will have an argument as to how it is written in H.R. 10. So it still applies to everybody. But what I object to is exempting specific slots because then I think we lose the whole purpose of the Hatch Act, which is that all Federal employees will be exempted from certain types of political activities; and it is up to the Congress to make the policy as to what that is, but it should be uniform

to everybody, whether it is H.R. 10 or the Hatch Act as it is now.

Mr. HORTON. If the gentleman will yield further, what about the Inspector General position we created last year in HEW? Is that position exempted or is that position covered by the Hatch Act?

Mrs. SCHROEDER. Mr. Chairman, to be very honest, I do not know if it is exempt. I did not have jurisdiction of this subcommittee during the last session. But one of the main concerns of the subcommittee and of the full committee has been the consideration of these exemptions in supergrades under the Hatch Act, and so forth. Everything is becoming a trade, and that is making the management of the bureaucracy almost impossible.

We literally have to have supergrades under title V, and we have to have everybody under the Hatch Act. If we start allowing a lot of specific exemptions, that would be a very bad precedent.

This is the first bill over which our committee has had jurisdiction since I have been chairman of the subcommittee. But I promise the gentleman that if we find anybody at HEW, for instance, who is trying to be exempted, we will take exactly the same position. It is our feeling that they should all be subject to the same law.

Mr. HORTON. Mr. Chairman, the other area I want to ask the gentleman about is concerning the amendment she has proposed with regard to supergrades.

In the bill that we reported out of the Committee on Government Operations we permitted and authorized the same number of supergrades in the new department as is now in the other agencies that are being melded into the Department of Energy.

What does the gentleman's amendment do with regard to that limitation that we put on the number of supergrades? In other words, the bill as we reported it out authorizes no more than is now presently authorized in the Federal Power Commission, the FEA, and ERDA.

Mrs. SCHROEDER. Mr. Chairman, let me point out what the difference is.

My amendment would not cut down the number of supergrades. The number of supergrades remains the same.

This is where the difference comes in: Under the bill as it is written by the Committee on Government Operations, the 350 positions would constitute special Department of Energy supergrade pool employees. Our committee feels strongly and unanimously that those 350 positions should remain as allocated to the Department of Energy, but they come through the civil service supergrade pool. There is a civil service supergrade pool for all agencies.

So we increase the civil service supergrade pool by 350 employees, and in that way we take care of the people in the Department of Energy. We up the figure that much.

Mr. HORTON. But there are more than 350.

Mrs. SCHROEDER. That is right. They are all taken care of in the way they were in the past. Some of them are

special engineers and scientists, employees in that category. Those employees are taken care of, but the administrative employees are the ones who form the real crux of the difference. Those are the 350 employees.

What we will do is this: The 350 employees will transfer in just the way they are now, and as those employees retire, or whatever happens, the 350 slots will still remain within the civil service supergrade pool. However, for the Department of Energy to retain that number it will have to compete with HEW and the other agencies to prove that its supergrade positions are more eminent than those of some other department.

Again, this is a problem of management. If we keep the bill the way it is written, these 350 supergrade pool employees are personnel that none of us can touch. Those employees are theirs, and they cannot be touched.

Mr. HORTON. That is true, except that they cannot fill them unless they go through this pool, so civil service could effectively prevent them from filling those 350 jobs or 200 jobs, or whatever the figure might happen to be.

Mrs. SCHROEDER. Mr. Chairman, as the gentleman knows, the positions are filled now, and it does not affect any of the 350 people now in line. They are filling them through civil service. It is still under civil service, either way we do it. They are filling them through civil service at the regular pool level, and they will do that later on when these people retire or resign.

The difference is that under title V of the Civil Service Act we have a way of controlling the total number of supergrades. Again let me say that if every agency comes in and wants its own supergrade pool, then it becomes a whole new ego thing as to who has the biggest supergrade pool. When that happens, we in Congress might as well give up on trying to control the bureaucracy.

Mr. HORTON. Mr. Chairman, I can understand the gentlewoman's concern.

The other problem about which I am concerned is that in ERDA, when we created that new agency, we had to create an additional number of supergrades because of the nature of the operation. Because of the research and development requirement, we had to secure a certain number of technical people.

Mrs. SCHROEDER. That is right. Mr. HORTON. So we required a number of supergrades. Will those supergrade positions be affected?

Mrs. SCHROEDER. No.

Mr. HORTON. Of course, they will be transferred, too.

Mrs. SCHROEDER. No, the quota of scientific and professional personnel that will be transferred will be the same. Where the difference is concerns those 350 slots I mentioned.

Mr. HORTON. Mr. Chairman, I thank the gentlewoman.

Mr. UDALL. Mr. Chairman, will the gentlewoman yield?

Mrs. SCHROEDER. I yield to the gentleman from Arizona.

Mr. UDALL. Mr. Chairman, I want to point out for the benefit of the gentleman from New York (Mr. HORTON) that

with the amendments that the gentlewoman from Colorado (Mrs. SCHROEDER) is supporting we are trying to turn things around here and do something very basic, if we can.

I support the Department of Energy bill. I believe the committee has done a good job on the bill. I hope that we will not single out the Department of Energy to bear the brunt of new controls on the explosion of high-paid executives.

But what has happened here is that in the last 20 years we have doubled the number of supergrades and executive positions in the Government.

We all complain about too many admirals and generals and having more now than we had in World War II. On the civilian side it is as bad or worse. What has happened is that we have lost control case by case, agency by agency. The Committee on Agriculture will create a new program; they will have a new agency that comes in, and they may want 25 new supergrades and 3 new executive positions. So we give them those permanent positions, and it creeps along, the number of executives and supergrades simply grows.

We started out a long time ago with the idea of pooling. We said we were going to have all the Government agencies assigned a pool of a number of supergrades. If Mr. Schlesinger or President Carter wants some new ones, let them find departments where old programs have expired or lessened, and then we can transfer the needed supergrades and executives to new departments and missions. As we go along with this job of reorganizing the Federal Government, I think we ought to get back to some overall limits that are written into the law.

We ought to get back to flexibility; and if the President wants to create a new program or create a new mission, he had better find a place where a mission has been completed and where executive slots can be taken out of the pool.

Our committee is serving notice in this legislation that when each of these major reorganization programs comes along, we are going to insist that we move back toward a Governmentwide pool and insist that we establish by law an overall quota for the Federal Government on both supergrades and executive levels; and what the gentlewoman from Colorado (Mrs. SCHROEDER) is doing here is very critical and very important.

We are not trying to get back at this one department. We are trying to get this explosion of high grades, executive and supergrade positions, under control.

Mr. HORTON. Mr. Chairman, will the gentlewoman yield?

Mrs. SCHROEDER. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, I just wanted to make clear that the legislation, when it was first sent up, proposed—it is my recollection—150 additional supergrades.

Following the testimony of the gentleman from Arizona (Mr. UDALL) before the committee we refused to go along with that request. We cut it back to the number that are now authorized in the three agencies that are to be transferred.

So we are not creating any additional grades. However, I do not want to have an amendment which is going to undercut that number because it does seem to me that the new agencies are going to need the number authorized now.

Mrs. SCHROEDER. Mr. Chairman, if I may recall what time I have left, I assure the gentleman that we are not undercutting the number. We are just trying to deal with the management procedure through the civil service pool, which I think the gentleman from Arizona (Mr. UDALL) emphasized.

That is what it is, Mr. Chairman. There is no quarrel on numbers at all.

Mr. GILMAN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of the amendments that are to be offered today by the Committee on Post Office and Civil Service to H.R. 6804, the Department of Energy Organization Act.

I commend our subcommittee chairperson, the gentlewoman from Colorado (Mrs. SCHROEDER), and the members of the entire Post Office and Civil Service Committee for the expeditious manner and bipartisan spirit that they demonstrated in considering this significant legislation which reorganizes all of the energy functions of the Federal Government.

Mr. Chairman, as the ranking minority member of the Subcommittee on Employee Ethics and Utilization, from which these amendments originated, I can attest to the thorough consideration given to H.R. 6804 and the recognition within both our subcommittee and the full committee of the need to act on the requirements of the new Department of Energy, without, at the same time, violating the integrity of our merit system laws and regulations. I believe that our committee amendments superbly achieve that end.

Mr. Chairman, anticipating the possible need for sequential referral, after noting the committee's jurisdiction in this matter, the Subcommittee on Employee Ethics and Utilization began to prepare the groundwork for such future action. Accordingly, on April 19, 1977, the subcommittee conducted hearings on H.R. 6804, during which representatives of Dr. Schlesinger's staff and the executive director of the Civil Service Commission testified on this proposed legislation. Subsequent to that hearing, the subcommittee prepared the six personnel policy amendments we are offering today.

Mr. Chairman, the new Administration has urged the committees of both Houses to act in the closest cooperation in their consideration of this reorganization proposal and future reorganization plans. Acceding to this request, the Committee on Post Office and Civil Service has attempted to act in the fullest cooperation with the Committee on Government Operations in the consideration of H.R. 6804. In this regard, we first noted our partial jurisdiction of the subject matter and the possible need for perfecting amendments in a letter to the chairman of the Committee on Government Operations, the able gentleman from Texas (Mr. BROOKS), back on

April 1, 1977. After the preparation of our committee amendments, we conveyed these same amendments to the committee chaired by the gentleman from Texas (Mr. BROOKS), well in advance of the subcommittee markup, and later, full committee action.

Regrettably the Committee on Government Operations rejected the majority of our amendments. Faced with this reality, we had little choice but to request of the Speaker sequential referral to insure the vitality of our merit system's laws, rules, and regulations. After sequential referral was granted, the committee having already done their homework, we were able to expeditiously consider H.R. 6804, as reported, and promptly marked up this legislation reporting it as amended by our committee action on May 18, by the unanimous vote of 25 in favor and none in opposition.

Mr. Chairman, I believe the committee amendments are noncontroversial, providing for: First, deletion of mini-Hatch Act requirements; second, application of the Civil Service Commission rules to the employment of Hearing Examiners; third, the deletion of unnecessary and overly broad authority by the secretary for the appointment of supergrade positions; fourth, the utilization of the Intergovernmental Personnel Act for all details of Federal, State, local or foreign personnel; fifth, the transfer of all functions in accordance with Civil Service laws; and sixth, a Civil Service Commission report to the Congress on the impact of reorganization on the employees affected.

We have attempted to strike a fair balance between the real need of the new Department and yet reflect our own concern with the expansion of the practice of providing special legislative authority for the employment of top level personnel and the bypassing of established procedures for the appointment and employment of personnel and their classification and pay.

Mr. Chairman, since this is the first of the reorganization plans to come down to us from the Administration, it is my hope that in the future our committee and the Committee on Government Operations, can attempt to work in closer cooperation so that the need for sequential referral and the necessity for floor amendments can be obviated.

At the appropriate time, I will urge the adoption of the six amendments offered by the Committee on Post Office and Civil Service.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. GILMAN. I am pleased to yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate the remarks of my colleagues on this issue of supergrades, especially and particularly, their opposition to the exceptional authority authorized in section 608 of this bill that could potentially increase the already swollen number of supergrades that could be employed by the Government without the concurrence of the Civil Service Commission or the Congress.

As my colleague, the gentleman from Arizona (Mr. UDALL) has already

stated—and I probably should preface my remarks by saying that we do not always agree on everything, but I believe in this case the gentleman is correct—this is an attempt on the part of our committee to insure that in authorizing supergrade positions for this new department that we do not give the future Secretary of DOE the kind of broad authority that this bill would allow him if these amendments are not agreed to.

So, Mr. Chairman, I would like to associate myself with the remarks of the gentleman now in the well, the gentleman from New York (Mr. GILMAN), and those of my colleague, the gentleman from Colorado (Mrs. SCHROEDER), and my colleague, the gentleman from Arizona (Mr. UDALL), that these amendments are necessary if we want to stop the unnecessary enlargement of the Federal bureaucracy.

It is not just the supergrade positions on which we are putting a ceiling, but all the people who would serve underneath them. The Committee on Government Operations probably did not have an opportunity to study this issue in as much detail as they may have liked, and for this very reason, I hope that they will accept our committee amendments.

These amendments are needed if we want to prevent this new department from proliferating into another huge bureaucracy. It is not just the question of exceptional authority for the hiring of supergrades that we are trying to address; but also, all the other people that would serve underneath them—the secretaries and clerks. So I compliment my colleague on his statement.

Mr. GILMAN. I thank the gentleman from California for so eloquently underscoring the need for this particular amendment. The committee believes that such exceptional authority as that contained in section 607, which refers to the supergrades, is unnecessary to meet the personnel needs of the new Department, and that not to apply merit system rules would be an unwise precedent.

Mr. ROUSSELOT. If the gentleman will yield further, additionally, President Carter himself has said—and he ran for the presidency on this platform—that he wants to curtail a mushrooming bureaucracy. While our committee amendments permit the transfer of most personnel positions from existing agencies, we still guarantee by our action that we will be imposing the same ceilings on supergrades that presently exist. So the President himself has stated that he wants to stop the mushrooming bureaucracy. The support of these six amendments, and especially the one the gentleman from New York has addressed, is essential if we are to accomplish that end.

I appreciate the comments of my colleagues.

Mr. UDALL. Mr. Chairman, will the gentleman yield?

Mr. GILMAN. I am pleased to yield to the gentleman from Arizona.

Mr. UDALL. I thank the gentleman for yielding.

I want to commend the gentleman from New York on his statement. There is either something very fishy going on

or something very basically right going on when the gentleman from California and the gentleman from Arizona can agree.

Mr. ROUSSELOT. If the gentleman will yield, the fishing went on yesterday.

Mr. UDALL. All right. There is a principle at stake here, and that is that we cannot discipline ourselves, we cannot get hard and tough on the expansion of these positions unless we set limits.

We have seen at the White House in the last eight years under conservative presidents a doubling and redoubling of executive positions in the White House. Jimmy Carter campaigned on cutting down the White House staff, and now we find that he has not been very successful. We have general legislation coming up, and I hope very soon, in this Congress, and I hope we will get broad support on the changes we are going to face for the executive branch of the Government, the total number of supergrades, and the total number of executive positions. As we go through this reorganization process of the executive branch during the next 2 or 3 years, people who want new positions for newly organized departments are going to have to find places where they are going to cut down positions.

The gentleman from California is right. When we create a general, we have not just created a general; we have created a general's aide, a deputy to the general, a bunch of secretaries, assistants, and civilians to help him around, an automobile to carry him in, flags to fly, and airplanes for him to go places in. So when we cut down a supergrade or cut down an executive position, we have done much more than eliminate just one position.

Mr. GILMAN. I thank the gentleman from Arizona for his remarks. I know the gentleman from Arizona and the gentleman from California are both aware that our Post Office and Civil Service Committee has been consistently opposed to the granting of special authority to establish supergrade positions outside of the Government-wide pool and the control of the Civil Service Commission as would be the case if section 608(b) prevailed.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. GILMAN. I yield to the distinguished gentleman from Texas.

Mr. BROOKS. I thank the gentleman for yielding. I want to make it clear that the position of the Committee on Government Operations was that we were not creating one new supergrade. We struck any new ones. We provided none in excess of those that were then authorized, and we will not attempt to add any. We just want to leave them in the position that they were in from the standpoint of supergrades. If the committee wants to change the supergrade positions for all of the government agencies, I would look with favor on it. I have no great love for them, but I do not want on a piecemeal basis to limit the number the Department of Energy is going to have. I do not want to take away from them what they now are entitled to under their authority. It just does not seem

right that we hamper them and handicap them in beginning their operation. Later if the committee wants to change the regulations under which we have supergrades and they want to limit the number, or whatever they want to do, we will consider that. But I do not want to do it on a piecemeal basis with this department. We are not creating one new supergrade. We want to leave them with what they had.

Mr. GILMAN. In response to the distinguished Chairman, the gentleman from Texas, I think both the Committee on Post Office and Civil Service and the Committee on Government Operations have the identical intent of permitting the exact same number of supergrades to be transferred into the new department. The Committee on Post Office and Civil Service is merely requesting that these positions that are transferred be subject to existing merit system's law, rules, and regulations.

Mr. BROOKS. This is the crux of the matter. Only if they transfer existing bodies to the Department of Energy will they have the assurance of being entitled to utilize that number of supergrades. If they do not transfer the same people, they will then revert into the pool, and they will then—maybe, maybe not—have a chance at getting them.

Mrs. SCHROEDER. Mr. Chairman, will the gentleman yield?

Mr. GILMAN. I am pleased to yield to the gentleman from Colorado.

Mrs. SCHROEDER. Mr. Chairman, I hate to tell the agency where the little loophole is, but let us do that. OK? There is a way that the agency can guarantee that they can retain them all. They get to retain all of the supergrades that are in the bill if they transfer in those supergrades from the agencies that were consolidated. Right?

Mr. BROOKS. Right, if they transfer those in, I would not want to discourage transferring them in from the other agencies.

Mrs. SCHROEDER. The loophole is they have 200 supergrades who are scientific employees who are assigned only to ERDA that they will keep, that do not go into the pool and that they will keep separate. So if they do not have all those, they take a few people out of their own pool and keep those general slots and they can fill their own specific slots and they do not have to bid against other agencies.

Mr. BROOKS. I would not want to encourage such devious actions.

Mrs. SCHROEDER. I know. But we also have assurance from the Civil Service Commission to make sure that those slots come in, but if that does not work, there is this little devious way to do it if we do not trust the Civil Service Commission. But I think everyone will work at this to make it work.

Mr. GILMAN. Mr. Chairman, I yield the balance of my time to the distinguished gentleman from Illinois (Mr. DERWINSKI).

Mr. DERWINSKI. Mr. Chairman, the distinguished chairman of our Post Office and Civil Service Committee (Mr. NIX) should be commended for blowing the whistle on a practice which, if

left unchallenged, eventually will undermine the impartiality of the civil service system. At his request, this legislation which reorganizes the Government's energy functions, was sequentially referred because many of its provisions deal with policies and laws relating to Federal employees. Such matters clearly are within the purview of the Post Office and Civil Service Committee.

Too often in the past legislation has given rise to new programs which in turn resulted in the creation of new positions wholly or partially excepted from existing laws relating to the appointment and classification of Federal employees. As a rule, the committee with original jurisdiction over the creation of a new program overlooked or ignored such considerations, or simply bypassed our committee. It has made it difficult, if not impossible, to exercise effective control over jobs which have been given preferential or exceptional treatment.

In unanimously adopting a series of amendments relating to the transfer, appointment, and tenure of employees in the new Energy Department, our committee is serving notice it will insist on uniform treatment for all Federal employees. At the same time, the House is being put on alert that legislation dealing with laws and policies applicable to Federal employees is the primary concern of the Post Office and Civil Service Committee.

While our committee amendments are a meaningful contribution to the orderly processes of government, we may, in the near future, have an opportunity to take an even more significant step by retaining the Hatch Act in its present form.

Mr. HORTON. Mr. Chairman, I yield myself 2 minutes.

I would like to have the attention of the gentleman from Colorado. According to the lid we have placed on the supergrades, we have limited the number that are now authorized. All of those are not filled. What would be the effect of the transfer of those authorized that are not filled? Would they have to go through this pool concept?

Mrs. SCHROEDER. Let me go through this again. As I say, I feel a little bit guilty pointing out the loophole. There are two different pools, a general civil service pool and the pool of 200 scientists for the Department of Energy only.

Mr. HORTON. I understand that but I am talking about the 350.

Mrs. SCHROEDER. And those 350 are all theirs and they get to keep all those slots and do not have to share them with any other agency as long as they are 350 transferred to the Department of Energy from other agencies. If they do not have 350 supergrades to transfer do they have to bid against other agencies for those slots we have created in the general by pool by raising it to 350?

Mr. HORTON. Mr. Chairman, that is what my question is. Would they have to go through the pool concept?

Mrs. SCHROEDER. Yes; my answer is that they would have to go through the general pool; but No. 1, we have assurance from the Civil Service Commission that they will do everything possible to

get the positions to the Department of Energy they need.

No. 2, there is a gigantic loophole, because there is nothing to prevent them from taking anyone in their 200 special supergrades and moving them to the general pool of 350. To get the number to 350, they transfer them all in and they can replace those transferred from the 200 pool to get the general pool numbers to 350, because it is their own pool and not in the Government-wide pool; so there is a loophole, but we do not think they will have any problem, because Civil Service is anxious to get control of civil service manpower back on track, and I am sure will cooperate so such utilization of the described loophole would not be needed.

Mr. HORTON. Mr. Chairman, I want to indicate my support for the concept. Certainly, I agree with what the gentleman from Arizona (Mr. UDALL) was saying with regard to the need for having some limitation or some way to get a handle on this continuing growth of the bureaucracy; but on the other hand, I do not want to penalize this agency when we are creating the agency and start it off with too much difficulty. They do have a need for supergrades, because of the technical and professional work there.

I understand those that are now in ERDA are exempt. We are talking about the 350. I am not sure whether all those 350 are filled. If I had some assurance those 350 could be filled without going through the pool concept, I do not believe I would have as much concern.

Mrs. SCHROEDER. Mr. Chairman, if the gentleman will look at pages 6-8 of the committee report, it tells how many supergrades there currently are in each of these agency slots. I think the gentleman will find nearly all of the agency slots are filled. There are very few left open.

Mr. HORTON. Mr. Chairman, I yield 1 minute to the gentleman from Virginia (Mr. HARRIS).

Mr. HARRIS. Mr. Chairman, the Department of Energy bill, H.R. 6804, is truly a landmark piece of legislation and I commend the President and my colleagues here in the House for bringing this bill to the floor. While talk of a comprehensive national energy policy has been batted about for years, unfortunately action has been slow. Creation of an Energy Department represents a giant step for our country and will give the Nation's pressing energy needs priority attention in our Federal Government. Coordinated, concentrated attention to our energy problems—which ripple throughout every phase of our economy and our life—is needed now. And I enthusiastically support creation of this new department to respond to the needs of the times.

#### CONTROLLING SUPERGRADE SPRAWL

I am pleased to support a group of amendments developed and approved by the House Post Office and Civil Service Committee which I believe will greatly enhance the effectiveness of this new agency. These amendments, I believe, will bring order to the department and very importantly balanced control in the

creation and evolution of positions within the new department.

The civil service amendments bring within a carefully constructed framework a number of top-level positions. Rather than giving the Department the authority to establish supergrade jobs outside civil service procedures, our amendments place most supergrade jobs within the central "supergrade pool" under the control of the Civil Service Commission.

The Post Office and Civil Service Committee strongly believes that the practice of creating separate supergrade positions outside the central supergrade pool has got to stop. Congress has created the supergrade pool with a tight numerical lid and responsibility for allocation of positions from the pool vested in the Civil Service Commission. However, over the years, we have circumvented the pool by writing special authorities for agencies giving them an unknown number of top-level jobs without regard to the central pool. The result has been an uncontrolled growth of top jobs with no real controls. The committee amendments represent an important step toward keeping the supergrade slots under accepted civil service laws and practices.

The problem addressed by these amendments point to the need for a new look at the creation of supergrade jobs and I believe call for legislation like that I have cosponsored with my colleague, Mr. UDALL, to eliminate all the exceptional authorities under which agencies can now create top jobs without regard to the pool. This bill, H.R. 5544, reaffirms our commitment to a central pool with a fixed limit and repeals all the current "loopholes" which I believe have created a "supergrade sprawl" throughout the Federal Government. I look forward to action on this bill in the near future.

#### CURBING UNCONTROLLED DETAILING AND BORROWING

Two other committee actions bring important controls to the agency. One amendment would repeal the provision in the bill which gives the Department the authority to borrow the services and personnel of other Federal, State, local, and even foreign agencies. We believe that this authority is unnecessary and would allow the agency to exceed the budgetary parameters set by Congress. Similarly, the committee is uncomfortable with the breadth of the authority granted to the Secretary to utilize members of the Armed Forces in the Department, detailed from their regular jobs. And our report includes an admonition and our expectation that the Department of Energy would not use these individuals extensively and particularly for functions normally performed by civilian employees.

#### KEEPING CONFLICTS OF INTEREST OUT OF ENERGY POLICY

I welcome the conflicts-of-interest provisions approved by the Government Operations Committee. Under these provisions supervisory employees are prohibited from receiving compensation or having financial interests in an energy concern and they are required to disclose previous employment with energy con-

cerns. Certain other nonsupervisory employees must disclose financial interests in yearly reports to the Secretary and the bill includes penalties for violations of these disclosure provisions. The public expects and we must demand our top energy policymaking officials to put the public's interest first—not their own private interests, not regional interests, not the oil companies interests. I commend President Carter for his initiatives in requiring top officials to disclose their financial holdings and support the disclosure provisions of this bill.

These civil service provisions, which could easily get lost "in shuffle" of the total bill, represent a responsible approach to how our energy policies are made. I commend my distinguished colleague Congresswoman SCHROEDER for her leadership in this important area.

Mr. HORTON. Mr. Chairman. I yield 1 minute to the gentleman from Texas (Mr. COLLINS).

Mr. COLLINS of Texas. Mr. Chairman, I recently retrieved from the Archives a statement that I submitted to the Cabinet task force on oil import control in 1969. The purpose of this task force was to consider whether or not the mandatory oil import program established by President Eisenhower should be retained or abolished.

In 1969 the posted price per barrel of crude from the major exporting countries ranged from \$1.59 to \$2.23. In contrast, crude produced in the United States was selling for \$3.09 per barrel. There was, as a result, a hue and cry by many in this Nation that we should in the name of low prices for the consumer import more of this foreign oil, because it was less costly and the consumer would benefit.

My advice to the task force was not to eliminate the oil import quota program but to strengthen it. In 1969, our import level was 21 percent with most of that oil coming from Canada and Venezuela. The Cabinet task force rejected my advice, and recommended the elimination of the oil import quotas. The task force predicted that the removal of controls on the importation of foreign oil would save American consumers "about \$5 billion annually now—1970—and over \$8 billion annually by 1980." We all know now how utterly ridiculous that statement was. I told the task force in my statement that there would be no such savings.

I would like to quote from my 1969 statement, because what I said would happen is exactly what did happen.

I said the following:

First:

If the import controls were removed, there would be a rapid rise of imports of lower cost foreign oil . . .

This is exactly what happened.

Second:

And with the next few years, the national dependence upon oil (foreign) would soar from approximately 21 percent now to more than 50 percent . . .

This is exactly what happened.

Third:

As soon as the self-sufficiency of the United States fell by a significant amount, the world

demand would be greater and thus the world price of oil could be expected to rise.

This is exactly what happened.

Fourth:

Moreover, the growing dependence upon foreign oil would strengthen the bargaining power of the producing nations, who can probably be expected to seek the highest possible price for their oil.

This is exactly what happened.

Fifth. I said in my remarks that the removal of the import quotas would reduce domestic production activity. Wells drilled dropped from 30,815 in 1969 to 27,408 in 1970 to 26,077 in 1971. And I went on to say that this would affect natural gas production. I said:

With decreased oil production activity, the supplies of natural gas would also drop. Since gas is often found during the search for oil, and about 25 percent of domestic gas is produced along with oil, a change in the oil import policy likely would mean less gas for the U.S. market.

As we know, this is exactly what happened over again.

Sixth: I also said:

If we had to depend upon any foreign country or regions for a large portion of our oil supplies, the United States would have to be at the good will of these foreign governments. What if the producing countries were to withhold petroleum exports to the U.S. if they did not agree to our foreign policy? The United States cannot allow itself to be victimized by the threat of a petroleum boycott.

All of us remember the oil embargo, and what I warned about in 1969 came true because we eliminated the quotas. We hurt the domestic oil industry and by reducing our own capacity to produce became more and more dependent on foreign sources.

Seventh. Here is the concluding paragraph of my statement:

At the present reserves to production ratios, our oil industry will have to find 80-85 billion barrels by 1985. Where will this new supply come from in so short a time if exploration and development by our home industry is not stimulated and supported by strong, positive government action? Our self-sufficiency and economic independence is at stake . . . Only by protecting and encouraging our domestic oil industry can we hope to meet the twin challenges of vital national security needs and ever-increasing national energy demands for the future.

What did we do, instead of what I recommended? We removed the oil import quotas. We first reduced and then eliminated the oil depletion allowance. We placed price controls on oil while continuing price controls on national gas. We have been eliminating, one by one, incentives to explore for and develop domestic sources of energy. Is it any wonder that we have an oil and gas shortage?

Mr. BOLAND. Mr. Chairman, I rise today not only in support of this bill, H.R. 6804, but also in support of the entire concept of a Department of Energy. This Nation finds itself at an important point in our history. Actions we take now will determine our survival as a free people and a world power. The creation of a Department of Energy is an important, crucial step in dealing with the No. 1 challenge facing this country—energy. By creating this Department, we

are preparing ourselves to deal with the energy amendments of a future that may best be labeled as uncertain.

I am certain that when the Founding Fathers established the first few executive departments almost two centuries ago, they did not envision the departments we now have—Transportation; Housing and Urban Development; Health, Education, and Welfare. I suppose some will say that this newest Department is just one more departure from the ideal envisioned by those early statesmen. I do not agree with that view. Times change, countries grow, resources dwindle, and international relations become vastly more complex. These inescapable facts demand that our Government grow and change to meet new problems and challenges. The greatest of the challenges facing us as a nation today is energy. We fail our duty if we do not use all our resources to meet this challenge. To marshal and channel these resources, we need a Department of Energy.

Mr. Chairman, by creating this Department, we do not dispose of the energy problem. This action does not in one fell swoop remove energy from our list of concerns. This action does, however, provide us with an important and necessary tool for dealing with these problems. We are not expanding the Federal bureaucracy—we are consolidating and streamlining existing programs so as to better deal with problems now facing all of us. I was startled, for example, to discover that there are now 261 existing energy data programs scattered throughout the Federal Government. The duplication of effort is staggering. Mr. Chairman, all of us are concerned about a proliferating bureaucracy. Approving a department that, among other things, consolidates these functions into one separate Energy Information Administration is an excellent way to express that concern.

I know many of us in this body have concerns about certain provisions of this bill. Those provisions can be worked out. It is rare that legislation with such far-reaching effects cannot be improved with amendments. Mr. Chairman, I welcome any amendments which will help make this Department more effective and better equipped to perform its necessary task.

Mr. Chairman, in the field of energy policy, the maxim of "divide and conquer" just does not hold up. Right now, we must consolidate and conquer. We cannot effectively deal with energy policy questions when we have five Federal agencies promoting conservation, three agencies handling research and development, and two agencies responsible for the economic regulation of fossil fuels. We all recognize the gravity of the energy questions facing this country. We must, therefore, all recognize the need for one department to deal with this problem. Mr. Chairman, this is not flash-in-the-pan legislation. This is an attempt to prepare this country for its third century. I urge my fellow Members to give their full support to H.R. 6804.

Mr. ANDERSON of California. Mr. Chairman, I rise in support of this bill

to consolidate and coordinate the energy affairs of the Government into a new Department of Energy.

It is self-evident that the Federal Government needs to eliminate the duplicative, overlapping, and conflicting policies and programs in energy.

One team—playing in the same league—must have the authority to develop and implement a bold policy for the future energy needs of our country.

Mrs. COLLINS of Illinois. Mr. Chairman, I rise in support of H.R. 6804, the Department of Energy Organization Act.

The energy shortages of last winter should have reminded us that we face a chronic and ever-worsening crisis of energy supply and demand. I know that my constituents have not forgotten the cruel combination of record cold weather, sporadic fuel deliveries, and high utility costs from which they, and many others like them, suffered.

On a national scale we are consuming finite supplies of oil and gas at a faster rate than we are discovering new deposits. In the past, our response to this situation has been to increase imports. We now import between 40 and 50 percent of our domestic oil consumption. The OPEC embargo and quadrupling of crude oil prices in 1973 and 1974 should have taught us a lesson. Instead, we have increased our dependency on imported OPEC oil as oil prices continue to rise.

The President has clearly and forcefully brought to the Nation's attention the need to begin immediately to conserve our scarce domestic energy resources and to utilize our imported oil more efficiently. However, these goals cannot be accomplished without a comprehensive national energy plan administered on a Federal level. Such a plan, as proposed by the administration, is now being considered by the Congress.

Regardless of one's opinions concerning this or that aspect of the plan, its implementation would be inconceivable without drastic changes in the way the Federal Government formulates and administers its energy policy. With jurisdiction over energy matters scattered throughout at least eight different departments, agencies, and commissions, it is no wonder that, as some foreign observers have astutely observed, the United States does not really have an energy policy. Information on energy supplies alone is provided by more than one hundred different Government sources. No other modern industrial country conducts its energy policies in such an uncoordinated way.

The proposed legislation, by consolidating existing programs into a single Cabinet-level Department of Energy, will at last provide the Federal Government with the resources and the authority to determine and effectively administer our national priorities in this crucial area.

The transformation will be accomplished through an orderly transfer of funding and personnel from existing agencies and programs to the new Department. Conservation will be a top priority. Tough new provisions will eliminate possible conflicts of interest among the employees.

While I do not generally consider my-

self to be a proponent of bigger and more centralized government, we are faced with a difficult choice in the energy field. Shall we invest the Government with the tools for a potentially effective energy policy, or shall we let the self-interest of the international oil companies dictate ad hoc solutions to a crisis that threatens our way of life? Given these options, it is best to establish a Department of Energy which will consolidate the multitude of energy related programs in the executive branch and deal with the energy crisis in a comprehensive manner. I urge my colleagues to support this measure.

Mr. ANNUNZIO. Mr. Chairman, I strongly support the legislation before us to establish a Department of Energy. Creation of this Department is an important step in assuring that the serious, difficult, and urgent task of meeting the Nation's energy needs is carried out in a more efficient and coordinated manner.

I believe it is clear that the present organizational framework in the Federal Government for energy is inadequate for the task before us. The Arab oil embargo in 1973 served warning that the United States is dangerously vulnerable to interruptions in imported energy supplies. We responded in a piecemeal fashion to that crisis, creating several new agencies which each had "a piece of the action," but none with overall responsibility. To date we still have not put in place the necessary consolidated department or agency to take responsibility for and focus on energy policy. That drawback has serious consequences, as we experienced last winter. In that period of prolonged severe weather, we learned that energy shortages within the country have drastic economic consequences.

Such crises as the Arab oil embargo and the shortages of last winter must be avoided. They must be avoided by strong Government action to plan for such events, and to provide viable and reliable alternatives to current energy sources. This can best be done through centralized, comprehensive organization.

The present administration took office with a pledge to reorganize the Government to better manage energy issues; it pledged a strong energy program and effective energy policy. This legislation to create the Department of Energy is the first step in fulfilling that pledge, and is an excellent effort in the right direction.

With this legislation we shall put in place a strong department which consolidates in one place the Energy Research and Development Administration with its important programs to provide essential alternative energy technologies and to improve existing energy supply systems; the energy resource allocation, data, and regulatory functions of the Federal Energy Administration; the natural gas and electric transmission regulatory functions of the Federal Power Commission; the energy leasing and power marketing functions of the Interior Department; as well as providing important functions for the Energy Secretary in energy policy formulation, regulation of oil pipelines, and establishment of stand-

ards and criteria for energy conservation in housing and transportation.

This legislation does not create any new authority or programs—but it does streamline the administration of our energy programs, creating a visible focal point for energy policy and for coordinating existing authorities more effectively.

The new Department which this legislation creates will also be instrumental in avoiding waste and duplication in our efforts to conserve existing energy sources, to develop new energy sources, and to become energy self-sufficient in the years ahead.

Its role also will be to assist in formulation of future policies to fill the gaps and plan ahead to avoid the disasters of the recent past.

President Carter recently forwarded to Congress a comprehensive proposal for substantive energy legislation. This proposal deserves our most serious consideration, and I believe we can demonstrate our seriousness at the outset by establishing the necessary organizational framework—the Department of Energy—which will be in a position to implement that program as it is developed by Congress.

Mr. Chairman, by setting in place this Department of Energy we take responsibility for dealing with the energy problem comprehensively, and I believe the public is demanding an end to the existing duplication and fragmentation in our energy organizational pattern.

I hope that this legislation can be swiftly considered and passed with the overwhelming support of this House. The Congress must take decisive action now so that our country may become energy self-sufficient without further delay. Only by decisive action on our part now can our children and grandchildren live free of fear of the high-handed black-mailing techniques that the OPEC nations have on occasion forced on the free world in the past.

Mr. FASCELL. Mr. Chairman, I rise in support of H.R. 6804, a bill to create a new Cabinet-level Department of Energy in the Federal Government.

This legislation has been requested by the Carter administration as a means of helping our Nation meet the energy challenge which is rapidly being thrust upon us.

Basically, the bill seeks to reorganize the Government in the area of energy so that it may be better equipped to deal with and hopefully to solve the energy crisis.

We know that changing the structure of the Government cannot by itself give us the energy we need and make us less dependent on imported sources. But, reorganization can help to better coordinate our efforts and focus our resources on the most promising areas of improvement.

Much of what the Government does in the field of energy involves research and development, by both the Government itself and private organizations. The new Department of Energy will consolidate our programs in R. & D. to prevent duplication and overlap.

The Government also regulates existing energy production and transmission activities. Under the new Department,

these functions will be more closely meshed into an overall policy.

Presently, five Federal agencies are charged with promoting fuel conservation. H.R. 6804 will bring these efforts under a single department.

This legislation will remedy the existing situation by creating one agency with the resources and authority to formulate and implement energy policy. We can no longer afford to allow the Government to proceed in a disjointed, haphazard fashion in responding to recurring crises.

The oil embargo, last winter's natural gas shortage, and the rapidly increasing dependence on imported oil tell us that the energy crisis is real and will not simply go away. We need adequate measures to cope with energy scarcities which affect our national security and way of life.

This legislation does not in itself increase Federal costs in the field of energy. It takes programs and employees from the Energy Research and Development Administration, the Federal Energy Administration, the Federal Power Commission, and other departments and places them within one new Department. In turn, ERDA, FEA, and the FPC are abolished.

The Department of Energy will be headed by a Secretary of Energy to be appointed by the President and confirmed by the Senate. He will have the authority to arrange programs within his Department as he likes, except that he cannot revise organizational units established by the act.

Four organizational units are set forth by the bill. These are the Federal Energy Regulatory Commission, an independent regulatory commission within the Department, whose five members are appointed by the President and confirmed by the Senate; the Economic Regulatory Administration; the Energy Information Administration; and the Office of Inspector General. The latter three offices are also headed by persons appointed by the President and confirmed by the Senate.

Other provisions of the bill deal with personnel transfers and policies, conflict of interest safeguards, and reports to Congress on energy needs and resources.

The legislation has received wide support from environmental organizations, private industry, and academic groups. It is supported by the administration in the form it has been approved by the committee. Therefore, I request that H.R. 6804 be approved by the House.

Mr. McCLOSKEY. Mr. Chairman, I intend to offer an amendment to title VI of H.R. 6804 to provide for the specific designation of energy conservation officers within the Department of Defense, the Department of Commerce, the Department of Housing and Urban Development, the Department of Agriculture, the Department of Transportation, the Department of the Interior, the U.S. Postal Service, and the General Services Administration.

In strong support of the energy conservation purposes of H.R. 6804, I think it important to provide clear legislative intent that the new Department will have full, high-level cooperation from other

key offices in the executive branch in the area of energy conservation efforts.

A similar provision has already been adopted by the Senate. I offer the following amendment:

On page 116, after line 2 insert the following:

"SEC. 624. The Secretary of Defense, the Secretary of Commerce, the Secretary of Housing and Urban Development, the Secretary of Agriculture, the Secretary of Transportation, the Secretary of the Interior, the United States Postal Service, and the Administrator of General Services shall each designate one Assistant Secretary or Assistant Administrator, as the case may be, as the principal energy conservation officer of such Department or of the Administration. Such designated principal conservation officer shall be responsible for coordination with the Department with respect to energy matters."

The CHAIRMAN. All time for general debate has expired.

Pursuant to the rule, the Clerk will now read by titles the committee amendment in the nature of a substitute recommended by the Committee on Government Operations now printed in the reported bill as an original bill for the purpose of amendment.

The Clerk read as follows:

H.R. 6804

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Department of Energy Organization Act".*

#### TITLE I—DECLARATION OF FINDINGS, POLICY, AND PURPOSES

SEC. 101. (a) The Congress of the United States finds that—

(1) the United States and the world face an increasing shortage of nonrenewable energy resources;

(2) this energy shortage presents a serious threat to the national security of the United States and to the health, safety, and welfare of its citizens;

(3) a strong national energy program is needed to increase the efficiency of energy use and availability of energy resources, particularly renewable energy resources;

(4) responsibility for energy policy execution, regulation, and research, development, and demonstration is presently vested in many agencies and departments, and this fragmentation hinders development of an effective Federal response to the energy shortage; and

(5) formulation and implementation of a national energy program require the integration of certain Federal energy functions into a single department in the executive branch.

(b) It is the policy of the United States that—

(1) energy conservation shall enjoy the highest priority in any national energy program, and shall be carefully considered as an adjunct to programs to increase energy supply and as an option to programs that may present health, safety, or other environmental hazards;

(2) major emphasis shall also be given to the development and commercial use of solar, thermal, recycling, and other technologies utilizing renewable energy resources;

(3) the environmental and social consequences of any national energy program shall be analyzed and considered in evaluation of the program's potential; and

(4) public participation in the development and enforcement of any national energy program shall be provided for, encouraged, and assisted.

SEC. 102. The purposes of this Act are (1)

to establish a permanent Department of Energy in the executive branch, (2) to vest in the Secretary of Energy such functions as are vested in, or transferred to, him by this Act, (3) to achieve, through the Department, effective management of energy functions of the Federal Government, (4) to provide the mechanism through which a coordinated national energy policy can be formulated and implemented to deal with the short-, mid-, and long-term energy problems of the Nation, (5) to safeguard and serve our natural resources and environment, and (6) to promote the interest of consumers.

Mr. BROOKS (during the reading). Mr. Chairman, I ask unanimous consent that title I be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

AMENDMENT IN THE NATURE OF A SUBSTITUTE  
OFFERED BY MR. ERLBORN

Mr. ERLBORN. Mr. Chairman, I offer an amendment in the nature of a substitute.

The Clerk read as follows:

Amendment in the nature of a substitute offered by Mr. ERLBORN: Strike out all after the enacting clause and insert in lieu thereof the following:

That this Act may be cited as the "Department of Energy Organization Act".

TITLE I—DECLARATION OF FINDINGS,  
POLICY, AND PURPOSES

SEC. 101. (a) The Congress of the United States finds that—

(1) the United States and the world face an increasing shortage of nonrenewable energy resources;

(2) this energy shortage presents a serious threat to the national security of the United States and to the health, safety, and welfare of its citizens;

(3) a strong national energy program is needed to increase the efficiency of energy use and availability of energy resources, particularly renewable energy resources;

(4) responsibility for energy policy execution, regulation, and research, development, and demonstration is presently vested in many agencies and departments, and this fragmentation hinders development of an effective Federal response to the energy shortage; and

(5) formulation and implementation of a national energy program require the integration of certain Federal energy functions into a single department in the executive branch.

(b) It is the policy of the United States that—

(1) energy conservation shall enjoy the highest priority in any national energy program, and shall be carefully considered as an adjunct to programs to increase energy supply and as an option to programs that may present health, safety, or other environmental hazards;

(2) major emphasis shall also be given to the development and commercial use of solar, thermal, recycling, and other technologies utilizing renewable energy resources;

(3) the environmental and social consequences of any national energy program shall be analyzed and considered in evaluation of the program's potential; and

(4) public participation in the development and enforcement of any national energy program shall be provided for, encouraged, and assisted.

SEC. 102. The purposes of this Act are (1) to establish a permanent Department of Energy in the executive branch, (2) to vest in the Secretary of Energy such functions as are vested in, or transferred to, him by this Act, (3) to achieve, through the Depart-

ment, effective management of energy functions of the Federal Government (4) to provide the mechanism through which a coordinated national energy policy can be formulated and implemented to deal with the short-, mid-, and long-term energy problems of the Nation, (5) to safeguard and conserve our natural resources and environment, and (6) to promote the interest of consumers.

TITLE II—ESTABLISHMENT OF DEPARTMENT

SEC. 201. There is hereby established at the seat of government an executive department to be known as the Department of Energy (hereinafter in this Act referred to as the "Department"). There shall be at the head of the Department a Secretary of Energy (hereinafter in this Act referred to as the "Secretary") who shall be appointed by the President by and with the advice and consent of the Senate. The Department shall be administered under the supervision and direction of the Secretary.

SEC. 202. There shall be in the Department a Deputy Secretary, nine Assistant Secretaries, and a General Counsel, each of whom shall be appointed by the President, by and with the advice and consent of the Senate, and who shall perform such functions as the Secretary shall prescribe from time to time. The Assistant Secretaries shall be designated as follows:

(1) Assistant Secretary for Public, Congressional, and Intergovernmental Relations;

(2) Assistant Secretary for Conservation;

(3) Assistant Secretary for Defense Programs;

(4) Assistant Secretary for Environment;

(5) Assistant Secretary for Fossil and Nuclear Energy Technologies;

(6) Assistant Secretary for Policy, Evaluation, and International Programs;

(7) Assistant Secretary for Competition;

(8) Assistant Secretary for Resource Applications; and

(9) Assistant Secretary for Solar, Geothermal, Recycling, and Other Energy Technologies.

SEC. 203. The Deputy Secretary shall act for, and exercise the functions of, the Secretary during the absence or disability of the Secretary or in the event the office of Secretary becomes vacant. The Secretary shall designate the order in which the Assistant Secretaries, General Counsel, and other officials shall act for, and perform the functions of, the Secretary during the absence or disability of both the Secretary and Deputy Secretary or in the event of vacancies in both of those offices.

SEC. 204. (a) There shall be within the Department an Energy Information Administration to be headed by an Administrator, who shall be appointed by the President, by and with the advice and consent of the Senate. Such Administrator shall be a person who, by reason of professional background and experience, is especially qualified to manage an energy information system. There shall be transferred to and vested in the Administrator (on a nonexclusive basis as the Secretary may determine) all functions and authorities transferred to, and vested in, the Secretary under this Act relating to collection, analysis, and dissemination of energy information and data. The Administrator shall be subject to all duties and responsibilities established under part B of the Federal Energy Administration Act of 1974.

(b) In the performance of his professional functions in connection with collecting, analyzing, and disseminating energy information, the Administrator shall not be responsible to, or subject to, the direction of any officer, employee, or agent of the Department.

(c) The Administrator shall, upon request, promptly provide any information or analysis in his possession to any other administration, commission, or office within the De-

partment relating to the functions of such administration, commission, or office.

SEC. 205. (a) There shall be within the Department an Economic Regulatory Administration to be headed by an Administrator, who shall be appointed by the President, by and with the advice and consent of the Senate. The Secretary shall by rule provide for a separation of regulatory and enforcement functions assigned to or vested in the Administration.

(b) The Secretary shall utilize the Economic Regulatory Administration to administer—

(1) any function which may be delegated to the Secretary under the Emergency Petroleum Allocation Act of 1973; and

(2) such other functions as the Secretary may consider appropriate.

(c) The Administrator shall insure an adequate opportunity for public participation, including an opportunity for hearings, in issuing any rules or regulations under this section.

SEC. 206. (a) (1) There shall be within the Department an Office of Inspector General to be headed by an Inspector General, who shall be appointed by the President, by and with the advice and consent of the Senate, solely on the basis of integrity and demonstrated ability and without regard to political affiliation. The Inspector General shall report to, and be under the general supervision of, the Secretary or, to the extent such authority is delegated, the Deputy Secretary, but shall not be under the control of, or subject to supervision by, any other officer of the Department.

(2) There shall also be in the Office a Deputy Inspector General appointed by the President, by and with the advice and consent of the Senate, solely on the basis of integrity and demonstrated ability and without regard to political affiliation. The Deputy shall assist the Inspector General in the administration of the Office and shall, during the absence or temporary incapacity of the Inspector General, or during a vacancy in that Office, act as Inspector General.

(3) The Inspector General or the Deputy may be removed from office by the President. The President shall communicate the reasons for any such removal to both Houses of Congress.

(4) The Inspector General shall, in accordance with applicable laws and regulations governing the civil service, appoint an Assistant Inspector General for Audits and an Assistant Inspector General for Investigations.

(b) It shall be the duty and responsibility of the Inspector General—

(1) to supervise, coordinate, and provide policy direction for auditing and investigative activities relating to programs and operations of the Department;

(2) to recommend policies for, and to conduct, supervise, or coordinate other activities carried out or financed by the Department for the purpose of promoting economy and efficiency in the administration of, or preventing and detecting fraud and abuse in, its programs and operations;

(3) to recommend policies for, and to conduct, supervise, or coordinate relationships between the Department and other Federal agencies, State and local governmental agencies, and nongovernmental entities with respect to (A) all matters relating to the promotion of economy and efficiency in the administration of, or the prevention and detection of fraud and abuse in, programs and operations administered or financed by the Department, and (B) the identification and prosecution of participants in such fraud or abuse; and

(4) to keep the Secretary and the Congress fully and currently informed, by means of the reports required by subsection (c) and otherwise, concerning fraud and other serious problems, abuses, and deficiencies relating to the administration of programs

and operations administered or financed by the Department, to recommend corrective action concerning such problems, abuses, and deficiencies, and to report on the progress made in implementing such corrective action.

(c) The Inspector General shall, not later than March 31 of each year, submit a report to the Secretary and to the Congress summarizing the activities of the Office during the preceding calendar year. Such report shall include, but need not be limited to—

(1) an identification and description of significant problems, abuses, and deficiencies relating to the administration of programs and operations of the Department disclosed by such activities;

(2) a description of recommendations for corrective action made by the Office with respect to significant problems, abuses, or deficiencies identified and described under paragraph (1);

(3) an evaluation of progress made in implementing recommendations described in the report or, where appropriate, in previous reports; and

(4) a summary of matters referred to prosecutive authorities and the extent to which prosecutions and convictions have resulted.

(d) The Inspector General shall report immediately to the Secretary and to the appropriate committees or subcommittees of the Congress whenever the Office becomes aware of particularly serious or flagrant problems, abuses, or deficiencies relating to the administration of programs and operations of the Department. The Deputy and Assistant Inspectors General shall have particular responsibility for informing the Inspector General of such problems, abuses, or deficiencies.

(e) The Inspector General (1) may make such additional investigations and reports relating to the administration of the programs and operations of the Department as are, in the judgment of the Inspector General, necessary or desirable; and (2) shall provide such additional information or documents as may be requested by either House of Congress or, with respect to matters within their jurisdiction, by any committee or subcommittee thereof.

(f) Notwithstanding any other provision of law, the reports, information, or documents required by or under this section shall be transmitted to the Secretary and to the Congress, or committees or subcommittees thereof, by the Inspector General without further clearance or approval. The Inspector General shall, insofar as feasible, provide copies of the reports required under subsection (c) to the Secretary sufficiently in advance of the due date for their submission to Congress to provide a reasonable opportunity for comments of the Secretary to be appended to the reports when submitted to Congress.

(g) In addition to the authority otherwise provided by this section, the Inspector General, in carrying out the provisions of this section, is authorized—

(1) to have access to all records, reports, audits, reviews, documents, papers, recommendations, and other material available to the Department which relate to programs and operations with respect to which the Inspector General has responsibilities under this section;

(2) to require by subpoena the production of all information, documents, reports, answers, records, accounts, papers, and other data and documentary evidence necessary in the performance of the functions assigned by this section, which subpoena, in the case of contumacy or refusal to obey, shall be enforceable by order of any appropriate United States district court; and

(3) to have direct and prompt access to the Secretary when necessary for any purpose pertaining to the performance of functions and responsibilities under this section.

(h) For purposes of this section, the term "Department" includes any component thereof.

### TITLE III—TRANSFERS OF FUNCTIONS

SEC. 301. Except as otherwise provided in this Act, there are hereby transferred to, and vested in, the Secretary all of the functions vested by law in the Administrator of the Federal Energy Administration or the Federal Energy Administration, the Administrator of the Energy Research and Development Administration or the Energy Research and Development Administration; and the functions vested by law in the officers and components of either such Administration.

SEC. 302. There are hereby transferred to, and vested in, the Secretary:

(a) All functions of the Secretary of the Interior, the Department of the Interior, and officers and components of that Department, to the extent such functions relate to or are utilized by the Southeastern Power Administration, the Southwestern Power Administration, and the Bonneville Power Administration. The authority for the functions so transferred includes, but is not limited to, section 5 of the Flood Control Act of 1944, the Bonneville Project Act of 1937, and the Federal Columbia River Transmission System Act. Notwithstanding sections 606 and 705 of this Act, each of the three such Power Administrations shall be maintained as a distinct entity within the Department.

(b) Such functions of the Secretary of the Interior, the Department of the Interior, and officers and components of that Department as relate to, or are utilized by, the Alaska Power Administration for the transmission and disposition (including acquisition by purchase or exchange) of electric power and energy and by the Bureau of Reclamation for the disposition (including acquisition by purchase or exchange) of electric power and energy, except that the authority for, and function of, operating the dams constructed pursuant to the Eklutna Project Act and section 204 of the Flood Control Act of 1962 shall remain in the Secretary of the Interior. The authority for the functions so transferred includes, but is not limited to, the Eklutna Project Act, section 204 of the Flood Control Act of 1962, the Reclamation Act of 1902, and Acts amendatory thereof and supplementary thereto, including, but not limited to, the authority for the sale of electric power or lease of power privileges under section 9(c) of the Reclamation Project Act of 1939, and the authority under section 303 of the Colorado River Basin Project Act.

(c) All the authority of the Secretary of the Interior, the Department of the Interior, and officers and components of that Department for the transmission and disposition of the electric power and energy generated at Falcon Dam and Amistad Dam, international storage reservoir projects constructed on the Rio Grande pursuant to the Act of June 19, 1954, as amended by the Act of December 23, 1963.

(d) (1) The authority of the Secretary of the Interior to prescribe regulations under the Outer Continental Shelf Lands Act, the Mineral Lands Leasing Act, the Mineral Leasing Act for Acquired Lands, the Geothermal Steam Act of 1970, and the Energy Policy and Conservation Act, which relate to the—

(A) fostering of competition for Federal leases (including, but not limited to, prohibition on bidding for development rights by certain types of joint ventures);

(B) implementation of alternative bidding systems authorized for the award of Federal leases;

(C) establishment of diligence requirements for operations conducted on Federal leases (including, but not limited to, procedures relating to the granting or ordering by the Secretary of the Interior of suspension of operations or production as they relate to such requirements;

(D) setting rates of production for Federal leases; and

(E) specifying the procedures, terms, and conditions for the acquisition and disposition of Federal royalty interests taken in kind,

except that such regulations shall be promulgated by the Secretary only after consultation with the Secretary of the Interior.

(2) The Secretary of the Interior shall retain any authorities not transferred by paragraph (1) of this subsection and shall be solely responsible for the issuance and supervision of leases and the enforcement of all regulations applicable to the easing of mineral resources, including, but not limited to, lease terms and conditions and production rates. No regulation issued by the Secretary shall restrict or limit any authority retained by the Secretary of the Interior under this paragraph with respect to the issuance or supervision of leases. Nothing in this subsection shall be construed to affect Indian lands and resources or to transfer any responsibilities of the Secretary of the Interior concerning such lands and resources.

(e) Those functions of the Secretary of the Interior, the Department of the Interior, and officers and components of that Department under the Act of May 16, 1910, and other authorities, exercised by the Bureau of Mines, but limited to—

(1) fuel supply and demand analysis and data gathering;

(2) research and development relating to increased efficiency of production technology of solid fuel minerals, other than research relating to mine health and safety and research relating to the environmental and leasing consequences of solid fuel mining, which shall remain in the Department of the Interior; and

(3) coal preparation and analysis.

(f) The functions of the Secretary of the Interior to establish production rates for all Federal leases.

SEC. 303. The Secretary of the Interior shall afford the Secretary a reasonable opportunity, prior to the execution of a Federal lease, to disapprove any term or condition of such Federal lease which relates to the matters with respect to which the Secretary has authority to prescribe regulations under section 302(d). No such term or condition may be included in such a lease if it is disapproved by the Secretary.

SEC. 304. As used in sections 302 and 303 of this Act, "Federal lease" means an agreement which, for any consideration, including, but not limited to, bonuses, rents, or royalties conferred and covenants to be observed, authorizes any person to explore for, develop, or produce (or to do any or all of these) oil and gas, coal, oil shale, tar sands, or geothermal resources in public, acquired, or submerged lands or interests therein under Federal jurisdiction.

SEC. 305. All functions vested by law in the Director of the Office of Energy Information and Analysis by part B of the Federal Energy Administration Act of 1974 are hereby transferred to the Administrator of the Energy Information Administration.

SEC. 306. There are hereby transferred to and vested in the Secretary all of the functions vested in the Secretary of Housing and Urban Development by the Energy Conservation Standards for New Buildings Act of 1976 (title III of the Energy Conservation and Production Act).

SEC. 307. There are hereby transferred to and vested in the Secretary such functions as are set forth in the Interstate Commerce Act and vested by law in the Interstate Commerce Commission or the Chairman and members thereof as relate to transportation of oil by pipeline.

SEC. 308. There are hereby transferred to and vested in the Secretary all functions vested by chapter 641 of title 10, United States Code, in the Secretary of the Navy as they relate to the administration of, and

there is hereby transferred to, and vested in, the Secretary jurisdiction over—

(1) Naval Petroleum Reserve Numbered 1 (Elk Hills) located at Kern County, California, established by Executive order of the President, dated September 2, 1912;

(2) Naval Petroleum Reserve Numbered 2 (Buena Vista), located in Kern County, California, established by Executive order of the President, dated December 13, 1912;

(3) Naval Petroleum Reserve Numbered 3 (Teapot Dome) located in Wyoming, established by Executive order of the President, dated April 30, 1915;

(4) Oil Shale Reserve Numbered 1, located in Colorado, established by Executive order of the President, dated December 6, 1916, as amended by Executive order of the President, dated June 12, 1919;

(5) Oil Shale Reserve Numbered 2, located in Utah, established by Executive order of the President, dated December 6, 1916; and

(6) Oil Shale Reserve Numbered 3, located in Colorado, established by Executive order of the President, dated September 27, 1974.

The surface management of such reserves shall be carried out by the Secretary of the Interior under applicable laws, including the Federal Land Policy and Management Act of 1976, administered by such Secretary.

Sec. 309. There are hereby transferred to and vested in the Secretary all functions of the Secretary of Commerce, the Department of Commerce, and officers and components of that Department, as relate to or are utilized by the Office of Energy Programs, but limited to industrial energy conservation programs.

Sec. 310. (a) The Division of Naval Reactors, established pursuant to section 25 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2035), and responsible for research, design, development, health and safety matters pertaining to naval nuclear propulsion plants and assigned civilian power reactor programs, is transferred to the Department under the Assistant Secretary for Fossil and Nuclear Energy Technologies and shall be deemed to be an organizational unit established by this Act.

(b) The Division of Military Application, established by section 25 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2035), and the functions of the Energy Research and Development Administration with respect to the Military Liaison Committee, established by section 27 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2037), are transferred to the Department under the Assistant Secretary for Defense Programs and such organizational units shall be deemed to be an organizational unit established by this Act.

#### TITLE V—ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

Sec. 501. (a) Subject to the other requirements of this section, the provisions of subchapter II of chapter 5 of title 5, United States Code, shall apply in accordance with its terms to any rule or regulation, or any order having the applicability and effect of a rule (as defined in section 551(4) of title 5, United States Code), issued pursuant to authority vested by law in or delegated to the Secretary or any officer, employee, or component of the Department, including any such rule, regulation, or order of a State or local government agency or officer thereof, issued pursuant to authority delegated by the Secretary.

(b) In addition to the requirements of subsection (a), notice of any proposed rule, regulation, or order described in subsection (a) shall be given by publication of such proposed rule, regulation, or order in the Federal Register. In each case, a minimum of ten days following such publication shall be provided for opportunity to comment; except that the requirements of this subsection as to time of notice and opportunity to comment may be waived where strict compliance is found to cause serious harm or

injury to the public health, safety, or welfare, and such finding is set out in detail in such rule, regulation, or order. In addition, public notice of all rules, regulations, or orders described in subsection (a) which are promulgated by officers of a State or local government agency shall be achieved by publication of such rules, regulations, or orders in at least two newspapers of statewide circulation, except that, if such publication is not practicable, notice of any rule, regulation, or order shall be given by such other means as the officer promulgating such rule, regulation, or order determines will assure wide public notice.

(c) In addition to the requirements of subsection (b), if any rule, regulation, or order described in subsection (a) is likely to have a substantial impact on the Nation's economy or large numbers of individuals or businesses, an opportunity for oral presentation of views, data, and arguments shall be afforded. To the maximum extent practicable, such opportunity shall be afforded prior to the issuance of such rule, regulation, or order, but in all cases such opportunity shall be afforded no later than forty-five days after the issuance of any such rule, regulation, or order. A transcript shall be kept of any oral presentation.

(d) The Secretary or any officer authorized to issue rules, regulations, or orders under the Emergency Petroleum Allocation Act of 1973, the Energy Supply and Environmental Coordination Act of 1974, or the Energy Policy and Conservation Act shall provide for the making of such adjustments, consistent with the other purposes of the relevant Act, as may be necessary to prevent special hardship, inequity, or unfair distribution of burdens and shall, by rule, establish procedures which are available to any person for the purpose of seeking an interpretation, modification, rescission of, exception to, or exemption from, such rule, regulation or order.

(e) (1) With respect to any rule or regulation of the Secretary the effects of which, except for indirect effects of an inconsequential nature, are confined to—

(A) a single unit of local government or the residents thereof;

(B) a single geographic area within a State or the residents thereof; or

(C) a single State or the residents thereof; the Secretary shall, in any case where appropriate, afford an opportunity for a hearing or the oral presentation of views and provide procedures for the holding of such hearing or oral presentation within the boundaries of the unit of local government, geographic area, or State described in subparagraphs (A) through (C), as the case may be.

(2) For purposes of this subsection—

(A) the term "unit of local government" means a county, municipality, town, township, village, or other unit of general government below the State level; and

(B) the term "geographic area within a State" means a special purpose district or other region recognized for governmental purposes within such State which is not a unit of local government.

(3) Nothing in this subsection shall be construed as requiring a hearing or an oral presentation of views where none is required by this section.

(f) (1) Judicial review of agency action taken under any law, the functions of which are transferred by this Act, shall, notwithstanding such transfer, be made in the manner specified in such law.

(2) Notwithstanding the amount in controversy, the district courts of the United States shall have exclusive original jurisdiction of all other cases or controversies arising under this Act, or under rules, regulations, or orders issued exclusively thereunder, other than any actions taken to implement or enforce any rule, regulation, or order by any officer of a State or local government agency under this Act, except that

nothing in this section affects the power of any court of competent jurisdiction to consider, hear, and determine in any proceeding before it any issue raised by way of defense (other than a defense based on the unconstitutionality of this Act or the validity of action taken by any agency under this Act). If in any such proceeding an issue by way of defense is raised based on the unconstitutionality of this Act or the validity of agency action under this Act, the case shall be subject to removal by either party to a district court of the United States in accordance with the applicable provisions of chapter 89 of title 28, United States Code. Cases or controversies arising under any rule, regulation, or order of any officer of a State or local government agency may be heard in either (1) any appropriate State court, or (2) without regard to the amount in controversy, the district courts of the United States.

(3) The Secretary may, by rule, prescribe procedures for State or local government agencies authorized by the Secretary to carry out such functions as may be permitted under applicable law. Such procedures shall apply to such agencies in lieu of section 501, and shall require that prior to taking any actions, such agencies shall take steps reasonably calculated to provide notice to persons who may be affected by the action, and shall afford an opportunity for presentation of views (including oral presentation of views where practicable) a reasonable time before taking the action.

(4) Notwithstanding any other law, the litigation of the Department shall be subject to the supervision of the Attorney General pursuant to chapter 31 of title 28 United States Code.

#### TITLE VI—ADMINISTRATIVE PROVISIONS

Sec. 601. (a) For purposes of this section—

(1) the term "Department" includes any agency, administration, commission, or other component thereof;

(2) the term "Department proceeding" includes any Department hearing, application, rulemaking or other determination, contract, grant, reward, fund transfer, claim, controversy, charge, accusation, or arrest;

(3) the term "employee" means any person holding a position in the Department;

(4) the term "employment" means employment with an energy concern and includes employment as a consultant, agent, attorney or otherwise and includes voluntary employment;

(5) the term "energy concern" means any person significantly engaged in the production, generation, transmission, distribution, or sale of electric power, petroleum or petroleum products, synthetic fuels, energy from renewable resources, wastes, or geothermal steam, nuclear energy, natural gas, coal, solar energy, or other energy-related source or resource, or in any research or development significantly related to such production, generation, transmission, distribution, or sale;

(6) the term "participate" includes participation by way of decision, approval, disapproval, recommendation, the rendering of advice, or investigation; and

(7) the term "supervisory employee" means any of the following officers or employees of the Department—

(A) an individual compensated at the rate provided for grade of GS-16 or above under section 5332 of title 5, United States Code;

(B) any other individual who, in the judgment of the Secretary, exercises sufficient decisionmaking authority so that the provisions of this section should apply to such individual;

(C) the Director or Deputy Director of any State, regional, district, local, or other field office; or

(D) an employee or officer who has responsibility with respect to the award, review, modification, or termination of any

grant, contract, reward, or fund transfer within the authority of the Secretary.

(b)(1) No supervisory employee shall knowingly receive compensation from, or hold any official relation to, any energy concern, or own stocks or bonds thereof, or have any pecuniary interest therein.

(2) Personnel transferred to the Department pursuant to section 701 of this Act shall have six months to comply with the provisions of paragraph (1) of this subsection with respect to prohibited property holdings. Any person transferred pursuant to section 701 shall notify the Secretary of all circumstances which would be violative of the restrictions described in subsection (b)(1) not later than fifteen days after the date of such transfer as determined by the United States Civil Service Commission.

(3) Where exceptional hardship would result, or where the interest is vested, the Secretary is authorized to waive the requirements of this subsection with respect to any person covered. Such waiver shall:

(A) be published in the Federal Register; (B) contain a finding by the Secretary that exceptional hardship would result; and

(C) indicate the steps taken by the Secretary to minimize conflict of interest and the appearance of conflict of interest.

Such waiver shall in no instance constitute a waiver of the requirements of section 208 of title 18, United States Code.

(c)(1) Each supervisory employee shall file with the Secretary, in such form and manner as the Secretary shall prescribe, a report describing all previous employment with any energy concern.

(2) Each former supervisory employee of the Department shall file with the Secretary, in such form and manner as the Secretary shall prescribe, not later than the November 15 of—

(A) the fiscal year following the fiscal year in which such person ceased to be an employee of the Department, and

(B) each of the succeeding two fiscal years, a report describing any employment with any energy concern during the fiscal year to which such report relates.

(3) Each report filed pursuant to paragraphs (1) and (2) shall contain the name and address of the person filing the report, the name and address of the energy concern with which he held employment, a brief description of his duties and work for the energy concern, the dates of his employment, and such other pertinent information as the Secretary may require.

(4) The Secretary shall maintain a file containing the reports filed with him pursuant to paragraphs (1) and (2). All such reports shall be available for public inspection and copying at all times during regular working hours.

(d)(1)(A) For a period of two years after terminating any employment with any energy concern, no supervisory employee shall knowingly participate in any Department proceeding in which his former employer is substantially, directly, or materially involved, other than in a rulemaking proceeding which has a substantial effect on numerous energy concerns.

(B) While an employee of the Department, no supervisory employee shall knowingly participate in any Department proceeding for which he had direct responsibility, or in which he participated substantially or personally, while in the employment of any energy concern.

(C) No supervisory employee who solicits, negotiates, or arranges for employment with any energy concern shall participate in any Department proceeding in which such energy concern is substantially, directly, or materially involved.

(2)(A) For a period of two years after ceasing to be an employee of the Department, no supervisory employee shall, in any professional capacity for anyone other than

the United States, appear or attend before, or make any oral or written communication or submission to, or filing with, the Department or any officer or employee of the Department in connection with any Department proceeding which was directly or indirectly under his official responsibility while a supervisory employee.

(B) For a period of five years after ceasing to be an employee of the Department, no supervisory employee shall, in any professional capacity for anyone other than the United States, appear or attend before, or make any oral or written communication to, or filing with, the Department or any officer or employee of the Department in connection with any Department proceeding in which he participated substantially or personally while a supervisory employee.

(3) Notwithstanding any penalty imposed under subsection (e), any violation of this subsection shall be taken into consideration in deciding the outcome of any Department proceeding in connection with which the prohibited appearance, attendance, communication, or submission was made.

(4) Whenever the Secretary makes a written finding as to a particular supervisory employee that the application of a particular restriction or requirement imposed by paragraph (1) or (2) of this subsection in a particular circumstance would work an exceptional hardship upon such supervisory employee or would be contrary to the national interest, the Secretary may waive in writing such restriction or requirement as to such supervisory employee. The Secretary shall maintain a file containing all findings and waivers made by him pursuant to this paragraph, and all such findings and waivers shall be available for public inspection and copying at all times during regular working hours. Any waiver made by the Secretary of a restriction imposed under paragraph (2) of this subsection shall also be filed with any record of the Department proceeding as to which the waiver for purposes of participation is granted. No such waiver shall in any instance constitute a waiver of the requirements of section 207 of title 18, United States Code.

(e) Any person who violates subsections (b), (c), or (d), taking into account any waiver under subsection (b)(3) or (d)(4), shall be subject to a civil penalty, assessed by the Secretary, not to exceed \$10,000 for each violation.

(f) Nothing in this section shall be deemed to limit the operation of section 207 or section 208 of title 18, United States Code.

Sec. 602. (a) Each officer or employee of the Department who has any known financial interest—

(1) in any person engaged in the business, other than at the retail level, of developing, producing, refining, transporting by pipeline, or converting into synthetic fuel, minerals, wastes, or renewable resources, or in the generation of energy from such minerals, wastes, or renewable resources, or in conducting research, development, and demonstration with financial assistance under this Act or any Act, the administration of which is transferred pursuant to this Act;

(2) in property from which coal, natural gas, crude oil, or nuclear material is commercially produced;

(3) in any person engaged in the production, generation, transmission, distribution, or sale of electric power; or

(4) in any person engaged in production, sale, or distribution of nuclear materials; shall, beginning on February 1, 1978, annually file with the Secretary a written statement disclosing all such interests held by such officer or employee during the preceding calendar year. Such statement shall be subject to examination, and available for copying, by the public upon request.

(b) The Secretary shall—

(1) act, within ninety days after the effective date of this Act, by rule—

(A) to define the term "known financial interest" for purposes of subsection (a); and (B) to establish the methods by which the requirement to file written statements specified in subsection (a) will be monitored and enforced, including appropriate provisions for the filing by such officers and employees of such statements and the review by the Secretary of such statements; and

(2) include, as part of the report made pursuant to section 621, a report with respect to such disclosures and the actions taken in regard thereto during the preceding calendar year.

(c) In the rules prescribed in subsection (b), the Secretary may identify specific positions, or classes thereof, within the Department which are of a nonregulatory or non-policy-making nature and provide that officers or employees occupying such positions shall be exempt from the requirements of this section.

(d) Any officer or employee who is subject to, and knowingly violates, subsection (a) shall be fined not more than \$2,500 or imprisoned not more than one year, or both.

Sec. 603. The Secretary is authorized to prescribe such policies, standards, criteria, procedures, rules, and regulations as he may deem to be necessary or appropriate to carry out functions now or hereafter vested in him.

Sec. 604. Except as otherwise expressly prohibited by law, the Secretary may delegate any of his functions to such officers and employees of the Department as he may designate, and may authorize such successive redelegations of such functions as he may deem to be necessary or appropriate.

Sec. 605. The Secretary is authorized to establish, alter, consolidate, or discontinue and to maintain such State, regional, district, local, or other field offices as he may deem to be necessary to carry out functions now or hereafter vested in him.

Sec. 606. The Secretary may, from time to time, establish, alter, consolidate or discontinue such organizational units or components within the Department as he may deem to be necessary or appropriate, except that such authority shall not extend to the abolition of organizational units or components established by this Act.

Sec. 607. In the performance of functions transferred to, and vested in, the Secretary or any officer or component of the Department, the Secretary is authorized to appoint and fix the compensation of such officers and employees as may be necessary to carry out such functions. Such officers and employees shall be appointed in accordance with the civil service laws and their compensation fixed in accordance with title 5, United States Code, except that to the extent the Secretary deems such action necessary to the discharge of his functions, he may establish scientific or professional positions within the Department as provided in section 3104 of title 5, United States Code.

Sec. 608. (a) There shall be within the Department not more than fourteen additional officers in positions authorized by sections 5315 and 5316 of title 5, United States Code, who shall be appointed by the Secretary and who shall perform such functions as the Secretary shall prescribe from time to time.

(b)(1) Subject to the provisions of chapter 51 of title 5, United States Code, but notwithstanding the last two sentences of section 5108(a) of such title, the Secretary may place at GS-16, GS-17, and GS-18, not to exceed 350 positions of the positions subject to the limitation of the first sentence of section 5108(a) of such title.

(2) Any position placed at GS-16, GS-17, or GS-18 under the authority of paragraph (1) may be filled only by a person who is transferred in connection with a transfer of function under this Act and who, immediately before the effective date of this Act, held a position having duties comparable

to those of such position. Appointments under this paragraph may be made without regard to the provisions of section 3324 of title 5, United States Code, relating to the approval by the Civil Service Commission of appointments to GS-16, GS-17, and GS-18.

(3) The Secretary's authority under this subsection with respect to any position shall cease when the person appointed to fill such position under paragraph (2) leaves such position.

Sec. 609. The Secretary may obtain services as authorized by section 3109 of title 5, United States Code, at rates not to exceed the daily rate prescribed for grade GS-18 of the General Schedule by section 5332 of title 5, United States Code, for persons in Government service employed intermittently.

Sec. 610. Section 17 of the Federal Energy Administration Act of 1974 shall be applicable to advisory committees chartered by the Department.

Sec. 611. (a) The Secretary is authorized to provide for participation of Armed Forces personnel in carrying out functions performed, on the date of enactment of this Act, in the Energy Research and Development Administration and under chapter 641 of title 10, United States Code. Members of the Armed Forces may be detailed for service in the Department by the Secretary concerned (as said term is defined in section 101 of such title) pursuant to cooperative agreements with the Secretary.

(b) The detail of any personnel to the Department under this section shall in no way affect status, office, rank, or grade which officers or enlisted men may occupy or hold or any emolument, perquisite, right, privilege, or benefit incident to, or arising out of, such status, office, rank, or grade, nor shall any member so detailed be charged against any statutory or other limitation on strengths applicable to the Armed Forces or the Department. A member so detailed shall not be subject to direction or control by his armed force, or any officer thereof, directly or indirectly, with respect to the responsibilities exercised in the position to which detailed.

Sec. 612. (a) With their consent, the Secretary may, with or without reimbursement, use the research, equipment, and facilities of any agency or instrumentality of the United States or of any State, the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States, or of any political subdivision thereof, or of any foreign government, in carrying out any function now or hereafter vested in the Secretary.

(b) The Secretary may, with or without reimbursement, provide research, equipment, and facilities to any agency or instrumentality of the United States or any State, territory, the Commonwealth of Puerto Rico, the District of Columbia, or any political subdivision thereof, or to any foreign government, whenever he deems such action to be necessary and appropriate to the performance of functions now or hereafter vested in him.

(c) Proceeds from reimbursements under this section shall be deposited in the Treasury and may be withdrawn by the Secretary or the head of the agency or instrumentality of the United States involved, as the case may be, to pay directly the costs of the equipment or facilities provided, to repay or make advances to appropriations or funds which do or will initially bear all or a part of such costs, or to refund excess sums when necessary, except that such proceeds may be credited to a working capital fund otherwise established by law, including the fund established pursuant to section 619 of this Act, and used under the law governing such fund, if the fund is available for use for providing the equipment or facilities involved.

Sec. 613. The Secretary is authorized to enter into and perform such contracts, leases, cooperative agreements, or other

similar transactions with public agencies and private organizations and persons, and to make such payments (in lump sum or installments, and by way of advance or reimbursement) as he may deem to be necessary or appropriate to carry out functions now or hereafter vested in the Secretary.

Sec. 614. The Secretary is authorized to acquire (by purchase, lease, condemnation, or otherwise), construct, improve, repair, operate, and maintain laboratories, research and testing sites and facilities, quarters and related accommodations for employees and dependents of employees of the Department, such personal property (including patents), or any interest therein, as the Secretary deems necessary; and to provide by contract or otherwise for eating facilities and other necessary facilities for the health and welfare of employees of the Department at its installations and purchase and maintain equipment therefor.

Sec. 615. (a) As necessary and when not otherwise available, the Secretary is authorized to provide for, construct, or maintain the following for employees and their dependents stationed at remote locations:

- (1) emergency medical services and supplies;
- (2) food and other subsistence supplies;
- (3) messing facilities;
- (4) audiovisual equipment, accessories, and supplies for recreation and training;
- (5) reimbursement for food, clothing, medicine, and other supplies furnished by such employees in emergencies for the temporary relief of distressed persons;
- (6) living and working quarters and facilities; and
- (7) transportation of school age dependents of employees to the nearest appropriate educational facilities.

(b) The furnishing of medical treatment under paragraph (1) of subsection (a) and the furnishing of services and supplies under paragraphs (2) and (3) of subsection (a) shall be at prices reflecting reasonable value as determined by the Secretary.

(c) Proceeds from reimbursements under this section shall be deposited in the Treasury and may be withdrawn by the Secretary to pay directly the cost of such work or services, to repay or make advances to appropriations of funds which will initially bear all or a part of such cost, or to refund excess sums when necessary: *Provided*, That such payments may be credited to a working capital fund otherwise established by law, including the fund established pursuant to section 619 of this Act, and used under the law governing such fund, if the fund is available for use by the Department for performing the work or services for which payment is received.

Sec. 616. The Secretary is authorized to acquire any of the following described rights if the property acquired thereby is for use by or for, or useful to, the Department:

- (1) copyrights, patents, and applications for patents, designs, processes, and manufacturing data;
- (2) licenses under copyrights, patents, and applications for patents; and
- (3) releases, before suit is brought, for past infringement of patents or copyrights.

Sec. 617. The Secretary is authorized to accept, hold, administer, and utilize gifts, bequests, and devises of property, both real and personal, for the purpose of aiding or facilitating the work of the Department. Gifts, bequests, and devises of money and proceeds from sales of other property received as gifts, bequests, or devises shall be deposited in the Treasury and shall be disbursed upon the order of the Secretary. Property accepted pursuant to this section, and the proceeds thereof, shall be used as nearly as possible in accordance with the terms of the gift, bequest, or devise. For the purposes of Federal income, estate, and gift taxes, property accepted under this section shall be considered as a gift, bequest, or devise to the United States.

Sec. 618. The Secretary shall cause a seal of office to be made for the Department of such design as he shall approve and judicial notice shall be taken of such seal.

Sec. 619. The Secretary is authorized to establish a working capital fund, to be available without fiscal-year limitation, for expenses necessary for the maintenance and operation of such common administrative services as he shall find to be desirable in the interests of economy and efficiency. There shall be transferred to the fund the stocks of supplies, equipment, other assets, liabilities, and unpaid obligations relating to the services which he determines will be performed through the fund. Appropriations to the fund in such amounts as may be necessary to provide additional working capital are authorized. The working capital fund shall recover from the appropriations and funds for which services are performed, either in advance or by way of reimbursement, amounts which will approximate the costs incurred, including the accrual of annual leave and the depreciation of equipment. The fund shall also be credited with receipts from the sale or exchange of its property, and receipts in payment for loss or damage to property owned by the fund.

Sec. 620. To the extent necessary or appropriate to perform any function transferred by this Act, the Secretary may exercise, in carrying out the function so transferred, any authority or part thereof available by law, including appropriation Acts, to the official or agency from which such function was transferred.

Sec. 621. The Secretary shall, as soon as practicable after the end of each fiscal year, commencing with the first complete fiscal year following the effective date of this Act, make a report to the President for submission to the Congress on the activities of the Department during the preceding fiscal year. Such report shall include a statement of the Secretary's goals, priorities, and plans for the Department, together with an assessment of the progress made toward the attainment of those goals, the effective and efficient management of the Department, and progress made in coordination of its functions with other departments and agencies of the Federal Government. In addition, such report shall include the information required by section 15 of the Federal Energy Administration Act of 1974, section 307 of the Energy Reorganization Act of 1974, and section 15 of the Federal Nonnuclear Energy Research and Development Act of 1974, and shall include:

(1) projected energy needs of the United States to meet the requirements of the general welfare of the people of the United States and the commercial and industrial life of the Nation;

(2) an estimate of (A) the domestic and foreign energy supply on which the United States will be expected to rely to meet such needs in an economic manner with due regard for the protection of the environment, the conservation of natural resources, and the implementation of foreign policy objectives, and (B) the quantities of energy expected to be provided by different sources (including petroleum, natural and synthetic gases, coal, uranium, hydroelectric, solar, and other means) and the expected means of obtaining such quantities;

(3) current and foreseeable trends in the price, quality, management, and utilization of energy resources and the effects of those trends on the social, environmental, economic, and other requirements of the Nation;

(4) a summary of research and development efforts funded by the Federal Government to develop new technologies, to forestall energy shortages, to reduce waste, to foster recycling, and to encourage conservation practices, and shall include recommendations for developing technologies

capable of improving the quality of the environment and increasing efficiency;

(5) a review and appraisal of the adequacy and appropriateness of technologies, procedures, and practices (including competitive and regulatory practices) employed by Federal, State, and local governments and nongovernmental entities to achieve the purposes of this Act.

Sec. 622. The Secretary, when authorized in an appropriation act, in any fiscal year, may transfer funds from one appropriation to another within the Department, except that no appropriation shall be either increased or decreased pursuant to this section more than 5 per centum of the appropriation for such fiscal year.

Sec. 623. Appropriations to carry out the provisions of this Act shall be subject to annual authorization.

#### TITLE VII—TRANSITIONAL, SAVINGS, AND CONFORMING PROVISIONS

Sec. 701. (a) Except as otherwise provided in this Act, the personnel employed in connection with, and the assets, liabilities, contracts, property, records, and unexpended balances of appropriations, authorizations, allocations, and other funds employed, held, used, arising from, available to or to be made available in connection with the functions transferred by this Act, subject to section 202 of the Budget and Accounting Procedures Act of 1950, are hereby transferred to the Secretary for appropriate allocation.

(b) Positions expressly specified by statute or reorganization plan, personnel occupying those positions on the effective date of this Act, and personnel authorized to receive compensation at the rate prescribed for offices and positions at level I, II, III, IV, or V of the Executive Schedule (5 U.S.C. 5312-5316) on the effective date of this Act shall be subject to the provisions of section 705 of this Act.

Sec. 702. Except as otherwise provided in this Act, the transfer of full-time personnel (except special Government employees) and part-time personnel holding permanent positions pursuant to this title shall not cause any such employee to be separated or reduced in grade or compensation for one year after the date of enactment of this Act.

Sec. 703. Any person who, on the effective date of this Act, held a position compensated in accordance with the Executive Schedule prescribed in chapter 53 of title 5, United States Code, and who, without a break in service, is appointed in the Department to a position having duties comparable to those performed immediately preceding his appointment shall continue to be compensated in his new position at not less than the rate provided for his previous position, for the duration of his service in the new position.

Sec. 704. Employees transferred to the Department holding reemployment rights acquired under section 28 of the Federal Energy Administration Act of 1974 or any other provision of law or regulation may exercise such rights only within one hundred and twenty days from the effective date of this Act.

Sec. 705. Except as otherwise provided in this Act, whenever all of the functions vested by law in an agency, commission, or other body, or any component thereof, have been terminated or transferred from that agency, commission, or other body, or component by this Act, the agency, commission, or other body, or component, shall terminate. If an agency, commission, or other body, or any component thereof, terminates pursuant to the preceding sentence, each position and office therein which was expressly authorized by law, or the incumbent of which was authorized to receive compensation at the rates prescribed for an office or position at level II, III, IV, or V of the Executive Schedule (5 U.S.C. 5313-5316), shall terminate.

Sec. 706. The Director of the Office of Man-

agement and Budget, in consultation with the Secretary, is authorized and directed to make such determinations as may be necessary with regard to the transfer of functions which relate to or are utilized by an agency, commission or other body, or component thereof affected by this Act, to make such additional incidental dispositions of personnel, assets, liabilities, contracts, property, records, and unexpended balances of appropriations, authorizations, allocations, and other funds held, used, arising from, available to or to be made available in connection with the functions transferred by this Act as he may deem necessary to accomplish the purposes of this Act.

Sec. 707. All orders, determinations, rules, regulations, permits, contracts, certificates, licenses, and privileges—

(1) which have been issued, made, granted, or allowed to become effective by the President, any Federal department or agency or official thereof, or by a court of competent jurisdiction, in the performance of functions which are transferred under this Act to the Department after the date of enactment of this Act, and

(2) which are in effect at the time this Act takes effect, shall continue in effect according to their terms until modified, terminated, superseded, set aside, or revoked by the President, the Secretary, or other authorized officials, a court of competent jurisdiction, or by operation of law.

Sec. 708. (a) (1) The provisions of this Act shall not affect any proceedings or any application for any license, permit, certificate, or financial assistance pending at the time this Act takes effect before any department, agency, commission, or component thereof, functions of which are transferred by this Act; but such proceedings and applications, to the extent that they relate to functions so transferred, shall be continued. Orders shall be issued in such proceedings, appeals shall be taken therefrom, and payments shall be made pursuant to such orders, as if this Act had not been enacted; and orders issued in any such proceedings shall continue in effect until modified, terminated, superseded, or revoked by a duly authorized official, by a court of competent jurisdiction, or by operation of law. Nothing in this subsection shall be deemed to prohibit the discontinuance or modification of any such proceeding under the same terms and conditions and to the same extent that such proceeding could have been discontinued if this Act had not been enacted.

(2) The Secretary is authorized to promulgate regulations providing for the orderly transfer of such proceedings to the Department.

(b) Except as provided in subsection (d)—

(1) the provisions of this Act shall not affect suits commenced prior to the date this Act takes effect, and,

(2) in all such suits, proceedings shall be had, appeals taken, and judgments rendered in the same manner and effect as if this Act had not been enacted.

(c) No suit, action, or other proceeding commenced by or against any officer in his official capacity as an officer of any department or agency, functions of which are transferred by this Act, shall abate by reason of the enactment of this Act. No cause of action by or against any department or agency, functions of which are transferred by this Act, or by or against any officer thereof in his official capacity shall abate by reason of the enactment of this Act.

(d) If, before the date on which this Act takes effect, any department or agency, or officer thereof in his official capacity, is a party to a suit, and under this Act any function of such department, agency, or officer is transferred to the Secretary or any other official, then such suit shall be continued with the Secretary or other official, as the case may be, substituted.

Sec. 709. If any provision of this Act or the application thereof to any person or circumstance is held invalid, neither the remainder of this Act nor the application of such provision to other persons or circumstances shall be affected thereby.

Sec. 710. With respect to any functions transferred by this Act and exercised after the effective date of this Act, reference in any other Federal law to any department, commission, or agency or any officer or office the functions of which are so transferred shall be deemed to refer to the Secretary or other official or component of the Department in which this Act vests such functions.

Sec. 711. Nothing contained in this Act shall be construed to limit, curtail, abolish, or terminate any function of, or authority available to, the President which he had immediately before the effective date of this Act; or to limit, curtail, abolish, or terminate his authority to delegate, redelegate, or terminate any delegation of functions.

Sec. 712. (a) The Federal Energy Administration Act of 1974 is hereby amended as follows:

(1) in section 4—

(A) by striking out the heading of such section and inserting in lieu thereof "Conflicts of Interest";

(B) by striking out subsections (a) through (h) of such section and redesignating subsections (i) and (j) as subsections (a) and (b), respectively; and

(C) by striking out, in the subsection redesignated as subsection (b), "holding any of the positions described in subsections (a), (c), (d), and (e) of this section" and inserting in lieu thereof "who is compensated at level II, III, or IV of the Executive Schedule and who is assigned principal responsibility for any program under this Act";

(2) in section 7—

(A) by striking out subsections (a) and (b) and redesignating subsection (c) as subsection (a);

(B) by striking out subsections (d), (e), (f), (g), and (h);

(C) by striking out "(i) (1)" and by striking out subparagraphs (A), (B), (C), (E), and (F) of subsection (i) (1) and redesignating subparagraph (D) of such subsection as subsection (b);

(D) by striking out, in the matter redesignated as subsection (b), "the rules, regulations, or orders described in paragraph (A)" and inserting in lieu thereof "any rule or regulation, or any order having the applicability and effect of a rule as defined in section 551(4) of title 5, United States Code, pursuant to this Act";

(E) by striking out, in such subsection, "paragraph (2) of this subsection" and inserting in lieu thereof "subsection (c)";

(F) by redesignating paragraph (2) (A) of subsection (i) as subsection (c) and by striking out subparagraph (B) of subsection (i) (2); and

(G) by striking out paragraph (3) of subsection (i) and by striking out subsections (j) and (k);

(3) by repealing sections 9, 28, and 30; and

(4) in section 52(a)—

(A) by striking out "and" at the end of paragraph (2);

(B) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; and"; and

(C) by adding after such paragraph (3) the following new paragraph:

"(4) the States to the extent required by the Natural Gas Act and the Federal Power Act."

(b) The Energy Reorganization Act of 1974 is hereby amended by repealing section 108.

(c) (1) The Atomic Energy Act of 1954 is hereby amended by repealing section 26.

(2) Section 161(d) of the Atomic Energy Act of 1954 shall not apply to functions transferred by this Act.

(d) Section 502 of the Motor Vehicle In-

formation and Cost Savings Act is amended by adding at the end thereof the following:

"(h) The Secretary shall consult with the Secretary of Energy in carrying out his responsibilities under this section."

(e) The Energy Conservation Standards for New Buildings Act of 1976 is hereby amended as follows:

(1) in section 303(11), strike out "Secretary of Housing and Urban Development" and insert in lieu thereof "Secretary of Energy";

(2) in section 304(c), by inserting "the Secretary of Housing and Urban Development," after "the Administrator,"; and

(3) in section 310, by inserting "Secretary of Housing and Urban Development," after "the Administrator,".

(f) The Rural Electrification Act of 1936 is hereby amended by adding a new section 16 to title I thereof to read as follows:

"Sec. 16. In order to insure coordination of electric generation and transmission financing under this Act with the national energy policy, the Administrator in making or guaranteeing loans for the construction, operation, or enlargement of generating plants or electric transmission lines or systems, shall consider such general criteria consistent with the provisions of this Act as may be published by the Secretary of Energy."

Sec. 713. Section 19(d) (1) of title 3, United States Code, is amended by inserting immediately before the period at the end thereof the following: ", Secretary of Energy".

Sec. 714. (a) Section 101 of title 5, United States Code is amended by adding at the end thereof the following:

"The Department of Energy."

(b) Subsection (a) of section 3104 of title 5, United States Code, is amended by inserting after paragraph (4) the following new paragraph:

"(5) Department of Energy—not more than 200."

(c) Subsection (a) of section 5108 of title 5, United States Code, is amended by striking out "an aggregate of 2,754" and inserting in lieu thereof "an aggregate of 3,104".

(d) Section 5312 of title 5, United States Code, is amended by adding at the end thereof the following:

"(14) Secretary of Energy."

(e) Paragraph (22) of section 5313 of title 5, United States Code, is amended to read as follows:

"(22) Deputy Secretary of Energy."

(f) Section 5314 of title 5, United States Code, is amended by amending paragraph (60) to read as follows:

"(60) Administrator, Economic Regulatory Administration, Department of Energy."

(g) Section 5315 of title 5, United States Code, is amended by striking out paragraph 102, and by adding at the end of the section the following:

"(114) Assistant Secretaries of Energy (9).

"(115) General Counsel of the Department of Energy.

"(116) Administrator, Energy Information Administration, Department of Energy.

"(117) Inspector General, Department of Energy.

"(118) Additional Officers, Department of Energy (4)."

(h) Paragraphs (135) and (136) of section 5316 of title 5, United States Code, are amended to read as follows:

"(135) Deputy Inspector General, Department of Energy.

"(136) Additional Officers, Department of Energy (10)."

Sec. 715. With the consent of the appropriate department or agency head concerned, the Secretary is authorized to utilize the services of such officers, employees, and other personnel of the departments and agencies from which functions have been transferred to the Secretary for such period of time as may reasonably be needed to facilitate the orderly transfer of functions under this Act.

SEC. 716. The Civil Service Commission shall, as soon as practicable but not later than one year after the effective date of this Act, prepare and transmit to the Congress a report on the effects on employees of the reorganization under this Act, which shall include—

(1) an identification of any position within the Department or elsewhere in the executive branch, which it considers unnecessary due to consolidation of functions under this Act;

(2) a statement of the number of employees entitled to pay savings by reason of the reorganization under this Act;

(3) a statement of the number of employees who are voluntarily or involuntarily separated by reason of such reorganization;

(4) an estimate of the personnel costs associated with such reorganization;

(5) the effects of such reorganization on labor management relations; and

(6) such legislative and administrative recommendations for improvements in personnel management within the Department as the Commission considers necessary.

SEC. 717. The transfer of functions under titles III and IV of this Act shall not affect the validity of any draft environmental impact statement published before the effective date of this Act.

SEC. 718. As used in this Act (1) references to "function" or "functions" shall be deemed to include reference to duty, obligation, power, authority, responsibility, right, privilege, and activity, or the plural thereof, as the case may be; and (2) references to "perform" when used in relation to functions, shall be deemed to include the exercise of power, authority, rights, and privileges.

#### TITLE VIII—EFFECTIVE DATE AND INTERIM APPOINTMENTS

SEC. 801. (a) The provisions of this Act shall take effect one hundred and twenty days after the Secretary first takes office, or on such earlier date as the President may prescribe and publish in the Federal Register, except that at any time after the date of enactment of this Act, (1) any of the officers provided for in title II and title IV of this Act may be nominated and appointed, as provided in those titles, and (2) the Secretary may promulgate regulations pursuant to section 708(a) (2) of this Act at any time after the date of enactment of this Act. Funds available to any department or agency (or any official or component thereof), functions of which are transferred to the Secretary by this Act, may with the approval of the Director of the Office of Management and Budget, be used to pay the compensation and expenses of any officer appointed pursuant to this subsection until such time as funds for that purpose are otherwise available.

(b) In the event that one or more officers required by this Act to be appointed by and with the advice and consent of the Senate shall not have entered upon office on the effective date of this Act, the President may designate any officer, whose appointment was required to be made by and with the advice and consent of the Senate and who was such an officer immediately prior to the effective date of the Act, to act in such office until the office is filled as provided in this Act. While so acting such persons shall receive compensation at the rates provided by this Act for the respective offices in which they act.

Mr. ERLBORN (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

Mr. ROUSSELOT. Mr. Chairman, reserving the right to object—and I do not know that I will—but I would like to ask

how long the gentleman's substitute amendment is.

Mr. ERLBORN. If the gentleman will yield—

Mr. ROUSSELOT. I would be delighted to yield.

Mr. ERLBORN. The substitute is quite long. It contains all but one of the titles that are in the bill under consideration. It strikes the title that provided for the transfer of the Federal Power Commission authorities to the new Department of Energy. That is the sole effect of the substitute, to leave the Federal Power Commission intact with all of its present authorities.

Mr. ROUSSELOT. So the gentleman strikes which title in his substitute?

Mr. ERLBORN. Title IV.

Mr. ROUSSELOT. And that is the only change? In all other respects, the substitute is the same as the original bill?

Mr. ERLBORN. That is right. There are conforming amendments in the other titles, and that is why it was necessary to offer this as an amendment in the nature of a substitute. There are references to the Federal Power Commission transfers in the other titles, but the other changes made are only conforming.

Mr. ROUSSELOT. So the gentleman can assure us that there are absolutely no other changes in any of the other titles except the conforming amendments the gentleman mentioned?

Mr. ERLBORN. That is correct.

Mr. ROUSSELOT. Only the elimination of title IV?

Mr. ERLBORN. That is correct.

Mr. ROUSSELOT. I thank the gentleman, and I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ERLBORN. Mr. Chairman, in the exchange with the gentleman from California a moment ago, I have completely and thoroughly defined and described the amendment in the nature of a substitute that I have offered. It eliminates title IV of the bill H.R. 6804, and it makes other technical and conforming amendments to eliminate references to the transfers that were contained in title IV.

Title IV provides for the dissolution of the Federal Power Commission and transfer of the authority to the new Department of Energy. It was obvious, I think, from the outset of our committee deliberations, that the most difficult part of the bill, the most controversial, was this transfer of Federal Power Commission authority to the new Department of Energy. The Federal Power Commission is a regulatory agency, an independent regulatory agency, patterned after the other independent regulatory agencies fashioned by the Congress over the years to make decisions—basically economic decisions—relative to the private sector; economic decisions that the Congress felt were not properly made in the judicial system and were too subject to political influence to be made in the executive branch.

So, to insulate these economic decisions from the very political atmosphere—and properly so—of the execu-

tive branch, these economic decisions were put in independent agencies more responsive to and responsible to the Congress than to the executive branch. We have always felt that the regulatory agencies were creatures of the Congress; that we should maintain oversight of their exercise of the authority that we have given them, and that they were to be kept free—free—of the influence of the executive branch.

It is the very nature of the independent regulatory agencies, and that is the purpose for which they were created. The proposition contained in H.R. 6804 is in the field of energy, to move this economic decisionmaking from that protected atmosphere into the very highly politically charged atmosphere of a Cabinet-level department; a Cabinet-level department that will be headed initially, probably, by Dr. Schlesinger, whom I think enjoys the respect of just about everyone in this Chamber.

We are not talking about individuals. We are really talking about governmental structure here. It is not Dr. Schlesinger that we are talking about. It is whether or not this type of decision-making properly belongs in the executive branch, or were we right when we created the Federal Power Commission to insulate these decisions from political considerations?

I think it is obvious why the Federal Power Commission ratemaking is being transferred to the Department of Energy. Dr. Schlesinger was very open about this in the testimony before our subcommittee. He said that if we are to have an effective energy policy it must be implemented through ratemaking. It must be implemented through ratemaking. That is why they are suggesting the transfer of this authority to the Department.

What does this mean? Maybe it was not fair of me to put it in these terms, but in the hearings I said to Dr. Schlesinger:

It sounds to me that what you are saying is you want to fix the court. You want to pre-judge and prejudice the decisions made relative to rates to implement a policy which has nothing to do with the economics of the situation but is a political decision of the Administration.

As I say, that may be gross terms with which to describe what is being attempted here, but I think it is accurate. The decisions now are to be made based on policy, which is congressional policy, which is established in the underlying law. Facts are to be determined by the independent agency. It holds hearings for this purpose generally and under the procedures described in the basic law, in the Administrative Procedure Act. Having found the facts, they apply the facts to the policy established by the Congress, and they come out with a decision as to the rates.

The CHAIRMAN. The time of the gentleman from Illinois (Mr. ERLENBORN) has expired.

(By unanimous consent, Mr. ERLENBORN was allowed to proceed for 5 additional minutes.)

Mr. ERLENBORN. Mr. Chairman, a new element will be introduced into this ratemaking decision process. As I say,

it is much to the credit of Dr. Schlesinger that he was open and honest in telling us what that new element is; and that new element is not congressional policy. That is already established, and we can change it as we see fit by amending the basic underlying law. It is not the facts, obviously, because the facts speak for themselves; and we have the hearing structure that will, to some extent at least, be maintained in the Department of Energy. Although even there, there is a breaking down of that hearing process. Some things which were necessarily on the record and after hearing may not be on the record after hearing if the Federal Power Commission is destroyed and its power put in this new agency. But the new element which is introduced into the decisionmaking, which I am describing here, is the political judgment of whatever administration happens to be in power at the time. We are not talking about Democrat against Republican or conservative against liberal or Jimmy Carter against some other President. This is a structure I hope we would all see apart from the vagaries of the political elections every 2 or 4 years. But we are establishing a structure for the Government for some considerable time, until conditions would change to warrant the change in the structure.

So I am not talking about whether it is this administration or some other. I hope I would feel the same—and I am sure I would feel the same—if it were a Republican administration at the present time. The problem is that political decisions will be made, decisions will be made in the White House, and they will be reflected in the rates that are determined when a Department of Energy is enforcing the ratemaking authority that we have established in the basic law.

I observed that the power companies, the energy companies, testified without exception in opposition to this transfer of power. And, by the way, so did the consumer-related testimony tend to criticize this transfer of power. About the only ones I recall being in support of it were the administration witnesses themselves.

But I said to the power companies when they were testifying, "I am surprised that you are in opposition to this transfer." I said that because if the policy of this administration is as it has been announced—and I am sure that it is—it appears that they want to discourage the use of energy, and if we are going to use ratemaking to discourage the use of energy, that means higher prices. It certainly means there will be higher prices.

It is obvious why consumer-related witnesses would be opposed to this transfer, but I was bemused by the fact that the power companies themselves were opposed to this transfer, because I would think the inevitable result of a policy of discouraging the consumption of energy would be higher prices for that energy. That, I think, is fine if it is done relative to policy considered and adopted by the Congress, but I do not think that this body should give up the authority over policy in this area and give the Executive this sort of influence in the ratemaking structure relative to energy.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I am happy to yield to my colleague, the gentleman from New York.

Mr. HORTON. Mr. Chairman, I was only handed this amendment by the gentleman from Illinois (Mr. ERLENBORN) about 2 minutes before he offered his substitute, so I have not had an opportunity to read the some 62 pages comprising the amendment. I was not aware that the gentleman had planned to introduce this substitute, so I have not had the opportunity to read it and determine what it does.

However, as I understand it from the explanation given by the gentleman, what he is doing with this substitute is keeping the Federal Power Commission intact, with all its authorities, and this agency would then be comprised basically of the Federal Energy Administration and the Energy Research and Development Administration.

Mr. ERLENBORN. Does the gentleman include the Nuclear Regulatory Agency as well?

Mr. HORTON. No. The Nuclear Regulatory Agency is not in the bill.

Is that included in this amendment that the gentleman has offered?

Mr. ERLENBORN. No; it is not.

The CHAIRMAN. The time of the gentleman from Illinois (Mr. ERLENBORN) has expired.

(On request of Mr. HORTON and by unanimous consent, Mr. ERLENBORN was allowed to proceed for 3 additional minutes.)

Mr. HORTON. Mr. Chairman, will the gentleman yield further?

Mr. ERLENBORN. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, do I understand that what the gentleman is proposing to do is just to keep the Federal Power Commission with its authorities as it now exists?

Mr. ERLENBORN. The gentleman is correct.

Mr. HORTON. The Federal Power Commission would not be involved in the reorganization?

Mr. ERLENBORN. The gentleman is correct.

Mr. HORTON. I just happened to read this one provision as I thumbed through the amendment. In lines 3 through 6 on page 8 of the gentleman's substitute—and I do not relate this to the bill at the moment—it strikes out this language:

The Inspector General and the Deputy shall each be subject to the provisions of subchapter III of chapter 73, title V.

Is it the intention of the gentleman to strike out the portion concerning the Inspector General and the authority that he has?

Mr. ERLENBORN. That was not my purpose. I will have to consult with the gentleman relative to the question he raises here. I am not able to answer the question immediately as to why in the drafting of this amendment we have affected that particular language.

Mr. HORTON. Mr. Chairman, will the gentleman yield further?

Mr. ERLENBORN. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, I have just been informed that the portion to which I referred was a change that was made by the Committee on Post Office and Civil Service, and that it is not a part of the gentleman's amendment.

Mr. ERLBORN. Mr. Chairman, I thank the gentleman for being able to answer the question that he posed to me and that I was unable to answer. I thank him very much for that.

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. ERLBORN. Mr. Chairman, I will yield to the gentleman in just a second.

First, I wanted to make the observation that I understand the gentleman from California (Mr. Moss) has circulated an amendment or has announced his intention to offer an amendment that would affect this ratemaking authority by insulating it within the new Department of Energy. I understand there was some similar, though not identical, activity on the floor of the Senate.

I will let the gentleman from California speak to that matter himself, but I might say that the purpose of the gentleman from California (Mr. Moss) might be served by the adoption of this substitute amendment which provides that we keep this ratemaking authority in the Federal Power Commission where it is today.

Mr. BAUMAN. Mr. Chairman, will the gentleman yield now?

Mr. ERLBORN. I am happy to yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Chairman, I thank the gentleman for yielding.

I just want to observe for the benefit of those Members who might be offering amendments to the bill that the gentleman from Illinois (Mr. ERLBORN) has presented us with somewhat of a parliamentary dilemma, because his amendment is in the nature of a substitute for the committee amendment, which is itself a substitute.

I happen to have an amendment at the desk that I will offer, and any one of us who offers amendments will now have to attempt to amend the gentleman's substitute against the possibility that it may be adopted. If it is adopted without any amendments being offered, that would preclude further amendments to the bill.

Mr. ERLBORN. Yes, the gentleman is correct, and I am sorry I was forced to offer the amendment in this form.

However, by eliminating title IV and making copious changes in all the other titles by way of conforming amendments, there seemed to be no other feasible way than to offer a total substitute.

Mr. Chairman, I would point out to the gentleman and to others who might have amendments that we have used the basic structure of the bill under consideration. Pages have been renumbered, but lines have not, so that probably all that it would require would be to change the page reference on the gentleman's proposed amendment to make it conform. However, the gentleman is correct.

The CHAIRMAN. The time of the gentleman from Illinois (Mr. ERLBORN) has expired.

(On request of Mr. ROUSSELOT and

by unanimous consent, Mr. ERLBORN was allowed to proceed for 2 additional minutes.)

Mr. ERLBORN. Mr. Chairman, I thank the gentleman.

I would like to conclude that thought. The gentleman from Maryland (Mr. BAUMAN) is right in saying that if this substitute is adopted, it will conclude the business of the Committee of the Whole. Therefore, if the gentleman does intend to offer perfecting amendments to the bill, they probably should be offered to the substitute amendment.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. ERLBORN. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate my colleague's yielding.

I have planned to support an amendment that the gentleman from Maryland (Mr. BAUMAN) has and also some additional amendments which the gentleman from Michigan (Mr. CONYERS) has, which would go a little further than the substitute amendment does in eliminating title IV. However, many Members are not now really prepared to have their amendments conform with the gentleman's substitute.

Therefore, Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

#### QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

Mr. BROOKS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I believe that the adoption of the amendment would seriously weaken our country's ability to mount an effective energy program. We need to construct an effective Government organization that can meet the challenge and propose a rational solution. In my opinion, such an organization can only be effective if we confer upon the Secretary of Energy the authority to establish overall policy direction on energy matters, the right to manage resources, to coordinate the manner and the ability to meet energy demands, including recurrent crises, in an expeditious and effective manner. Placing basic administrative power over energy policy in an independent regulatory agency will not solve our problem. A collegial body is not equipped by temperament or structure to make long-range policy or to meet emergency needs. Rather, such a body is designed to act in a deliberate way, to pass upon case-by-case adjudications in a quasi-judicial manner. In this regard I should point out that what we establish in this bill is a Federal Energy Regu-

latory Commission to resolve case-by-case adjudication and to afford all the necessary procedural protection, including hearings, oral arguments, written decisions, the right to cross-examine in proper cases, and the right to appeal. The regulation of national policy and general authority cannot effectively be handled by a commission. It has not been done to date.

I urge the Members not to adopt this amendment and thereby reduce this country's chance to gain control over the management of our energy needs.

I would suggest to my distinguished friend, the gentleman from Illinois (Mr. ERLBORN), that we might well have this type of an amendment at the end of the bill if it were going to be a substitute. A motion to recommit would be a more appropriate time to consider this type of legislation.

Mr. Chairman, I move the previous question on the amendment.

Mr. HORTON. Mr. Chairman, I rise in opposition to the amendment.

#### PARLIAMENTARY INQUIRY

Mr. ERLBORN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. Will the gentleman yield for a parliamentary inquiry?

Mr. HORTON. I yield to the gentleman from Illinois.

The CHAIRMAN. The gentleman will state the parliamentary inquiry.

Mr. ERLBORN. Mr. Chairman, I understood the gentleman from Texas to move the previous question on the amendment.

The CHAIRMAN. That motion is not in order in Committee of the Whole. The Chairman did not recognize the gentleman for that purpose.

Mr. ERLBORN. I thank the Chairman.

Mr. HORTON. Mr. Chairman, I rise in opposition to this substitute.

When the legislation was first sent up to the Congress and we first met with the administration officials, I must say that there was some very serious question in my own mind as to whether or not we ought to abolish the Federal Power Commission and whether or not we ought to transfer those functions of the FPC over to this new agency. I was very much concerned about that and I did not make up my mind until we had gone through a great number of the hearings and until I had the opportunity to meet on several occasions with the administration officials and after much research by the staff and by me personally. But I came to the conclusion that in order for us to really make any headway in solving this energy problem it was going to be necessary for the Department of Energy to have the tools and the ability to respond in the circumstances in which this Nation finds itself at the present time.

There is no question but that we could leave ERDA like it is, and we could leave FEA like it is, and we could leave the FPC like it is, but when we do that we still have the diversification of the energy problem so that there is no single handle that anyone can put on the problem to try to resolve it.

So I came to the conclusion that it is not appropriate that ERDA set the ura-

nium prices and that FEA set the oil prices and that FPC set the gas prices. There ought to be one place where those are going to be set.

I understand some Members of Congress would disagree with that, and as a matter of fact the gentleman from California (Mr. Moss) wants to offer an amendment to do something different, and the gentleman from Michigan (Mr. CONYERS) has another amendment to set up something separate outside the regulatory agency, and there are different other tactics and proposals other Members will be following.

But I submit to the Members that after all the testimony and after all the study and after the hearings and after the deliberations by the subcommittee and the full committee, we came to the conclusion that what we ought to do is set up a separate agency within the Department, and that is what we tried to do when we set up this Federal Energy Regulatory Commission with five members.

At the present time the FPC is bipartisan. That is to be transferred over to the new agency, to the FERC, the Federal Energy Regulatory Commission. We have five Commissioners to be appointed by the President with the advice and consent of the Senate. We have made it so that the Commission has complete independence with regard to hiring of staff. That was not the way it was sent up to us. The committee set it up separately that way.

We have also provided that the Secretary of the Department can only get involved by intervening as any other party could intervene with the Federal Energy Regulatory Commission.

We further provided that the decision of the Commission is final.

I do not know how we can make it any more independent unless we keep it out of the Department.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I yield to the gentleman from Florida (Mr. FUQUA).

Mr. FUQUA. Mr. Chairman, I commend the gentleman. He is absolutely correct.

Furthermore, we insulate him by his budget, so that it cannot be arbitrarily changed or reduced by the Secretary to put on pressure.

Mr. HORTON. That is correct, and it is a very important point.

In addition we felt there were some phases of the work of the FPC that should go to the independent regulatory commission.

So we provided that those functions that are not regulatory would go to this independent agency that we establish. I say, we can do it any way we want. We can keep the FPC; we can keep the FEA, keep ERDA, and not have this Department. Many people do not want to do that; but I think we have got to find some handle in order to resolve the energy crisis that we have in the country today; so I opted for providing the Department with the tools necessary to do the job; that is, to create a separate commission for these functions that are now handled by the FPC.

The CHAIRMAN. The time of the gentleman from New York has expired.

(By unanimous consent, Mr. HORTON was allowed to proceed for an additional 3 minutes.)

Mr. HORTON. Mr. Chairman, we studied long and hard the authorities of FPC. These are the three authorities that are transferred over to the regulatory aspect, which would be under the control of the Secretary: Setting policies of general applicability; taking emergency action and gathering energy information for the rest of the staff in this independent agency.

Now, in my judgment, that is the way to resolve this energy problem insofar as an organization is concerned.

Mr. Chairman, I would hope that my colleagues will vote down this substitute amendment or any other amendment that would try to take away this authority from the Secretary of Energy. In my judgment, if we do not give it to him, we might as well forget about resolving the energy problem.

Mr. MOORHEAD of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I yield to the gentleman from Pennsylvania.

Mr. MOORHEAD of Pennsylvania. Mr. Chairman, is it not correct that for the purposes of congressional oversight, it is better to have one department with all responsibility, rather than fragmented responsibilities, as the present situation is?

Mr. HORTON. I would agree. The gentleman has made a good point.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, I am not being critical of what the committee is recommending; but I am a little at a loss to note the difference between the powers the Secretary would have if he did not have this independent commission within the Department, or the powers the Secretary would have with this independent commission within the Department. It is an independent agency, as I understand it.

Mr. HORTON. That is right.

Mr. EVANS of Colorado. Mr. Chairman, if the gentleman will yield further, what is the difference between being outside the Department or being inside the Department, if it is independent and hires its own staff and has a separate budget and so forth?

Mr. HORTON. The point is that there are certain functions the FPC has, like the setting of well-head prices of natural gas. That is in the FPC.

If we adopt the Erlenborn substitute amendment, that would remain in the FPC.

Under the bill, that authority would be vested in the Secretary. Other important functions, such as determination of the rates which may be charged by wholesale distributors of electric power and natural gas would be under a quasi judicial body; the Federal Energy Regulatory Commission.

The CHAIRMAN. The time of the gentleman from New York has again expired.

(By unanimous consent, Mr. HORTON was allowed to proceed for an additional 2 minutes.)

Mr. HORTON. Mr. Chairman, the judicial aspect would be under the Federal Energy Regulatory Commission. The important thing is the transfer of regulatory functions to the Secretary of the Department.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield further?

Mr. HORTON. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, this is what I was worried about. I think everybody wants to have a commission and everybody wants to have it independent, and yet as we speak of this provision in the bill we also find ourselves speaking about the provision for getting the Secretary more of what he should have to carry out what the policy should be; yet it is an independent commission, as the bill establishes.

Mr. HORTON. That is right. We have transferred those authorities. We were very careful to define those authorities and with the help of the gentleman from California (Mr. Moss), the chairman of the committee, the gentleman from Texas (Mr. Brooks) and I tried to distinguish between those authorities that should go to the independent commission and those that would stay with the Secretary. That is the important aspect of it.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I would like to address a comment to the gentleman from Colorado regarding his inquiries. One of the things that needs to be said in this explanation concerns administrative procedures, the rights of persons who are affected by the decisionmaking resulting from that process. This applies whether it is a utility company, Ralph Nader, an environmentalist or whoever it is.

If the Federal Power Commission remains as it is, we know what those procedures are, and they are fully protective of the rights of all the persons involved, both under the law, the Natural Gas Act and the Federal Power Act, and by the precedents of the Commission which would continue to be in effect.

The CHAIRMAN. The time of the gentleman from New York has expired.

(On request of Mr. Brown of Ohio and by unanimous consent Mr. HORTON was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Ohio. Under the legislation submitted by the administration, the authorities of the Secretary that are taken over from the Federal Power Act and the Natural Gas Act—those authorities formerly held by the Federal Power Commission—would also embrace his opportunity to change those administrative procedures at his will. That is one of the big hooks here, because he might limit the administrative procedures under his own authority when the choice comes to him. I do not think they should be limited.

The question of setting up a Federal Energy Regulatory Commission raises

doubts on both sides of that issue. Does the Federal Energy Regulatory Commission, which Mr. Moss and I would hope to see retain the powers and the independence of the Federal Power Commission, really retain all those powers? Well, I would hope so, and this is why I support the Moss amendment and will support it if it is, in fact, offered.

I also support the Erlenborn amendment because I think it makes further assurances that the Federal Power Commission will be independent and that these rate decisions it has to take in the whole energy area will be made under the old administrative procedure.

Mr. HORTON. I want to make the point again that we can do it any way we want. I think it is better to put it under the aegis of this new department and under this independent commission that we have established. Let us not go back to ground zero. That would be what we would be doing if we adopt the Erlenborn substitute.

Mr. ARMSTRONG. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, the committee owes a debt of gratitude to the gentleman from Illinois for bringing this amendment before us. The amendment corrects the most important shortcoming of the legislation. Let us think a moment about why we have historically developed the tradition of independent regulatory agencies rather than simply vesting regulatory power in the President or politically appointed executives. At least four reasons occur to me.

First, to mitigate at least the worst temptations to corruption. If there is one thing we have discovered over the years, it is that when Federal officials are in a position to convey large economic benefits, whether we are talking about airline routes or radio-television licenses, bank charters, setting milk prices or any other kind of economic benefit that the Federal Government may bestow on or withhold from the private sector, the temptation for corruption is very, very great.

While our regulatory process has been scandal-ridden, at best, the very worst scandals and abuses have occurred under precisely the kind of framework suggested by the bill, that is, where one person has the opportunity to make, without proper safeguards, a decision that has a large economic impact.

In this respect, the Erlenborn amendment is a great improvement.

Second, we have established the tradition of independent regulatory bodies, rather than one man decisions, because it avoids politicizing the decisions. I think the gentleman from Illinois has already explained that Dr. Schlesinger himself admits the reason for concentration of power in the new Secretary of Energy is to permit the use of a political judgment in addition to whatever other factors is taken into account.

The third reason why we have independent regulatory bodies is to provide procedural safeguards, the hearings, the notices, the appellate process; and, most

important, it separates the policymaking, the rulemaking, from the day-to-day program administration.

While I have very serious reservations about other aspects of the bill, the amendment the most glaring problem of this bill and I certainly do hope the Erlenborn substitute will be adopted.

The CHAIRMAN. The question is on the amendment in the nature of a substitute offered by the gentleman from Illinois (Mr. ERLBORN).

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. ERLBORN. Mr. Chairman, I demand a recorded vote.

A recorded vote was refused.

Mr. ERLBORN. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Eighty-one Members are present, not a quorum.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

At the time the point of order of no quorum was made, the amendment in the nature of a substitute offered by the gentleman from Illinois (Mr. ERLBORN) was before the Committee, a recorded vote had been refused, and in the opinion of the Chair the amendment in the nature of a substitute had not carried.

For what purpose does the gentleman from Illinois (Mr. ERLBORN) rise?

Mr. ERLBORN. Mr. Chairman, on the question of my amendment in the nature of a substitute, I demand a division.

On a division (demanded by Mr. ERLBORN) there were—ayes 29, noes 51.

Mr. SYMMS. Mr. Chairman, on that I ask unanimous consent for a recorded vote.

The CHAIRMAN. Is there objection to the request of the gentleman from Idaho?

Mr. MEEDS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard. So the amendment in the nature of a substitute was rejected.

PARLIAMENTARY INQUIRY

Mr. BROWN of Ohio. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. BROWN of Ohio. Mr. Chairman, is it appropriate to ask for the yeas and nays at this point?

The CHAIRMAN. The Chair will state in response to the gentleman's parlia-

mentary inquiry that it is not in order to ask for the yeas and nays in Committee of the Whole.

Are there amendments to title I?

AMENDMENT OFFERED BY MR. ROSE

Mr. ROSE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROSE: Page 65, after line 20, insert the following new paragraph:

(3) in the conservation and development of energy resources, the energy needs of both rural and urban residents shall be given full consideration;

Page 65, line 21, strike out "(3)" and insert in lieu thereof "(4)", and on page 66, line 1, strike out "(4)" and insert in lieu thereof "(5)".

Mr. HORTON (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. ROUSSELOT. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard. The Clerk will read.

The Clerk concluded reading the amendment.

Mr. ROSE. Mr. Chairman and Members of the House, my concern in offering this amendment is that rural and urban energy needs are as diverse as their respective lifestyles. I believe that in formulating and implementing the Nation's energy policy, it is incumbent upon the Secretary of Energy to view these energy needs as different and assess them accordingly.

My amendment is quite simple: It makes a commitment to assessing the energy needs of both urban and rural residents. Such a commitment will assure that the many unique and differing uses for energy in the United States are properly considered in the Nation's energy policy.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. ROSE. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, the gentleman has submitted his amendment to us.

What he is trying to do, in my judgment, is to include rural areas with urban areas. I think it is a good amendment, and I would be perfectly willing to accept it.

Mr. ROSE. I thank the gentleman.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. ROSE. I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, I have no objection to the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Carolina (Mr. ROSE).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. BROOKS

Mr. BROOKS. Mr. Chairman, I know that the gentleman from Maryland (Mr. BAUMAN) has an amendment, and I

would offer in his name or in my name an amendment to page 66, after line 3, of the bill.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. BROOKS: On page 66, after line 3, add the following new language:

(5) to the maximum extent practicable the productive capacity of the private sector of the free enterprise system shall be utilized in the development and achievement of the policies and purposes of this act.

Mr. BROOKS. Mr. Chairman, I will not take more than a half minute to say that the gentleman from Maryland (Mr. BAUMAN) drafted this language and asked my consideration of it. He also discussed it with the gentleman from New York (Mr. HORTON). It seemed like an excellent amendment.

Mr. Chairman, the gentleman from Maryland (Mr. BAUMAN) is unavoidably off the floor at this particular time, but I would say that I would be pleased to accept the amendment.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. BROOKS. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, the gentleman from Maryland (Mr. BAUMAN) talked with me about the amendment; and I am willing to accept the amendment.

Mr. BAUMAN. Mr. Chairman, I regret that I was momentarily absent from the Chamber when title 1 was being considered. I do want to express my sincere appreciation to the gentleman from Texas (Mr. BROOKS) for offering my amendment during my absence and for the kind words which accompanied that offering.

Mr. Chairman, my amendment to the policy declaration section of the bill simply seeks to inject a small amount of economic reality into a bill which lacks such commonsense in many important respects. As I said earlier in debate, the basic premise of this legislation seems to be that the same Government which must accept responsibility for many of the energy problems we now suffer is now to be the savior for those very same problems.

My amendment simply puts the Congress on record as recognizing that without the full use of the private sector of our economy there can be no solution to our energy situation. Would that this was the theme echoed throughout this legislation, but lacking that, perhaps this language will serve as some small direction to the new energy bureaucracy warning them that the Congress expects them to work with and promote the free enterprise system.

Again, I thank my colleagues for their support and urge the adoption of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. BROOKS).

The amendment was agreed to.

Mr. BENNETT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in support of H.R. 6804, to establish a Department of Energy in the executive branch. The legislation is needed and I solicit the full support from the House for it.

I particularly want to commend the distinguished chairman, JACK BROOKS, and the entire committee for their wisdom in assuring that the essential features of the Atomic Energy Act that bear on the common defense and security of the United States remain undisturbed by the reorganizational and related provisions of this bill. Thanks to the work of the committee, section 202 establishes a separate Assistant Secretary to be in charge of "defense programs," and section 310 now expressly continues in effect the division of military applications established by section 25 of the Atomic Energy Act of 1954, as amended, and the functions of ERDA with respect to the Military Liaison Committee as provided for in section 27 of that act.

Suitably separated from the Department's general energy missions, the important national security activities that the Department will inherit from ERDA can continue to be conducted in an effective, comprehensive manner, as in the past. Under the control of the Assistant Secretary for Defense Programs—who will answer directly to the Secretary—responsibility can be appropriately discharged for the nuclear weapon program, for control of the weapon laboratories and production and testing facilities comprising the weapon complex, for fulfillment of restricted data requirements, and for satisfaction of other common defense and security obligations, all without hampering interference, and reasonably apart from the Department's general administration addressed to its responsibilities for civilian energy.

I extend my compliments to the committee, and I feel sure that my remarks would be wholeheartedly endorsed by MEL PRICE, the distinguished chairman of the Armed Services Committee on which I have the honor to serve.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

#### TITLE II—ESTABLISHMENT OF DEPARTMENT

Sec. 201. There is hereby established at the seat of government an executive department to be known as the Department of Energy (hereinafter in this Act referred to as the "Department"). There shall be at the head of the Department a Secretary of Energy (hereinafter in this Act referred to as the "Secretary") who shall be appointed by the President by and with the advice and consent of the Senate. The Department shall be administered under the supervision and direction of the Secretary.

Sec. 202. There shall be in the Department a Deputy Secretary, nine Assistant Secretaries, and a General Counsel, each of whom shall be appointed by the President, by and with the advice and consent of the Senate, and who shall perform such functions as the Secretary shall prescribe from time to time. The Assistant Secretaries shall be designated as follows:

(1) Assistant Secretary for Public, Congressional, and Intergovernmental Relations;

(2) Assistant Secretary for Conservation;

(3) Assistant Secretary for Defense Programs;

(4) Assistant Secretary for Environment;

(5) Assistant Secretary for Fossil and Nuclear Energy Technologies;

(6) Assistant Secretary for Policy, Evaluation, and International Programs;

(7) Assistant Secretary for Competition;

(8) Assistant Secretary for Resource Applications; and

(9) Assistant Secretary for Solar, Geothermal, Recycling, and Other Energy Technologies.

Sec. 203. The Deputy Secretary shall act for, and exercise the functions of, the Secretary during the absence or disability of the Secretary or in the event the office of Secretary becomes vacant. The Secretary shall designate the order in which the Assistant Secretaries, General Counsel, and other officials shall act for, and perform the functions of, the Secretary during the absence or disability of both the Secretary and Deputy Secretary or in the event of vacancies in both of those offices.

Sec. 204. (a) There shall be within the Department an Energy Information Administration to be headed by an Administrator, who shall be appointed by the President, by and with the advice and consent of the Senate. Such Administrator shall be a person who, by reason of professional background and experience, is especially qualified to manage an energy information system. There shall be transferred to and vested in the Administrator (on a nonexclusive basis as the Secretary may determine) all functions and authorities transferred to, and vested in, the Secretary under this Act relating to collection, analysis, and dissemination of energy information and data. The Administrator shall be subject to all duties and responsibilities established under part B of the Federal Energy Administration Act of 1974.

(b) In the performance of his professional functions in connection with collecting, analyzing, and disseminating energy information, the Administrator shall not be responsible to, or subject to, the direction of any officer, employee, or agent of the Department.

(c) The Administrator shall, upon request, promptly provide any information or analysis in his possession to any other administration, commission, or office within the Department relating to the functions of such administration, commission, or office.

Sec. 205. (a) There shall be within the Department an Economic Regulatory Administration to be headed by an Administrator, who shall be appointed by the President, by and with the advice and consent of the Senate. The Secretary shall by rule provide for a separation of regulatory and enforcement functions assigned to or vested in the Administration.

(b) The Secretary shall utilize the Economic Regulatory Administration to administer—

(1) any function which may be delegated to the Secretary under the Emergency Petroleum Allocation Act of 1973;

(2) any function transferred to the Secretary by section 301(b) of this Act which relates to establishment of rates and charges under the Federal Power Act and the Natural Gas Act (subject to the provisions of section 401); and

(3) such other functions as the Secretary may consider appropriate.

(c) The Administrator shall insure an adequate opportunity for public participation, including an opportunity for hearings, in issuing any rules or regulations under this section.

Sec. 206. (a) (1) There shall be within the Department an Office of Inspector General

to be headed by an Inspector General, who shall be appointed by the President, by and with the advice and consent of the Senate, solely on the basis of integrity and demonstrated ability and without regard to political affiliation. The Inspector General shall report to, and be under the general supervision of, the Secretary or, to the extent such authority is delegated, the Deputy Secretary, but shall not be under the control of, or subject to supervision by, any other officer of the Department.

(2) There shall also be in the Office a Deputy Inspector General appointed by the President, by and with the advice and consent of the Senate, solely on the basis of integrity and demonstrated ability and without regard to political affiliation. The Deputy shall assist the Inspector General in the administration of the Office and shall, during the absence or temporary incapacity of the Inspector General, or during a vacancy in that Office, act as Inspector General.

(3) The Inspector General or the Deputy may be removed from office by the President. The President shall communicate the reasons for any such removal to both Houses of Congress.

(4) The Inspector General and the Deputy shall each be subject to the provisions of subchapter III of chapter 73, title 5, United States Code, notwithstanding any exemption from such provisions which might otherwise apply.

(5) The Inspector General shall, in accordance with applicable laws and regulations governing the civil service, appoint an Assistant Inspector General for Audits and an Assistant Inspector General for Investigations.

(b) It shall be the duty and responsibility of the Inspector General—

(1) to supervise, coordinate, and provide policy direction for auditing and investigative activities relating to programs and operations of the Department;

(2) to recommend policies for, and to conduct, supervise, or coordinate other activities carried out or financed by the Department for the purpose of promoting economy and efficiency in the administration of, or preventing and detecting fraud and abuse in, its programs and operations;

(3) to recommend policies for, and to conduct, supervise, or coordinate relationships between the Department and other Federal agencies, State and local governmental entities with respect to (A) all matters relating to the promotion of economy and efficiency in the administration of, or the prevention and detection of fraud and abuse in, programs and operations administered or financed by the Department, and (B) the identification and prosecution of participants in such fraud or abuse; and

(4) to keep the Secretary and the Congress fully and currently informed, by means of the reports required by subsection (c) and otherwise, concerning fraud and other serious problems, abuses, and deficiencies relating to the administration of programs and operations administered or financed by the Department, to recommend corrective action concerning such problems, abuses, and deficiencies, and to report on the progress made in implementing such corrective action.

(c) The Inspector General shall, not later than March 31 of each year, submit a report to the Secretary, to the Federal Energy Regulatory Commission, and to the Congress summarizing the activities of the Office during the preceding calendar year. Such report shall include, but need not be limited to—

(1) an identification and description of significant problems, abuses, and deficiencies relating to the administration of programs and operations of the Department disclosed by such activities;

(2) a description of recommendations for corrective action made by the Office with respect to significant problems, abuses, or deficiencies identified and described under paragraph (1);

(3) an evaluation of progress made in implementing recommendations described in the report or, where appropriate, in previous reports; and

(4) a summary of matters referred to prosecutive authorities and the extent to which prosecutions and convictions have resulted.

(d) The Inspector General shall report immediately to the Secretary, to the Federal Energy Regulatory Commission as appropriate, and to the appropriate committees or subcommittees of the Congress whenever the Office becomes aware of particularly serious or flagrant problems, abuses, or deficiencies relating to the administration of programs and operations of the Department. The Deputy and Assistant Inspectors General shall have particular responsibility for informing the Inspector General of such problems, abuses, or deficiencies.

(e) The Inspector General (1) may make such additional investigations and reports relating to the administration of the programs and operations of the Department as are, in the judgment of the Inspector General, necessary or desirable, and (2) shall provide such additional information or documents as may be requested by either House of Congress or, with respect to matters within their jurisdiction, by any committee or subcommittee thereof.

(f) Notwithstanding any other provision of law, the reports, information, or documents required by or under this section shall be transmitted to the Secretary, to the Federal Energy Regulatory Commission, if applicable, and to the Congress, or committees or subcommittees thereof, by the Inspector General without further clearance or approval. The Inspector General shall, insofar as feasible, provide copies of the reports required under subsection (c) to the Secretary and the Commission, if applicable, sufficiently in advance of the due date for their submission to Congress to provide a reasonable opportunity for comments of the Secretary and the Commission to be appended to the reports when submitted to Congress.

(g) In addition to the authority otherwise provided by this section, the Inspector General, in carrying out the provisions of this section, is authorized—

(1) to have access to all records, reports, audits, reviews, documents, papers, recommendations, and other material available to the Department which relate to programs and operations with respect to which the Inspector General has responsibilities under this section;

(2) to require by subpoena the production of all information, documents, reports, answers, records, accounts, papers, and other data and documentary evidence necessary in the performance of the functions assigned by this section, which subpoena, in the case of contumacy or refusal to obey, shall be enforceable by order of any appropriate United States district court; and

(3) to have direct and prompt access to the Secretary when necessary for any purpose pertaining to the performance of functions and responsibilities under this section.

(h) For purposes of this section, the term "Department" includes any component thereof, including the Federal Energy Regulatory Commission.

Mr. BROOKS (during the reading). Mr. Chairman, I ask unanimous consent that title II be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

#### COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the first committee amendment recommended by the Committee on Post Office and Civil Service.

The Clerk read as follows:

Committee amendment: Page 71, strike out line 3 and all that follows down through line 6 and on page 71, line 7, strike out "(5)" and insert in lieu thereof "(4)".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the remaining committee amendments recommended by the Committee on Post Office and Civil Service.

The Clerk read as follows:

#### Committee amendments:

Page 86, line 12, strike out "the appointment" and all that follows down through line 18, and insert in lieu thereof: "the appointment and employment of hearing examiners in accordance with the provisions of title 5, United States Code."

Page 87, strike out line 3 and all that follows down through line 7.

(3) Page 104, beginning on line 23, strike out "he may appoint" and all that follows down through line 11 on page 105 and insert in lieu thereof the following: "he may establish scientific or professional positions within the Department as provided in section 3104 of title 5, United States Code."

Page 105, strike out line 18 and all that follows down through line 25 and insert in lieu thereof the following:

(b) (1) Subject to the provisions of chapter 51 of title 5, United States Code, but notwithstanding the last two sentences of section 5108(a) of such title, the Secretary may place at GS-16, 17, and 18, not to exceed 350 positions of the positions subject to the limitation of the first sentence of section 5108(a) of such title.

(2) Any position placed at GS-16, 17, or 18 under the authority of paragraph (1) may be filled only by a person who is transferred in connection with a transfer of function under this Act and who, immediately before the effective date of this Act, held a position having duties comparable to those of such position. Appointments under this paragraph may be made without regard to the provisions of section 3324 of title 5, United States Code, relating to the approval by the Civil Service Commission of appointments to GS-16, 17, and 18.

(3) The Secretary's authority under this subsection with respect to any position shall cease when the person appointed to fill such position under paragraph (2) leaves such position.

Page 124, insert after line 15, the following new subsections:

(b) Subsection (a) of section 3104 of title 5, United States Code, is amended by inserting after paragraph (4) the following new paragraph:

"(5) Department of Energy—not more than 200."

(c) Section (a) of section 5108 of title 5, United States Code, is amended by striking out "an aggregate of 2,754" and inserting in lieu thereof "an aggregate of 3,104".

Page 124, line 16, strike out "(b)" and insert "(d)" in lieu thereof.

Page 124, line 19, strike out "(c)" and insert "(e)" in lieu thereof.

Page 124, line 22, strike out "(d)" and insert "(f)" in lieu thereof.

Page 125, line 5, strike out "(e)" and insert "(g)" in lieu thereof.

Page 125, line 18, strike out "(f)" and insert "(h)" in lieu thereof.

(4) Page 107, line 8, strike out "services."

Page 107, line 9, strike out "personnel."

Page 107, line 17, strike out "service," and "personnel."

Page 108, lines 3 and 4, strike out "services," and "personnel."

Page 108, line 11, strike out "services."

Page 108, line 12, strike out "personnel."

(5) Page 114, line 22, strike out "personnel positions."

(6) Page 126, after line 6, insert:

Sec. 716. The Civil Service Commission shall, as soon as practicable but not later than 1 year after the effective date of this Act, prepare and transmit to the Congress a report on the effects on employees of the reorganization under this Act, which shall include—

(1) an identification of any positions within the Department or elsewhere in the executive branch, which it considers unnecessary due to consolidation of functions under this Act;

(2) a statement of the number of employees entitled to pay savings by reason of the reorganization under this Act;

(3) a statement of the number of employees who are voluntarily or involuntarily separated by reason of such reorganization;

(4) an estimate of the personnel costs associated with such reorganization;

(5) the effects of such reorganization on labor management relations; and

(6) such legislative and administrative recommendations for improvements in personnel management within the Department as the Commission considers necessary.

Page 126, line 7, strike out "Sec. 716." and insert "Sec. 717." in lieu thereof.

Page 126, line 11, strike out "Sec. 717." and insert "Sec. 718." in lieu thereof.

Mrs. SCHROEDER (during the reading). Mr. Chairman, I ask unanimous consent that all of the remaining committee amendments, which were set forth in the report of the Committee on Post Office and Civil Service, be considered en bloc, be considered as read and be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

Mrs. SCHROEDER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the Government Operations Committee language in section 206(a)(4) says that "notwithstanding any exemption from such provisions which might otherwise apply." Subchapter III of chapter 73 of title 5, United States Code, the Hatch Act, will apply to the Inspector General and Deputy Inspector General of the Department of Energy.

Our committee strikes this subsection.

Under the present Hatch Act, employees who are appointed by the President by and with the advice and consent of the Senate, and who determine policies to be pursued by the United States in the nationwide administration of Federal laws, are excluded from the prohibition that the general run of employees have against taking an active part in political management or in political campaigns. This exclusion would cover the Inspector General, and the Deputy, who would be prohibited from such activities, because neither are in-

involved in the nationwide administration of Federal laws. And any employee is prohibited from using his official authority or influence for the purpose of interfering with or affecting the result of an election.

The problem with this, however, is that the "notwithstanding any other provision of law clause" in the Government Operations' bill may backfire if H.R. 10, the Hatch Act revisions, is passed. It would make this single officer the only officer not subject to the Hatch Act at all, "notwithstanding" the tightening up H.R. 10 does with regard to the general class of employees to which the Inspector General belongs.

The committee urges adoption of this amendment, to preserve its own jurisdiction over to whom the Hatch Act should or should not apply.

#### AMENDMENT NO. 2

This amendment does two things:

First, it corrects certain references to the law applied to the appointment, assignment, removal, and compensation of hearing examiners. H.R. 6804 as reported by the Government Operations Committee does not cite all applicable sections of title 5 and thus raises the inference that the Department of Energy hearing examiners would not be subject to all provisions of hearing examiner law.

Second, and quite importantly, the amendment deletes the language which would permit the Department of Energy's Federal Energy Regulatory Commission its own hearing examiner pool rather than making it use the Civil Service Commission pool (created in 5 U.S.C. 5108 (a)), which most other agencies and departments requiring hearing examiners must use.

Without this amendment we cannot be assured that Commission hearing examiners will receive all the benefits and guarantees of impartiality and independence which the Administrative Procedures Act requires for hearing examiners holding hearings under the act.

Without these amendments, adjudications by Commission hearing examiners might be open to collateral attack on the basis that, although the Commission is supposed to hold hearings under the APA, its hearing examiners do not qualify as true APA hearing examiners, because they do not have all the protections of independence—from proper benefits to—by their being in a special energy department pool—proper independence from their appointing body—which other APA examiners by statute have.

I want to note that, as a matter of the status quo, the Federal Energy Administration and the Federal Power Commission now use Civil Service pool hearing examiners, and that on this point the Government Operations Committee bill is granting an authority—the special pool—beyond merely reorganizing these agencies. Since other parts of the bill will transfer these hearing examiners to the Department of Energy, there will be ample examiners available for the Department to start up.

In addition, I will note that our committee has reported a bill (H.R. 6375) which will soon come to the floor which

will increase the Civil Service Commission pool of supergrade hearing examiners. We believe that this approach, which will assist all departments and agencies facing hearing examiner shortages, including the Department of Energy if it finds itself in that position, is the better management approach than the creation of special pools of high level bureaucrats at specific departments.

#### AMENDMENT NO. 3

This amendment—unless Congress believes the merit system cannot deliver the goods—and I cannot but believe from the debate over the Hatch Act that we are not concerned with the merit system—in no manner interferes with the mission of the Department of Energy. It merely permits the Department of Energy like any other department to meet its goals through employees obtained by established means.

It will not affect any of the employees covered by it one iota.

It does not reduce the number of employees in these jobs.

This amendment amends section 607 of the bill, relating to the appointment of scientific and professional personnel, and section 608, relating to the establishment of supergrade GS-16, -17, and -18—positions. In addition, there are corresponding amendments to sections 3104(a) and 5108(a) of title 5, United States Code.

Section 607, as reported by the Government Operations Committee, authorizes the Secretary to appoint an unspecified number—estimated to be approximately 511—of scientific, engineering, and professional personnel without regard to the civil service laws and to fix the compensation of such personnel at rates not in excess of the rate for grade GS-18 of the general schedule—currently \$47,500. The effect of this authority is to except such personnel from the laws and regulations governing the competitive service—merit system rules would not apply—and from the laws governing the classification of positions and the pay of Federal employees.

The committee believes that such exceptional authority is unnecessary to meet the personnel needs of the new Department. Therefore, this committee's amendment strikes from section 607 the Secretary's authority to appoint and fix the pay of scientific, engineering, and professional personnel without regard to civil service laws and inserts, in lieu thereof, authority to establish scientific or professional positions within the Department as provided in section 3104 of title 5, United States Code. This amendment, together with a corresponding amendment to section 3104(a) of title 5, will authorize the Secretary to establish 200 scientific or professional positions to carry out the research and development functions of the new Department. In accordance with existing laws—section 3325 of title 5—these scientific or professional positions will be in the competitive service, but appointments to such positions will be made without competitive examination on approval of the qualifications of the proposed appointees by the Civil Service Commission. Also in

accordance with existing law—5 U.S.C. 5361—the rate of basic pay for such positions may be fixed by the head of the agency, subject to the approval of the Civil Service Commission, at a rate not less than GS-16 nor more than GS-18 of the general schedule.

Section 608(b), as reported by Government Operations, authorizes on a permanent basis 105 GS-16, -17, and -18 positions for the new Department. These positions would not be part of the Government-wide pool of supergrade positions established under section 5108(a) of title 5.

This committee consistently has been opposed to the granting of special authority to establish supergrade positions outside of the Government-wide pool and beyond the control of the Civil Service Commission. In lieu of such authority, this committee's amendment enlarges the Government-wide pool under section 5108(a) of title 5 by 350 positions and temporarily allocates such positions to the Department of Energy. However, the amendment specifically provides that such positions may be filled only by a person who is transferred to the new Department in connection with a transfer of function under the act and who, immediately before the effective date of the act, held a position which had duties comparable to those of the supergrade position. The initial appointments to the 350 positions are authorized to be made without regard to section 3324 of title 5, which requires Civil Service Commission approval of the qualifications of a proposed appointee to a position in GS-16, -17, or -18.

The allocation of 350 supergrade positions from the Government-wide pool to the Energy Department is intended to facilitate the transfer of supergrade and supergrade-equivalent employees from existing agencies such as ERDA and the Federal Energy Administration. This special allocation insures that the Secretary immediately will have at his disposal a sufficient number of supergrades to meet the staffing needs of the new Department.

However, to be consistent with this committee's policy of keeping the control over supergrades in the Civil Service Commission, the amendment further provides that each of the 350 supergrade positions will revert to the Government-wide pool and to the control of the Civil Service Commission when the person originally appointed to such position subsequently vacates the position. Thereafter, the Department of Energy, as any other Federal agency, will have to request allocation of supergrade positions from the Civil Service Commission.

This amendment is the most important of the committee package. Without it, there would be at the Secretary of Energy's disposal, an authority unprecedented in any department to fill 511 top jobs without regard to civil service laws and regulations, without review, and without accountability.

While we may all know the present administration—and the presumed Secretary of Energy—will not fill these jobs with undeserving individuals, the au-

thority in H.R. 6804 without the amendment is broad enough to assure that all 435 of us in the House could—without even putting on white coats—go to work for the Department of Energy as "scientists, engineers, and professional" types, and have a good many jobs left over.

#### AMENDMENT NO. 4

This amendment amends section 612 of H.R. 6804, deleting the words "services" and "personnel" throughout the section.

As reported by the Committee on Government Operations, section 612 grants extraordinary authority to the Secretary of the Department of Energy and to the Federal Energy Regulatory Commission to use the research, services, equipment, personnel, and facilities of any Federal, State, local, and foreign governmental agency or to provide research, services, equipment, personnel, and facilities to such Federal, State, local, or foreign governmental agencies. It is extraordinary because although the law provides for certain detailing of personnel to and from Federal, State, and local governments, nowhere does the law which applies to governmental departments grant such broad authority and nowhere does the law permit the rather interesting concept of loaning or borrowing employees from foreign governments.

This committee makes no judgment with respect to the authority for using or furnishing research, equipment, and facilities. However, with respect to the using and furnishing of services and personnel, we believe that the provisions of section 612 conflict with the Intergovernmental Personnel Act which adequately provides for the assignments of employees to and from State and local governments. Moreover, during the hearings conducted by my Subcommittee on Employee Ethics and Utilization, administration witnesses could not justify the need for this extraordinary authority with respect to the use and furnishing of personnel and services, nor could they offer examples of how the authority would be used which could not be handled through the IPA or other arrangements which are available to Government departments.

#### AMENDMENT NO. 5

This amendment strikes out the reference to "personnel positions" in section 701 of the bill. Section 701 in H.R. 6804 as reported by the Committee on Government Operations provides for the transfer of personnel, personnel positions, property, records, and funds to the Secretary of energy for appropriate allocation.

The committee believes that the authority to transfer personnel to the new Department in connection with the various transfers of functions authorized under the provisions of the bill is sufficient to accomplish the purposes of the act.

It is not necessary to transfer "personnel positions." Since the words "personnel positions" are a term of art in the Civil Service, and could be interpreted as meaning excepted positions are to be transferred, such authority conflicts with section 607 of the bill which provides

that officers and employees of the Department of Energy shall be appointed in accordance with the civil service laws.

#### AMENDMENT NO. 6

This amendment inserts a new section 716 in the bill. The new section requires the Civil Service Commission to prepare and transmit to the Congress a report on the effects on employees of the reorganization under the act. The Commission's report must be transmitted not later than 1 year after the effective date of the act.

Because of the magnitude of the reorganization which will take effect under this act, the 20,000 employees which will be affected by such reorganization, and the thousands of others who will have their jobs revamped at other agencies because of the moves, this committee believes that the Congress should be furnished comprehensive information relating to the overall impact of the reorganization. Therefore, the Commission's report will cover such matters as:

Positions which have become unnecessary due to the consolidation of functions under the act;

The number of employees who have separated as a result of the reorganization;

An estimate of the personnel costs associated with the reorganization; and

Recommendations for improvements in personnel management within the Department of Energy.

In this light, although the Office of Management and Budget will oversee the general reorganization, the committee expects that in order to carry out its reporting, the Civil Service Commission will have to play a great part in overseeing the effects of the reorganization upon employees. This report will be especially valuable when further administration reorganizations take place as a resource tool to assure that mistaken policies do not repeat themselves, and good policies are repeated.

The CHAIRMAN. The question is on the committee amendments recommended by the Committee on Post Office and Civil Service.

The committee amendments were agreed to.

Mr. HORTON. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I want to point out that one of the Assistant Secretaries—who will be called the Assistant Secretary for Defense Programs—will be responsible for, and will report directly to the Secretary in regard to, the common defense and security functions provided for in the Atomic Energy Act. This responsibility will pertain to the nuclear weapons program, including essential control over the weapon complex, to the restricted data process spelled out in the Atomic Energy Act, and to the sensitive nuclear activities that affect the common defense and security of our country. These important features of the Atomic Energy Act, including the related organizational units established by that act and designated, respectively, the Division of Military Application and the Military Liaison Committee, will continue in effect without modification.

## AMENDMENT OFFERED BY MR. MOSS

Mr. MOSS. Mr. Chairman, I offer an amendment.

The clerk read as follows:

Amendment offered by Mr. Moss: Page 75, after line 16, add the following new section:

Sec. 207. (a) There shall be within the Department an Office of Energy Research to be headed by a Director, who shall be appointed by the President, by and with the advice and consent of the Senate.

(b) It shall be the duty and responsibility of the Director—

(1) to administer the physical research program transferred to the Department from the Energy Research and Development Administration;

(2) to monitor the Department's energy research and development programs in order to advise the Secretary with respect to any undesirable duplication or gaps in such programs;

(3) to advise the Secretary with respect to the well-being and management of the multipurpose laboratories under the jurisdiction of the Department, excluding laboratories that constitute part of the nuclear weapon complex;

(4) to advise the Secretary with respect to education and training activities required for effective short- and long-term basic and applied research activities of the Department;

(5) to advise the Secretary with respect to grants and other forms of financial assistance required for effective short- and long-term basic and applied research activities of the Department; and

(6) to carry out such additional duties assigned to the Office by the Secretary relating to basic and applied research, including but not limited to supervision or support of research activities carried out by any of the Assistant Secretaries designated by section 202 of this Act, as the Secretary considers advantageous.

Mr. MOSS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. MOSS. Mr. Chairman, the organizational unit my amendment would add to the new Department will perform certain valuable functions that I believe need to be expressly delineated in the Department's legislative charter. These are:

First. Administration of ERDA's extensive physical research program.

This program includes basic and applied research to further our understanding of natural laws and phenomena governing all matter. It encompasses research in high energy, medium energy, low energy, and nuclear physics, in the properties of materials, in chemical sciences, and in engineering, mathematics and geosciences. Essentially, it comprises all basic research, except research geared to defense programs or the life sciences.

The physical research program spawned the fusion program, which is now an advanced, very promising energy mission that will be the responsibility of one of the Department's Assistant Secretaries. And it is logical to expect that basic and applied research in the

physical sciences will ultimately enable the human brain to penetrate the innermost secrets that nature employs in its amalgamation of elemental particles and forces to create the building blocks of matter and the fount of all energy.

Second. The second category of functions will help assure the avoidance of any undesirable duplication or gaps in the Department's research programs. Through overall monitoring by this Office of Energy Research the possibility of any such undesirable misapplication or nonapplication of effort and money will be minimized.

Third. The third category of functions addresses the very important need to assure the continued well-being and effective management of the multipurpose laboratories that the Department will maintain. The advice of the Director of the Office my amendment would establish, and the conduct by the Office of related contract negotiations and other duties with respect to the Department's non-weapon-related laboratories that the Secretary may well prefer that the Office be responsible for, will help assure appropriate departmental attention to the proper maintenance of these major national assets.

Fourth. The fourth category of functions is the vital area of education and training activities that are essential for the fulfillment of all of the Department's research and development functions. Appropriate liaison and programs with academic and other institutions, and effectively tailored procedures, must address the variety of educational and training needs that will be required to assure an adequate reservoir of talents and skills for long-range progress toward solving our energy dilemma. This Office will play a key role in this important area.

Fifth. The fifth category would assist the Secretary in getting the adequate base of full information and advice with respect to grants and other forms of financial assistance that will be required for some of the Department's basic and applied research activities.

Sixth. Finally the Office would carry out such additional duties as the Secretary may consider desirable. For example, the Secretary, from time to time, might well consider it advantageous to the Department to require the Office to supplement certain of the basic or applied research activities generally within the bailiwick of a particular Assistant Secretary.

From an overall standpoint, I firmly believe the amendment is necessary to help provide a realistic prospect for the existence, maintenance, and availability of a healthy scientific base on which the Secretary can—and will have to—draw.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from New York.

Mr. HORTON. I thank the gentleman for yielding.

I want to join with the gentleman in his remarks. During the course of the testimony of the administration witnesses, I expressed concern about the

long-term research and development aspect of the new Department. If the gentleman will remember, this committee, the Committee on Government Operations, handled the formation of the new Energy Research and Development Administration, and I felt I had a very important part in the development of that agency.

I feel it is very important that we protect and preserve that long-range research and development. I think that the gentleman's amendment does solve that deficiency in the creation of this Department. I feel it is a very important amendment, and I hope that the House and the committee will support the amendment because it does give the important ingredients for the academic research and development that is so important for the overall long-range research and development in this very important field.

Mr. MOSS. I thank the gentleman. I would like to observe that not only has he made significant contributions to the creation of the Energy Research and Development Administration, but he has served with distinction on the Joint Committee on Atomic Energy and given a great deal of leadership in that area.

Mr. HORTON. I thank the gentleman from California.

Mr. MOSS. I thank the gentleman.

Mr. BROOKS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I want to say that I appreciate the concern of the gentleman from California (Mr. Moss), and I recognize the necessity and desirability of giving due recognition—and it is almost impossible to give enough recognition—to the issue of research and development in the new Department. But there is no question that research and development will be a major activity of the Department as now structured.

My personal feeling is that energy research and development can be adequately performed and monitored within the structure of the committee bill. As the gentleman knows, I did not prefer naming all of the Assistant Secretaries, but when the committee adopted an amendment allocating functions among the Assistant Secretaries, on a bipartisan effort by Republicans and Democrats, several of those Assistant Secretaries, particularly the Assistant Secretary for Fossil and Nuclear Energy Technologies and the Assistant Secretary for Solar, Geothermal, Recycling, and Other Technologies, will have the responsibility for policy and management of research and development, including demonstration. About five Assistant Secretaries will have some research requirements and responsibilities. And the Assistant Secretary for Policy should certainly be in a position to coordinate the research and development functions and ultimately the Secretary himself would undoubtedly wield substantial influence as well.

I hesitate to encumber the Department with numerous fragmented offices which may or may not fit into the ultimate scheme at all. I do not share the concern of the university community, including my own alma mater and many others, that there will be any lack of

attention paid to research and development. For those reasons, I reluctantly oppose the amendment offered by the gentleman from California.

Mr. PICKLE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to speak in support of the gentleman's (Mr. Moss) amendment to establish an Office of Energy Research within the Department of Energy.

I think that the establishment of this Office is of great importance for meeting our Nation's energy needs in the future. Since President Carter's energy message in April there has been a greater awareness of the role that alternative energy sources will play in the coming years.

New sources such as solar, geothermal, wind, biomass conversion, fusion, and synthetic fuels must be developed to fill the gap when our fossil fuel supplies begin to drop off. The development of these new sources is so important to our future that we cannot afford to take a hodge-podge approach to this research. We must have a coordinated, intensive national research and development program.

We cannot allow our Nation's energy research efforts to be shifted from one office to another with the right hand not knowing what the left hand is doing. It should be done out of one office not only to avoid duplication of efforts but also to assure that no stone is left unturned in our search for new sources of energy.

By passing this amendment and establishing this Office, we will be assuring that energy research will continue as one of the country's top priorities.

In my district, the University of Texas at Austin has been conducting one of the country's leading energy research programs. The Center for Energy Studies headed by Dr. William Drummond at UT has set up a broad program of energy research that is making important advances in the areas of fusion energy, geothermal energy, gasification, and solar energy.

This work must continue and it should continue in coordination with all of the other energy research that is being conducted throughout the country.

I urge my colleagues to accept this amendment to create a balanced, centralized approach to energy research and development.

The Department of Energy needs an organizational component in the Office of the Secretary responsible for its total research program that takes into account immediate, middle range, and long range research needs. The research program must be coordinated in a way that establishes balance without discouraging initiative, and special pains must be taken to insure that research which does not fit neatly into the categories of energy programs is adequately supported. The program must insure both that research required to meet immediate needs is carried out, and that research basic to the mission of the Department is adequately supported in the face of strong and proper pressures to act decisively to

meet immediate needs. These responsibilities of the Department can most effectively be carried out by an Office of Energy Research which would have the following responsibilities:

Advise the Secretary on coordination and development of the near and long range basic and applied research programs of the Department;

Monitor energy problems to insure that the research required for effective programs is undertaken;

Review the research programs of the operating divisions;

Arrange for independent technical and scientific advice to the Secretary on the full range of the plans and programs of the operating divisions;

Advise the Secretary on Department-wide policies to insure the appropriate involvement of university, industrial, and National laboratories in energy research;

Monitor needs for persons with special training required for the total national energy research and development effort, and insure that these needs are met;

Assess levels of investment across the Department in basic and applied research and in development to insure that they are balanced and directed toward solution of current and long-range problems;

Provide support for those long-range research activities that do not fall within the missions of the operating divisions; and

Insure that clear and useful information on the national energy research program is presented to Congress and the White House in a timely manner.

These tasks can best be effectively carried out in the Office of the Secretary. The tasks have such a large scientific and engineering component, and they are of such magnitude and variety, that the Secretary and the Deputy Secretary would find it impossible to carry them personally.

The need for such an Office is generated by a research program with characteristics like the research program of the Department of Defense. Both are complex, diverse, and located primarily in operating entities with a substantial degree of autonomy. Both need central monitoring and coordination. Both Secretaries need competent, independent advice to complement advice from operating components.

All of these considerations lead to the placement of this cross-cutting research and development function in an Office of Energy Research reporting to the Secretary. The research and development functions are so intertwined with all operating aspects of the Department and are so central to the mission of the Department that such an Office of Energy Research for this purpose should be created by law, with a person of the highest qualifications to be appointed by the President and confirmed by the Senate.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from Texas (Mr. Brooks).

Mr. BROOKS. Mr. Chairman, I want to say to my distinguished friend from north Texas that nobody better represents his constituents. I want to commend the gentleman for the gentleman's dedication and say with all due respect that I reserve my right to feel that it would be duplicatory and unnecessary to create such a separate agency to funnel money into these university research projects.

Mr. PICKLE. Mr. Chairman, I am not speaking now of the University of Texas alone. I am talking about the university in coordination with dozens of others in this land of ours that are carrying on work highly needed.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from California.

Mr. MOSS. Mr. Chairman, I thank the gentleman for his remarks, because I think it focuses on one of the objectives stated repeatedly by the administration in seeking this Department, to have better coordination of our effort in meeting the energy needs, the ongoing energy needs of this Nation. There is nothing more logical than to tie together the research programs, so that they are monitored, so that they are coordinated. That is not possible if five or nine Assistant Secretaries are to share responsibilities, with no one acting as a coordinator.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, I appreciate the gentleman yielding.

I have a great deal of respect for the gentleman from California (Mr. Moss) and for the gentleman in the well (Mr. PICKLE); yet I am not convinced that what the gentleman is trying to do will be done by the amendment. We have various Assistant Secretaries on various energy-related matters in the bill. Now, if the amendment of the gentleman from California were to pass, each of the other Assistant Secretaries having made up their minds what their recommendations for research would be, would then have to go to the Assistant Secretary for Research for his recommendations when the budget is made up.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

(At the request of Mr. EVANS of Colorado, and by unanimous consent, Mr. PICKLE was allowed to proceed for an additional 2 minutes.)

Mr. EVANS of Colorado. Mr. Chairman, if the gentleman will yield further, as these budgets are made up, it seems to me we are creating a competing Secretary where all these other Assistant Secretaries, after they have made up their minds, will then have to funnel their ideas before they get to the Secretary. I think it is mischievous.

Mr. PICKLE. Mr. Chairman, I must reply to the gentleman this way. It is not setting up duplicating groups for the various programs to coordinate. In the five or six different agencies, each one can make their own recommendation on

certain emphasis on research. That ought to be done, but it should be coordinated in the one agency. If they do not, it will just proliferate down there and end up with one great big laboratory. If we do not do that, it will damage the other research being done in American universities. It does just the opposite of the apprehension the gentleman raises.

Mr. EVANS of Colorado. Mr. Chairman, if the gentleman will yield further, I think the responsibility for this decision stays in the Secretary. They are in the Secretary. I do not think an additional Secretary would be very efficient.

Mr. PICKLE. I will say to the gentleman from Colorado, the Secretary will have that authority to do it through his office. That office will be immediately under the Secretary. Whatever that division does would have to be cleared with the Secretary. That is all the more reason to have it.

Mr. HORTON. Mr. Chairman, I move to strike the requisite number of words. I rise in support of the amendment.

Mr. Chairman, as I indicated to my colleague, the gentleman from California (Mr. Moss), I think this is a good amendment. I hope that the committee will adopt the amendment.

Mr. Chairman, I received a copy of a letter from a very good friend of mine who is also the President of the University of Rochester, Robert L. Sproull. I would like to read two paragraphs of the letter because it goes to the substance of what we are talking about here.

Bob says:

The proposed organization pattern for the new Department of Energy is notably deficient in one critical aspect: There is no provision within the organization to emphasize the urgency of and give recognition to the crucial importance of a strong and balanced research and development effort for this country's greatest problem, energy resources for the future. From my experiences in government, on national scientific committees and panels, and at a research university, it is my strongest opinion that this country must safeguard the role of research and development in the energy program if we wish to conquer the many obstacles in the long path of solving the energy problems.

To suggest, as some have, that research and development will be adequately covered in each of the program organizational units is a specious argument. The history of research programs proves clearly that unless there is strong leadership for and statutory recognition of the program in the organizational structure at the highest level, the near-term development efforts will drive away the more difficult and long-range fundamental research tasks that are absolutely necessary to lay the foundations for the resolutions to future problems. This country would make a serious error if it did not act now to give a strong, central role to energy R&D on the basis of what we learned at great expense over the years in other programs.

There are other points which I will not refer to here now except to say that the Energy Research and Development Administration is charged with the principal responsibility for long-term research and development. They only had about 2 years to get started. It is very true that if we do not do something to protect that long-term research and development, it is going to get swallowed up in

trying to resolve the immediate problems. So, I think it is very important that we adopt this amendment.

I also have copies of telegrams from the president of Ohio State University, Harold L. Enarson; Archie R. Dykes, chancellor, University of Kansas; John W. Oswald, president, the Pennsylvania State University; and also the executive director of the National Association of State Universities and Land-Grant Colleges, Ralph K. Hutt.

Mr. Chairman, I urge adoption of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. Moss).

The amendment was agreed to.

#### AMENDMENTS OFFERED BY MR. CONYERS

Mr. CONYERS. Mr. Chairman, I offer amendments.

The Clerk read as follows:

Amendment offered by Mr. CONYERS: On page 69, strike out line 6 and all that follows down through line 4 on page 70, and redesignate the following sections in Title II accordingly.

Mr. CONYERS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the Record.

The CHAIRMAN. The Chair will state that the amendment has been read in full.

Mr. CONYERS. Mr. Chairman, I submitted a combined amendment that brought together that language and the National Energy Board. I ask unanimous consent that these amendments be considered en bloc, be considered as read, and be printed in the Record.

The CHAIRMAN. The Clerk will report the second amendment.

The Clerk read as follows:

Amendment offered by Mr. CONYERS: On page 84, strike out line 17 and all that follows down through line 14 on page 90 and insert in lieu thereof the following new title:

#### TITLE IV—NATIONAL ENERGY BOARD

Sec. 401. (a) (1) There is hereby established an independent regulatory board to be known as the National Energy Board (hereinafter referred to in this title as the "Board").

(2) There are hereby transferred to, and vested in the Board (A) all functions and authority of the Federal Power Commission under the Federal Power Act and the Natural Gas Act which are not specifically transferred to, and vested in, the Secretary pursuant to section 301(b) of this Act, (B) all functions transferred to the Secretary by section 301(b) of this Act which relate to establishment of rates and charges under the Federal Power Act and the Natural Gas Act, (C) all functions which may be delegated by the President under the Emergency Petroleum Allocation Act of 1973, (D) all functions of the Energy Research and Development Administration with respect to uranium enrichment prices under the Energy Reorganization Act, and (E) all other functions transferred by title III of this Act which involve an agency determination required by law to be made on the record after opportunity for an agency hearing.

(3) Notwithstanding section 301(b)(1), the Board shall have the authority to prescribe, issue, make, amend, and rescind rules, regulations, and statements of policy under section 309 of the Federal Power Act and section 16 of the Natural Gas Act.

(b) The Board shall be comprised of seven

members appointed by the President by and with the advice and consent of the Senate. One of the members shall be designated by the President as Chairman. Members shall hold office for a term of four years and may be removed by the President only for inefficiency, neglect of duty, or malfeasance in office. Appointments shall be made with due regard for maximizing the diversity of representation on the Board and for considering the views of recognized interest groups, including, but not limited to, groups involving consumers, environmentalists, labor and management from energy and nonenergy industries, agriculture and different regions of the country. The terms of the members first taking office shall expire (as designated by the President at the time of appointment), two at the end of two years, two at the end of three years, two at the end of four years, and one at the end of five years. Not more than four members of the Board shall be members of the same political party. Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. A member may continue to serve after the expiration of this term until his successor has taken office, except that he may not so continue to serve more than one year after the date on which his term would otherwise expire under this subsection.

(c) (1) The Chairman shall be responsible on behalf of the Board for the executive and administrative operation of the Board, including functions of the Board with respect to (A) the appointment of such hearing examiners as he deems necessary to assist in the performance of the Board's functions and to fix their compensation in accordance with the provisions of title 5, United States Code; except that assignment, removal, and compensation of such hearing examiners shall be in accordance with sections 3105, 3314, 5302, and 7521 of title 5, United States Code, (B) the selection, appointment, and supervision of personnel employed by or assigned to the Board, except that each member of the Board may select and supervise personnel for his personal staff, (C) the distribution of business among personnel and among administrative units of the Board, and (D) the use and expenditure of funds appropriated for Board functions. The Secretary shall provide to the Board such support and facilities as the Board may need to carry out its functions.

(2) The hearing examiners appointed pursuant to this section shall be subject to the laws governing employees in the classified civil service, except that appointments shall be made without regard to section 5108 of title 5, United States Code.

(d) In each annual authorization and appropriation request for the Board under this Act, the Chairman shall include a statement showing (1) the amount requested by the Board in its budgetary presentation to the Office of Management and Budget and (2) an assessment of the budgetary needs of the Board. Whenever the Board submits any legislative recommendations or testimony, or comments on legislation, to the Secretary, the President, or the Office of Management and Budget, it shall concurrently transmit a copy thereof to the appropriate committees of Congress.

(e) A decision of the Board shall be a final agency action within the meaning of section 704 of title 5, United States Code, with respect to matters within the Board's jurisdiction.

(f) The Chairman of the Board may from time to time designate any other member of the Board as Acting Chairman to act in the place and stead of the Chairman during his absence. The Chairman (or the Acting Chairman in the absence of the Chairman) shall preside at all sessions of the Board

and a quorum for the transaction of business shall consist of at least four members present. Each member of the Board, including the Chairman, shall have one vote. Actions of the Board shall be determined by a majority vote of the members present. The Board shall have an official seal which shall be judicially noticed.

(g) The Board is authorized to establish such procedural and administrative rules as are necessary to the exercise of its functions. Until changed by the Board, the rules of the Federal Power Commission shall continue in effect.

(h) In carrying out all its functions, the Board shall have the powers authorized by the Federal Power Act and the Natural Gas Act to hold hearings, sign and issue subpoenas, administer oaths, examine witnesses, and receive evidence at any place in the United States it may designate. The Board may, by one or more of its members or by such agents as it may designate, conduct any hearing or other inquiry necessary or appropriate to its functions.

Sec. 402. (a) No person in the employ of, or holding any official relation to, any person, firm, association, or corporation engaged in the production, generation, transmission, distribution, or sale of electric power, petroleum, petroleum products, natural gas, coal, nuclear material, synthetic fuels, or energy from renewable resources, wastes, or geothermal steam, or in energy research or development, or owning stock or bonds thereof, or who has a pecuniary interest therein, shall enter upon the duties of, or hold the office of, Board member. Members shall not engage in any other business, vocation, or employment while members of the Board.

Sec. 403. The principal office of the Board shall be in or near the District of Columbia, where its general session shall be held; but the Board may sit anywhere in the United States.

Sec. 404. Subject to applicable provisions of law, officers of all Departments of the Government and all Federal agencies shall cooperate with the Board in providing, upon request, such information as it may require.

Sec. 405. Nothing in this title shall be construed in any way to limit the functions of the Secretary relating to activities within the jurisdiction of the Secretary, including any shared with the Board.

Sec. 406. The Secretary may as of right intervene or otherwise participate in any adjudicatory proceeding before the Board. The Secretary shall comply with rules of procedure of general applicability governing the timing of intervention or participation in such proceeding or activity and, upon intervening or participating therein, shall comply with rules of procedure of general applicability governing the conduct thereof. The intervention or participation of the Secretary in any proceeding or activity shall not affect the obligation of the Board to assure procedural fairness to all participants.

Sec. 407. For the purpose of section 552b of title 5, United States Code, the Board shall be deemed to be an agency.

Sec. 408. Section 4 of the Emergency Petroleum Allocation Act of 1973 is amended by adding at the end thereof the following new subsection:

"(h) (1) The National Energy Board, upon consultation with the Secretary, is authorized to promulgate a rule which shall be deemed a part of the regulation issued under subsection (a) and which shall provide, consistent with the objectives of subsection (b), for the establishment of a program for the rationing and ordering of priorities among classes of end-users of crude oil, residual fuel oil, or any refined petroleum product, and for the assignment to end-users of such products of rights, and

evidence of such rights, entitling them to obtain such products in precedence to other classes of end-users not similarly entitled.

"(2) The rule under paragraph (1) of this subsection shall take effect only if the National Energy Board, upon consultation with the Secretary, finds that (A) national or regional energy shortage conditions exist which are of such severity or scope as to require the exercise of the end-use rationing authority, or (B) available petroleum products are or are likely to be no more than sixteen million barrels a day.

"(3) Recognizing that gasoline usage may vary according to characteristics of individual regions of the country, in establishing standards of end-use gasoline rationing under paragraph (1) of this title, the National Energy Board, upon consultation with the Secretary, shall designate individual regions of the country as (A) rural, (B) suburban, or (C) urban, on the basis of population density and establish variable gasoline allocation criteria accordingly.

"(4) The National Energy Board, upon consultation with the Secretary, shall provide for procedures by which any end-user of crude oil, residual fuel oil or refined petroleum products for which priorities and entitlements are established under paragraph (1) of this subsection may petition for review and reclassification or modification of any determination made under such paragraph with respect to his rationing priority or entitlement. Such procedures may include procedures with respect to such local boards as may be authorized to carry out functions under this subsection pursuant to section 120 of the Standby Energy Emergency Authorities Act.

"(5) No rule or order under this section may impose any tax or user fee, or provide for a credit or deduction in computing any tax.

"(6) Nothing in this act may be construed to prohibit the legal sale of gasoline coupon rations by holders of such coupons.

"(7) (a) Action taken under authority of this Act, the Emergency Petroleum Allocation Act of 1973, or other Federal law resulting in the allocation of petroleum products and electrical energy among classes of users or resulting in restrictions on use of petroleum products and electric energy, shall be equitable, shall not be arbitrary or capricious, and shall not unreasonably discriminate among classes of users, unless the Administrator determines that such a policy would be inconsistent with the purposes of this Act, or other Federal laws and publishes his findings in the Federal Register. Allocations shall contain provisions designed to foster reciprocal and nondiscriminatory treatment by foreign countries of United States citizens engaged in commerce.

"(b) To the maximum extent practicable, any restriction on the use of energy shall be designed to be carried out in such manner so as to be fair and to create a reasonable distribution of the burden of such restriction on all sectors of the economy without imposing an unreasonably disproportionate share of such burden on any specific industry, business, or commercial enterprise, or on any individual segment thereof and shall give due consideration to the needs of commercial, retail, and service establishments whose function is to supply goods and services of an essential nature."

Staff are authorized and directed to make such technical and conforming changes as are necessary to incorporate the above amendment into the bill.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan that the amendments be considered en bloc?

There was no objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan that further reading of the amendments be dispensed with?

There was no objection.

Mr. CONYERS. Mr. Chairman and my colleagues, the thrust of this amendment is one that has been carefully examined in the Committee on Government Operations, and I am very pleased to bring it to the attention of the Members because it follows along the thrust of the substitute offered earlier by the gentleman from Illinois (Mr. ERLBORN), and it also follows along the thrust of the amendment which may be offered by the gentleman from California (Mr. MOSS). It addresses preserving the regulatory agencies that are being swallowed up by innocence, by accident, or by design in this super-agency.

The discussion thus far has focused on preserving the Federal Power Commission and its regulatory powers over natural gas. I think that this matter is extremely important. What distinguishes my amendment from the substitute offered by the gentleman from Illinois (Mr. ERLBORN) and the amendment offered by the gentleman from California (Mr. MOSS) is that it also preserves the authority of the Federal Energy Administration with regard to the wellhead pricing of oil and the establishing of import prices, and it combines both the FPC and FEA in one regulatory agency.

Essentially my amendment preserves these regulatory agencies in the best tradition of the Congress. Mr. Chairman, I would remind my colleagues that these regulatory agencies were established in the first instance by congressionally derived powers. In other words, there would be no Federal Power Commission or Federal Energy Administration were it not the judgment of this body that the complicated and politically sensitive considerations pertaining to energy resource pricing and allocation must necessarily receive the attention of an independent regulatory body. And so I think quite soundly Congress created independent commissions to handle this authority.

But what may happen today, if we are not careful, is that we are taking those independent authorities, wisely created by congressional enactment and, in this sweeping super reorganization, placing them fully within the ambit of an executive department. That, I contend, is a fundamental contradiction, which has also been expressed in the views submitted by several members on both sides of the aisle on the committee.

Because of this blatant contradiction, I propose to strike a portion of the section in title IV, starting at page 84. On page 84, line 19, the bill before us says:

There is hereby established with the Department an independent regulatory commission to be known as the Federal Energy Regulatory Commission.

Have the Members ever heard of an independent regulatory commission established within an executive department? Not only is this unprecedented, I think it is an insult to our collective intelligence that we have been asked to

endorse, in a vast bureaucracy to be administered by a prospective Secretary who may well become the second most powerful man in Government, the creation of one small office with a door which says "Independent Regulatory Commission." This commission will be making controversial decisions, sometimes at the displeasure of this awesome bureaucracy, with regard to energy pricing and allocation.

I would argue that we should maintain the regulatory process that has already been established by Congress, but consolidate the regulatory agencies. This does not mean that I uncritically accept the past history of either the FPC or the FEA. On the contrary, I come before the Members as a critic of the FPC in particular. But the fact that these agencies will operate independently, and not be subject to the fluctuations of changing Presidents and their Secretaries of Energy, should encourage us to support this amendment. I should note that my amendment failed in committee by a vote of 12 to 19 but it did enjoy bipartisan support.

Mr. Chairman, I urge the consideration and support of this amendment by the Members because it would maintain the independence of the FPC and the FEA.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. CONYERS) has expired.

(On request of Mr. WALKER and by unanimous consent, Mr. CONYERS was allowed to proceed for 2 additional minutes.)

Mr. WALKER. Mr. Chairman, will the gentleman yield?

Mr. CONYERS. I yield to the gentleman from Pennsylvania.

Mr. WALKER. Mr. Chairman, do I understand the thrust of the gentleman's amendments is in part to keep the regulatory authority from becoming politicized as it might so become in the structure of the Department of Energy?

Mr. CONYERS. The gentleman is correct. Mr. Chairman, if I may say this to the gentleman, the whole notion of keeping these decisionmaking organs of Government out of the political process and not subject to the action of the current President or the current Secretary is critical and bears on the reason why we established them in the first place.

Mr. WALKER. Mr. Chairman, I would like to commend the gentleman from Michigan (Mr. CONYERS) for offering the amendments. I supported the amendments in the committee, and I intend to support them again on the floor.

Mr. CONYERS. Mr. Chairman, I thank the gentleman from Pennsylvania (Mr. WALKER).

The CHAIRMAN. The question is on the amendments offered by the gentleman from Michigan (Mr. CONYERS).

The question was taken; and on a division (demanded by Mr. CONYERS) there were—ayes 17, noes 24.

Mr. BAUMAN. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Seventy-one Members are present, not a quorum.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

#### QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

#### RECORDED VOTE

The CHAIRMAN. The pending business is the demand of the gentleman from Maryland (Mr. BAUMAN) for a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 83, noes 277, not voting 73, as follows:

[Roll No. 298]

#### AYES—83

| Hammer-        | Mollohan       | Young, Mo.    |
| schmidt        | Myers, Gary    | Zerferetti    |

Mr. NOLAN and Mr. WALSH changed their vote from "no" to "aye."

Mr. EVANS of Georgia changed his vote from "aye" to "no."

So the amendments were rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. CHARLES WILSON OF TEXAS

Mr. CHARLES WILSON of Texas. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CHARLES WILSON of Texas: Page 67, line 18, insert "Production and" immediately after "Assistant Secretary for".

Mr. CHARLES WILSON of Texas. Mr. Chairman, members of the committee, this amendment simply changes the title of the Assistant Secretary for Resource Application to Assistant Secretary for Production and Resource Application, in order to put some emphasis on the product side of the problem.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. CHARLES WILSON of Texas. I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, I see no objection to this amendment. This just mentions the word "production", and production is one of the key factors in the solution of our energy problems.

Mr. CHARLES WILSON of Texas. I thank the gentleman.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. CHARLES WILSON of Texas. I yield to the gentleman from California.

Mr. ROUSSELOT. I thank the gentleman for yielding. Will this insure that there will be better production in the private sector?

Mr. CHARLES WILSON of Texas. Hopefully, this will point out that somebody in this new department is responsible for the production side of the equation. It will mean that there is an Assistant Secretary of Production.

Mr. ROUSSELOT. They are supposed to be for production in the private sector?

Mr. CHARLES WILSON of Texas. Yes. That is the only place we have production.

Mr. ROUSSELOT. Does the gentleman mean that is the only place in this bill there is any discussion of production in the real world?

Mr. CHARLES WILSON of Texas. This is the only place.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. CHARLES WILSON).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

#### TITLE III—TRANSFERS OF FUNCTIONS

SEC. 301. (a) Except as otherwise provided in this Act, there are hereby transferred to, and vested in, the Secretary all of the functions vested by law in the Administrator of the Federal Energy Administration or the Federal Energy Administration, the Administrator of the Energy Research and Development Administration or the Energy Research and Development Administration; and the functions vested by law in the officers and components of either such Administration.

(b) Except as provided in section 401, there are hereby transferred to, and vested in, the Secretary the functions of the Federal Power Commission, or of the members, officers, or components thereof—

(1) in prescribing, issuing, making, amending, and rescinding rules, regulations, and statements of policy, pursuant to the Federal Power Act and the Natural Gas Act, which are of general applicability;

(2) relating to energy information, subject to subsection (c) of this section, under sections 304 and 311 of the Federal Power Act and sections 10 and 11 of the Natural Gas Act;

(3) under section 202(a) of the Federal Power Act (relating to establishment of regional districts);

(4) under section 202 (c) and (d) of the Federal Power Act (relating to emergency interconnections);

(5) under section 202(e) of the Federal Power Act (relating to regulation of exports of electric energy);

(6) under (A) section 3 of the Natural Gas Act, and (B) section 7 of such Act (to the extent such section is applicable to the regulation of exports and imports of natural gas);

(7) under sections 4, 5, and 7 of the Natural Gas Act (to the extent that such sections relate to the establishment and review of priorities for curtailments of natural gas deliveries); and

(8) relating to regulations of general applicability with respect to the rates and charges at which natural gas is first sold to any natural gas company for resale in interstate commerce under the Natural Gas Act.

(c) The Secretary and the Federal Energy Regulatory Commission shall, to the extent necessary to carry out their respective functions, utilize the data-gathering authorities of sections 304 and 311 of the Federal Power Act and sections 10 and 11 of the Natural Gas Act. The Secretary and the Commission shall coordinate their data-gathering activities to avoid duplication and undue burden on any person.

SEC. 302. There are hereby transferred to, and vested in, the Secretary:

(a) All functions of the Secretary of the Interior, the Department of the Interior, and officers and components of that Department, to the extent such functions relate to or are utilized by the Southeastern Power Administration, the Southwestern Power Administration, and the Bonneville Power Administration. The authority for the functions so transferred includes, but is not limited to, section 5 of the Flood Control Act of 1944, the Bonneville Project Act of 1937, and the Federal Columbia River Transmission System Act. Notwithstanding sections 606 and 705 of this Act, each of the three such Power Administrations shall be maintained as a distinct entity within the Department.

(b) Such functions of the Secretary of the Interior, the Department of the Interior, and officers and components of that Department as relate to, or are utilized by, the Alaska Power Administration for the transmission and disposition (including acquisition by purchase or exchange) of electric power and energy and by the Bureau of Reclamation for the disposition (including acquisition by purchase or exchange) of electric power and energy, except that the authority for, and function of, operating the dams constructed pursuant to the Eklutna Project Act and section 204 of the Flood Control Act of 1962 shall remain in the Secretary of the Interior. The authority for the functions so transferred includes, but is not limited to, the Eklutna Project Act, section 204 of the Flood Control Act of 1962, the Reclamation Act of 1902, and Acts amendatory thereof and supplementary thereto, including, but not limited to, the authority for the sale of electric power or lease of power privileges under section 9(c) of the Reclamation Project Act of 1939, and the authority under section 303 of the Colorado River Basin Project Act.

(c) All the authority of the Secretary of the Interior, the Department of the Interior, and officers and components of that Department for the transmission and disposition of the electric power and energy generated at Falcon Dam and Amistad Dam, international storage reservoir projects constructed on the Rio Grande pursuant to the Act of June 19, 1954, as amended by the Act of December 23, 1963.

(d) (1) The authority of the Secretary of the Interior to prescribe regulations under the Outer Continental Shelf Lands Act, the Mineral Lands Leasing Act, the Mineral Leasing Act for Acquired Lands, the Geothermal Steam Act of 1970, and the Energy Policy and Conservation Act, which relate to—

(A) fostering of competition for Federal

leases (including, but not limited to, prohibition on bidding for development rights by certain types of joint ventures);

(B) implementation of alternative bidding systems authorized for the award of Federal leases;

(C) establishment of diligence requirements for operations conducted on Federal leases (including, but not limited to, procedures relating to the granting or ordering by the Secretary of the Interior of suspension of operations or production as they relate to such requirements);

(D) setting rates of production for Federal leases; and

(E) specifying the procedures, terms, and conditions for the acquisition and disposition of Federal royalty interests taken in kind,

except that such regulations shall be promulgated by the Secretary only after consultation with the Secretary of the Interior.

(2) The Secretary of the Interior shall retain any authorities not transferred by paragraph (1) of this subsection and shall be solely responsible for the issuance and supervision of leases and the enforcement of all regulations applicable to the leasing of mineral resources, including, but not limited to, lease terms and conditions and production rates. No regulation issued by the Secretary shall restrict or limit any authority retained by the Secretary of the Interior under this paragraph with respect to the issuance or supervision of leases. Nothing in this subsection shall be construed to affect Indian lands and resources or to transfer any responsibilities of the Secretary of the Interior concerning such lands and resources.

(e) Those functions of the Secretary of the Interior, the Department of the Interior, and officers and components of that Department under the Act of May 18, 1910, and other authorities, exercised by the Bureau of Mines, but limited to—

(1) fuel supply and demand analysis and data gathering;

(2) research and development relating to increased efficiency of production technology of solid fuel minerals, other than research relating to mine health and safety and research relating to the environmental and leasing consequences of solid fuel mining, which shall remain in the Department of the Interior; and

(3) coal preparation and analysis.

(f) The functions of the Secretary of the Interior to establish production rates for all Federal leases.

SEC. 303. The Secretary of the Interior shall afford the Secretary a reasonable opportunity, prior to the execution of a Federal lease, to disapprove any term or condition of such Federal lease which relates to the matters with respect to which the Secretary has authority to prescribe regulations under section 302(d). No such term or condition may be included in such a lease if it is disapproved by the Secretary.

SEC. 304. As used in sections 302 and 303 of this Act, "Federal lease" means an agreement which, for any consideration, including, but not limited to, bonuses, rents, or royalties conferred and covenants to be observed, authorizes any person to explore for, develop, or produce (or to do any or all of these) oil and gas, coal, oil shale, tar sands, or geothermal resources in public, acquired, or submerged lands or interests therein under Federal jurisdiction.

SEC. 305. All functions vested by law in the Director of the Office of Energy Information and Analysis by part B of the Federal Energy Administration Act of 1974 are hereby transferred to the Administrator of the Energy Information Administration.

SEC. 306. There are hereby transferred to and vested in the Secretary all of the functions vested in the Secretary of Housing and Urban Development by the Energy Conserva-

tion Standards for New Buildings Act of 1976 (title III of the Energy Conservation and Production Act).

SEC. 307. There are hereby transferred to and vested in the Secretary such functions as are set forth in the Interstate Commerce Act and vested by law in the Interstate Commerce Commission or the Chairman and members thereof as relate to transportation of oil by pipeline.

SEC. 308. There are hereby transferred to and vested in the Secretary all functions vested by chapter 641 of title 10, United States Code, in the Secretary of the Navy as they relate to the administration of, and there is hereby transferred to, and vested in, the Secretary jurisdiction over—

(1) Naval Petroleum Reserve Numbered 1 (Elk Hills) located in Kern County, California, established by Executive order of the President, dated September 2, 1912;

(2) Naval Petroleum Reserve Numbered 2 (Buena Vista), located in Kern County, California, established by Executive order of the President, dated December 13, 1912;

(3) Naval Petroleum Reserve Numbered 3 (Teapot Dome) located in Wyoming, established by Executive order of the President, dated April 30, 1915;

(4) Oil Shale Reserve Numbered 1, located in Colorado, established by Executive order of the President, dated December 6, 1916, as amended by Executive order of the President, dated June 12, 1919;

(5) Oil Shale Reserve Numbered 2, located in Utah, established by Executive order of the President, dated December 6, 1916; and

(6) Oil Shale Reserve Numbered 3, located in Colorado, established by Executive order of the President, dated September 27, 1974.

The surface management of such reserves shall be carried out by the Secretary of the Interior under applicable laws, including the Federal Land Policy and Management Act of 1976, administered by such Secretary.

SEC. 309. There are hereby transferred to and vested in the Secretary all functions of the Secretary of Commerce, the Department of Commerce, and officers and components of that Department, as relate to or are utilized by the Office of Energy Programs, but limited to industrial energy conservation programs.

SEC. 310. (a) The Division of Naval Reactors, established pursuant to section 25 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2035), and responsible for research, design, development, health and safety matters pertaining to naval nuclear propulsion plants and assigned civilian power reactor programs, is transferred to the Department under the Assistant Secretary for Fossil and Nuclear Energy Technologies and shall be deemed to be an organizational unit established by this Act.

(b) The Division of Military Application, established by section 25 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2035), and the functions of the Energy Research and Development Administration with respect to the Military Liaison Committee, established by section 27 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2037), are transferred to the Department under the Assistant Secretary for Defense Programs and such organizational units shall be deemed to be an organizational unit established by this Act.

Mr. BROOKS (during the reading). Mr. Chairman, I ask unanimous consent that title III be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

#### AMENDMENT OFFERED BY MR. MOSS

Mr. MOSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Moss: Page 76, line 7, strike out "(1)" and all that follows through the semicolon on line 10 and redesignate paragraphs (2) through (7) accordingly.

Page 76, line 24, insert "and" after the semicolon.

Page 77, line 3, strike out "; and" and insert in lieu thereof a period.

Page 77, line 4, strike out "(8)" and all that follows through the period on line 7.

Page 77, after line 7, insert the following new subsection (c):

(c) In carrying out the functions transferred to the Secretary by subsection (b) of this section, the Secretary may issue, prescribe, make, amend, and rescind rules, regulations, and statements of policy pursuant to the Federal Power Act and the Natural Gas Act, which are of general applicability. Whenever the Secretary proposes any such action, he shall notify the Federal Energy Regulatory Commission, established by section 401 of this Act, of the proposed action. If the Commission determines, within such period as the Secretary may prescribe, that the proposed action may significantly affect any function administered by the Commission pursuant to title IV of this Act, the Secretary shall, except in a case where the Secretary determines that an emergency exists which requires immediate action, allow the Commission an additional period of at least 30 days to comment on the proposed action. Before taking the proposed action (other than immediate action required by an emergency), the Secretary shall take into account any comment or recommendation received from the Commission pursuant to this subsection. If the Secretary takes the proposed action and such action is inconsistent in any respect with such comment or recommendation, the Secretary shall publish in the Federal Register the reasons for such inconsistency.

Page 77, line 8, strike out "(c)" and insert in lieu thereof "(d)".

Mr. MOSS [during the reading]. Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. MOSS. Mr. Chairman, many of us on both sides of the aisle are deeply concerned by the transfer to the Secretary of Energy of authorities which have been traditionally vested in independent regulatory agencies. Of particular concern to us in the transfer to the executive of authorities under the Federal Power and Natural Gas Acts to issue rules of general applicability and to set the wellhead price of natural gas.

These authorities are broad while the statutory guides to their use are flexible. For example, each penny increase in the price of jurisdictional natural gas increases consumer gas bills \$115 million per year. Despite the importance of such pricing decisions to consumers and industry alike, section 4 of the Natural Gas Act (15 U.S.C. 717c) merely requires that such prices be "just and reasonable." Recognizably this standard vests in the

individual or organization which administers the act substantial discretion—discretion which can be improperly applied or even abused.

Under present law, one of the principal checks against abuse of discretion under the Federal Power and Natural Gas Acts is the requirement that these broad powers be exercised through an independent, collegial regulatory agency. Only when Congress has enacted more specific standards—or during short term national emergencies—has it delegated to an executive agency authority to control important sectors of the economy. For example, the Emergency Petroleum Allocation Act, as amended, authorizes the President to regulate petroleum prices but that act carefully specifies, among other things, the average, first sale price of domestic oil and a congressional veto procedure for removal of price controls from petroleum products.

Similarly at least until the Congress has acted to specify national policies under the Federal Power and Natural Gas Acts, a cabinet officer, whether of this or any administration, should not be allowed to issue rules of general applicability or to set the wellhead price of natural gas. As a consequence we will support an amendment to vest these authorities in the Federal Energy Regulatory Commission, an independent collegial regulatory agency within the Department of Energy. Specifically the amendment Mr. Brown of Ohio and I are offering would do the following:

First. Limit the authority of the Secretary of Energy to issue rules of general applicability pursuant to the Natural Gas and Power Acts to functions identified in section 301(B)(2)-(7). This would insure that rules of critical consumer interest, including those related to construction work in progress and the wheeling of power, are decided by a collegial regulatory commission. It should be noted that language with respect to rules of general applicability is not intended to expand whatever rulemaking authority which is enjoyed by the Federal Power Commission.

Second. Transfer to the Federal Energy Regulatory Commission the authority to set the well head price of natural gas. This transfer is essential at least until the Congress specifies natural gas and power policies through substantive amendments to the Natural Gas and Federal Power Acts.

Third. Provide that the Federal Energy Regulatory Commission shall have a minimum of 30 days, except in cases of emergency as determined by the Secretary, to comment upon rules proposed by the Secretary which would affect functions vested in the Commission.

This amendment is reasonable; it is responsible. It is supported by a board coalition of members and organizations. I hope you will join with us in supporting this proposal.

Mr. BROOKS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, this Nation undoubtedly faces dislocations in the production

and distribution of energy resources. Our petroleum and natural gas reserves are rapidly declining; the ability to effectively extract and utilize our coal reserves is in doubt; solar and geothermal energy is still in the developing stages; the use of nuclear energy is surrounded with serious problems; dependence on foreign energy resources creates uncertainty; and the price of all energy is bound to escalate in the years to come.

Complicating our efforts to deal with this problem is the amount of control over all forms of energy that has been captured by a small group of private concerns which now hold dominant ownership positions in petroleum, natural gas, nuclear, coal, and other energy sources.

If we are to meet these challenges in a way which fully protects the public welfare, we must create the proper instrument in Government. In establishing the Department of Energy, we are carrying out that purpose. We must establish within the Department a single individual, namely the Secretary, who shall have the authority to meet crises and to contend with monopolistic forces in a rapid and concise manner and one which will rationalize policy objectives in broad areas of concern.

The amendment before us would deny the Secretary two essential tools to meet these crises. First, it would seriously limit the Secretary's authority to issue general rules and regulations. That would have the effect of precluding the Secretary from issuing regulations of general applicability pertaining to rates and charges under the Federal Power Act, and the issuance of certificates of convenience and necessity under the Natural Gas Act.

Second, it would have the effect of denying to the Secretary the authority to set wellhead prices of natural gas. The denial of this authority would hamstring the ability of the Secretary to establish a national policy designed to meet energy crises in the most equitable and expeditious manner. This could be detrimental to the welfare of the country because the amendment would transfer these authorities to a five member collegial body. Recent studies of this Commission have raised serious questions as to ability of a collegial body to perform the functions which this amendment would give it. Such a body inherently moves slowly. That type of function has its place and we create such a body in this bill in the Federal Energy Regulatory Commission but the authority we give to the FERC is to decide case-by-case issues in a quasi-judicial manner.

I recognize that fears have been expressed over centralizing too much power in the hands of an energy czar. I sympathize with such concerns although I must reiterate that when a nation faces crises, it must confer necessary authority upon Government officials to meet such crises. Giving the Secretary of Energy the ability to issue rules and regulations of general applicability is designed to enable the Secretary to harmonize particular energy issues with overall

national energy policy objectives. This rulemaking power would not confer new power upon the Secretary, but would simply transfer to the Secretary the power now available to the Federal Power Commission to issue such rules. He must do so through the issuance of rules and regulations in the same manner in which the Federal Power Commission now exercises this authority under the Natural Gas Act and Federal Power Act.

For these reasons, I urge the defeat of the amendment.

Mr. HIGHTOWER. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, it has been stated, emphasized, repeated, and reemphasized, both in the committee and in the debate here today, that the Federal Energy Regulatory Commission will be independent of the Secretary.

It is very well to say these things, but we want to be sure that our actions are equal to our words.

Mr. Chairman, there seems to me to be a valid question as to the way the rule-making authority is placed. It is similar to some of the old "now you see it, now you don't" games.

Mr. Chairman, as section 301(b) presently reads, the Secretary is vested with eight specific functions or powers of the Federal Power Commission, with all other functions not specifically vested in the Secretary transferred to the Federal Energy Regulatory Commission.

Section 301(b) (1) vests in the Secretary all power to make rules, regulations, statements of policy, and so forth "which are of general applicability." Section 401 (a) (3) states:

Except as provided in section 301(b) (1), the Commission shall have the authority to prescribe, issue, make, amend, and rescind rules, regulations, and statements of policy under the Federal Power Act and the Natural Gas Act, and, in exercising such authority, shall coordinate its actions with the Secretary.

Similarly, section 401(h) specifically provides:

The Commission is authorized to establish such procedural and administrative rules as are necessary to the exercise of its functions. Until changed by the Commission, such rules of the Federal Power Commission shall continue in effect.

But since section 301(b) (1) vests all powers therein enumerated "which are of general applicability" in the Secretary, sections 401(a) (3) and 401(h) are virtually meaningless and could create considerable confusion.

Mr. Chairman, it was recognized on the Senate side and by some views expressed in the committee that the Secretary should not be made a czar and the proposed Federal Energy Regulatory Commission should be a strong and viable entity.

Mr. Chairman, the amendment that has been offered by our friend, the gentleman from California (Mr. Moss), does clearly state the rulemaking authority of the Secretary and the rulemaking authority of the Regulatory Commission.

Mr. Chairman, I would like to engage my colleague, the gentleman from California (Mr. Moss), in a little colloquy

here and ask him for an explanation or whether this is his intention. Is it the intention of the gentleman that his amendment will vest the Federal Energy Regulatory Commission with all the necessary authority to prescribe, issue, make, amend, and rescind all the rules and regulations and statements of policy under the Federal Power Act and the Natural Gas Act in carrying out the functions vested in it?

Mr. MOSS. Mr. Chairman, if the gentleman will yield, my answer is yes, with the exception of functions which would remain with the Secretary under my amendment, functions identified in section 301(b) (2) through 301(b) (7).

The Commission would have, pursuant to section 401(a) (3), as amended, authority under the Federal Power and Natural Gas Acts to issue or amend rules to the extent, and no further, allowed under present law. The Secretary's authorities are further limited by requiring that even with respect to rules issued by the Secretary within his jurisdiction, as established by section 301(b) (2) through (7), the Commission has, except in emergencies, the right to review such rules for 30 days before they could take effect.

Mr. HIGHTOWER. In other words, the Commission will have the full power and authority to carry out its functions without domination or interference by the Secretary; is that correct?

Mr. MOSS. That is the intent of the amendment.

Mr. HIGHTOWER. Mr. Chairman, I thank the gentleman.

Mr. BROWN of Ohio. Mr. Chairman, I move to strike the last word, and I rise in support of the amendment.

Mr. Chairman, as now drafted, H.R. 6804 contains several serious defects.

My major concern with the legislation is that the several Power Commission authorities over such things as wellhead natural gas pricing and electric utility interconnection would be transferred to the Secretary of the Department of Energy.

Under existing law, wide discretion is given to the Federal Power Commission in its establishment of wellhead natural gas prices. The National Gas Act provides that prices must be just and reasonable, as determined by the Commission. These findings of justness and reasonableness, if supported by substantial evidence, shall be conclusive upon judicial review. This wide discretion now vested in the FPC, an independent, collegial body, bipartisan in its makeup, well insulated from the politics of the moment, protected by established administrative procedures both in law and by precedent, would come into the hands of the single Secretary of the Department of Energy, under the bill we are considering today.

Mr. Chairman, so long as I agree with the energy policies practiced by this single administrative decisionmaker, perhaps I should not mind that he is no longer an independent collegial agency, but, Mr. Chairman, administrations and policies change. We may not always have the same administration. We may not

always have the same Secretary. We may not always wish to see the administration hold to precisely the same policies.

We know that energy policies are among the most hotly debated policies ever to come to Congress in years, and that debate will be warm again this year. It is particularly important that regulatory decisions be made in an environment where all views can be expressed fully. That was not possible within the FEA legislation when we had the emergency. So we provided for the review of some of the actions by FEA by the full Congress, so that we could have all of the various views fully debated and considered.

These decisions should not be taken in an imbalanced situation, or a situation where only one viewpoint, the administration's viewpoint, comes in, or where they might be subject to total political domination.

There are many new energy regulating authorities contained in the companion National Energy Act now under consideration by the Congress, which will be vested in the Secretary of the Department of Energy. I feel that a commission is more likely to retain its objectivity and independence than would a single secretary or his delegate.

Under the committee reported bill there is little assurance that important energy issues will be resolved in an independent manner, at least less assurance than would be given us if these functions had been maintained in the independent Federal Energy Regulatory Commission within the DOE.

With the gentleman from California (Mr. Moss) I join in this amendment which would vest gas pricing authority in the Federal Energy Regulatory Commission, within the Department of Energy. But although the Federal Energy Regulatory Commission would be within the Department of Energy, the Moss-Brown of Ohio amendment would not permit the decisions to be set or vetoed or reviewed by the Secretary so that he would not be in a position to dominate. He would be able to intervene in the decisionmaking process just like a power company or just like Ralph Nader or anybody else who wants to participate in that decision, but he could not review or change the decision of the Federal Energy Regulatory Commission.

I hope that my colleague will support me in this effort.

There are a couple of other angles which ought to be considered. One is that out of this very Committee on Government Operations we produced legislation for government in the sunshine, which was enacted by the Congress last year. But this only applies to collegial agencies, it does not apply to decisions taken by a single administrator, a single Secretary. Therefore, if the Secretary makes a decision there is no way for us to get into his mind or understand the debate that he went through to come to that conclusion. There is that opportunity under a collegial agency, the Federal Energy Regulatory Commission.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. Brown of Ohio was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Ohio. Mr. Chairman, I would hope that we would support the Moss-Brown amendment in the hope that we will have these policy decisions which are guided by congressional legislation made by an independent—although independent within the Department of Energy—regulatory commission where we will have the application of the sunshine legislation and the opportunity for all to have full administrative procedure protections in a collegial bipartisan body.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Texas.

Mr. HALL. I thank the gentleman for yielding.

Does the gentleman understand that if this amendment passes, the Administrator, or Dr. Schlesinger, will or will not have the power to set the prices of intrastate gas?

Mr. BROWN of Ohio. I do not think the price of intrastate gas can at present be set by the Administrator in any event. The intrastate question will be resolved presumably in the new National Energy Act, which is under consideration right now in the Commerce Committee, one way or the other. It has been proposed that it would be covered. He will only have the power to intervene in a decision made by the Federal Power Commission to deal with interstate gas prices under the present law.

Mr. HALL. But not intrastate.

Mr. BROWN of Ohio. But not intrastate under the present law.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOORHEAD of Pennsylvania. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, this situation reminds me of an occurrence that happened many years ago when our distinguished former colleague, the gentleman from Alabama, Mr. Rains, was floor manager of a bill. An amendment was offered, and he said it reminded him of the story of the little boy who was fishing. He caught a fish, and the fish was flopping around, and the little boy said, "Lie still, little fish; all I want to do is gut you."

I think that is what the effect of this amendment would be.

There seems to be an unwritten assumption in the amendment which is currently before us, and that assumption is that somehow the Secretary of Energy should have less ability than other Cabinet officers to prescribe rules under which decisions affecting matters within his Department's authority should be decided. By severely limiting the rule-making power of the Secretary with regard to the functions the Department will be inheriting under the Natural Gas Act and the Federal Power Act, this amendment would make the Secretary

less able than the Secretary of Transportation or the Secretary of the Interior, or any other Cabinet officer, to prescribe such rules.

Let us take a look at what the committee bill actually does. The committee-reported bill would very carefully divide the Federal Power Commission's functions between the Secretary and the new Federal Energy Regulatory Commission within the Department in a manner that allows each to do what it should be able best to do. The Secretary would deal with those general issues that impact on national energy policy; the Commission with the resolution of individual disputes which should be performed by someone other than the policymaker. This is a division that makes sense in practice, and it will help ensure that we do not have a Secretary moving in one direction and a Commission moving in another on major policy decisions, thereby frustrating the developing of a coherent policy on vital issues dealing with natural gas and electricity policy. We in the Congress will provide oversight over the Department. We can and should change the underlying mandates of the statutes if they are in need of change, but let us not try to cure one potential problem by removing from the Secretary the tools he needs to make our energy policy work. We need a workable energy policy, and the amendment should be defeated.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD of Pennsylvania. I yield to the gentleman from California.

Mr. MOSS. I thank the gentleman for yielding.

I thank the gentleman for his kind characterization of the amendment as a gutting amendment—a most inaccurate characterization. But would the gentleman name for me a single Cabinet officer who has succeeded to the powers previously held and exercised for over a half century by an independent regulatory commission?

Mr. MOORHEAD of Pennsylvania. I cannot name one. I do not believe it has been done. But I think the gentleman would agree, even if he does not agree with the result, that the committee attempted to preserve those things which should be handled by an independent regulatory commission as opposed to those that ought to be handled by the Secretary so that we could have a coherent national energy policy.

Mr. MOSS. Will the gentleman yield further?

Mr. MOORHEAD of Pennsylvania. Of course I yield to the gentleman from California.

Mr. MOSS. Is there less coherency to include one other function historically performed by a collegial body?

Mr. MOORHEAD of Pennsylvania. I believe there is. I believe this is the issue of the amendment: Whether we have a national coherent energy policy.

Mr. MOSS. But it is hardly of such magnitude as to cause a gutting characterization to be placed on an amendment offered in good faith to improve a piece of legislation.

Mr. MOORHEAD of Pennsylvania. If I may reclaim my time, if I inferred any lack of faith on the part of the gentleman from California, I did not intend it. I am sure the gentleman offered the amendment in good faith. However, I think it has a very disastrous effect on the carefully worked out structure of this legislation and that was the reason I used that characterization.

Mr. DINGELL. Mr. Chairman, I move to strike the requisite number of words, and I rise in strong support of the Moss-Brown-Dingell amendment. The amendment does two things my colleagues ought to know about. The first is it strikes the authority of the Secretary over well-head pricing of natural gas and invests it in the collegial commission which we set up in this bill. This insures that the Sunshine Act—the prohibition against ex parte communications—and all of the other protections of fairness to the consumer are fully and fairly observed. And it means that the decisionmaking process becomes open so that all persons might know what their Government does with respect to the pricing of natural gas. That is very important.

Second of all, it does another thing that I regard as being of extreme importance, and that is it requires that a Secretary not be able to issue rules of general applicability.

What are rules of general applicability? A rule of general applicability might deal with the wholesale price of electricity or wheeling or interchange of electricity in interstate commerce. It might allow the Secretary by fiat, functioning behind closed doors, to issue a rule which would allow construction work in progress on the construction of electrical facilities, something to which the consumers are violently and totally opposed.

On May 24 we had a hearing before the Subcommittee on Energy and Power and we brought the representatives of the administration before us, and they talked to us about the criteria which would be applied by the administration in connection with the pricing which it would do on wellhead pricing of natural gas. In that there was a very interesting interchange with regard to the criteria which would be imposed by the Secretary. I will now quote from a colloquy between me and one of the administration officials on what criteria would be imposed by the Secretary:

Mr. DINGELL. Mr. O'Leary, you have comforted me greatly. Please tell me where in the bill that is.

Mr. O'LEARY. Mr. Chairman, none of this is in the bill.

Mr. DINGELL. I see.

Mr. O'LEARY. The authority is in the Secretary to set prices.

Mr. DINGELL. I am less comforted. You are asking that I take this then on which of the three great virtues: faith, hope or charity.

Mr. O'LEARY. We are dealing in faith at the moment, a great deal of hope, and, as ever in your case, with some charity.

Mr. DINGELL. I suspect there is very little of the last, possibly some of the second, and practically none of the first.

Mr. O'LEARY. Mr. Chairman, you know the great discipliner in this sort of activity is the very fact that whoever is running this agency would have from time to time to come before you and to explain his actions. I think if he were in the position of having made great gifts to the oil producing industry or the gas, more particularly to the gas producing industry under this authority, that you would cut—pull him up short in short order and knowing that would be the case, he would use great restraint and discipline...

What Mr. O'Leary was saying, and I very specifically qualified him to be speaking on behalf of the administration, is that there is no—repeat, no—criteria whatsoever with regard to the unfettered, untrammelled, and absolute jurisdiction that would exist here with regard to the Secretary's authority concerning wellhead prices.

A somewhat similar situation obtains with respect to the orders of general applicability.

Mr. Chairman, the age of the kings expired with the French revolution. I plead with this body, do not set up a new king here in Washington.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I think it might be said to the gentleman in the well that the gentleman and I may have somewhat different views of the desirability or lack of desirability of deregulation of the price of natural gas, for instance, or perhaps even certain actions with reference to the pricing of electric power; but we are in agreement that if an action is taken in this very significant area, that it ought to have the full light of day, not only in sunshine legislation or in a collegial body, but it also ought to have the full opportunity for all those persons who feel different views about the desirability of the action and that all the procedures that have been either by precedent or law part of the Federal Power Commission used to share those contradictory views.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(At the request of Mr. BROWN of Ohio, and by unanimous consent, Mr. DINGELL was allowed to proceed for 1 additional minute.)

Mr. BROWN of Ohio. Mr. Chairman, if the gentleman will yield further, so that there is full approval of all the ramifications of the action of a collegial body or the Federal Power Commission or the National Energy Commission would take.

Mr. DINGELL. I fully agree with the gentleman. If we want a full, open and free process where people can watch the Government work, if we want to see to it that the Sunshine Act works, if we want to see to it that due process works, where ex parte action is done behind closed doors, then support the Moss amendment. It makes good Government and it makes good sense.

Mr. LEVITAS. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Georgia.

Mr. LEVITAS. Mr. Chairman, I have the greatest respect for the gentleman from Michigan; but I must take exception to one statement in support of the Moss amendment, both for the reason of setting the record straight or in the event the Moss amendment should not pass, that the Secretary would not have the legislative history of having untrammelled power.

Mr. DINGELL. Mr. Chairman, if the gentleman will permit, I do not think he has untrammelled power, but the language of the bill without that appears to give it to him.

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

(At the request of Mr. LEVITAS, and by unanimous consent, Mr. DINGELL was allowed to proceed for an additional 2 minutes.)

Mr. DINGELL. Mr. Chairman, I do not want that any more than the gentleman does; but the problem is when the door is closed and one man is making the decision, and under the criteria we have that may well be the situation; I can only quote Mr. O'Leary again.

Mr. LEVITAS. Mr. Chairman, if the gentleman will yield further, I would just like to observe that it is my understanding that the legislation simply transfers to the Secretary the same powers that are now possessed, for example, by the Federal Power Commission and that the statutory requirements are that in setting the well-head prices he would have to set a just and reasonable rate and that this has been very clearly defined by a series of decisions; so he is not able to exercise arbitrary power.

Mr. DINGELL. The gentleman may be correct; but at a lengthy hearing where we had the FEA speaking on behalf of the Administration and on behalf of the bill here for the Subcommittee on Energy and Power did not indicate that either the procedure, the openness of the rules which bind the Federal Power Commission or the precedents which bind the Federal Power Commission are being transferred. That is the thing making the apprehension.

As the gentleman knows, the Federal Power Commission has a whole body of precedents they adhere to in a greater or lesser degree. I am not satisfied those are transferred, nor did Mr. O'Leary make clear that they are transferred.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I think there is one other point that needs to be made. The Federal Power Commission now has the right to set its own rules, and has set them, and they have worked in precedent for years and years.

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

(On request of Mr. BROWN of Ohio and by unanimous consent Mr. DINGELL was allowed to proceed for 4 additional minutes.)

Mr. BROWN of Ohio. The Secretary would have the authority to modify the rules by which these decisions are taken. I think that is an unlimited power because he can say, "We are going to change all the rules and we are going to do it this way."

That does bother me.

Mr. DINGELL. That is precisely the point I am making.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman.

Mr. EVANS of Colorado. I am interested in the amendment offered by the gentleman from California and the comments made by the gentleman in the well. Yet, I have one serious question in my mind if this amendment were to pass. It seems to me that we might have a two-headed horse, in a way. We might have a President and a Secretary of Energy who want to take a certain direction in regard to energy, and we might have an independent commission that thinks that the President and Secretary are wrong and feel that we ought to go another way. What would be the situation if this amendment passes?

Mr. DINGELL. I think we have a horse with two heads or two tails—the gentleman can take his pick—where under the bill as drawn, or under the amendment as offered by the gentleman in California, in either event we have a Secretary and we have a Commission. What we are doing is defining which end of the horse is going to go which way under which particular set of circumstances at which time. Also, we lay out a set of circumstances where it will function more in the daylight and less in the dark, where there will be more public input and more public appreciation of what is going on, and less action by that two-headed horse, or two-tailed horse, in the dark. That is the basic difference.

Mr. EVANS of Colorado. The problem to which the gentleman alludes is inherent within the bill?

Mr. DINGELL. Regardless of whether the Moss amendment is present or absent.

Mr. BROWN of Ohio. I might say that there are certain other powers in which the legislation is transferred to the Secretary, not just the Federal Power Commission. There are the powers of the Federal Energy Agency. Those powers are simply more arbitrary in their exercise by the Administrator than are the Federal Power Commission powers. They were made more arbitrary by this very Congress, and they were given to the Federal Energy Administrator by this Congress at the emergency time of the embargo.

Now, the policies in the energy field will be set by the Congress, but in the one area we gave the Federal Energy Administration very arbitrary powers in terms of administrative procedures. In

the Federal Power Commission area, we have given very restricted powers with reference to the administrative procedures in the law.

The question is, in the Department of Energy as we have set it up on a permanent basis, do we want a Secretary exercising powers in an arbitrary way, presumably out of the policy that the Congress will enact, or do we want it done in a collegial body, listening to the evidence and getting all the information to follow the policy of the Congress. It seems to me that is the issue here. We are setting up a permanent agency, and we want it done on some kind of a rational basis rather than an arbitrary basis by a Secretary.

Mr. TUCKER. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Arkansas.

Mr. TUCKER. Did I understand the gentleman to say that the language contained in this bill would allow the Secretary to adopt a rule of general applicability with regard to construction work in progress?

Mr. DINGELL. The answer to that question is, he could do it with regard to construction work in progress, and a whole abundance of other rules.

Mr. TUCKER. I mention particularly construction work in progress because I spent 4 years as attorney general in my State litigating this issue, and I know public service commissions throughout the country have litigated it. This is a very serious issue; this is an authority which just 2 years ago a different administration asked this Congress to grant and the Congress said no. Granting this authority would be very detrimental to the interests of the consumers of this Nation.

Mr. LEVITAS. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the Moss amendment. And I should start off by saying that I attribute no bad faith but all good faith to the gentleman from California and to his colleague, the gentleman from Ohio, in the offering of this amendment. But I think it is fair to say that in the opinion of many of us it goes right to the heart or the viscera of this legislation. I think the people in America are looking to the Congress to develop a comprehensive energy policy and to establish a single focal point of administration of that policy in the Department of Energy. If we do not follow through on that expectation, then we shall have given rise to another wave of public disappointment and cynicism. If we do not give the Secretary of this Department the overall responsibility for the energy policies and implementation of them in this country, then we shall have not succeeded. And what the Moss-Brown of Ohio amendment will do is again fragment that responsibility and make it impossible for a comprehensive national policy to be brought about.

My colleague, the gentleman from Pennsylvania, said that the Moss amendment gutted the bill.

The gentleman from California objects to the word "gutted," and in deference to any sensibilities I will use the word "viscera," but the organs are the same. The Erlenborn amendment perhaps took a meat-ax approach, and the first Conyers amendment perhaps pointed a dagger in the body of the bill. The Moss amendment is using a scalpel. But all of them have in common the purpose, in the end, of removing the viscera of this particular legislation. For that reason I urge the members of the committee seriously to think about what they are being asked to vote upon.

The central thrust of this amendment seems to be the contention that fairness dictates that decisions, such as the well-head price of natural gas or Federal rules under the Federal Power or Natural Gas Acts, must be made by a collegial body. I dispute that contention because it seems to imply that an executive branch official, subject to congressional oversight, cannot or will not act fairly, while a collegial body can and will.

The actions taken by the Secretary of Energy if the committee bill is adopted will not be made in a vacuum. It is true that the language of the Natural Gas Act with regard to wellhead pricing does specify that rates must be "just and reasonable." But there is also a history of court interpretation of that language which defines with somewhat more precision the standards which must be used in making such determinations. The Secretary would not be granted unfettered discretion. And any decision made on natural gas pricing would be subject to a review by the courts to determine whether the Secretary's action is supported by the substantial weight of the evidence provided in the record before him.

In addition, the Secretary would not make this or any other decision under the Natural Gas Act or the Federal Power Act without substantial public input through the requirement of section 501 of this legislation for a full legislative-type hearing, including the opportunity for members of the public to present their views. This assures public participation in the decisionmaking process.

And, finally, the proponents of this amendment stress that the Secretary would be a political official, and that this is undesirable. If by this they mean that the Secretary would be accountable to the people and to the President and to the Congress, I would have to agree. Indeed, one of the problems we have had with independent regulatory commissions is the lack of any real accountability on the part of the members of those commissions. In fact, some of the proponents of this amendment have vigorously condemned the past practices of the Federal Power Commission.

I pause right here to say that I am surprised to hear some of my colleagues, who condemned the Federal Power Commission in the past for its failure to take into consideration the price increases

to stimulate additional production, now say they want to keep the Federal Power Commission.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from California (Mr. Moss).

Mr. MOSS. I thank the gentleman for yielding.

Mr. Chairman, there is probably no Member of this body who has more harshly criticized the Federal Power Commission than I have, because it has on occasion had appointed to it very incompetent members, and for a prolonged period of time it has had too many vacancies.

It has too many vacancies at this very moment. It is very difficult for an agency to operate under those conditions.

However, that does not support the proposition that the structure is faulty, but, rather, it reflects on the type of person appointed or the failure to appoint for prolonged periods of time, leaving uncertainty and indecision in the agency.

The CHAIRMAN. The time of the gentleman from Georgia (Mr. LEVITAS) has expired.

(By unanimous consent, Mr. LEVITAS was allowed to proceed for 3 additional minutes.)

Mr. LEVITAS. Mr. Chairman, I thank my colleague, the gentleman from California (Mr. Moss), for his contribution, and I would like to say that I am well aware of his criticism of the Federal Power Commission.

Indeed, last October, in a report of a subcommittee chaired by the gentleman from California (Mr. Moss), there appeared this language—and I am quoting:

The FPC in recent years has demonstrated a conscious disregard for its statutory duties, extending in varying degrees to all facets of its regulatory responsibilities.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. Mr. Chairman, if the gentleman will allow me to complete one sentence, I will yield.

Mr. Chairman, I would like to say that the reason for this has been lack of accountability, and until we get some accountability into the process we are going to continue to have indecision or unresponsive decision.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I will be happy to yield to the gentleman from California.

Mr. MOSS. Mr. Chairman, in that same report issued by the same subcommittee chaired by the gentleman from California we cited another agency, the Securities and Exchange Commission, which is a collegial body, as an example of extreme efficiency and effectiveness in Government, performing as it should, with a full complement of individuals who were carefully selected. I think the contrast was very sharply drawn in the report.

The indictment that the gentleman from Georgia (Mr. LEVITAS) makes of collegial bodies is totally invalid.

Mr. LEVITAS. Mr. Chairman, I would like to say to the gentleman from Califor-

nia (Mr. Moss) that there must be different cures for different illnesses, and we know that we use different weapons on different game.

In the case of the Federal Power Commission, the best solution is to make this transfer which this legislation is calling for, because we are being asked now to prolong the lack of accountability in yet another collegial body in areas of importance such as those affected by this amendment. I do not believe that having a collegial body serving fixed terms and being unaccountable to the President or the Congress or the people is the way to help solve the energy problems we face.

Mr. Chairman, I think that if we adopt this amendment, we would be striking a blow at what the President of the United States has called for in saying that we need to have a comprehensive energy policy and a single focal point through which to administer that energy policy. If we adopt the Moss amendment, we are saying there is no crisis and let us just keep doing what we have been for so many years and so unwisely.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Florida.

Mr. FUQUA. Mr. Chairman, I want to commend my friend, the gentleman from Georgia (Mr. LEVITAS), for the very excellent statement he has made concerning this bill. There are two particular points he has made that I think are very important.

One point is that concerning a comprehensive energy policy. The gentleman from Michigan (Mr. DINGELL) pointed out very jokingly something about the type of horse we will perhaps have in adopting it. But by the same token, we need to bring these policies together. Otherwise we might as well leave it as it is now and have ERDA running in one direction, FEA in another direction, the FPC in still another direction and then whoever else is involved running in yet another direction.

But this bill brings them all together. This does not set up a czar, because I think we have pooled the duties, and we make him accountable to this Congress.

I have seen Cabinet members who are much more responsible to the Congress than most independent regulatory bodies I have seen, and there are also Federal judges who forget from whence they came.

The CHAIRMAN. The time of the gentleman from Georgia (Mr. LEVITAS) has again expired.

(On request of Mr. FUQUA and by unanimous consent, Mr. FUQUA was allowed to proceed for 2 additional minutes.)

Mr. FUQUA. Mr. Chairman, will the gentleman yield further?

Mr. LEVITAS. I yield to the gentleman from Florida.

Mr. FUQUA. Mr. Chairman, this bill brings all the forces together. We do not have the luxury of being able to waste time as we have in the past. We must get on with this, and I think the President is right in bringing this up and asking us to do something about energy. He has

had the mandate of the people; he ran, and he was elected President. I think we all find in our districts that we have the support of the people.

Mr. Chairman, the other point is accountability. I think that a Secretary of Energy can be accountable to this Congress, because we have spelled it out in the bill. I think he will be much more accountable than any independent body we have had running around demonstrating its so-called independence. I think that this is the real heart of the bill, and we must defeat this amendment and get on with the bill itself.

Mr. Chairman, I thank the gentleman for yielding.

Mr. LEVITAS. Mr. Chairman, I thank the gentleman from Florida (Mr. FUQUA) for his excellent statement and his leadership on this important legislation.

Mr. Chairman, I would like to say this to the members of the committee: That this is really the first serious test we have had in this Congress as to whether or not we are going to be serious about doing something to effect a comprehensive energy policy. If we do not defeat the Moss amendment, we will have indicated to the American people that we as a Congress are not prepared to make the hard decisions that are necessary to develop a comprehensive energy policy, one that is so important to our economy and our national security.

Mr. SYMMS. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Idaho.

Mr. SYMMS. Mr. Chairman, I thank the gentleman for yielding.

Then is the gentleman telling us that the Secretary of Energy of the Department of Energy will deregulate the price of natural gas because if the Congress will not do that, all of this argument is superficial anyway?

Mr. LEVITAS. I cannot speak for what the new Secretary will do. He certainly cannot do any worse than what has happened so far.

I have heard the President's energy message, and it sounds a lot more like a movement in the direction of deregulation to stimulate production than do the actions taken by the Federal Power Commission; but I would say this, that the question will now become one of accountability.

The gentleman knows as well as does any other Member of this body that these independent regulatory commissions, and particularly one such as this, are not accountable to anybody. Most people in this country don't even know who are the people on these collegial bodies, what their names are or where they live. This new department will be accountable, through oversight and other means, to the Congress.

Furthermore, I have an amendment providing for congressional veto of rules and regulations which will be offered later which will make the Secretary and this new department even more accountable. That is what we have to have.

Mr. HORTON. Mr. Chairman, I move to strike the requisite number of words,

and I rise in opposition to the amendment.

Mr. Chairman, I will not take very long because I made this speech, in a sense, before.

At the present time the FEA regulates the price of oil. ERDA regulates the price of uranium. The Federal Power Commission regulates the price of natural gas.

What we have tried to do in this bill is to give authority to the Secretary of Energy to handle the regulation of the various sources of energy.

Mr. Chairman, this amendment would take away from the Secretary authority that we would transfer to him from the Federal Power Commission.

As the gentleman from Georgia (Mr. LEVITAS) said a moment ago, there was a substitute amendment offered by the gentleman from Illinois (Mr. ERLBORN) to put the authority back in the FPC. Then the gentleman from Michigan (Mr. CONYERS) proposed to set up a separate commission.

Now the gentleman from California (Mr. MOSS) and the gentleman from Ohio (Mr. BROWN) propose that we take away some of the regulatory authority that we have given to the Secretary and put it in the Commission set up as an independent agency within the Department.

In other words, Mr. Chairman, this is just another effort to keep the status quo.

I emphasize again that if we are going to have a Department of Energy, let us give the authority to the Secretary so that he can do the job. If we accept this amendment, we are going to take away his authority. This is a hands-tying amendment as far as the Secretary is concerned.

Therefore, Mr. Chairman, I think it is very important that we defeat this amendment.

Mr. SYMMS. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I yield to the gentleman from Idaho.

Mr. SYMMS. Mr. Chairman, I thank the gentleman for yielding.

I just say that it is just tragic that we are talking about ERDA and FEA, the Federal Power Commission, and now the DOE controlling these prices when the argument should be centered around the marketplace.

Mr. Chairman, we will not solve the problem as long as we try to have the Government artificially set these prices and use force in regulating them.

Mr. HORTON. Mr. Chairman, I am in accord with the gentleman in that respect. I do not want the Government to set the prices. I am in favor of deregulation, and I am in favor of removing controls; but the point I am making is that the status quo has not solved the energy problem.

In order to solve the problem, in my judgment, we need the type of authority which we have given the Secretary.

Mr. SYMMS. Mr. Chairman, if the gentleman will yield further, the problem, in my opinion, is that the status quo has had too much regulation which has been placed on a market system that

would work if given the opportunity; and the position of the committee is going to make it worse. We are going to give a bigger whip to the Government in setting up the Department of Energy. We should be trying to make the whip of Government a little smaller.

Mr. PRITCHARD. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I yield to the gentleman from Washington.

Mr. PRITCHARD. Mr. Chairman, I want to rise to support the statements of the gentleman from New York (Mr. HORTON).

I think this is a crucial amendment. I know some Members are not for this Energy Department and that they are against the concept. However, if we believe in the concept and believe we have to solve these different aspects and parts of this problem by putting them together in one agency, we should allow this Department to operate in the manner that the committee has prescribed. We cannot go in two directions at one time.

Mr. Chairman, I think this is a crucial amendment, and it will cripple this Department if we do not vote this amendment down.

Mr. HORTON. Mr. Chairman, I urge a vote against the amendment.

Mr. CONYERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment offered by the gentleman from California, Mr. MOSS.

I would like to point out that this amendment goes halfway in terms of the distance that my amendment, offered earlier, would have gone. I am supporting this amendment. I think it is critical that we do not lose sight of the fact that had the executive branch come to us in the first instance and asked us to take from the congressional authority the power to set prices and put it in the executive branch that, almost to a man and woman in this body, we would have reacted negatively. But when we take this authority and put it in the FPC and then reorganize the Department of Energy and move this in the back door, we are then asking: Will this then lead to deregulation or will it not lead to deregulation? Which I do not believe is the issue at all. I believe this is an extremely important point.

If anyone believes that our seriousness in creating a Department of Energy is going to be measured in terms of whether we take this regulatory pricing authority out of the Department of Energy, I think they are totally misguided. I support completely the principles involved in this amendment. I urge its adoption.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. CONYERS. I yield to the gentleman from California.

Mr. MOSS. Mr. Chairman, I thank the gentleman from Michigan for yielding to me.

Mr. Chairman, I would like to make this point: The statement was made a moment ago that those of us pushing this amendment are opposed to the creation of a Department of Energy. Nothing

could be further from the truth. That has not been my intent. It is not now my intent. I also supported the creation of the Department of Transportation but we did not vest in the Secretary of Transportation all the authority over rates that had been previously vested in the Civil Aeronautics Board, and the Interstate Commerce Commission and we did not try to create a transportation czar. Here, for the first time—and, bear this in mind, it is the first time in the history of this Nation—that we have dismantled an independent commission exercising essentially the powers of the Congress itself under the commerce clause of the Constitution and invested those in a single individual.

Even in the courts we have the appellate level of review by more than a single judge. Here we are going to have one man set the rules, one man set the prices and one man spell out the conditions. I think it is ill-advised. I would not vote for it under any administration. I think it is a compromise of the independence of this House. I think it is a compromise of the independence of the ratemaking process. I do not believe that doing away with due process is going to expedite for one moment any breakthrough in energy or achieve any greater efficiency in the field of energy. On the contrary, if one were to take and contrast the handling by the CAB—and it has been sorry on many occasions on domestic air routes—with the handling of the international air routes in the White House, I believe that the answer one will find is very clear: that the very secretive operation at the White House hardly comports with good regulatory procedures or good due process procedures.

Mr. CONYERS. Mr. Chairman, I would like to point out that the argument has been raised that the Congress would have full oversight over the Department of Energy with regard to prices. I would say to the Member of the House that seriously we should realize that oversight is one of the weakest functions the Congress could possibly indulge in. We need to do a lot more, but whether it would effectively develop in this agency I seriously doubt.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. CONYERS. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I appreciate the gentleman's yielding.

I want to echo my sentiments reflected in the remarks of the gentleman from California and add just one further thought. There is not either any antipathy for the gentleman who will probably be the Secretary of the Department of Energy, Dr. Schlesinger. I have the greatest respect for him and think he will do an excellent job coordinating that Department. But I feel that, whether it be Frank Zarb or Jim Schlesinger or anybody else, this kind of power is too much in the hands of one person.

Mr. ECKHARDT. Mr. Chairman, I move to strike the requisite number of words.

Mr. McCLODY. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Illinois.

Mr. McCLODY. I thank the gentleman for yielding.

I want to say that I supported the amendment offered earlier by the gentleman from Michigan (Mr. CONYERS). I intend to support the Moss amendment. It was my feeling that this legislation was going to streamline and to simplify the agencies of Government which are involved in the problems of energy. It seems to me that we should take steps to deregulate, to reduce the amount of governmental interference and control, and it seems to me that unless we adopt the Moss-Brown amendment we are going to further complicate and harass the very producers of energy on whom we have to rely for additional sources of energy.

Mr. Chairman, the legislation before us would seem to impose new bureaucratic authority over an industry which is already overburdened with Federal regulations and controls. Recently it was estimated that the additional expenses incurred by the oil industry in the compiling of data and the preparing of reports totaled more than \$500 million just in the past several years—and that the additional annual expense imposed by existing regulations would require oil company expenses of \$45 million each year.

These estimates appear to me to be conservative and do not, of course, include the new additional burdens which will be imposed upon our private economy by this bureaucratic maze.

The unfortunate part which seems to attract little attention is that the entire cost of the new and additional bureaucratic expenses must and will be passed on to the American consumer—that is, the American public—through higher energy costs and through general taxation.

House action should be deferred on this bill because of the huge and growing costs to the consumer and because of its threat to economic freedom. The order and efficiency of a central, overpowering authority is virtually incontrovertible. But as we reject these benefits of such an authority at the cost of personal freedoms, so should we at the cost of economic freedoms.

The desirability of such an order in the chaotic energy area, whose octopus tentacles have a stranglehold on almost every aspect of human endeavor and industry, very well may not be worth the loss of economic freedom existing in the consumer whose countless decisions in the marketplace should more democratically determine prices.

Congress must face up to the responsibility of setting basic energy policy decisions for the new agency to administer and not just "pass the buck" to a new energy "czar." Czars are not our way of government. The Moss amendment would seem to retain some independent regulation of production and wellhead prices of gas and oil.

Our way of government includes

checks and balances and safeguards. H.R. 6804 is deficient in failing to providing these safeguards. Agencies have traditionally been independent of the executive in order to insulate them to some degree from the executive's political pressure. Departure from these traditions should not be done in a rush for a quick solution to our vexing energy problems. Unless substantially amended by adoption of the Moss-Brown amendment—and certain other amendments which will serve to release our private enterprise capacity to produce new and additional sources of energy—I will be constrained to support a motion to recommit this measure to the appropriate committee or committees.

Mr. ECKHARDT. Mr. Chairman, I feel that those who have said it makes no difference whether the authority to regulate price be within the executive department or be protected by a collegial body simply do not understand the basis of this process. We have delegated, and probably necessarily so, the greatest amount of power in this area of energy that this Congress has ever delegated. If we delegate that power directly to the Secretary of a department of the executive branch, we are confounding the situation. We are creating a situation in which the delegation of authority from Congress to engage in policymaking is to the head of a department of the executive branch. I think that would be a grave mistake.

The gentleman from Ohio (Mr. Brown) has pointed out the enormous authority, almost unlimited with respect to procedure, that has been granted to the FEA. Add to that the authority of the Federal Power Commission and leave all this to an executive department's unbridled authority and Congress will have indeed abdicated from its constitutionally defined position as prime policymaker in our divided system of government. We all know that we have some greater opportunity to oversee and influence a regulatory agency, from both sides of this aisle, than to oversee and influence a part of the executive family. We know that the regulatory agencies have to be more nonpartisan, because they have to answer to Congress more directly than do those receiving a part of the executive budget—that of a department. These departments in the executive family can transfer funds from one area to another. Why should we delegate so much authority here today?

I am in favor of the President's program. I have gone to Texas and spoken for the President's program before groups of oil men, independents and majors. I have said it is a good program. So my credentials in support of the President's program are impeccable, I believe.

I opposed the Conyers amendment, because I thought it went too far. I thought FEA functions ought to be directly controlled by the Energy Agency. I thought that was necessary in order to put a fully integrated program together. But when we talk about regulation that has to do with a factual determination of price,

and about quasi-judicial functions, we are talking about a different thing. I have said on this floor before that I suppose I am a substantive liberal but a procedural conservative. I think that the best thing that we could do here today is move a little slower, a little more conservatively with respect to delegation of the exercise of power to regulate the price of gas. It does not make any difference whether one is for deregulation or for regulation. Let us have deregulation or regulation done in an atmosphere which is not affected so directly by the politics of the executive department.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. Moss).

The question was taken; and the chairman announced that the ayes appeared to have it.

#### RECORDED VOTE

Mr. BROOKS. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 236, noes 119, not voting 78, as follows:

[Roll No. 299]

#### AYES—236

## NOT VOTING—78

|                |                |               |
|----------------|----------------|---------------|
| Anderson, Ill. | Harkin         | Neal          |
| Andrews, N.C.  | Hollenbeck     | Nichols       |
| Ashbrook       | Hughes         | Pepper        |
| Aspin          | Ichord         | Poage         |
| Bo. and        | Ireland        | Pressler      |
| Breaux         | Jeffords       | Price         |
| Brown, Mich.   | Jenrette       | Pursell       |
| Burgener       | Johnson, Colo. | Roe           |
| Burke, Calif.  | Koch           | Ryan          |
| Carter         | Leach          | Scheuer       |
| Chappell       | Lehman         | Sebelius      |
| Clausen.       | Lloyd, Calif.  | Seiberling    |
| Don H.         | Lujan          | Smith, Iowa   |
| Davis          | McCormack      | Steers        |
| Delaney        | McKay          | Stratton      |
| Dent           | McKinney       | Taylor        |
| Devine         | Mann           | Teague        |
| Dornan         | Marlenee       | Thompson      |
| Downey         | Mikva          | Waggonner     |
| Fary           | Milford        | Weaver        |
| Flood          | Miller, Calif. | Whitehurst    |
| Florio         | Mineta         | Wilson, Bob   |
| Flowers        | Minish         | Wyder         |
| Fraser         | Mitchell, Md.  | Young, Alaska |
| Hagedorn       | Moakley        | Young, Mo.    |
| Hammer-        | Mollohan       | Zeferetti     |
| schmidt        | Myers, Gary    |               |

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. McKay against.  
 Mr. Florio for, with Mr. Davis against.  
 Mr. Nichols for, with Mr. Thompson against.  
 Mr. Marlenee for, with Mr. Chappell against.  
 Mr. Devine for, with Mr. Boland against.  
 Mr. Carter for, with Mr. Mitchell of Maryland against.

Mr. Taylor for, with Mr. Minish against.  
 Mr. Young of Alaska for, with Mr. Koch against.

Mr. Whitehurst for, with Mr. Pepper against.

Mr. Dornan for, with Mrs. Burke of California against.

Mr. FLIPPO and Mr. FITHIAN changed their vote from "aye" to "no."

Mr. KELLY and Mr. RUSSO changed their vote from "no" to "aye."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

## AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Page 76, line 25, strike out all of line 25 through line 3, page 77.

Mr. DINGELL. Mr. Chairman, this is a very simple, but important amendment.

The bill transfers to the new Secretary authority to establish priorities in the case of curtailments under the Natural Gas Act. That power is now vested in the Federal Power Commission.

I believe that this is the kind of power over business, over industry, and over the lives of our citizens that ought to be vested in the Commission, and we should consider it in that light for the same reason that we acted on the Moss amendment, which was just agreed to. This is a function that affects the homes, the businesses, the jobs, and the industries of all the American people, just as does the rate function.

The power to curtail is the power to deny heat, light, and energy to the homes of America. It is not the kind of power that should be vested in one man; it is the kind of power which should be vested in a collegial body.

The reason for that is that a collegial body has certain requirements under law which it obviously must meet and which it cannot escape meeting because of the capacity in which it functions. Under the Sunshine Act this kind of action must be taken in an open public meeting. When the Secretary takes an action of this kind, he does it behind closed doors.

Mr. Chairman, I would point out to my colleagues that this is the kind of action which should be taken in the openness of daylight and where the public would have the opportunity to see who will be curtailed.

In a hearing which my subcommittee held last week to go into this question, my colleague and friend, the gentleman from New Jersey (Mr. MAGUIRE), asked questions with regard to this matter. Let me read for the Members what appears in the record:

Mr. MAGUIRE. The question could then be who should set that general curtailment strategy, and I don't think in terms of emergency actions of the sort you have described that that would necessarily mean that that had to be done by the Secretary. It could equally well be done by a collegial body.

Mr. O'LEARY. It could be.

Mr. MAGUIRE. Thank you, Mr. Chairman.

Mr. Chairman, let me go back to a point a little earlier and read another

inquiry made by the gentleman from New Jersey (Mr. MAGUIRE). This is what he said:

Now, my question is, aren't curtailment priorities best established well in advance of an emergency? Presumably they would not be established at the moment.

He is referring, of course, to the moment at which the emergency occurred.

Mr. O'Leary, responding to the question of our friend and colleague, the gentleman from New Jersey (Mr. MAGUIRE), said as follows:

Mr. Maguire, they are indeed established well in advance of emergency. The point that you have to concern yourself with here are decisions within categories. For example, if you are down to the point of cutting two's—

And that is two categories—

Who goes first, the agricultural people, or the school, or that sort of decision, those sorts of things you have to more or less take in the context of what is going on at the moment, I think, are properly the emergency functions in a Secretary.

Mr. Chairman, what was said really was that we are now choosing under the curtailment power who loses heat for his home, who loses heat for his business, who loses heat for a school, and who loses heat or energy for his activities which are required.

If my colleagues will think back to what happened last fall when we were seeing curtailments across the country, they might well ask: Would we rather have that judgment made by a collegial commission functioning under the Sunshine Act—open daylight of the decision-making process by a group of persons functioning under law—or would we rather have it made by a Secretary functioning behind closed doors?

Mr. Chairman, I have great respect for Mr. Schlesinger. He is a fine and an honorable man, and he will probably be a great and honorable Secretary. I have every confidence in him. But the fact of the matter is that we do not know who will be succeeding him or who will be participating in the decisions with regard to these matters.

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. Mr. Chairman, I mentioned the name of my friend, the gentleman from New Jersey (Mr. MAGUIRE), and I will be happy to yield to him.

Mr. MAGUIRE. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I want to thank the gentleman from Michigan (Mr. DINGELL) for offering this amendment. I think it is an excellent amendment. It does follow on in line with the colloquy the gentleman has cited from one of our earlier hearings.

I might make two additional points. The first is that I certainly agree—and I am sure the gentleman in the well also agrees—that the Secretary needs in times of emergency to have such powers.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. DINGELL) has expired.

(On request of Mr. MAGUIRE and by unanimous consent, Mr. DINGELL was

allowed to proceed for 2 additional minutes.)

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I will continue to yield to my friend, the gentleman from New Jersey.

Mr. MAGUIRE. Mr. Chairman, I thank the gentleman.

I would just point out that the planned energy legislation does incorporate a 2-year extension of the emergency natural gas provisions promulgated in that regard, with the powers vested in the President for dealing with emergencies.

What we are asking for in this amendment—and I join with the gentleman from Michigan (Mr. DINGELL) in offering it and supporting it—is simply that the basic judgments about categories should be made calmly and dispassionately in advance by a collegial body.

The same arguments that applied a moment ago to the Moss amendment apply equally to this amendment; and I would point out as well that we are not talking about an issue which relates to pricing or production or supply or any of the complicated supply-and-demand issues which we will be getting into later, but simply, given an amount of gas, who is going to get it?

That should not be a political decision; that should not be a decision made by one individual; it should be a decision made by a collegial body.

Mr. Chairman, I urge adoption of the gentleman's amendment.

Mr. DINGELL. Mr. Chairman, I join the gentleman in the broad openness of daylight, and on behalf of due process and against ex parte communication. I urge the adoption of my amendment.

Mr. BROOKS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I would say that priority for curtailments is not a case-by-case matter. It is not price setting.

If we want to have a Secretary of the Department of Energy who has any authority, who can make plans to eliminate the possibility of emergencies, and if they do not work, who has the authority and the capacity to meet the emergencies for this country in natural gas curtailments, then we should leave it in the Secretary.

If we want to take all of the authority away from the Secretary and give it to the great Commission which we have created and which will be somewhat irrelevant to the problem of gas and oil shortages in this country, if that is what we want to do, then we should do it. However, I think it is a very unwise thing to take all of the authority away from the Secretary and turn it back over to a commission. We would be headed back into the same area from which we came, with semi-independent bodies making decisions; and we are not going to be in a position to do much better with our energy problems than we have in the past.

Mr. Chairman, these persons can just think back to the problems we have

had with the FPC and think about how long we took or how long our constituents took to get their cases adjudicated. Some of them made a career out of riding back and forth from Houston to Washington on those FPC cases.

Mr. Chairman, I do not think this amendment is necessary, and I urge a no vote.

Mr. FASCELL. Mr. Chairman, will the gentleman yield?

Mr. BROOKS. I yield to the gentleman from Florida.

Mr. FASCELL. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, it seems to me that the argument of the proponents of the pending amendment and that which was just adopted, is that there is no sense of urgency. We can go on doing things in the same way we have been doing them. The argument seems to say that we need to do nothing to prevent a crisis—we should wait until the crisis develops. But I submit there is an energy crisis in the United States and we need a Secretary of Energy with enough authority to deal with the crisis. This amendment denies the Secretary that authority and should be defeated.

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. BROOKS. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. Mr. Chairman, I would like to point out that in the colloquy with Mr. O'Leary, he indicated that the board would, in any case under their general policy, also reserve power to decide individual cases.

We are dealing here with three different categories: overall curtailment strategy, individual cases, and emergency powers.

We agree with the administration that the case-by-case issues ought to be handled by the board and that the emergency powers ought to be vested in the President. The only point of disagreement is whether the overall strategies are to be set by the board or by the Secretary.

We are saying that it should be by the board because that can be set well in advance, and it does not impinge on anybody's emergency, and also, it is not prejudged.

Mr. BROOKS. Mr. Chairman, I thank the gentleman.

I think the Secretary should have the authority to make these plans in advance and to meet crises that come about in this country.

If we do not believe in that, Mr. Chairman, let us vote for the amendment and give the Commission 6 months. However, when it gets cold in the wintertime and our constituents question us about it, we should just tell them how we voted.

Mr. MOSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I think it is well to understand what is being proposed here. It is nothing violent. It is nothing regressive. We are not moving back to any

pattern of the past. But, in dealing with orderly, long-range planning, we say that the decisions on curtailment schedules, on curtailments pursuant to a master plan, should be put together by the collegial body. The emergency powers, in the event of a crisis, exist and can be exercised. It is vested in the President who may delegate that power.

But there is no valid reason why the collegial body, following the normal procedures with opportunity for hearings—and I was rather shocked at my good friend, the gentleman from Florida (Mr. FASCELL), the father of the Sunshine Act, for standing here and urging that we create a situation in which sunshine certainly will not cast its rays upon the actions of the Secretary in the exercise of this function. But I do appreciate the path that the gentleman from Florida helped launch us on. Having some of these actions taken in the open, with a record, with a hearing, with the opportunity to insure that all parties and all viewpoints are considered is necessary. That is all that is being asked for here. The emergency matters are taken care of. But the long range, orderly planning, you have a right, as an individual, you have a right as a businessman, as a manufacturer, as a user of these energy products, to know under what conditions curtailments would occur and under what guidelines.

I think the amendment should be adopted.

Mr. HORTON. Mr. Chairman, I move to strike the requisite number of words and I rise in opposition to the amendment.

Mr. Chairman, what we tried to do when we reported this bill was to take certain regulatory functions of the Federal Power Commission and give them to the Secretary. With the last amendment, the Moss amendment, we knocked out two of those eight. Now we have an amendment before us to knock out the third of those authorities that the Federal Power Commission had. So we are rapidly getting back to the Erlenborn amendment, which was to leave the Federal Power Commission as it was.

I went along with the administration on this proposal because I feel very strongly that there is a need for a unified energy policy in this Government. At the present time it is very diversified. The Secretaries of several departments and agencies have jurisdiction over energy in this country. If we are going to have any cohesive policy at all, it is going to require that the Secretary have some authority on this question of curtailment. Again, in my judgment, it is very important for the Secretary of Energy to have this authority. If we want to maintain the status quo, then why don't we keep ERDA as it is, FEA as it is, and the Federal Power Commission as it is, and not try to establish a Department of Energy to resolve these problems?

Here again we are undercutting the authority the committee feels the Secretary should have in order to do a job. It is very important authority.

I would hope that this amendment will be defeated.

Mr. FASCELL. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I would be glad to yield to the gentleman from Florida.

Mr. FASCELL. Mr. Chairman, I would like to know, if this amendment is adopted, whether the Secretary would have the authority to direct the Board to establish a new curtailment plan. How can the Secretary in administering a national energy policy be assured that the Board will consider such policy? If he has no authority to do that, and it is only on the initiative of the Board, then we will be long, into a winter crisis before we ever get a plan adopted and administered.

Mr. HORTON. That is a good point.

The other point I would like to make, Mr. Chairman, is that, in studying this legislation, and in studying what was presented to us, I came to the conclusion that I would rather have a Secretary responsible to the Congress, than a collegial board because the collegial boards have not been too responsive to the Congress, especially in matters of energy.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. HORTON. I yield to the gentleman from Michigan.

Mr. DINGELL. I do thank my colleague because he has asked a very serious question. The answer is the Federal Power Commission has done a very fine job in providing for curtailments, and there have been no serious complaints about the decisions they have made or the way in which they have acted. They have provided for curtailments well in advance. They are well known and well understood, and they are achieved in the eye of the public and not behind closed doors.

Mr. HORTON. Why do we have a gas shortage this year?

Mr. DINGELL. If the gentleman will yield further, that is a question, I would point out to my good friend and colleague, that we will be debating shortly when we get to the substantive questions around which the procedural questions and the organizational questions we are now addressing revolve.

Mr. HORTON. The point I am making is I think it is important to have a Department of Energy and a Secretary with authority. If we keep whittling away the authority, we might as well leave the situation as it is.

Mr. Chairman, I urge that the amendment not be adopted.

Mr. ALLEN. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I voted for the Moss amendment. This was an amendment that applied to individual cases that would come before a determinative body, and where we wanted to protect the right of the people to due process of law. However, we have in this country a grave national emergency. We heard the President from this rostrum, just a few months ago, tell us of a worldwide shortage in the crude oil reserves;

and through his Secretary of Energy he wants to conserve this essential natural resource, through the agency created by this bill, to the fullest extent possible.

The President was elected by the people, and is answerable to the people. He is answerable for the conduct of his Secretary of Energy. The most responsible thing we can do in this matter, it seems to me, is to permit the President of the United States through this agency and Secretary of Energy to establish the policy that needs to be adopted to assure the people of this country in the long run that we have the natural resources to provide the energy that this country needs.

Certainly an appointed board is answerable to nobody. But the Secretary of Energy, or of the Department of Energy, is answerable to the President, and the President is answerable to the people. For that reason I say that this matter of long-range planning, and decisions as to how much of what kind of energy should be used, how much crude oil should be permitted to be refined and used, are decisions that should be made by the Department of Energy and the Secretary answerable to the President. If we are not going to do that, let us just scrap the whole bill and forget the whole thing, because it serves no purpose at all to have a bill in which the President, who is answerable to the people, is not going to be given the power to take such actions and make such decisions as he may deem necessary to meet his very grave responsibility to protect the health, safety, and economy of this Nation.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. DINGELL).

The amendment was rejected.

#### AMENDMENT OFFERED BY MR. UDALL

Mr. UDALL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. UDALL: On page 79, lines 16 through 20, strike section 302 (d) (1) (C), and renumber section 302 (d) (1) (D) and section 302 (d) (1) (E) accordingly; and

On page 81, lines 8 through 14, strike section 303 and renumber title III accordingly.

Mr. UDALL. Mr. Chairman, we need a Department of Energy, and we are in energy trouble. I support the structure and outline of this bill. I have been with the committee on nearly all of the amendments today. I do not like to see a lot of power put in the hands of one strong individual, but I suspect we are going to need it, so I have broadly supported this bill.

I do want to make one change in it, and that is what this amendment is about. It relates to the relationship of the Secretary of Energy and the Secretary of the Interior with regard to leasing energy resources.

The American people are lucky in one respect as we go into this energy situation, that is that most of the remaining energy reserves are not owned by oil companies and are not owned by private individuals; they are owned by the Amer-

ican people. The offshore oil and gas we own, the coal in Western lands the people own, and the oil shale in the Rocky Mountains is largely federally owned, and the uranium ore is largely on Federal lands, the same with geothermal sites.

So one of the questions in the years ahead is how we deal with the Federal lands and resources. How do we manage to get the energy resources we need out of those lands and yet do it in ways to protect the environment and to protect the cattle and the timber people who have interests, and to protect all the values including recreation on those public lands? That is what is involved here.

Are we going to have Federal lands managed by the Secretary of Energy who has a single focus and whose sole job is to produce energy, or are we going to have day by day Federal lands and resources managed by a trained and experienced set of land managers that we have now in place in the Department of the Interior?

So my amendment would draw, I think, the necessary distinction between the overall economic considerations which the Secretary of Energy ought to determine and we leave him with the determination of that. The Energy Secretary, Mr. Schlesinger, is going to write guidelines and is going to make decisions on competition and on alternative bidding systems and rates of production and Federal royalty levels and these kinds of things. I think we can draw that distinction and still leave the day by day management of the public lands with the Secretary of the Interior to take care of these multiple uses and environmental values which are involved.

So my amendment in part will strike out section 303, which says the Secretary of Energy, after the Department of Interior has negotiated leases, and there will be thousands of them, then Energy Secretary has the right to go through and veto any paragraph or word or page or section of thousands of leases. What I would do is to give the Energy Secretary the right to make overall guidelines, to say what economic principles should govern these leases, but to leave negotiation, execution, and management of individual leases in the hands of the Secretary of the Interior who has the expertise and who has the trained land managers who are now on the job. This is all the amendment does.

It makes no basic change in the structure of the Energy Department but strikes a better balance between management of diverse values of public lands and energy purposes we all support. I hope the amendment will be adopted.

Mr. BROOKS. Mr. Chairman, I rise to oppose the amendment of the gentleman from Arizona.

The leasing arrangement between the Department of Energy and the Department of the Interior, as contained in the committee reported bill, strikes a fair balance between energy production and multiple use considerations. The division of responsibilities allows each Department to consider and act on those areas

in which it has the greatest interests—Energy with regard to economic terms and conditions and Interior with regard to environmental protection and multiple use constraints.

The sections which the pending amendment would delete are vital in maintaining that balance. The ability of the Department of Energy to issue regulations relating to diligent development of leased resources is vital if we are to insure the development of these resources for the benefit of the American people, rather than for the encouragement of speculative holding of such resources for the benefit of the lessee. This is properly a function of the Energy Department, which will be and should be concerned with obtaining the production needed from Federal lands to help insure us an adequate supply of energy. But it does not mean that the Energy Department can ride roughshod over environmental concerns in the issuance of these diligence regulations. The Interior Secretary will retain the power to enforce environmental conditions in the development of Federal leases. This power will not be mitigated by the new division of responsibility with the Secretary of Energy.

The second part of the pending amendment would eliminate the ability of the Energy Department to disapprove terms and conditions of individual leases. First, let me make clear that this disapproval right, in the committee-reported bill, extends only to the specific economic areas outlined in section 302 (d) (1) in which the Secretary of Energy can issue regulations. It does not extend to disapproving other terms and conditions of leases. But this disapproval right is essential if the Energy Department is to effectively translate the regulations issued on a general basis into reality at the individual lease level. Without this disapproval right, the power of the Energy Department to monitor the degree of adherence to the general regulations it has issued will be severely diminished. And the interaction between the Energy and Interior Departments regarding individual leases will likely result in a better decision being made in the end, as both energy and environmental factors are considered.

The leasing provisions of the committee-reported bill have been fully agreed to by Secretary of the Interior Andrus. It is my understanding that he believes the division of responsibility makes sense and is in the public interest. I similarly believe the committee-reported bill strikes a proper balance.

I therefore urge defeat of the Udall amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arizona (Mr. UDALL).

The question was taken; and on a division (demanded by Mr. UDALL) there were—ayes 29, noes 29.

#### RECORDED VOTE

Mr. UDALL. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 170, noes 180, not voting 83, as follows:

#### [Roll No. 300]

##### AYES—170

| Giaimo         | Myers, Gary    |               |

Mr. SARASIN changed his vote from "aye" to "no."

Mrs. FENWICK and Messrs. EARLY, ARCHER, and SATTERFIELD changed their vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

#### AMENDMENT OFFERED BY MR. MEEDS

Mr. MEEDS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MEEDS:

Strike subsection (a) through (c) of section 302, page 77, line 15 through page 79, line 4, and insert in lieu thereof the following:

SEC. 302. (a) There are hereby transferred to and vested in the Secretary all functions and authorities of the Secretary of the Interior under section 5 of the Food Control Act of 1944 (16 U.S.C. 825s), and all other functions and authorities of the Secretary of the Interior, and officers and components of the Department of the Interior, with respect to—

(1) the Southeastern Power Administration;

(2) the Southwestern Power Administration;

(3) the Alaska Power Administration;

(4) the Bonneville Power Administration including but not limited to the authority contained in the Bonneville Project Act of 1937 (50 Stat. 731), as amended, and the Federal Columbia River Transmission System Act (88 Stat. 1376);

(5) the power marketing functions of the Bureau of Reclamation including the construction, operation, and maintenance of transmission lines and attendant facilities; and

(6) the transmission and disposition of the electric power and energy generated at

Falcon Dam and Amistad Dam, international storage reservoir projects on the Rio Grande, pursuant to the Act of June 18, 1954, as amended by the Act of December 23, 1963.

(b) The Southeastern Power Administration, the Southwestern Power Administration, the Bonneville Power Administration, and the Alaska Power Administration shall be preserved as separate and distinct organizational entities within the Department; shall each be headed by an Administrator appointed by the Secretary. The functions and authority hereby transferred to the Secretary shall be exercised by the Secretary, acting by and through such Administrators. Each such Administrator shall maintain his principal office at a place located in the region served by his respective Federal power marketing entity.

(c) There is hereby created a separate and distinct Administration within the Department of Energy which shall be headed by an Administrator appointed by the Secretary. The functions and authority transferred in paragraph (a) (5) or (a) (6) of this section shall be exercised by the Secretary, acting by and through such Administrator; and the Administrator shall establish and shall maintain such regional offices as necessary to facilitate the performance of such functions. Neither the transfer of functions and authority effected by subsection a(5) of this section nor any changes in cost allocation or project evaluation standards shall be deemed to authorize the reallocation of joint costs of multipurpose facilities theretofore allocated unless and to the extent that such change is hereafter approved by Congress.

Mr. MEEDS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. MEEDS. Mr. Chairman, this amendment is designed to accomplish three objectives.

First, it would transfer to the Department of Energy the transmission line functions of the Bureau of Reclamation. At present, section 302(A) only provides for the transfer to the Department of Energy of the Bureau of Reclamation's power marketing functions, leaving the Bureau of Reclamation with the authority to administer its own transmission lines. As a result of this partial transfer of functions, power customers of the Bureau would have to deal with the Department of Energy on matters concerning rates and power supply and then would have to turn to the Bureau of Reclamation to arrange for the transmission of power. This amendment, by transferring to the Department of Energy both the power marketing and transmission line functions of the Bureau of Reclamation, would eliminate unnecessary multiagency actions, would greatly simplify negotiations of power customers, and would focus all authority in this area in the Department of Energy.

Second, the amendment provides for separate Administrators within the Department of Energy for each of the four Federal power marketing agencies and the Bureau of Reclamation. In addition, the amendment mandates that each such Administrator shall maintain his prin-

cipal office within the region served by his agency.

Mr. Chairman, the purpose of these portions of the amendment is to insure that these agencies and the Bureau of Reclamation are preserved as separate and distinct organizational entities within the Department of Energy, able to function on a regional basis. Through years of cooperation with State and local authorities, public and private utilities, and industrial power users, each of these entities have become an integral part of the power planning and allocation programs of the regions in which they operate. By allowing local and State access to personnel administering power programs, by encouraging local innovation, and by considering purely regional needs and requirements, each of these organizations have managed to develop regional power supply programs best able to serve the communities of each region. If the regional nature of these entities is destroyed by the creation of the Department of Energy, the results of years of mutually advantageous cooperation will be seriously threatened.

The Bonneville Power Administration provides an excellent example of the extent of present regional administration. Since its creation in 1937, the Bonneville Power Administration has always exercised independent responsibility over such matters as the administration of its budget, local labor relations, the procurement of legal services, construction contracts, power supply contracts, claim settlements, selection of technical expertise and utilization of local administrative skills. As a result of such regional interaction, the Bonneville Power Administration has been able to meet the constantly changing power needs of the Pacific Northwest.

Mr. Chairman, I would like to stress that it is absolutely imperative that Bonneville Power Administration, along with the other three Federal power marketing agencies and the Bureau of Reclamation, be allowed to continue to exercise independent responsibility over such matters. Without the authority to make independent decisions based on regional needs, the effectiveness of the regional entities is jeopardized. I believe this amendment will prevent this.

Third, this amendment would insure that cost allocations of presently constructed multipurpose projects will not be changed without the approval of Congress.

The need for this section of the amendment stems from the fact that H.R. 6804 separates power marketing responsibilities from responsibilities associated with the development of water resources and the marketing of that water for agricultural, municipal and industrial purposes in areas served by the Bureau of Reclamation. In the past, the Department of Interior, acting through the Bureau of Reclamation, has determined, after approval by Congress, how the costs and repayment obligations should be allocated between the power and water aspects of multipurpose water resources projects. However, H.R. 6804, by dividing these re-

sponsibilities between the Department of Energy and the Department of Interior, will create a situation where these two departments could be at odds with each other over the proper division of joint costs and repayment obligations.

Mr. Chairman, this amendment merely insures that this conflict will not take place by requiring congressional approval of any changes in cost allocations and repayment obligations.

I hope this amendment will be adopted.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, I would say to my distinguished friend, the gentleman from Washington (Mr. MEEDS), that I have looked over his amendment, and I have had discussions with him during the last couple of days and particularly during the last couple of hours. I find that it is an acceptable amendment, and would be constructive, helpful, equitable, and desirable.

Therefore, Mr. Chairman, I would be perfectly willing to support it.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, when we were before the Committee on Rules the other day, the gentleman indicated that he was going to offer such an amendment here today. We have seen his amendment, and it is acceptable to our side.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. MEEDS).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. EDGAR

Mr. EDGAR. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. EDGAR: Page 84, after line 16, add the following new section:

SEC. 311. Notwithstanding section 301(a), there are hereby transferred to, and vested in, the Secretary of Transportation all of the functions vested in the Administrator of the Federal Energy Administration by section 381(b)(1)(B) of the Energy Policy and Conservation Act.

Mr. EDGAR. Mr. Chairman, my amendment transfers to the Department of Transportation the existing vanpool and carpool program administered by the Federal Energy Administration. The Department already administers various programs which promote carpooling and vanpooling. For example, the Federal Highway Administration administers a program authorized by the Emergency Highway Energy Conservation Act which allows States to utilize certain highway funds for carpooling and vanpooling. Over \$11 million has been set aside by States to fund these programs. The Urban Mass Transportation Administration also funds a number of vanpooling demonstration programs.

I have no complaints about the FEA program, which was authorized by section 381 of the Energy Policy and Conservation Act. The program is poorly

funded, with operating funds for only two full-time employees and less than \$1 million grant money. I am very pleased with FEA Administrator John O'Leary's attitude toward this innovative and cost-effective form of transit. Yet I see a general problem which could stifle effective Federal involvement in encouraging ridesharing, in its forms of vanpooling and carpooling.

Vanpooling and carpooling promotion is duplicated within FEA, UMTA, FHWA, and to a lesser extent, within EPA. These programs have sprouted as a reaction to the many benefits provided by vanpooling and carpooling programs. FEA would naturally be interested because each commuter van saves an average of 5,000 gallons each year. The Congressional Budget Office issued a study on the President's energy plan the other day, which estimated that the gasoline tax proposal would save an estimated 65,000 barrels each day. Just 20,000 commuter vans, none of which require a Government subsidy or compete with existing mass transit systems, would save as much fuel as the gasoline tax which is causing such an outrage in these halls. Over 1,000 of these vans are already on our highways each workday. The President proposes using 6,000 vans for Federal employees on a reimbursable basis. It follows that 20,000 vans is not an unrealistic goal for 1985.

The Environmental Protection Agency is interested in vanpool programs because each commuter van replaces six vehicles, keeping 2 tons of pollutants out of the atmosphere. In some highly urbanized areas which suffer high pollution loads, EPA has required large employers to offer vanpool programs.

The Federal Highway Administration is interested because our highways are clogged during rush hours. Substituting vans for private autos reduces traffic congestion and lowers highway maintenance requirements.

The Urban Mass Transportation Administration recognizes that it is impractical to build subways in every city, and that public mass transit opportunities are not cost-effective except in areas of high population density. Vanpools bridge the gap between private and public transit with significant savings to participants.

My amendment is sensitive to the need to streamline government and remove layers of bureaucracy and waste. I am a strong proponent of placing the entire vanpooling and carpooling effort into a single office within the Department of Transportation. During questioning of FEA Administrator O'Leary which occurred at hearings of the House Surface Transportation Subcommittee, he noted that DOT would be the most appropriate agency should a single office be established.

My amendment is the first step in creating an office to consolidate the many carpooling and vanpooling programs in the Federal Government. It is consistent with legislation I introduced, the "Federal-aid to Ridesharing Act, H.R. 869, which now has 33 House cosponsors.

This legislation articulates a national policy for ridesharing which is consistent with a balanced transportation system. It also establishes a single categorical grant program for ridesharing activities, such as State planning, and promotion. It establishes a \$100 million revolving fund which could be utilized to finance van purchases. I do not see a single dollar of the Federal Government being required to buy vans on other than a reimbursable basis.

The House Government Activities and Transportation Subcommittee will have 2 days of hearings on June 8 and 9 to explore the President's proposal for a vanpool program for Federal employees. I intend to testify at these hearings, and I anticipate that the organization of Federal programs to promote vanpooling and carpooling will be carefully considered.

Mr. Chairman, I would like to draw to the attention of my colleagues an editorial which appeared today in the New York Times praising vanpooling, and underscoring the need for congressional support of that form of transit.

I urge my colleagues to accept my amendment as a first step in focusing our efforts in this important area.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. EDGAR. I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, I understand that this program could be under either agency, and I can appreciate the gentleman's desire to unite these programs with similar programs presently carried out by the Department of Transportation.

Mr. Chairman, I personally have no objection to the gentleman's amendment at all.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. EDGAR).

The amendment was agreed to.

Mr. BEDELL. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I have taken this time because of a problem that exists relative to some of the language of the Senate report on the Senate bill. There are some serious questions in regard to the return of investment for pipeline companies. According to figures obtained from the ICC, if we take the years from 1968 to 1972, in that 5-year period, the return on investment for those pipeline companies was 269.3 percent, in a 5-year period, for 35 pipeline companies. According to a recent consent decree it was declared that pipeline companies' limitations on return would be based upon the value of the pipeline, regardless of how much equity the corporation had in the pipeline.

The problem therein is that as the company continues to depreciate its pipeline and takes off depreciation, at the same time the value increases and the amount of money that they receive continues to increase.

Under these circumstances the Department of Justice has already de-

clared that this should be reviewed. The ICC is starting to indeed review it.

In the language of the Senate report, it states, among other things, I quote, "recognizing the importance of regulatory continuity the committee proposes no substantial changes in the existing method of regulation."

I believe they meant to say by that, no substantial changes in the authority over that now exercised by the ICC.

I have discussed this with the chairman. It is my understanding that it is indeed the intention of this legislation to transfer the authority to the new department, which will be exactly the same as that with the ICC, so that if the new department feels there should be changes they will have the authority to make those changes just the same as the ICC did.

Mr. BROOKS. Mr. Chairman, if the gentleman will yield, I want to say to my distinguished friend, the gentleman from Iowa (Mr. BEDELL) that we do not intend to change the substantive law through this legislation. By the same token, we do not intend to tie the hands of the Secretary in his efforts to effectively carry out his management and his implementation of this substantive law that is being transferred to him.

Mr. BEDELL. So that opportunities to make corrections, if they seem advisable, will go with the new department just as they have been before with the ICC in the past. Does the gentleman agree with my understanding?

Mr. BROOKS. That is my understanding.

AMENDMENT OFFERED BY MR. VOLKMER

Mr. VOLKMER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. VOLKMER: Page 77, strike out lines 8 through 14, and insert in lieu thereof, "(C) The Secretary, in formulating the information to be requested in the reports or investigations under section 304 and section 311 of the Federal Power Act and section 10 and section 11 of the Natural Gas Act, shall include in such reports and investigations such specific information as requested by the Federal Energy Regulatory Commission and copies of all reports, information, results of investigations and data under said sections shall be furnished by the Secretary to the Federal Energy Regulatory Commission."

Mr. VOLKMER (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. VOLKMER. Mr. Chairman, I do not plan to take a long time explaining this amendment. The purpose of the amendment is to try to eliminate some of the proposed duplication of paperwork that is proposed in this section. Under the present law, the four statutory sections involved have reports, two under the National Gas Act, two under the Federal Power Act. Reports from the public, industries, utilities and concerns are presently reported to the Federal

Power Commission. Under the proposed legislation, both the Secretary and the Energy Regulatory Commission would have the power to require these reports. Under my amendment, only the Secretary would require the reports and make the investigation.

Under my amendment the Secretary would require the reports and make the investigation, and in preparing the formulation of what goes into the reports would include such information as requested from the Energy Regulation Commission so that we would only have one report and not a duplication. We have all talked about unnecessary paperwork being foisted upon industry and business, and I am attempting by this amendment to provide that we would only have one report; and the copies of the reports would be provided to the Secretary, who would then transmit copies to the Federal Energy Regulatory Commission.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. VOLKMER. I yield to the gentleman from Texas.

Mr. BROOKS. I thank the gentleman for yielding.

I will say to my distinguished friend, the gentleman from Missouri, that I have looked over this amendment. It seems to be helpful and constructive, and I might say to eliminate duplication I would find it helpful to the legislation.

Mr. VOLKMER. I thank the Chairman.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. VOLKMER. I yield to the gentleman from New York.

Mr. HORTON. I thank the gentleman for yielding.

I am certainly in accord with anything we can do in the Congress to eliminate paperwork. Looking at the gentleman's amendment, I think it will help to avoid duplication, and under those circumstances I would be willing to accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri (Mr. VOLKMER).

The amendment was agreed to.

Mr. BAUCUS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to ask the chairman of the committee to engage in colloquy for the purpose or clarification of the bill. I would like to ask the chairman:

I appreciate the long hours of work put into this bill by Dr. Schlesinger's staff and both the Government Operations and Post Office and Civil Service Committees. All of us wish to see the new Department of Energy established as quickly as is reasonably possible. However, I am afraid that in our haste we may leave legacies of confusion.

I speak in particular of the division of responsibility for energy resource management between the proposed Department of Energy and the Department of the Interior. H.R. 6804 states that the Department of Energy is being established "in order to secure effective man-

agement to assure a coordinated national energy policy." On the other hand, the Department of the Interior is the manager of our public lands and resources including those resources which provide energy.

Mr. Chairman, I will not pretend that Interior has done an exemplary job in managing these resources but I contend that adding another department as a sort of comanager will not increase Interior's efficiency. In fact, it is very likely to further confuse an already entangled morass. Therefore, I have two questions about the following interrelated areas:

First, in section 302(a), (b), and (c), authority for the disposition of power generated by various dams, including those in the Bonneville Power Administration which profoundly affect Montana, is transferred to the Secretary of Energy. Control over the water in those dams was left with the Secretary of the Interior. In times of drought in the West, decisions may be required on whether the water will stay above the dams for agricultural purposes or allowed to flow over the dam to produce energy. These decisions will be vital to the farmers and ranchers of Montana. It is not clear who will make such decisions.

Second, section 302(d) gives some of the lease management duties of the Department of Interior to the Department of Energy but leaves the overall management with Interior. In Montana we are determined that the development of our rich coal supplies shall be orderly and efficient. We neither wish to delay coal production or fling ourselves pell mell into the destruction of our farming and ranching way of life. The efficient, careful leasing of our coal resources is of great importance to us.

The whole energy area is such a vital issue and our concepts about it are in such a state of flux. What appears wise today may be utmost folly tomorrow. It is absolutely imperative to provide good oversight in order to adjust provisions which do not work. Therefore, we must take time to evaluate the division of responsibility between Energy and Interior no later than 2 years after the new Department is established. We must also be prepared to make statutory adjustments of the division of responsibility between Interior and Energy if that division does indeed present the problems I fear might occur.

Mr. Chairman, my first question for the gentleman from Texas concerns the dams in section 302(a), (b), and (c) for which the authority for power disposition has been transferred to the Energy Department and the water disposition rests with Interior. In times of drought in the West, when a choice must be made between the use of water above a Power Administration dam—referred to in Section (a), (b), and (c)—for either energy production or agricultural uses, will the Secretary of Energy make the decision or will the Secretary of the Interior?

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. BAUCUS. I yield to the gentleman from Texas.

Mr. BROOKS. I thank the gentleman for yielding.

To my distinguished friend, the gentleman from Montana, I will say that under this bill the authority over the management of water resources will remain within the Department of the Interior and, as a consequence, the Secretary of the Interior would determine the priority usage of water during any period of drought.

Mr. BAUCUS. That is, when drought conditions prevail, it would be primarily the Interior Secretary's decision rather than the Energy Secretary's decision?

Mr. BROOKS. That is correct.

Mr. BAUCUS. My second question concerns the division of leasing management between the Departments of Energy and Interior as found in section 302(d). Does the gentleman from Texas feel that it would be wise to study the way this division has worked and recommend statutory changes if necessary no later than 2 years after the Energy Department is established?

Mr. BROOKS. If the gentleman will yield further, I think that a study of the management or leasing arrangements between the Department of the Interior and the Department of Energy would be beneficial. There is a general on-going need to evaluate contracts to see whether the Government interests are being protected or whether we are being ripped off steadily. I think that such oversight would be particularly called for where we have a divided leasing authority, one who will find primary interest in writing a lease and protecting environmental provisions, and the other in taking a look at the economics of the lease itself. So if it proves unworkable, then legislation would be introduced, and I would be amenable to considering that.

Mr. BAUCUS. I thank the gentleman very deeply because we in the West, as the gentleman knows, are very concerned about the land management, and we are very hopeful that the two competing interests between agricultural productivity and energy development can be accommodated, and we are just nervous and hopeful that if there are problems, the committee will recommend changes. I thank the gentleman.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

#### TITLE IV—FEDERAL ENERGY REGULATORY COMMISSION

SEC. 401. (a) (1) There is hereby established within the Department an independent regulatory commission to be known as the Federal Energy Regulatory Commission (hereinafter referred to in this title as the "Commission").

(2) There are hereby transferred to, and vested in, the Commission (A) all functions and authority of the Federal Power Commission under the Federal Power Act and the Natural Gas Act which are not specifically transferred to, and vested in, the Secretary pursuant to section 301(b) of this Act, and (B) all other functions transferred by title III of this Act which involve an agency determination required by law to be made on the record after opportunity for an agency hearing.

(3) Except as provided in section 301(b) (1), the Commission shall have the authority to prescribe, issue, make, amend, and rescind rules, regulations, and statements of policy

under the Federal Power Act and the Natural Gas Act, and, in exercising such authority, shall coordinate its actions with the Secretary.

(4) The Secretary may assign to the Commission, by rule, any other functions vested in or delegated to him.

(b) The Commission shall be comprised of five members appointed by the President, by and with the advice and consent of the Senate. One of the members shall be designated by the President as Chairman. Members shall hold office for a term of four years and may be removed by the President only for inefficiency, neglect of duty, or malfeasance in office. The terms of the members first taking office shall expire (as designated by the President at the time of appointment), two at the end of two years, two at the end of three years, and one at the end of four years. Not more than three members of the Commission shall be members of the same political party. Any Commissioner appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. A Commissioner may continue to serve after the expiration of this term until his successor has taken office, except that he may not so continue to serve more than one year after the date on which his term would otherwise expire under this subsection.

(c) The Chairman shall be responsible on behalf of the Commission for the executive and administrative operation of the Commission, including functions of the Commission with respect to (1) the appointment and employment of hearing examiners in accordance with the provisions of title 5, United States Code, (2) the selection, appointment, and supervision of personnel employed by or assigned to the Commission, except that each member of the Commission may select and supervise personnel for his personal staff, (3) the distribution of business among personnel and among administrative units of the Commission, and (4) the use and expenditure of funds appropriated for Commission functions. The Secretary shall provide to the Commission such support and facilities as the Commission may need to carry out its functions.

(d) In each annual authorization and appropriation request under this Act, the Secretary shall identify the portion thereof intended for the support of the Commission and include a statement by the Commission (1) showing the amount requested by the Commission in its budgetary presentation to the Secretary and the Office of Management and Budget and (2) an assessment of the budgetary needs of the Commission. Whenever the Commission submits any legislative recommendation or testimony, or comments on legislation, to the Secretary, the President, or the Office of Management and Budget, it shall concurrently transmit a copy thereof to the appropriate committees of Congress.

(e) In the performance of their functions, the members of the Commission shall not be responsible to, or subject to the supervision or direction of, any officer, employee, or agent of the Department.

(f) A decision of the Commission shall be a final agency action within the meaning of section 704 of title 5, United States Code, with respect to matters within the Commission's jurisdiction and shall not be subject to further review by the Secretary or any officer or employee of the Department.

(g) The Chairman of the Commission may from time to time designate any other member of the Commission as Acting Chairman to act in the place and stead of the Chairman during his absence. The Chairman (or the Acting Chairman in the absence of the Chairman) shall preside at all sessions of the Commission and a quorum for the transaction of business shall consist of at least three

members present. Each member of the Commission, including the Chairman, shall have one vote. Actions of the Commission shall be determined by a majority vote of the members present. The Commission shall have an official seal which shall be judicially noticed.

(h) The Commission is authorized to establish such procedural and administrative rules as are necessary to the exercise of its functions. Until changed by the Commission, such rules of the Federal Power Commission shall continue in effect.

(i) In carrying out all its functions, the Commission shall have the powers authorized by the Federal Power Act and the Natural Gas Act to hold hearings, sign and issue subpoenas, administer oaths, examine witnesses, and receive evidence at any place in the United States it may designate. The Commission may, by one or more of its members or by such agents as it may designate, conduct any hearing or other inquiry necessary or appropriate to its functions.

Sec. 402. No person in the employ of, or holding any official relation to, any person engaged in the production, generation, transmission, distribution, or sale of electric power, petroleum, petroleum products, natural gas, coal, nuclear material, synthetic fuels, or energy from renewable resources, wastes, or geothermal steam, or in energy research or development, or owning stock or bonds thereof, or having a pecuniary interest therein, shall enter upon the duties of, or hold the office of Commission member. Members shall not engage in any other business, vocation, or employment while members of the Commission.

Sec. 403. The principal office of the Commission shall be in or near the District of Columbia, where its general sessions shall be held; but the Commission may sit anywhere in the United States.

Sec. 404. The Secretary, each officer of the Department, and each Federal agency, subject to applicable provisions of law, shall cooperate with the Commission in providing, upon request, such information as it may require.

Sec. 405. Nothing in this title shall be construed in any way to limit the functions of the Secretary relating to activities within the jurisdiction of the Secretary, including any function shared with the Commission.

Sec. 406. The Secretary may as of right intervene or otherwise participate in any adjudicatory proceeding before the Commission. The Secretary shall comply with rules of procedure of general applicability governing the timing of intervention or participating therein, shall comply with rules of procedure of general applicability governing the conduct thereof. The intervention or participation of the Secretary in any proceeding or activity shall not affect the obligation of the Commission to assure procedural fairness to all participants.

Sec. 407. For the purpose of section 552b of title 5, United States Code, the Commission shall be deemed to be an agency.

Mr. BROOKS (during the reading). Mr. Chairman, I ask unanimous consent that title IV be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas? There was no objection.

AMENDMENT OFFERED BY MR. MOSS

Mr. MOSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Moss: Page 90, line 20, insert immediately after the period the following new sentence: "For the purposes of chapter 9 of title 5, United States Code, the Commission shall be deemed to be an independent regulatory agency."

Mr. MOSS. Mr. Chairman, this is the amendment I discussed earlier in the day when I indicated that I would offer a total of four amendments, the third for the purpose of making very clear the intent of the Congress that the Federal Energy Regulatory Commission be an independent Commission within the executive department and that it could not be reorganized except under the same conditions as would direct the reorganization of any other independent regulatory commission.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, the gentleman and I had a colloquy on this earlier during the debate. I certainly agree with him that we do not want this Commission to have any special benefits with regard to reorganization; in other words, we would want the same laws applicable to this Commission as to other Commissions and other agencies. I would certainly agree with the gentleman that the amendment should be enacted.

Mr. MOSS. I thank the gentleman from New York.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, I think it is perfectly appropriate to so define this particular section of the bill. The agency has the characteristics of being an independent agency, we might as well face up to it. I see no objection to the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. Moss).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. TUCKER

Mr. TUCKER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TUCKER: On page 84, line 25, strike "and" and insert a comma after the word "Act".

On page 85, line 1, after the word "Act" insert a comma and the following: "and all other laws under which the Commission operates".

Mr. TUCKER. Mr. Chairman, under existing statutes the Federal Power Commission has the responsibility under certain statutes to review rates proposed to be charged by federally owned electric utility projects. As an obligation of the Commission it is transferred to the Energy Department by section 301 of H.R. 6804, but this function does not arise from the Federal Power Act or the Natural Gas Act and therefore it is not included in the delegation to the Administrator under section 205(b) or to the Federal Energy Regulatory Commission under section 401(a)(1). This ambiguity needs to be clarified to specify that the Federal Energy Regulatory Commission will have such jurisdiction consistent with its jurisdiction over similar electric power wholesale rates arising under Federal Power Acts. Specific examples would be authority of the Federal Power Commission to review and approve electrical rates charged by such entities as

the Bonneville Power Project and the Southwest Power Administration.

This amendment is designed to clarify that ambiguity so that there can be subsequently no litigation or debate over it.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, I think the amendment is well thought out and would be constructive and helpful and I have no objection to it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas (Mr. TUCKER).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. TUCKER

Mr. TUCKER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TUCKER: Page 87, line 23, insert "and employees" after "members".

Mr. TUCKER. Mr. Chairman, this amendment simply clarifies and removes any doubt that the employees of the Federal Energy Regulatory Commission will operate subject only to the authority and direction of the Commission. Thus, the amendment is to assure that the Secretary of the Department of Energy cannot, indirectly, through any control over the employees of the Commission, thereby control the Commission's acts.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, it was the intent and is the intent of the committee to do this same thing and I think this language does not interfere with that intent. We would agree to it.

Mr. TUCKER. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas (Mr. TUCKER).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

#### TITLE V—ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

Sec. 501. (a) Subject to the other requirements of this section, the provisions of subchapter II of chapter 5 of title 5, United States Code, shall apply in accordance with its terms to any rule or regulation, or any order having the applicability and effect of a rule (as defined in section 551(4) of title 5, United States Code), issued pursuant to authority vested by law in or delegated to the Secretary or any officer, employee, or component of the Department, including any such rule, regulation, or order of a State or local government agency or officer thereof, issued pursuant to authority delegated by the Secretary.

(b) In addition to the requirements of subsection (a), notice of any proposed rule, regulation, or order described in subsection (a) shall be given by publication of such proposed rule, regulation, or order in the Federal Register. In each case, a minimum of ten days following such publication shall be provided for opportunity to comment; except that the requirements of this subsection as to time of notice and opportunity to comment may be waived where strict compliance is found to cause serious harm or injury to the public health, safety, or welfare, and such finding is set out in detail in such rule, regulation, or order. In addition,

public notice of all rules, regulations, or orders described in subsection (a) which are promulgated by officers of a State or local government agency shall be achieved by publication of such rules, regulations, or orders in at least two newspapers of statewide circulation, except that, if such publication is not practicable, notice of any rule, regulation, or order shall be given by such other means as the officer promulgating such rule, regulation, or order determines will assure wide public notice.

(c) In addition to the requirements of subsection (b), if any rule, regulation, or order described in subsection (a) is likely to have a substantial impact on the Nation's economy or large numbers of individuals or businesses, an opportunity for oral presentation of views, data and arguments shall be afforded. To the maximum extent practicable, such opportunity shall be afforded prior to the issuance of such rule, regulation, or order, but in all cases such opportunity shall be afforded no later than forty-five days after the issuance of any such rule, regulation, or order. A transcript shall be kept of any oral presentation.

(d) The Secretary or any officer authorized to issue rules, regulations, or orders under the Emergency Petroleum Allocation Act of 1973, the Energy Supply and Environmental Coordination Act of 1974, or the Energy Policy and Conservation Act shall provide for the making of such adjustments, consistent with the other purposes of the relevant Act, as may be necessary to prevent special hardship, inequity, or unfair distribution of burdens and shall, by rule, establish procedures which are available to any person for the purpose of seeking an interpretation, modification, rescission of, exception to, or exemption from, such rule, regulation or order.

(e) (1) With respect to any rule or regulation of the Secretary of the effects of which, except for indirect effects of an inconsequential nature, are confined to—

(A) a single unit of local government or the residents thereof;

(B) a single geographic area within a State or the residents thereof; or

(C) a single State or the residents thereof; the Secretary shall, in any case where appropriate, afford an opportunity for a hearing or the oral presentation of views and provide procedures for the holding of such hearing or oral presentation within the boundaries of the unit of local government, geographic area, or State described in subparagraphs (A) through (C), as the case may be.

(2) For purposes of this subsection—

(A) the term "unit of local government" means a county, municipality, town, township, village, or other unit of general government below the State level; and

(B) the term "geographic area within a State" means a special purpose district or other region recognized for governmental purposes within such State which is not a unit of local government.

(3) Nothing in this subsection shall be construed as requiring a hearing or an oral presentation of views where none is required by this section.

(f) (1) Judicial review of agency action taken under any law, the functions of which are transferred by this Act, shall, notwithstanding such transfer, be made in the manner specified in such law.

(2) Notwithstanding the amount in controversy, the district courts of the United States shall have exclusive original jurisdiction of all other cases or controversies arising under this Act, or under rules, regulations, or orders issued exclusively thereunder, other than any actions taken to implement or enforce any rule, regulation, or order by any officer of a State or local government agency under this Act, except that nothing in this section affects the power of

any court of competent jurisdiction to consider, hear, and determine in any proceeding before it any issue raised by way of defense (other than a defense based on the unconstitutionality of this Act or the validity of action taken by any agency under this Act). If in any such proceeding an issue by way of defense is raised based on the unconstitutionality of this Act or the validity of agency action under this Act, the case shall be subject to removal by either party to a district court of the United States in accordance with the applicable provisions of chapter 89 of title 28, United States Code. Cases or controversies arising under any rule, regulation, or order of any officer of a State or local government agency may be heard in either (1) any appropriate State court, or (2) without regard to the amount in controversy, the district courts of the United States.

(3) The Secretary may, by rule, prescribe procedures for State or local government agencies authorized by the Secretary to carry out such functions as may be permitted under applicable law. Such procedures shall apply to such agencies in lieu of section 501, and shall require that prior to taking any action, such agencies shall take steps reasonably calculated to provide notice to persons who may be affected by the action, and shall afford an opportunity for presentation of views (including oral presentation of views where practicable) a reasonable time before taking the action.

(4) Notwithstanding any other law, the litigation of the Department shall be subject to the supervision of the Attorney General pursuant to chapter 1 of title 28 United States Code. This paragraph shall not apply to the Federal Energy Regulatory Commission.

Mr. BROOKS (during the reading). Mr. Chairman, I ask unanimous consent that title V be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Page 90, strike out line 21 and everything that follows through page 95, line 17, and insert in lieu thereof the following:

#### TITLE V—ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

Sec. 501. (a) Subject to the other requirements of this title, the provisions of subchapter II of chapter 5 of title 5, United States Code, shall apply in accordance with its terms to any rule or regulation, or any order having the applicability and effect of a rule (as defined in section 551(4) of title 5, United States Code), issued pursuant to authority vested by law in, or transferred or delegated to, the Secretary, or required by this Act or any other Act to be carried out by any other officer, employee, or component of the Department, other than the Federal Energy Regulatory Commission, including any such rule, regulation, or order of a State, or local government agency or officer thereof, issued pursuant to authority delegated by the Secretary in accordance with this title. If any provision in any Act, the functions of which are transferred, vested, or delegated pursuant to this Act, provides administrative procedure requirements in addition to those provided in this title, such additional requirements shall also apply to actions under that provision.

(b) (1) In addition to the requirements of subsection (a) of this section, notice of any proposed rule, regulation, or order described in subsection (a) shall be given by publication of such proposed rule, regulation, or order in the Federal Register. Such publication shall be accompanied by a statement of the research, analysis, and other available information in support of, the need for, and the probable effect of, any such proposed rule, regulation, or order. Other effective means of publicity shall be utilized as may be reasonably calculated to notify concerned or affected parties of the nature and probable effect of any such proposed rule, regulation, or order. In each case, a minimum of thirty days following such publication shall be provided for opportunity to comment prior to the effective date of any such rule, regulation, or order; except that the requirements of this subsection as to time of notice and opportunity to comment may be waived, subject to paragraph (3) of this section, where strict compliance is found by the Secretary to be likely to cause serious harm or injury to the public health, safety, or welfare, and such finding is set out in detail in such rule, regulation, or order.

(2) Public notice of all rules, regulations, or orders described in subsection (a) which are promulgated by officers of a State or local government agency pursuant to a delegation under this Act shall be provided by publication of such proposed rules, regulations, or orders in at least two newspapers of statewide circulation. If such publication is not practicable, notice of any such rule, regulation, or order shall be given by such other means as the officer promulgating such rule, regulation, or order determines will reasonably assure wide public notice.

(3) The requirements of this subsection may be satisfied within a reasonable period of time subsequent to the promulgation of the rule, regulation, or order if the Secretary finds, under paragraph (1), that an emergency exists requiring the immediate implementation of any such rule, regulation, or order.

(c) (1) If the Secretary determines at the time of publication of a proposed rule, regulation, or order described in subsection (a) that no substantial issue exists and that such rule, regulation, or order is unlikely to have a substantial impact on the nation's economy or large numbers of individuals or businesses, the proposed rule, regulation, or order may be promulgated in accordance with section 553 of title 5, United States Code, except that subsection (a) (2) of section 553 shall not apply. If the Secretary determines at the time of publication of any such rule, regulation, or order that a substantial issue exists or that such rule, regulation, or order is likely to have a substantial impact on the nation's economy or large numbers of individuals or businesses, an opportunity for oral presentation of views, data, and arguments shall be provided.

(2) Any person, who would be adversely affected by the implementation of any proposed rule, regulation, or order issued pursuant to the first sentence of paragraph (1) and who desires an opportunity for oral presentation of views, data, and arguments, shall offer evidence supporting the existence of such substantial issues or such impact during the period established for public comment. If the Secretary determines that such evidence is sufficient to establish the existence of such issues or impact, the Secretary shall provide an opportunity for such oral presentation.

(3) Following the notice and comment period, including any oral presentation required by this subsection, the Secretary may promulgate such rule, regulation, or order, which shall include therewith an explanation responding to the major comments, criticisms,

and alternatives offered during the comment period.

(4) A transcript shall be kept of any oral presentation with respect to a rule, regulation, or order described in subsection (a).

(d) The Secretary, or any officer authorized to issue rules, regulations, or orders under the Federal Energy Administration Act, the Emergency Petroleum Allocation Act of 1973, the Energy Supply and Environmental Coordination Act of 1974, or the Energy Policy and Conservation Act shall provide for the making of such adjustments, consistent with the other purposes of the relevant Acts, as may be necessary to prevent special hardship, inequity, or unfair distribution of burdens, and shall, by rule, establish procedures which are available to any person for the purpose of seeking an interpretation, modification, or rescission of, exception to, or exemption from, such rule, regulation, or order. The Secretary or any such officer shall additionally insure that each decision on any application or petition requesting an adjustment shall specify the standards of hardship, inequity, or unfair distribution of burden by which any disposition was made, and the specific application of such standards to the facts contained in any such application or petition. If any person is aggrieved or adversely affected by a denial of a request for adjustment under the preceding sentences, such person may request a review of such denial by the Secretary and may obtain judicial review in accordance with this title when such a denial becomes final. The Secretary shall, by rule, establish appropriate procedures, including a hearing when requested, for review of a denial, and where deemed advisable by the Secretary, for considering other requests for action under this subsection, except that no review of a denial under this subsection shall be made by the same officer denying the adjustment.

(e) (1) With respect to any rule, regulation, or order, the effects of which, except for indirect effects of an inconsequential nature, are confined to—

(A) a single unit of local government or the residents thereof;

(B) a single geographic area within a State or the residents thereof; or

(C) a single State or the residents thereof; the Secretary shall, in any case where appropriate, afford an opportunity for a hearing or the oral presentation of views and provide procedures for the holding of such hearing or oral presentation within the boundaries of the unit of local government, geographic area, or State described in paragraphs (A) through (C) of this paragraph as the case may be.

(2) For purposes of this subsection—

(A) the term "unit of local government" means a county, municipality, town, township, village or other unit of general government below the State level; and

(B) the term "geographic area within a State" means a special purpose district or other region recognized for governmental purposes within such State which is not a unit of local government.

(3) Nothing in this subsection shall be construed as requiring a hearing or an oral presentation of views where none is required by this section or other provision of law.

(f) (1) Judicial review of agency action taken under any law the functions of which are vested by law in, or transferred or delegated to, the Secretary or any officer, employee, or component of the Department shall, notwithstanding such vesting, transfer, or delegation, be made in the manner specified in such law.

(2) Notwithstanding the amount in controversy, the district courts of the United States shall have exclusive original jurisdiction of all other cases or controversies arising under this Act, or under rules, regula-

tions, or orders issued exclusively thereunder, other than any actions taken to implement or enforce any rule, regulation, or order by any officer of a State or local government agency under this Act, except that nothing in this section affects the power of any court of competent jurisdiction to consider, hear, and determine in any proceeding before it any issue raised by way of defense (other than a defense based on the unconstitutionality of this Act or the validity of action taken by any agency under this Act). If in any such proceeding an issue by way of defense is raised based on the unconstitutionality of this Act or the validity of agency action under this Act, the case shall be subject to removal by either party to a district court of the United States in accordance with the applicable provisions of chapter 89 of title 28, United States Code. Cases or controversies arising under any rule, regulation, or order of any officer of a State or local government agency may be heard in either (A) any appropriate State court, or (B) without regard to the amount in controversy, the district courts of the United States.

(3) Where authorized by any law vested, transferred, or delegated pursuant to this Act, the Secretary may, by rule, prescribe procedures for State or local government agencies authorized by the Secretary to carry out such functions as may be permitted under applicable law. Such procedures shall apply to such agencies in lieu of this section, and shall require that prior to taking any action, such agencies shall take steps reasonably calculated to provide notice to persons who may be affected by the action, and shall afford an opportunity for presentation of views (including oral presentation of views where practicable) a reasonable time before taking the action.

(4) Notwithstanding any other law, the litigation of the Department shall be subject to the supervision of the Attorney General pursuant to chapter 31 of title 28, United States Code. This paragraph shall not apply to the Federal Energy Regulatory Commission.

Sec. 502. (a) Section 501 of this title shall remain in effect for two years after the effective date of this Act. Any proceeding commenced under such section prior to the termination of its effect shall, notwithstanding such termination, be conducted in accordance with such section. Orders shall be issued in such proceedings, appeals shall be taken therefrom, and payment shall be made pursuant to such orders as if such section had not terminated; and orders issued in any such proceedings shall continue in effect until modified, terminated, superseded, or revoked by a duly authorized official, by a court of competent jurisdiction, or by operation of law. Nothing in this section shall be deemed to prohibit the discontinuance or modification of any such proceeding under the same terms and conditions and to the same extent that such proceeding could have been discontinued or modified if such section had not terminated.

(b) Within one year after effective date of this Act, the Secretary shall submit a report to Congress concerning the actions taken to implement section 501. The report shall include a discussion of the adequacy of such section from the standpoint of the Department and the public, including a summary of any comments obtained by the Secretary from the public about such section and implementing regulations, and such recommendations as the Secretary deems appropriate concerning the extension and revision of such section.

(c) Nothing in this title shall be construed as repeating by implication any existing provision of law relating to administrative procedures and judicial review ap-

pliable to any authority vested, transferred, or delegated pursuant to this Act, except that such existing provisions shall, to the extent provided by section 501, be superseded by the provisions of such section during the two years specified in subsection (a).

Mr. DINGELL (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DINGELL. Mr. Chairman, I want to commend the distinguished gentleman from Texas (Mr. BROOKS). The gentleman has done an outstanding job in handling the legislation, both in the committee and here on the floor.

Mr. Chairman, title V is a matter of great concern to me. As Learned Hand once observed, "Procedural justice is the essence of liberty."

I would point out to my colleagues that throughout the years the Congress has crafted a number of statutes, the procedural functions of which would be transferred and which would be changed by the legislation before us, most specifically by title V.

Mr. Chairman, I would point out that title V has the possibility of changing all of those procedures, possibly for the worse, and to eliminate the strong probability of a large number of safeguards.

The function of the amendment is not to change any substance, but to keep in place all of those procedural rights and safeguards under the different statutes and to require that those provisions terminate at the end of 2 years, so that the Congress has full opportunity to review those.

My amendment, which is supported by Mr. BROWN of Ohio and others on the Energy and Power Subcommittee, which I chair, rewrites title V of the bill.

On Tuesday evening, May 24, 1977, our subcommittee held a hearing to determine the impact of H.R. 6804 on the President's energy bill, H.R. 6831, which our subcommittee is now considering. The hearing focused primarily on title V. It also showed that some provisions of the title are vague and ambiguous.

Our amendment seeks to correct the deficiencies and clear up the ambiguous and vague provisions of title V. It provides that the Administrative Procedures Act provisions shall apply to all rule-making by the Energy Secretary. In addition, it provides that:

Where other provisions of the laws that are transferred or delegated to the Energy Secretary include greater procedural safeguards, such as those in the Energy Policy and Conservation Act of 1975 for appliances, those safeguards will continue to apply to those programs;

All proposed rules be published in the Federal Register and a minimum of 30 days be afforded for public comment, except in emergencies;

Even in the case of emergencies, there must be an opportunity for public comment after promulgation;

Informal rulemaking is authorized where the Secretary finds that no substantial issue exists and that the proposed rule is unlikely to have a substantial impact on the economy or on individuals or businesses;

Where the Secretary finds such impact or the existence of such an issue, oral presentation is required and a transcript is required;

During the comment period, any person can offer evidence showing the existence of substantial issues or substantial impact and the Secretary must then provide for oral presentation;

When a rule is promulgated, it must include a sufficient summary of the major public comments and an explanation of the action taken by the Secretary concerning such comments and the reasons therefor;

In cases of hardship, inequity, or unfair distribution of burdens, procedures for adjustments are required, including procedures for review of any denial of an application for adjustment. Additionally, the person who issues the denial initially cannot review the matter on review. On review, that person's role is to be limited;

In the case of judicial review, the existing provisions of law will apply, including those applicable to matters arising under the Emergency Petroleum Allocation Act of 1973; and

That the title V procedures do not apply to the newly established Federal Energy Regulatory Commission.

Most importantly, our amendment provides that title V will terminate in 2 years. In 1 year, the Secretary must submit a report to Congress explaining how effectively these new procedures are working. We are concerned about establishing—without benefit of extensive hearings in any committee—new administrative procedures applicable, not only to FEA and FPC functions, but also to those of ERDA and Interior. Who knows how they will work. We want to find out.

Mr. Chairman, I want at this time to commend Chairman BROOKS and the Committee on Government Operations for their skill in crafting a very good and tight energy reorganization bill. H.R. 6804 is a far better bill than that on which I testified on March 29, 1977. At that time I recommended that the bill should avoid making substantive changes in laws under the jurisdiction of our Committee on Interstate and Foreign Commerce and providing new authorities for the Department of Energy. Generally, H.R. 6804 adopts my recommendations.

However, there are several matters which give me great concern.

#### PROCEDURES

Title V of H.R. 6804 establishes administrative procedures for the issuance of rules, regulations, and orders by the new Secretary. It makes the provisions of the Administrative Procedures Act applicable to such rules, regulations, and orders and provides some additional safeguards.

The title stems from section 7 of the Federal Energy Administration Act. However, all of the procedural safeguards of that section are not included in title V.

On May 24, 1977, the Subcommittee on Energy and Power held a special evening hearing on the impact of H.R. 6804 on the President's national energy bill, H.R. 6831. Special attention was focused on title V. The administration testified that title V was intended to provide uniform procedures for the new Department. We, however, noted several deficiencies in the title.

First, the bill repeals the provisions of section 7 of the FEA Act, but it does not repeal the procedural requirements of other laws enacted after the FEA Act. Nevertheless, the title appears to supersede those provisions. These other laws establish special safeguards for issuance of regulations for specific programs. For example, the Energy Policy and Conservation Act of 1975 established a number of special procedural safeguards for the issuance of test procedures, mandatory energy efficiency standards, and labeling regulations applicable to the appliance industry. Title V does not preserve those procedures. Yet, the President's national energy bill, H.R. 6831, clearly intends to preserve them.

Second, title V provides, in section 501 (f) (1), that judicial review of agency action under any law "the functions of which are transferred" to the Department of Energy shall "be made in the manner specified in such law." The Emergency Petroleum Allocation Act of 1973—EPAA—provides that the special judicial review provisions of the Economic Stabilization Act of 1970 apply to court review of oil pricing and allocation regulations. But the oil pricing and allocation authority contained in the EPAA is not "transferred" to the Department of Energy. This EPAA authority is now vested in the President and will be "delegated" to the Department of Energy when H.R. 6804 is enacted. Title V fails to note this important distinction.

The amendment I have just discussed will correct many deficiencies. However, we are concerned that even our revision of title V may not be adequate. The consideration given to this title has been minimal. Remember, the procedures are often more important than the substance. Our 2-year limitation on title V is therefore essential.

In this regard note that the Senate added to title V of S. 826 a new procedure for enforcement of remedial orders under the EPAA. Many have urged my support of that provision in this bill. It is widely supported by the industry. I do not, at this time, oppose it or support it. It is a matter that is clearly in conference. I want to know more about its effects and the adequacy of the provisions. I clearly do not think it should be included in H.R. 6804. This is a reorganization bill, not one to establish new procedures. That is a matter within the jurisdiction of the Commerce Committee.

Let me now discuss some of the provisions of H.R. 6804.

#### THE FEDERAL POWER COMMISSION

Last March, I urged that the Federal Power Commission not be abolished and its functions transferred to the Secretary. The FPC should continue.

The bill does abolish the Commission, which I hope will not be a mistake, but it does not transfer the functions of the FPC to the Secretary. Instead, it provides in section 401 that "all functions and authority" of the FPC under the Federal Power and Natural Gas Acts that "are not specifically transferred" to the Secretary by section 301(b) of the bill are "vested" in the new Federal Energy Regulatory Commission. This is a very important difference with the Senate-passed bill S. 826. That bill places all FPC functions in the Secretary and specifies which shall go to the Board established by that bill. The House approach is far superior.

The new Commission is a statutorily created independent body that cannot be abolished, altered, consolidated, or discontinued by the Secretary. It is a five-member body subject to the Sunshine Act. It will have its own budget line item. It can hire and fire its personnel, in accordance with civil service laws.

The Commission, without influence or direction by the Secretary or the Office of Management and Budget, must make annually a detailed statement of its budgetary needs. The detailed amounts requested by the Commission annually

in its budgetary presentation to the Secretary and OMB must be provided to the Congress, together with the Secretary's and OMB's actions thereon.

The new Commission can conduct its own litigation. It has subpoena power to cover all its functions. Its procedures are those established by the FPC, but the Commission may establish new procedures. Section 404 requires that the Secretary and each official of the Department of Energy shall provide "upon request" by the Commission such data, reports, records, and other information as the Commission may require. This includes all information in the hands of the FEA or its successor, including end-use data, which has been the subject of considerable correspondence between our subcommittee and the FEA and FPC.

I believe that this new commission is good and I believe it will work.

#### ANNUAL APPROPRIATIONS

The bill requires annual authorizations and appropriations for the Department of Energy, including the Commission. It preserves the current line-item provisions of section 29 of the FEA Act. This insures annual review of the new Commission and the Department of Energy in Congress.

#### ECONOMIC REGULATORY COMMISSION

The bill establishes a new ERA to be headed by a Presidential appointee confirmed by the Senate. Many FEA functions will go to the ERA.

Most importantly, the bill requires that the Secretary provide by rule for a separation of regulatory and enforcement functions vested or delegated or otherwise assigned to the ERA. The Interstate and Foreign Commerce Committee recommended such separation in House Report 95-323 of May 16, 1977 (p. 9).

These and other features of the bill, such as the establishment of the new Energy Information Administration with clear powers, are very good and cause me to support H.R. 6804.

At this point, I insert an analysis of the principal provisions of H.R. 6804 and the Senate-passed bill. You will note the other body makes a number of substantive law changes and adds new authorities. It is my hope that the House conferees will vigorously oppose these as not belonging in a reorganization bill. The analysis follows together with a committee print by my subcommittee of a portion of H.R. 6831 which we are considering for markup:

#### COMPARISON OF PRINCIPAL PROVISIONS OF DEPARTMENT OF ENERGY LEGISLATION OTHER THAN THOSE RELATING TO FEDERAL POWER COMMISSION FUNCTIONS

H.R. 6804 AS REPORTED ON MAY 15, 1977

S. 826 AS PASSED THE SENATE ON MAY 18, 1977

1. Title I finds a worldwide shortage of energy resources, that the shortage is a threat to U.S., that a strong energy program is needed to increase efficiency of energy use and availability of energy resources, that energy policy and regulation is scattered, and that we need a single department.

2. Title I establishes as a high priority pooling energy conservation, places major emphasis on development and commercialization of renewable resources, requires analysis and consideration of environmental and social consequences of energy program, and provides for public participation.

3. Establishes a Deputy Secretary, General Counsel, and 9 Assistant Secretaries for specific program areas.

4. No such provision.

5. Establishes an Energy Information Office headed by Presidential appointee confirmed by Senate. The office to administer information functions of EPCA and others assigned to it by Secretary.

6. (a) Establishes Economic Regulatory (ERA) Administration headed by confirmed Presidential appointee. That Office will administer EPAA of 1973 and certain functions of the Federal Power Commission.

6. (b) Separate regulatory and enforcement functions required.

7. Establishes Office of Inspector General.

8. No Such Provision.

9. Transfers the following functions:

(a) All functions of Bonneville, Southeastern and Southwestern Power Administrations, but requires that each be maintained as a separate entity within the DOE.

(b) The power marketing functions of the Bureau of Reclamation.

(c) Six specific functions of the Secretary of the Interior relating to competition, bidding, diligence rate of production and royalties concerning the leasing of oil, gas, coal, oil shale, tar sands and geothermal resources in Federal lands, including Outer Continental Shelf lands.

(d) All functions of HUD under EPCA.

(e) All functions of the Interstate Commerce Commission relating to the transportation of oil by pipeline.

(f) Jurisdiction of certain naval and oil shale reserves.

Contains similar findings.

Sets forth 20 purposes of the bill, relating to energy organization and coordination; need for central data gathering; facilitating distribution and allocation of fuels and administration of national energy reserve; protection of consumers; cooperation with States; fostering competition; establishment of mechanism for State participation in energy policymaking.

The same, except the bill calls for 8 Assistant Secretaries and sets 10 functions to be assigned to them. Presumably an Assistant Secretary could have more than one function.

Requires that the new Department have nuclear waste management responsibilities, but this is not to affect such functions of the National Regulatory Commission.

Similar Provisions.

Similar but Administrator must be qualified to assess fairly the interests and needs of producers, consumers, and users of energy

No such provision.

No such provision.

Sets forth 12 broad "responsibilities" of the Secretary, including development of plans and programs for dealing with domestic energy production and import shortages. These responsibilities, as well as other functions transferred to Secretary, must be carried out and governed by requirements of several named laws and other laws not named that affect the new agency.

Same.

Same, but requires that they be managed by a separate entity within DOE and headed by an Administrator appointed by the Secretary.

Same, but establishes a permanent leasing liaison committee and specifies that Interior be lead agency for preparation of environmental impact statements.

Same.

Same, but first Secretary must issue rule establishing procedures which are subject to one House veto.

Same.

H.R. 6804 AS REPORTED ON MAY 15, 1977

S. 826 AS PASSED THE SENATE ON MAY 16, 1977

10. No provision.

11. Establishes a new 5-member independent Federal Energy Regulatory Commission within DOE.

12. Abolishes Federal Power Commission.

13. Prohibits supervisory employees of DOE from receiving compensation or holding position in energy concerns (as defined in bill) or holding stocks or bonds or receiving interest in such concern. A supervisory employee includes persons at GS-16 or above, others holding decisionmaking positions, heads of regional or field offices, and persons having contract or grant responsibilities. There are provisions for waiver of prohibition. It provides civil penalty of up to \$10,000 for any violation.

14. Requires financial disclosure provisions like those now required for FEA and Interior.

15. Provides postemployment restrictions for supervisory employees.

16. No such provision.

17. No such provision.

18. No such provision.

19. No such provision.

20. Authorizes land acquisition for, and construction of, laboratories, research and testing siting.

21. Requires annual authorizations and appropriations for all DOE programs.

22. Authorizes Capital Fund.

23. No such provision.

24. No such provision.

25. No such provision.

Amends Title V of the Motor Vehicle Information and Cost Savings Act re: fuel economy by giving DOE certain preview functions re: standards.

Establishes a 3-member Energy Regulatory Board within DOE.

Same.

Same provision.

Requires each supervisory employee to file Public Financial Disclosure Report which discloses information required to be disclosed by Members of Congress.

Contains similar provision.

Gives Secretary of DOE same subpoena powers as the Federal Trade Commission under section 9 of FTC Act with respect to all responsibilities vested in Secretary.

Directs the Administrator of the Energy Information Office to designate "major energy-producing companies," develop the format of a financial report for such companies, and require such companies to file such report annually.

Authorizes a new volunteer assistance program.

Authorizes grants to anyone with no limitations.

Same provision.

Authorizes appropriations without limitation except where annual authorizations are required under ERDA's statutes. The FEA annual authorization and appropriation requirement is repealed.

Also authorizes Capital Fund, but includes a number of changes in the House provision.

Requires Secretaries of Defense, Commerce, HUD, DOT, Interior, and the Postal Service, and GSA to establish an energy conservation officer.

Provides new authority directing the President to propose a National Energy Policy Plan by April 1979 and biennially thereafter. The plan must be reviewed by Congress. The appropriate Congressional Committees must report on the plan by Joint Resolution by September 1 of each year. Congress must then act on the resolution by October 1. Once the resolution is enacted, the plan is approved.

Provides new authority for the Energy Regulatory Board to promulgate rules in connection with any amendment to the pricing or allocation regulations required by the Emergency Petroleum Act of 1973 where the amendment constitutes an energy action required to be transmitted to Congress. This will include:

Any amendment to provide for adjustment to the composite price for domestic crude oil at a rate in excess of 10 percent a year;

Any amendment to remove up to 2 million barrels a day of crude oil transported through the trans-Alaska pipeline from the composite price limitation and to specify the price for such crude oil; and any further amendments to such amendment;

Any amendment to exempt, with respect to a class of persons or class of transactions, crude oil, residual fuel oil, or any refined petroleum product or product category from allocation regulations, or from price regulations. Refined product categories as to which energy actions are required are gasoline, No. 2 oils, propane, and all or any portion of a number of other refined products.

The Board's decision goes to Congress unless vetoed by the President within 10 days.

## COMMITTEE PRINT, JUNE 2, 1977

[Containing the revision recommended by the staff]

[Part A, subpart 1, utility program]

PART A—ENERGY CONSERVATION PROGRAMS FOR EXISTING RESIDENTIAL BUILDINGS

Subpart 1—Utility Program

## DEFINITIONS

Sec. 101. As used in this subpart—

(1) The term "Administrator" means the Administrator of the Federal Energy Administration.

(2) The term "Commission" means the Federal Trade Commission.

(3) The term "natural gas" means natural gas as such term is defined in the Natural Gas Act.

(4) The term "nonregulated utility" means a public utility which is not a regulated utility.

(5) The term "public utility" means any person, State agency, or Federal agency which is engaged in the business of selling natural gas or electric energy or both for purposes other than resale.

(6) The term "rate" means any price, rate, charge, or classification made, demanded, observed, or received with respect to sales of electric energy or natural gas, any rule, regulation, or practice respecting any such rate, charge, or classification, and any contract pertaining to the sale of electric energy or natural gas.

(7) The term "ratemaking authority" means authority to fix, modify, approve, or disapprove rates.

(8) The term "regulated utility" means a public utility with respect to whose rates a State regulatory authority exercises rate-making authority.

(9) The term "residential building" means any building used for residential occupancy, the construction of which commenced prior to one year after the date of enactment of this subpart, which has a mechanical or electrical system for heating or cooling, or both.

(10) The term "residential customer" means any person to whom a public utility sells natural gas or electric energy for consumption in a residential building.

(11) The term "residential energy conservation measure" means—

(A) caulking and weatherstripping of exterior doors and windows;

(B) furnace efficiency modifications including—

(i) replacement burners designed to reduce the firing rate or to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency;

(ii) devices for modifying flue openings which will increase the efficiency of the heating system; and

(iii) electrical or mechanical furnace ignition systems which replace standing gas pilot lights;

(C) clock thermostats;

(D) ceiling, attic, wall, and floor insulation;

(E) hot water heater insulation;

(F) storm windows and doors; and

(G) replacement furnaces which have a seasonal operational efficiency of more than 85 percentum (as determined by the Administrator);

(H) devices associated with load management systems as defined in section 513(a) (2) (A); and

(I) such other measures as the Administrator may by rule identify for purposes of this subpart.

(12) The term "residential energy conservation plan" means a plan approved by the Administrator pursuant to section 103(c) which is developed by a State regulatory authority or by a nonregulated utility.

Sec. 102. This subpart shall apply in any of the Administrator, Puerto Rico.

(14) The term "State regulatory authority" means any State agency which has rate-making authority with respect to the sale of electric energy or natural gas by any public utility (other than by such State agency).

(15) The term "suggested measures" means, with respect to a particular residential building, the residential energy conservation measures which the Administrator, in the rules prescribed pursuant to section 103 (a), determines to be appropriate for the location and the category of residential buildings which includes such building.

(16) The term "utility program" means a program meeting the requirements of section 104 carried out by—

(A) a regulated utility pursuant to a residential energy conservation plan developed by a State regulatory authority;

(B) a nonregulated utility pursuant to a residential energy conservation plan developed by such utility; or

(C) a regulated or nonregulated utility pursuant to an order of the Administrator issued pursuant to section 106.

(17) The term "State agency" means a State, a political subdivision thereof, or any agency or instrumentality of either.

#### COVERAGE

(13) The term "State" means a State, the District of Columbia, and, at the discretion calendar year to a public utility only if during the second preceding calendar year either (1) sales of natural gas by such utility exceeded ten billion cubic feet, or (2) sales of electric energy by such utility exceeded two hundred million kilowatt-hours.

#### RESIDENTIAL ENERGY CONSERVATION PLANS

Sec. 103. (a) The Administrator shall, not later than one hundred and twenty days after enactment of this Act and after consultation with the Secretary of Housing and Urban Development and the heads of such other agencies as he deems appropriate, promulgate rules for the content and implementation of residential energy conservation plans.

(b) The rules promulgated under subsection (a)—

(1) shall identify the suggested measures for residential buildings, by climatic region and by categories determined by the Administrator on the basis of type of construction or any other factors which the Administrator may deem appropriate;

(2) shall include—

(A) standards which the Administrator determines necessary for general safety and effectiveness of any suggested measure;

(B) standards which the Administrator determines necessary for installation of any residential energy conservation measure; and

(C) standards, developed in close consultation with the Federal Trade Commission, for the programs and procedures required under subsections (d) (2), (d) (4), (e) (2), and (e) (3); and

(3) may include such other requirements as the Administrator may determine to be necessary to carry out this subpart.

(c) Not later than one hundred and eighty days after promulgation of rules under subsection (a), each State regulatory authority may submit, and each nonregulated utility shall submit a proposed residential energy conservation plan to the Administrator. The Administrator may, upon request of a State regulatory authority or nonregulated utility, extend for good cause shown the time period for submission of a plan by such authority or utility. Each such plan shall be reviewed and approved or disapproved by the Administrator not later than ninety days after submission. If the Administrator disapproves a plan, the State regulatory authority or nonregulated utility may submit a new or amended plan not later than sixty days after the date of such disapproval, or such longer period as the Administrator may, for good cause, allow. The Administrator shall review and approve or disapprove any such new or amended plan not later than ninety days after submission. After approval of a plan, a State regulatory authority or nonregulated utility may submit an amended plan and such plan shall be approved or disapproved in the same manner as the original plan.

(d) No residential energy conservation plan submitted by a State regulatory authority shall be approved by the Administrator unless such plan—

(1) requires each regulated utility over which such State regulatory authority exercises rate-making authority to implement a utility program which meets the requirements of section 104;

(2) contains an adequate program for preventing unfair, deceptive, or anticompetitive acts or practices by such utility affecting commerce which relate to the implementation of utility programs within such State;

(3) contains adequate procedures to assure that each regulated utility will carry out such program;

(4) contains adequate procedures to assure that each regulated utility will charge fair and reasonable prices and rates of interest in connection with such program; and

(5) meets such other requirements as may be contained in the rules promulgated under subsection (a).

(e) No residential energy conservation plan proposed by a nonregulated utility shall be approved by the Administrator unless such plan—

(1) provides for the implementation by such utility of a utility program which meets the requirements of section 104;

(2) contains adequate procedures for preventing unfair, deceptive, or anticompetitive acts or practices by such utility which relate to the implementation of such utility program;

(3) contains adequate procedures to assure that such utility will charge fair and reasonable prices and rates of interest in connection with such program;

(4) contains procedures pursuant to which such utility will submit a written report to the Administrator not later than one year after approval of such plan and biennially thereafter, regarding the implementation of such utility program and containing such information as may be prescribed by the Ad-

ministrator in the rules promulgated under subsection (a); and

(5) meets such other requirements as may be contained in the rules promulgated pursuant to subsection (a).

#### UTILITY PROGRAMS

Sec. 104. (a) Except as provided in subsection (b) and section 105, each utility program shall include—

(1) procedures designed to inform, no later than January 1, 1980, each of its residential customers who owns or occupies a residential building, of—

(A) the suggested measures for the category of buildings which includes such residential building;

(B) the savings in costs of home heating and cooling that are likely to result from installation of the suggested measures in typical residential buildings in such category; and

(C) the availability of the arrangements described in paragraph (2) of this subsection, the inspectors, suppliers, and contractors described in paragraph (3), and the public and private lending institutions described in paragraph (4);

(2) procedures whereby the public utility, no later than January 1, 1980, will offer each such residential customer the opportunity to enter into arrangements with the public utility under which the public utility, will—

(A) inspect the residential building to determine and inform the residential customer of the estimated cost of purchasing and installing each suggested measure;

(B) make, or arrange for another lender to make, a loan to such residential customer to finance the purchase and installation costs of suggested measures purchased from and installed by any other person, subject to such reasonable requirements as to creditworthiness as may be permitted by the applicable residential energy conservation plan and to the right of the public utility to inspect the residential building to confirm the installation of suggested measures except that in no case shall such customer be required to repay the loan over a period of less than three years unless he so elects;

(C) permit the residential customer to repay the principal of and interest on any loan made pursuant to subparagraph (B) as a part of his periodic bill except that a lump-sum payment of outstanding principal and interest may be required upon default in payment by the residential customer;

(3) procedures whereby the public utility prepares and sends to each of its residential customers a list of suppliers and contractors in its service area who sell and install residential energy conservation measures and are willing to perform a residential inspection and give an estimate of costs which list is designed to encourage participation by such contractors and suppliers in a nondiscriminatory manner in the activities to be carried out under paragraph (2);

(4) procedures whereby the public utility prepares and sends to each of its residential customers a list of banks, savings and loan associations, credit unions, and other public and private lending institutions in its service area which offer loans for the purchase and installation of residential energy conservation measures; and

(5) procedures to assure that all amounts expended or received by the utility which are attributable to the utility program (including any penalties paid by such utility under section 106) are accounted for on the books and records of the utility separately from amounts attributable to all other activities of the utility and are not part of the rate base or cost of service or otherwise charged to customers of the utility as part of any charge for electric power or natural gas, except that any amounts expended by the utility under provisions of a program referred to in paragraph (1) shall be treated

for such purposes as a current expense of providing utility service and charged to all customers of such utility in the same manner as current operating expenses of providing such utility service.

(b) No utility may directly or indirectly supply or install any residential energy conservation measure (other than a measure referred to in section 101(11)(H)) as part of a utility program described in this section.

(c) No utility implementing any program under this section may terminate or threaten to terminate utility service to any customer by reason of any default of such customer with respect to payments due for energy conservation measures installed pursuant to such program.

(d) The Administrator may, upon petition of a public utility, supported in the case of a regulated utility by the appropriate State regulatory authority, waive in whole or in part the requirements of paragraph (2) of subsection (a) with respect to the utility program of such utility if such utility demonstrates to the satisfaction of the Administrator that, despite good faith efforts on its part, it is unable to meet the requirements of paragraph (2) of subsection (a) because it both lacks the financial capability to extend loans in accordance with such paragraph and is unable to arrange with any other suitable financial institution for the making of such loans, except that no public utility may be granted a waiver under this section unless such utility demonstrates to the satisfaction of the Administrator that it has dedicated all capital reasonably available to it toward meeting the requirements of paragraph (2) of subsection (a).

#### TEMPORARY PROGRAMS

Sec. 105. Any State regulatory authority or public utility may apply for a temporary exemption prior to the promulgation of rules pursuant to section 103. A temporary exemption may be granted from the requirements of section 104 for a period not to exceed two years after the date of enactment of this Act, if such authority or utility demonstrates to the satisfaction of the Administrator that it has implemented or proposes to implement an energy conservation program for residential customers which is likely to result in the installation of suggested measures in a substantial proportion of residential buildings.

#### FEDERAL STANDBY AUTHORITY

Sec. 106. (a) If a State regulatory authority does not have a plan approved under section 103(c) within two hundred and seventy days after promulgation of rules under section 103(a), or within such additional period as the Administrator may allow pursuant to section 103(c)(1), or if the Administrator determines that such State regulatory authority has not adequately implemented an approved plan, the Administrator shall—

(1) promulgate a plan which meets the requirements of section 103 and which applies to the residential buildings which would have been covered had such plan been so approved or implemented, and

(2) under such plan, by order, require each public utility in the State to offer, not later than ninety days following the date of issuance of such order, to its residential customers a utility program prescribed in such order which meets the requirements specified in subsection (a) of section 104.

(b) If a nonregulated utility does not have a plan approved under section 103(c) within two hundred and seventy days after promulgation of rules under section 103(a) or within such additional period as the Administrator may allow pursuant to section 103(c), or if the Administrator determines that such nonregulated utility has not adequately implemented an approved plan, the Administrator shall, by order, require such nonregulated utility to promulgate a plan which

meets the requirements specified in subsection (e) of section 103.

(c) If the Administrator determines that any public utility to which an order has been issued pursuant to subsection (a) or (b) has failed to comply with such order, he may either—

(1) order that such public utility may not increase any rate at which it sells natural gas or electric energy until such time as he determines that such utility has complied with such order, or

(2) file a petition in the appropriate United States district court to enjoin such utility from violating an order issued pursuant to this subsection.

(d) Any public utility which violates any requirement of a plan promulgated under subsection (a) or which fails to comply with an order under this subsection within ninety days from the issuance of such order shall be subject to a civil penalty of not more than \$25,000 for each violation. Each day that such violation continues shall be considered a separate violation.

(e) Upon petition of any person who is a customer of a public utility which has failed to comply with an order issued under subsection (a) or (b), the appropriate United States district court shall have jurisdiction to enjoin such utility from increasing any rate at which it sells natural gas or electric energy until such time as the Administrator determines that such utility has complied with such order.

#### RELATIONSHIP TO OTHER LAWS

Sec. 107. (a) Nothing in this subpart shall supersede any law or regulation of any State or political subdivision thereof, except to the extent that the Administrator, upon petition of a public utility and for good cause, determines that such law or regulation prohibits a public utility from taking any action required to be taken under this subpart.

(b) Nothing in this subpart shall be construed as restricting the authority of any agency or authority of the United States or of any State under any provision of law to prevent unfair methods of competition and unfair or deceptive acts or practices by public utilities.

(c) Nothing contained in section 104(4) of the Truth in Lending Act (15 U.S.C. 1603 (4)) or the regulations issued pursuant thereto shall be deemed to exempt sales or credit extensions by public utilities under section 104 or section 105 of this Act.

#### CONTRACT PROVISIONS

Sec. 108. No public utility shall be subject to any liability under any provision in any contract which restricts any public utility from lending, borrowing, or entering a new line of business, if such lending, borrowing, or entering a new line of business is required under this subpart.

#### RULES

Sec. 109. The Administrator is authorized to promulgate such rules as he determines may be necessary to carry out this subpart.

#### PRODUCT STANDARDS

Sec. 110. The Administrator and, in the case of title II, the Secretary of the Treasury shall consult with the Federal Trade Commission with regard to any product or material which is relied on in implementing this Act as a basis for judging the efficacy, energy efficiency, safety or other attributes of energy conservation materials, products, or devices, for the purpose of insuring that such standards do not operate to deceive consumers or unreasonably restrict consumer or producer options, and that such standards (where applicable) are suitable as a basis for making truthful and reliable disclosures to consumers regarding performance and safety attributes of energy conservation products, materials, and devices.

#### AUTHORIZATION OF APPROPRIATIONS

Sec. 111. There are hereby authorized to be appropriated to the Administrator for each of the three first fiscal years beginning after the date of the enactment \$5,000,000 to carry out his responsibilities under this subpart.

#### Subpart 4—Requirement of Energy Efficiency for Federal Assistance

##### DEFINITION

Sec. 141. For purposes of this subpart, the term "existing residential dwelling" means any building used for residential occupancy, the construction of which commenced prior to one year after the date of enactment of this Act, which has a mechanical or electrical system for heating or cooling, or both.

##### FEDERAL ASSISTANCE

Sec. 142. (a) After January 1, 1985, no Federal officer or agency shall approve any application for financial assistance (within the meaning of section 303(7)(A) of the Energy Conservation and Production Act) for acquisition of any existing residential dwelling (other than financial assistance to install residential conservation measures referred to in subpart 1) unless an appropriate State or local authority responsible for determining whether or not such dwelling meets applicable State or local health and safety requirements has certified in writing that such dwelling complied, at the time such certificate was issued, with the suggested measures (as defined in section 101(15)) promulgated under section 103(a) and applicable to such dwelling.

(b) Each Federal instrumentality responsible for the supervision, approval, regulation, or insuring of banks, savings and loan associations, or similar institutions shall by regulation direct such institutions not to make, increase, extend, or renew after January 1, 1985, any loan secured by a residential dwelling (other than financial assistance to install residential conservation measures referred to in subpart 1) unless the appropriate State or local authority responsible for determining whether or not such dwelling meets applicable State or local health and safety requirements has certified in writing that such dwelling complied, at the time such certificate was issued, with the suggested measures (as defined in section 101(15)) promulgated under section 103(a) and applicable to such dwelling.

(c) The Administrator shall promulgate such requirement as may be necessary regarding the certification by State or local authorities of compliance required under this section.

##### EXEMPTIONS

Sec. 143. The Administrator shall promulgate rules under this subpart providing for such exemptions from the requirements of this subpart as may be necessary in the case of—

(1) any dwelling which is not the principal residence of any person, and

(2) any dwelling owned by any person who is financially unable to install in such dwelling the suggested measures required.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the chairman of the committee, the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, I want to say to my distinguished friend that we worked closely with the gentleman in trying to work out this legislation, not to infringe on the gentleman's committee. I think it has been a harmonious operation. We made every effort to preserve the existing law as it is. I think that this amendment continues that practice.

Mr. Chairman, I have reviewed this

amendment. It appears to be a satisfaction of that effort.

I therefore have no objection to the amendment.

Mr. DINGELL. Mr. Chairman, I thank my friend.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the distinguished gentleman from New York.

Mr. HORTON. Mr. Chairman, I have gone over the amendment of the gentleman in the well. This side of the aisle has no objection to the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. DINGELL).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. LEVITAS

Mr. LEVITAS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LEVITAS: Page 95, after line 17, insert the following new section:

SEC. 503. (a) (1) Except as provided in subsection (c), but notwithstanding any other provision of this or of any other Act, simultaneously with promulgation or repromulgation of any rule or regulation issued pursuant to authority transferred, vested, or delegated to the Secretary or the Federal Energy Regulatory Commission, other than a rule or regulation establishing a price for petroleum, petroleum products, or natural gas, the Secretary or the Commission, as the case may be, shall submit a copy thereof to the Secretary of the Senate and the Clerk of the House of Representatives. Except as provided in paragraph (2), the rule or regulation shall not become effective, if—

(A) within 90 calendar days of continuous session of Congress after the date of promulgation, both Houses of Congress adopt a concurrent resolution, the matter after the resolving clause of which is as follows: "That Congress disapproves the rule or regulation promulgated by \_\_\_\_\_ dealing with the matter of \_\_\_\_\_, which rule or regulation was transmitted to Congress on \_\_\_\_\_," the blank spaces therein being appropriately filled; or

(B) within 60 calendar days of continuous session of Congress after the date of promulgation, one House of Congress adopts such a concurrent resolution and transmits such resolution to the other House, and such resolution is not disapproved by such other House within 30 calendar days of continuous sessions of Congress after such transmittal.

(2) If at the end of 60 calendar days of continuous session of Congress after the date of promulgation of a rule or regulation described in paragraph (1), no committee of either House of Congress has reported or been discharged from further consideration of a current resolution disapproving the rule or regulation, and neither House has adopted such a resolution, the rule or regulation may go into effect immediately. If, within such 60 calendar days, such a committee has reported or been discharged from further consideration of such a resolution, or either House has adopted such a resolution, the rule or regulation may go into effect not sooner than 90 calendar days of continuous session of Congress after its promulgation unless disapproved as provided in paragraph (1) (A).

(b) (1) The agency may not promulgate a new rule or regulation identical to one disapproved pursuant to this section unless a statute is adopted affecting the agency's powers with respect to the subject matter of the rule or regulation.

(2) If the agency proposes a new rule or regulation dealing with the same subject matter as a disapproved rule or regulation, the agency shall comply with the procedures required for the issuance of a new rule or regulation.

(c) The provisions of this section shall not apply with respect to a rule or regulation which is promulgated under a provision of law which provides for another method of congressional review and disapproval or approval of such rule or regulation than that provided by this section.

(d) For the purpose of this section, calendar days of continuous session of Congress shall be computed in accordance with section 906(b) of title 5, United States Code.

Mr. LEVITAS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

Mr. MOSS. Mr. Chairman, reserving the right to object, what was the request?

The CHAIRMAN. The request was to have the amendment considered as read and printed in the Record.

Mr. MOSS. Mr. Chairman, I withdraw my reservation of objection.

Mr. BROOKS. Mr. Chairman, if the gentleman will yield, this is the amendment on veto regulations?

Mr. LEVITAS. Yes.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. LEVITAS. Mr. Chairman, this amendment is almost identical to one which was adopted on 10 separate occasions in the 94th Congress, and has been accepted as part of three major authorizing bills during this Congress. It simply gives the House and the other body the right to veto the rules and regulations which are promulgated by the Department.

As every Member of this body knows, the rules and regulations that come out of these agencies have the force and effect of law. They are very far-reaching in nature. They affect property rights; they indeed can affect the liberty of individuals who violate them.

It seems to me that before we delegate forever the right to pass laws to unelected bureaucrats, the Congress of the United States should have the power, by exercising a congressional veto, to consider whether those rules and regulations carry out the intent of the Congress, or whether they are wise, or whether they are prudent. I think that we abdicate our responsibility unless we reserve to ourselves—and as a result to the people of the United States—the power to exercise this congressional veto. I should point out to the members of this committee that recently the Court of Claims here in the District of Columbia had occasion to rule upon the constitutionality of the congressional one-House veto in the Federal Salary Act, and the court upheld it as a proper exercise of authority under this act.

As this House knows, Congress has adopted similar provisions in almost 200

statutes. Yet, we are creating this new department, with vast powers over every element of our energy policy, and it seems the least that we can do is to reserve to the elected Congress the opportunity to review these rules and regulations to determine whether they are in the best interests of the American people and are consistent with congressional intent.

We have done it before. I think we should do it again and establish once and for all that it is the Congress that passes the laws, not the unelected bureaucracy.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from California.

Mr. ROUSSELOT. We have on several occasions had very similar amendments, have we not?

Mr. LEVITAS. That is true. There have been 3 occasions this year and 10 occasions during the last Congress.

Mr. ROUSSELOT. As the gentleman so properly pointed out, the court has upheld it, so the old argument as to its not being constitutional does not hold.

Mr. LEVITAS. Correct.

Mr. MOSS. Mr. Chairman, I rise to speak against the amendment.

Mr. Chairman, I have seen many instances of inconsistency in my 25 years in this body, but I have never seen so much inconsistency as has just been demonstrated by the distinguished gentleman from Georgia (Mr. LEVITAS). He has been lecturing us all afternoon—all day, as a matter of fact—on the need to have everything in the hands of the Secretary. He has objected to the collegial body undertaking traditional functions, and now he comes in and lays on the table the prize package of all.

Let me tell the Members something: You can kid yourselves if you want, but I do not believe anyone in this body is damn fool enough to actually think that he can review each of the rules and regulations promulgated by these agencies. The President recently directed that the secretaries of the various departments and the administrators of the agencies read the regulations that were issued by their agencies, and they became paralyzed. They could not do it. We cannot do it.

If the Members want to infer or leave the inference that because Congress has not vetoed an agency's regulation it has approved it, then vote for this rather ridiculous proposal. It has been voted for before, and it has proved that the House can be a ridiculous body.

Mr. BROOKS. Will the gentleman yield?

Mr. MOSS. I yield to the distinguished gentleman from Texas, and of course following that I will yield to the gentleman from Georgia.

Mr. BROOKS. I want to say that I hope that while this is a nice thought, and it is an amendment which does sort of challenge one's intellect, the reviewing of rules and regulations and laws, is not something on which I want to spend the next 20 years. I do not want, by not vot-

ing on them, to indicate that I have approved them.

So I am inclined to be definitely opposed to this amendment. I do not think it is necessary. I agree with the gentleman from California (Mr. Moss) that we should not adopt this amendment at this time.

Mr. LEVITAS. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the distinguished gentleman from Georgia.

Mr. LEVITAS. I thank the gentleman for yielding.

Mr. Chairman, I would like to make two points, if I could. The gentleman from California (Mr. Moss) has inferred that the gentleman from Georgia is openly acting inconsistently on this matter.

Mr. MOSS. The gentleman is precisely correct.

Mr. LEVITAS. I have said that consistency is the hobgoblin of little minds. I think consistency depends on whose ox is in the ditch.

Mr. MOSS. Let me say to the gentleman that one will not accuse him of being consistent.

Mr. LEVITAS. The gentleman from California was arguing so effectively and so eloquently earlier about putting too much power in the office of the Secretary.

Mr. MOSS. Mr. Chairman, I will take back my time.

I will say to the gentleman that does not fly, because the gentleman has had his amendment prepared. He has carried it in his back pocket for the last 3 years. So I say to the gentleman that he should not tell me that I inspired him today. I did not inspire him to do anything.

Mr. LEVITAS. I have never accused the gentleman from California of inspiring me, nor would I.

Mr. ECKHARDT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I want to point out to the Members of the House that this amendment may do more than the author of it thinks it will do. It excepts from congressional veto any rule or regulation establishing the price of petroleum, petroleum products, and natural gas.

Under existing law, an energy action which may affect regulation of the price of petroleum products is subject to congressional veto.

Mr. LEVITAS. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. I thank the gentleman for yielding.

Mr. Chairman, I direct the gentleman's attention to paragraph C of the amendment, which specifically preserves the right of any existing congressional veto to that pricing mechanism for the very purpose that the gentleman from Texas points out.

I would also like to observe that this amendment is not meant to imply con-

gressional approval of any regulation, should neither House act to reject any rule or regulation under this procedure.

Mr. ECKHARDT. I am glad the gentleman pointed that out.

When was this amendment printed? Will the gentleman indicate that?

Mr. LEVITAS. If the gentleman will yield, it was offered by the gentleman earlier today, and it has been on the desk of the majority and the minority since this morning. In addition, a notice of this amendment is contained in the Doorkeeper's list of floor action today, as well as in today's DSG bulletin, an organization to which the distinguished Member from Texas belongs. There was ample public notice that this amendment would be offered.

Mr. ECKHARDT. This amendment is three pages long. It has an integral relationship with questions of pricing of oil and gas. This kind of an amendment may be properly considered on a bill which deals with the question of pricing, but it is a bad mistake to deal hastily with a matter of this moment here today.

I know that many Members have voted for this type of amendment and I know the Members know that I think it is a very, very bad approach because, among other things, it would overload our body with review of regulations. But what is the reason for permitting a review of other rules besides price rules and then leave out the most extensive authority of all—pricing authority—out of the review provisions? Does that really make sense? If there is anything we ought to review, it should be the question of price. And yet that is exempted from the amendment. The gentleman says he does have down here, in section C—and he speaks correctly—a proviso that it will not affect existing laws. But we need to look at that in considerable more detail. I would urge the House not to act hastily on this amendment merely because the House feels that the principle involved is good as a general thing.

Mr. VOLKMER. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Chairman, if we do not add this amendment to the bill, where is this body with regard to proposed rules and regulations to be promulgated by the Secretary under this bill?

Mr. ECKHARDT. Mr. Chairman, I am afraid I did not fully understand the gentleman's question.

Mr. VOLKMER. Under the bill the Secretary will have power to make rules and regulations. Where will this body be without the amendment in the bill? What is the position of this body in relation to those rules and regulations? What can we do other than enact legislation ourselves?

Mr. ECKHARDT. Mr. Chairman, that will depend on what comes out of the subcommittee chaired by the gentleman from Michigan (Mr. DINGELL). If this amendment is to be placed on a bill, it should be subsequent to a determination

by that subcommittee of the manner in which rules are promulgated and the restrictions upon rules which are promulgated.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I hope that my colleagues are listening to the gentleman from Texas (Mr. ECKHARDT) because he is speaking with good sense.

Let me give the Members an idea of some of the questions that are involved here. First, there are actions of the Nuclear Regulatory Agency, and those involve, in other words, safety of nuclear materials. Then there is the allocation of natural gas in instances of emergency, and we have involved questions of who shall be cut off from natural gas in the event of shortages. There are questions of emergency sales of natural gas in times of natural gas shortages.

Mr. Chairman, this involves cold homes; this involves the safety of people from nuclear contamination. And any of these orders or actions, for all intents and purposes, must lie fallow for 90 days if the Congress has failed to act by concurrent resolution by both Houses.

These are matters that should be addressed as high priority emergency items, and there ought not to be doubt cast on them by failure of the House to act.

Let me ask my colleagues, the Members of the House, to look at this and understand what we are doing to ourselves. We are taking unto ourselves the blame for the failure of every action that has taken place with regard to regulatory bodies downtown, every action real or imaginary, and the result is that if we have failed to act, each and every one of us is subject to being denounced by our constituents.

The CHAIRMAN. The time of the gentleman from Texas (Mr. ECKHARDT) has expired.

(On request of Mr. DINGELL and by unanimous consent, Mr. ECKHARDT was allowed to proceed for 2 additional minutes.)

Mr. DINGELL. Mr. Chairman, will the gentleman yield further?

Mr. ECKHARDT. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, if I may repeat, if we have failed to act, each and every one of us is subject to being denounced for having failed to overrule these actions, whether they are with merit or without merit. I commend my colleague, the gentleman from Texas (Mr. ECKHARDT), for having pointed out these perils.

Mr. ECKHARDT. Mr. Chairman, I think the observation of the gentleman from Michigan (Mr. DINGELL) is absolutely right. If we do not approach this matter in the right way, we put the imprimatur of congressional authority on matters that we really have not had an opportunity to consider.

Mr. ROUSSELOT. Mr. Chairman, I move to strike the requisite number of words.

I rise in support of the Levitas amendment. Mr. Chairman, I am absolutely amazed as I listen to some of my colleagues who list all these powers that have been granted to this agency under this bill and then say that we should not tamper with a rulemaking power.

I can remember those same arguments being made in previous debates. These same voices said, "Trust us. We know what we are doing. We are going to set up a whole new independent Post Office Department." Look what happened as the result of Congress delegating all that new authority to the Post Office. Did the service improve? Who got blamed for everything that went wrong—the Congress.

We do not, under this amendment, have to veto every single rule or regulation. But let me say to my colleagues that this is a new agency with tremendous powers, far more powers than most of us realize, I am afraid. The power that we are giving this agency would extend over a vast amount of the resources of this country. To simply ask for the right to look at those rules and regulations that will affect all those areas that my colleague, the gentleman from Michigan (Mr. DINGELL), just mentioned, is, I think, a simple request on our part.

Mr. Chairman, we have time and time again given power to agencies and then come back and complained because they are using that power. This amendment is a simple request on our part to review that rulemaking power.

Many Members have cosponsored a bill introduced by my colleague, the gentleman from California (Mr. DEL CLAUSEN) that is very similar to this. The majority of us have supported this provision for other agencies.

Mr. Chairman, I think this is a reasonable request, and I cannot understand why these same Members who are complaining about too much power being granted to this agency would now complain because we want to check some of its rulemaking power.

Mr. LEVITAS. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Georgia.

Mr. LEVITAS. Mr. Chairman, I thank the gentleman for yielding, and I agree with his observation.

Let me point out a few things more. Some of the Members in this Chamber may think that their constituents are quite pleased with the fact that the bureaucracy has been passing more rules and regulations which have the force and effect of law than the laws that the Members of Congress have enacted. Some Members may think that it is an easy out to say that we do not want to have the responsibility of reviewing Administrative regulations. The gentleman from Michigan (Mr. DINGELL) has made such an argument. The real argument is that we do not want to face the music.

We want to pass the buck down to the bureaucracy and then along with our constituents condemn the bureaucrats when they do not do the job or do a poor job.

We do not have to look at every one of the 7,000 regulations issued under the bureaucracy each year, but when there is a far-reaching one that affects the life, liberty, or property of someone, then we have that responsibility.

Mr. Chairman, it is the law that we are talking about. If we do not want to be involved in the legislative process, then we should not be here. What we are doing today is letting other people, not elected by anybody, pass laws.

Mr. Chairman, this is keeping in the Congress the ultimate responsibility. I think we should adopt this amendment.

Mr. ROUSSELOT. Besides that, Mr. Chairman, we get blamed for many of the rules and regulations on which we have not passed judgment.

Mr. KETCHUM. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from California.

Mr. KETCHUM. Mr. Chairman, I thank the gentleman for yielding.

I rise in support of the gentleman's amendment.

In the last Congress, Mr. Chairman, we went up and down the hill on this same amendment, the gentleman from Georgia (Mr. LEVITAS), the gentleman from Georgia (Mr. MATHIS), myself, and others, and each time we did, it was passed overwhelmingly, so overwhelmingly that finally it was done on a voice vote.

Mr. Chairman, it is a little bit ridiculous at this point to say that we cannot pass this amendment because it will create too much trouble. If we are going to get the blame for it—and we are—we might as well take the responsibility for doing the job.

Mr. LAGOMARSINO. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from California.

Mr. LAGOMARSINO. Mr. Chairman, I thank the gentleman for yielding.

I rise in support of the amendment of the gentleman from Georgia (Mr. LEVITAS), as well.

Mr. Chairman, there are three good reasons that this amendment should be adopted. Number one, the agency will be much more careful if it knows that we have the ability to review the regulation.

Second, on occasion, we might actually veto a regulation. We have done it in the past. During the last Congress, my colleagues will remember, we did precisely that with respect to the regulations adopted by the GAO in regard to the Presidential papers. They issued regulations. We vetoed them.

Third, Mr. Chairman, we will not be able to continue to pass the buck. That is the one complaint that the American people have about this Congress, more

than any other complaint that I have heard, anyway; that is, that we are always passing the buck to the bureaucracy.

They come in with a regulation that we do not like. We say, "We are sorry. We do not like that regulation." However, we cannot do anything about it.

Mr. Chairman, I think this is a very fine amendment; and I certainly support it.

Mr. TUCKER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I just offer this one brief comment: I certainly agree with the spirit in which this amendment is offered, but let me assure my colleagues that if we pass an amendment of this nature, there will be literally thousands and thousands of regulations involving individual litigants that come before the Federal courts where good arguments are very soundly defeated because one litigant will pull out this statute and say, "This must be in keeping with the intent of Congress because Congress had the opportunity to act in opposition to it and did not."

Mr. Chairman, I have heard this argument in court before. I see by the nods of heads that many of my colleagues have heard it also.

Mr. Chairman, I urge the Members to defeat this amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia (Mr. LEVITAS).

The question was taken; and the chairman announced that the yeas appeared to have it.

#### RECORDED VOTE

Mr. LEVITAS. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 200, noes 125, not voting 108, as follows:

[Roll No. 301]

H.R. 6401. An act to authorize appropriations for the administration of the Deepwater Port Act of 1974.

## PERSONAL EXPLANATION

(Mr. MIKVA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, I was off the floor on a medical appointment during the debate on several amendments to the bill, H.R. 6804. Had I been present, I would have voted "no" on rollcall No. 298, the Conyers amendment; and "aye" on rollcall No. 299, the Moss amendment; and "aye" on rollcall No. 300, the Udall amendment.

## GENERAL LEAVE

Mr. CORNWELL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and include therein extraneous material on the subject of the special order speech today by the gentleman from Massachusetts (Mr. DRINAN).

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

## GOVERNING INTERNATIONAL FISHERY AGREEMENT FOR 1978 THROUGH 1982 BETWEEN THE UNITED STATES AND JAPAN—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95-168)

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Merchant Marine and Fisheries and ordered to be printed:

## To the Congress of the United States:

In accordance with the Fishery Conservation and Management Act of 1976 (P.L. 94-265: 16 USC 1801), I transmit herewith a governing international fishery agreement for 1978-1982 between the United States and Japan, signed at Washington on March 18, 1977.

This Agreement is significant because it is one of a series to be negotiated in accordance with that legislation. It sets out the principles that will govern fishing by Japan for fisheries over which the United States exercises exclusive management authority. I urge that the Congress give favorable consideration to this Agreement at an early date.

JIMMY CARTER.

THE WHITE HOUSE, June 2, 1977.

## LEGISLATION AMENDING AND EXTENDING ELEMENTARY AND SECONDARY EDUCATION ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentle-

Mr. MEEDS changed his vote from "aye" to "no."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

Mr. BROOKS. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MIKVA, Chairman pro tempore of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 6804) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes, had come to no resolution thereon.

## GENERAL LEAVE

Mr. BROOKS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and to include extraneous material on the bill, H.R. 6804, just considered.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

## MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Shirdon, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On May 26, 1977:

H.J. Res. 424. Joint resolution to authorize the Administrator of General Services to accept land, buildings, and equipment, without reimbursement, for the John Fitzgerald Kennedy Library, and for other purposes;

H.R. 5562. An act to authorize the establishment of the Eleanor Roosevelt National Historic Site in the State of New York, and for other purposes; and

H.R. 6205. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out the Atlantic Tunas Convention Act of 1975.

On June 1, 1977:

H.R. 3662. An act granting the consent of Congress to the Mississippi-Louisiana bridge construction compact; and

man from Minnesota (Mr. QUIE) is recognized for 10 minutes.

Mr. QUIE. Mr. Speaker, I am today introducing legislation to amend and extend the Elementary and Secondary Education Act and various other programs of assistance to students in grades kindergarten through 12.

The major thrust of the bill is to amend title I of ESEA to provide that beginning with fiscal year 1978 funds will be allocated on the basis of educational need as opposed to the current formula which is based on discredited economic data and the outlandish assumption that being economically poor is equivalent to being educationally disadvantaged.

Before I detail the bill which I have introduced, I would like to note that the thrust of the changes I am proposing in the allocation of title I funds has already received a great deal of favorable support.

William A. Bibbiana, senior research analyst, Pasadena Unified School District, Pasadena, Calif., in a letter to the editors, *Education U.S.A.*, wrote:

In reference to Congressman Quie's proposal, we welcome the possibility of extending Title I funds based on a "national test" or other indicator of academic achievement. To base funding solely upon "need" without including effectiveness as a criterion for continued funding is, in fact, deleterious educationally and wasteful financially.

Dr. James P. Miller, superintendent of schools, Santa Fe Public Schools, Santa Fe, N. Mex., stated:

We wholeheartedly support the philosophy addressed in the first three items in your letter, namely that the allocation of Title I funds should be determined solely on educational need. While we recognize the original political necessity of placing ESEA under the War on Poverty aegis, we believe the time has come to remove these funds from general social action and to concentrate them solely on education.

Mr. John W. Phillips, acting superintendent, Charlotte-Mecklenburg Schools, Charlotte, N.C., said:

The Board and Staff of the Charlotte-Mecklenburg school system support wholeheartedly the proposed legislation to direct school districts to allocate funds among schools on the basis of educational need. We feel that this is a fairer, more equitable way of assuring that children, whose educational attainment is significantly lower than that expected of children of the same age and grade, receive the help they need.

Dr. Owen B. Kiernan, executive director, the National Association of Secondary School Principals, commented:

Using educational need, rather than income level to determine eligibility for Title I, is a constructive approach. We agree that Title I should not be an educational subsidy tied to low income. Rather, it should be an educational subsidy tied to low achievement.

Mr. George W. Barnes, Federal projects coordinator, Clearfield Area School District, Clearfield, Pa., wrote:

At last evening's meeting of our Parent Advisory Council for ESEA Title I in the Clearfield Area School District, the members passed a resolution expressing support for you in your fight to remove the Title I formula that requires a school building to have a high-enough percentage of economically-

disadvantaged students to qualify it for Title I supplementary instruction in reading and math.

We believe that such restrictions placed on us by the Title I regulations are not only discriminatory but may be a violation of rights that could be overturned by the Supreme Court if some family would be so inclined to press suit.

This bill is a refined version of legislation which I had introduced in the 93d Congress (H.R. 5163) to amend title I to provide for allocation according to educational need. The new bill builds upon many of the comments and suggestions made about the earlier bill.

In addition to amending title I of ESEA, the bill also contains major substantive amendments to title VII, ESEA, providing aid for bilingual education programs, and to the National Reading Improvement Act. The legislation also establishes a program to assist school districts in providing programs for gifted and talented children.

The amendments made to the Bilingual Education Act have been prompted by recent evaluation reports on the program done under contract to the U.S. Office of Education by the American Institute of Research and are reflective of concerns expressed in a recent subcommittee hearing by Joseph Coates of the Office of Technology Assessment.

The amendments to the Reading Act are designed to remedy some of the administrative confusion and unnecessary duplication created in the 1974 law (P.L. 93-380) by the merging of different House and Senate approaches to the grant-making process.

The inclusion of a program for gifted and talented children is based on my belief that there is a vital need to stimulate programs for the bright student just as Federal policy has done for the disadvantaged and the handicapped. Naturally, the level and extent of support in this area will be quite small in comparison to the other special populations served by Federal programs; however, this is an area where a few Federal dollars will stimulate a great deal of effort at the State and especially at the local level.

As I mentioned earlier, the main thrust of my bill deals with title I of ESEA. For several years now I have felt that the title I allocation formula was both unfair and unwise. Ever since the enactment of title I in 1965, funds have been allocated on the basis of census and welfare data. Both of these data elements have significant drawbacks which have been enumerated in a variety of congressional hearings.

To recapitulate, census information suffers from being untimely. For example, the 1970 census asked respondents about their 1969 income. By the time that data was available for use by USOE, it was 1973 and that data will be in use until results of the 1980 census are available in about 1983. By that time a sixth grade child from a poverty family in the 1970 census would be 24 years old and would likely be living in a different school district, might or might not have

children of his or her own, and would likely no longer be in a family designated as below the poverty line. In addition, there is also a strong likelihood that that sixth-grade child in 1970 would have received at least some college education, if not a degree. And yet through legislative legerdemain, Congress has decreed that the school district of attendance in 1970 will continue to get funds based on that child. In this period of declining enrollments, we might well find someday that the number of title I eligible children, using census information, is greater than the actual enrollment. Such is the power of the legislatively created phantom child.

The Census Bureau has also acknowledged that census methods are inaccurate in counting some minority citizens. In a report of the 1970 census, the Census Bureau estimated that it had missed 5.3 million people. Further, the Bureau estimates that the error rate ranges from less than 1 percent for white females aged 10-14 to 10.4 percent for black males under 5 years of age.

The other major component of the title I formula is welfare data based on counts of the number of children on AFDC where the AFDC payment is higher than the current poverty level.

AFDC data suffers from a host of problems. The AFDC program is subject to enormous variations between States. For example, each State makes the decision on whether or not to provide AFDC funds to families where a man is present in the home. As a result, half the States have such a program and half do not. What a ridiculous thing to reward school districts in half the States with a title I payment as a bonus for a broken family on welfare.

The AFDC program is also subject to enormous errors in payments and eligibility. A report by HEW for the period January-June 1976 showed that in some States as many as 14.6 percent of the AFDC recipients were ineligible for such aid. Even the best administered program had a 0.6 percent error rate on eligibility. In another category, as many as 25.7 percent of those eligible were receiving more than they should have been. Although recent actions by Congress and HEW have had some effect in reducing the scale of the problem, it is hardly a data base to use to allocate education funds.

In contrast to the system that now exists, I propose in the bill introduced today that title I dollars be directed to those with the greatest demonstrated educational need.

In brief, what I propose is that the National Assessment of Educational Progress, an already functioning, experienced organization funded by HEW's National Center for Educational Statistics, be directed to test a sample of 7-year-old children of sufficient size to produce valid State-level estimates. I have chosen 7-year-olds as the only age to be tested for the national distribution because they are both old enough to be tested and young enough not to be subject to any real school influences. The educational

deficiencies that they will exhibit will be real and serious.

By using the national assessment we will gain from the experience of that organization and use their procedures which utilize random sampling and a controlled testing environment directed by an NAEP employee or contractor. According to the information they have supplied me, an adequate sample for each State will be between 1,000 and 3,000 children.

The data collected from NAEP will be used for interstate allocation. Once the dollars are received at the State level, it will be up to the State to devise the means to accomplish intrastate allocation. Since about 40 States have some type of testing program, that should not be too difficult. Many States could probably implement such a change within a year. To assure fairness of the testing instrument and its lack of bias, the State would be required to obtain the approval of the Commissioner. The Commissioner would also approve the State's plan with respect to setting of the cut-off point for allocation among school districts. To conform with the Federal allocation based on 7-year-olds, I would urge, but not require, the States to assess 7-year-olds as well.

Once the allocations have been made to the school district, then the district would apportion the funds to schools. There would be two restrictions. No school with less than a 3-percent educationally disadvantaged population could receive title I funds, and the LEA would be required to serve those with the greatest educational needs first.

I realize that this plan will require some adjustments and I have, therefore, provided for a phased-in transition to this new method. In the first year after enactment, fiscal year 1979, LEA's would be required to use this new method of allocating funds within the district. Beginning in fiscal year 1980, States would have the option of using the new system with a fiscal year 1981 deadline for compliance. The national allocation would first occur in fiscal year 1981. This 3-year, three-stage phase-in should provide adequate time for the needed transition.

In addition to these changes in the allocation system and formula, my bill also contains a number of other amendments to title I. They are as follows:

First. An average of not less than 80 percent of all title I funds within a State would have to be spent on the basic skills of reading, mathematics, and the language arts.

Second. Each LEA would be required to coordinate programs and projects assisted under title I with the regular program and staff of the agency. This would hopefully eliminate the situation that currently exists in many districts where the title I program virtually operates as a tenant and the school as a landlord with little or no coordination between the academic program and staff.

Third. States would be permitted to increase funds withheld for State administration for 1 to 1½ percent and would further be required to match, over a pe-

riod of years, all Federal money withheld for administration.

Fourth. Programs for migrant students who have left the migrant stream would be subject to pro rata reduction.

Fifth. The Commissioner would be permitted authority to withhold a portion of a State's title I grant if such an action would be more in keeping with the nature of the offense and purpose of the act. Current law requires a total cutoff of funds even for the most minor infraction.

Sixth. States which have their own compensatory education programs would be permitted to submit a plan for the joint administration of the State and Federal compensatory program. The Commissioner would be permitted to waive portions of the law or regulations in order to permit joint administration. Any such waiver would be published in the Federal Register and subject to a 45-day congressional review period.

Seventh. The follow through program is transferred from the Community Services Act to title I, ESEA.

In addition to the changes in title I, the bill also includes, as I noted earlier, some major amendments to the Bilingual Education Act.

These amendments would direct the program primarily toward proficiency in the English language and would require:

First, the development of a variety of bilingual models;

Second, that local parents select the type of programs;

Third, multicultural teaching;

Fourth, annual program evaluations;

Fifth, that academic progress be demonstrated before further funding of a program could take place; and

Sixth, those students with the greatest need for the program be served first.

I am proposing these changes both because of my own concern about the direction of the program and because of the recent evaluation studies which I mentioned earlier. Let me make clear the fact that I support a bilingual program which will assist limited and non-English speaking students in learning English. I also support the notion that States and local districts can choose to fund a maintenance program or a full bilingual-bicultural program if they so desire. I do, however, oppose a Federal policy that endorses such an approach and I become very concerned when evaluation reports indicate that a vast majority of title VII students are in fact English-language dominant.

The OE evaluation study contained the following major findings:

Only one-third of the students enrolled in bilingual education classrooms were of limited English-speaking ability.

During a 5½ month period title VII hispanic students made smaller progress in English language proficiency than their nonprogram counterparts, but showed greater gains in mathematics.

Eighty-six percent of the title VII project directors reported that Spanish dominant students often remain in bilingual classrooms after they are able to function in English.

The amendments I am proposing to title VII should assist in overcoming these adverse findings.

The other major set of amendments contained in my bill deal with the National Reading Improvement Act. As passed in 1974 as title VII of Public Law 93-380, the act contains two major parts dealing with assistance to States and local districts. The combination of these two parts represented a combination of different approaches. In my view and in the view of many in the field who are familiar with the program, the merger has not worked well and has, in fact, created a great deal of confusion.

The amendments contained in the bill I have introduced today merge parts A and B and eliminate two sections of the law which have either not been used or whose effectiveness I question. The amendments also extend the program through fiscal year 1982.

Finally, my bill creates a separate program for gifted children authorized at \$12.5 million for each of 4 years and extends title IV of ESEA and the Adult Education Act through 1982 without amendment.

On June 7, Chairman PERKINS will begin an extensive series of hearings on ESEA and related acts providing assistance to elementary and secondary schools. I commend him for the very thorough schedule he has announced and for his openness and willingness to explore the enormous number of issues which are raised by the list of OE programs operating in this area.

Although my bill covers a number of programs, it does not cover them all. Emergency school aid, impact aid, and the Special Projects Act all will come up for renewal in this Congress. In each of these programs, as well as in areas like the Adult Education Act, there are many other issues which need thorough exploration. I would expect that the committee will make extensive recommendations for modification in all of these programs.

I include a section-by-section analysis of the bill:

#### SECTION-BY-SECTION DESCRIPTION OF THE ELEMENTARY AND SECONDARY EDUCATION ACT AMENDMENTS OF 1977

##### TITLE I—AMENDMENTS TO TITLE I OF ELEMENTARY AND SECONDARY EDUCATION ACT OF 1965

Section 101. Amends the Declaration of Policy section of Title I, effective October 1, 1980, to provide that Title I funds will be allocated to State and local educational agencies on the basis of educational need as determined by an assessment of deficiencies in basic learning skills.

In addition, this section extends Title I through fiscal 1982.

Section 102. This section amends the LEA application section of Title I (Sec. 141) to provide that, beginning with fiscal 1979, the LEA must:

(a) allocate funds to schools on the basis of educational need and give priority in providing services to those with the greatest need;

(b) not provide services to children in any school where the concentration of educationally needy children is less than three percent of the children enrolled in that school;

(c) derive the data relating to educational need from educational measurements ap-

proved by the State education agency according to guidelines published by the Commissioner;

(d) determine the level of non-Federal sources based upon the exclusion of comparable State special programs for educationally deprived children, providing that the level of such expenditures for State programs is not less than the expenditure level for fiscal 1976.

This section also amends the "excess cost" definition in Section 403 of P.L. 874 to delete language that has hampered the development of comparable State compensatory education programs.

Section 103. (a) This section amends the LEA application section to require that the LEA must plan for the coordination of programs and projects assisted under Title I with the regular public school program and staff so that such programs and projects complement one another and so that the needs of the individual children served by such programs and projects are better met.

(b) Section 142 of Title I, dealing with assurances from the States, is amended by adding a new subsection to require that the State education agency shall submit a comprehensive plan (or revision) which shall contain:

(1) standards and objectives for obtaining excellence in Title I projects and an assessment of the success which has been attained in meeting such standards and objectives;

(2) information on how States which have State compensatory programs will coordinate the State programs with Title I to better serve the children assisted; and

(3) an assistance that not less than 80 per centum of the payments received by a State will be used for instructional programs in reading, mathematics, and language arts.

Section 104. The section of Title I dealing with the participation of non-public school children is amended to provide that in instances where the Commissioner must "bypass" the State or LEA, he may deduct from the grant an amount necessary to cover his administrative expenses for arranging such services.

Section 105. The payment section (143) of Title I is amended to provide that for fiscal 1980 states may have the option of allocating funds to LEAs according to an assessment of educational need and that, beginning with fiscal 1981, States would be required to use such means. Any measurement program used by the States would have to be approved by the Commissioner. The Commissioner would be required to approve the assessment program to assure that it is culturally fair and non-biased and that it will result in an adequate measurement upon which to base intrastate allocations.

Section 106. This section amends Sec. 103 of Title I (dealing with grants) to provide that beginning with fiscal 1981 the interstate allocation of funds will be based on an assessment of educational need as determined by data derived from the National Assessment of Educational Progress relative to the performance of 7-year olds in each State. The entitlement for each State would be based on the projected number of educationally disadvantaged—each State using the ratio of 7-year olds so determined in each State compared to the national number and then extrapolating that figure to the total number of children ages 5-17 in the nation.

Section 107. This section contains amendments to Sec. 103 and provides that the Secretary of the Interior may contract with tribal organizations for the delivery of Title I services to Indian children.

Section 108. This section amends the section providing funds for State administrative expenses to increase the maximum set-aside from 1 to 1.5 percent and to require that States match Title I moneys withheld

for administration. The matching provision would be phased in over a six-year period. In addition, the definition of "administrative expenditures" is expanded to include technical assistance related to measurement and evaluation.

Section 109. The Title I set-aside for migrant children is amended to permit the Commissioner to use not more than one percent of the funds to develop, by contract, and disseminate programs for migrant children in the basic skills areas of reading and mathematics. The payments to States for those children whose parents have dropped out of the migrant stream are made subject to pro rata reduction in the case of insufficient appropriations for Title I.

Section 110. Section 146 dealing with withholdings in cases of noncompliance with Title I is amended to permit the Commissioner to hold back a portion of the State's Title I payment. Current law requires that the entire payment be withheld even for minor infractions.

Section 111. A new section (152) is added providing that in any State with a State compensatory program consistent with Title I and funded at an amount equal to at least 20 per centum of the State's Title I payment, the State may submit a two-year plan for the joint administration of both programs. If such plan so requires, the Commissioner is empowered to waive requirements of Title I following publication of such waiver request in the Federal Register and a 45-day review by the Congress. However, the section of Title I dealing with services to students in non-public schools may not be waived.

Section 112. The Follow Through program, operated by the U.S. Office of Education and authorized in the Community Services Act of 1975, is transferred to Title I.

#### TITLE II—AMENDMENTS TO OTHER EDUCATION PROGRAMS

Section 201. (a) Part A of the National Reading Improvement Program, Title VII of P.L. 93-380, is combined with Part B of that Act to provide for better coordination and management, in addition to Parts C and D of that Act, dealing with Special Emphasis Projects and Reading Training on Public Television.

The terms of the Act are amended to permit service to secondary school students. The section providing for grants to reading academies is amended to require notification of and opportunity for comment by the State education agency.

The Act is extended through fiscal 1982.

Section 202. The Adult Education Act is extended through fiscal 1982.

Section 203. The Bilingual Education Act is extended through 1982.

Section 204. The Bilingual Education Act is amended by:

(a) emphasizing the transitional nature of programs funded under the Act;

(b) requiring the teaching of multicultural contributions to American society;

(c) limiting participation in programs to children of limited English-speaking ability and requiring that those with the greatest needs be given priority in service;

(d) directing the creation of several model bilingual programs and placing in the hands of local parents the decision on which model to use;

(e) requiring that use of evaluation models in each project;

(f) requiring that the refunding of a project be contingent upon demonstrated progress by children serviced by the project in attaining English language skills. In addition, the Commissioner is directed to publish program and evaluation models in the *Federal Register* within six months of the date of enactment of the Elementary and Secondary Education Act Amendments of 1977.

Section 205. Title IV of the Elementary and Secondary Education Act is extended through fiscal 1982.

#### TITLE III—GIFTED AND TALENTED CHILDREN

Section 301. This Title is cited as the "Gifted and Talented Children Act."

Section 302. The Commissioner is required to designate an administrative unit within the Office of Education to administer programs and projects funded under this title and to coordinate all gifted and talented programs in the U.S. Office of Education. Also, the Commissioner is directed to establish or designate a clearinghouse on the education of gifted and talented programs.

Section 303. Creates a program of grants to State and local education agencies for gifted and talented children from preschool through the secondary school level. Also authorized by this section are grants to train personnel for working with gifted and talented children.

Section 304. Directs the National Institute of Education to carry out a program of research related to gifted and talented children and directs the transfer of funds from the Commissioner to the Director of the National Institute of Education to carry out such a program.

Section 305. Authorizes \$12.5 million for fiscal year 1979 through 1982.

#### THE 1977 GREAT DECISIONS OPINION BALLOTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 10 minutes.

Mr. WHALEN. Mr. Speaker, the Foreign Policy Association is well known in this body and across the country for its commendable efforts in behalf of increasing public awareness of our international relations and their very great importance to us and world peace.

As part of its multifaceted program, FPA conducts a survey of the attitudes of its membership on specific questions. I was pleased to receive a copy of the 1977 Great Decisions Opinion Ballots this morning in a meeting with FPA Chairman Carter Burgess and several of his associates. The results of the survey are listed below for the information of my colleagues.

I would like to mention that all of the eight subject areas surveyed are matters of great current concern. They are nuclear proliferation, southern Africa, the Middle East, Western Europe in transition, United States-Soviet relations, China, food and population, and Panama and Cuba.

As a member of the House International Relations Committee, I found the attitudes reflected in the results to be very informative and I commend them to my fellow Members. I also would like to congratulate Carter Burgess and his colleagues for another successful year and for securing the agreement of former Secretary of State Henry Kissinger to be a member of the board, thus adding further eminence to an already distinguished body.

Mr. Speaker, I am pleased to insert at this point in the RECORD the results of the Great Decisions 1977 Opinion Ballots:

## TOPIC 1: SPREAD OF DEADLY WEAPONS—TOTAL NUMBER OF BALLOTS: 4,896

[In percent]

|   | Pro | Go along without enthusiasm | Con | No opinion |
|---|-----|-----------------------------|-----|------------|
| 1. With regard to the sale or transfer of conventional weapons to foreign nations, the United States should:                                      |     |                             |     |            |
| a. Pursue existing policies   | 15  | 35                          | 34  | 16         |
| b. Unilaterally ban the sale or transfer of conventional weapons to all foreign nations   | 17  | 22                          | 46  | 15         |
| c. Sell or transfer conventional weapons to our allies only   | 26  | 31                          | 27  | 16         |
| d. Sell or transfer conventional weapons to any nation when the President and Congress find it in the national interest to do so                  | 37  | 35                          | 18  | 10         |
| e. Seek an agreement in the United Nations, or among major arms suppliers, to control the sale or transfer of conventional weapons                | 71  | 13                          | 9   | 7          |
| f. Repeal existing legislation giving Congress a legislative veto over the sale or transfer of conventional weapons                               | 16  | 19                          | 50  | 15         |
| 2. With regard to the problem of nuclear proliferation, the United States should:   |     |                             |     |            |
| a. Give first priority in our foreign policy agenda to controlling the spread of nuclear weapons  | 72  | 14                          | 8   | 6          |
| b. Unilaterally ban the sale of sensitive nuclear technology and fuel to non-nuclear weapons nations  | 43  | 20                          | 22  | 15         |
| c. Seek agreement with all other nuclear exporting nations to ban the sale of sensitive nuclear technology and fuel to nonnuclear weapons nations | 64  | 13                          | 9   | 14         |
| d. Give priority to developing nonnuclear energy sources even if this means a slower rate of economic growth for the United States                | 51  | 17                          | 18  | 14         |

## TOPIC 2: SOUTHERN AFRICA—TOTAL NUMBER OF BALLOTS: 5,064

[In percent]

| 1. With regard to relations with the Soviet Union, the United States should:                     |     |                             |     |            |
| a. Adopt more conciliatory policies toward the Soviet Union in the interest of advancing détente | 18  | 26                          | 46  | 10         |
| b. Continue to pursue détente along the lines of the Ford-Kissinger approach                     | 21  | 35                          | 28  | 16         |
| c. Pursue a policy of détente but make fewer concessions, demanding strict reciprocity           | 61  | 21                          | 11  | 7          |
| d. Abandon détente and pursue goal of military superiority over the U.S.S.R.                     | 6   | 16                          | 68  | 10         |

## TOPIC 6: CHINA AND THE UNITED STATES—TOTAL NUMBER OF BALLOTS: 5,032

[In percent]

|  | Pro | Go along without enthusiasm | Con | No opinion |
|--|-----|-----------------------------|-----|------------|
| 1. With regard to the People's Republic of China (mainland China) and the Republic of China (Taiwan), the United States should:  |     |                             |     |            |
| a. Continue present policies: i.e., maintain full diplomatic relations with Taiwan; liaison office in Peking; defense treaty with Taiwan; encourage trade with both.         | 42  | 26                          | 19  | 13         |
| b. Give full and unconditional recognition to the People's Republic of China; sever diplomatic relations with Taiwan and renounce bilateral defense treaty with Taiwan.      | 13  | 20                          | 53  | 14         |
| c. Give full recognition to People's Republic of China on condition that it provide firm assurances it will use peaceful means only to resolve the status of Taiwan.         | 51  | 23                          | 14  | 12         |
| d. Give full recognition to People's Republic of China while giving Taiwan guarantees United States will use force, if necessary, to defend it against aggression by Peking. | 18  | 25                          | 40  | 17         |
| 2. If Taiwan declares itself a new, sovereign and independent nation, the United States should:  |     |                             |     |            |
| a. Refuse to recognize it.   | 12  | 14                          | 51  | 23         |
| b. Establish full diplomatic relations with it but allow existing defense treaty to lapse.   | 34  | 29                          | 18  | 19         |
| c. Establish full diplomatic relations and maintain defense treaty in force.   | 23  | 22                          | 34  | 21         |

## TOPIC 7: FOOD AND POPULATION—TOTAL NUMBER OF BALLOTS: 3,515

[In percent]

|   | Pro | Go along without enthusiasm | Con | No opinion |
|---|-----|-----------------------------|-----|------------|
| 1. With regard to the population problem, the United States should:   |     |                             |     |            |
| a. Pursue zero population growth at home as official Government policy.   | 49  | 19                          | 20  | 12         |
| b. Encourage developing countries to adopt compulsory measures to curb population growth.                             | 31  | 26                          | 32  | 11         |
| c. Encourage developing countries to adopt voluntary measures to curb population growth.                              | 73  | 12                          | 7   | 8          |
| d. Deny foreign aid or credits to developing nations that do not have family-planning or population-control programs. | 19  | 30                          | 37  | 14         |
| e. Do nothing.  | 2   | 8                           | 55  | 35         |

## 2. With regard to the world food problem, the United States should:

|  | Pro | Go along without enthusiasm | Con | No opinion |
|--|-----|-----------------------------|-----|------------|
| a. Give no direct food aid except in emergencies.  | 24  | 21                          | 37  | 18         |
| b. Provide mainly indirect aid (seeds, equipment, technical assistance, etc.) to stimulate self-help efforts and promote agricultural development. | 83  | 10                          | 3   | 4          |
| c. Continue to provide food aid on easy credit and/or grant basis.   | 27  | 33                          | 25  | 15         |
| d. Encourage a free market in world grain trade, letting market forces set grain prices.   | 35  | 23                          | 23  | 19         |
| e. Seek an international accord to regulate world grain prices.  | 41  | 18                          | 23  | 18         |
| f. Contribute to a world grain reserve that would help stabilize prices and provide supplies for emergencies.                                      | 62  | 10                          | 7   | 21         |
| g. Curtail consumption of meat products at home to make more food grains available.  | 27  | 25                          | 23  | 25         |

## TOPIC 8: PANAMA AND CUBA—TOTAL NUMBER OF BALLOTS: 3,686

[In percent]

|  | Pro | Go along without enthusiasm | Con | No opinion |
|--|-----|-----------------------------|-----|------------|
| 1. With regard to Panama, the United States should:  |     |                             |     |            |
| a. Abandon negotiations for a new treaty and maintain the present status of the canal, insisting on full control over the canal and Canal Zone in perpetuity.  | 14  | 15                          | 58  | 13         |
| b. Seek a new treaty that would return the canal and Canal Zone to Panama at the end of a fixed period and provide for United States participation in the defense of the canal for as long as the United States feels this is necessary. | 57  | 18                          | 17  | 8          |
| c. Agree to a new treaty that gives Panama full control over the canal and the Canal Zone.   | 10  | 19                          | 52  | 19         |
| 2. With regard to Cuba, the United States should:  |     |                             |     |            |
| a. Resume full diplomatic and trade relations.   | 41  | 23                          | 22  | 14         |
| b. Continue present policies toward Cuba: nonrecognition, economic boycott, etc.   | 10  | 17                          | 52  | 21         |
| c. Normalize relations only if Cuba ceases to interfere in the affairs of other Latin American and third-world countries and severs military ties with the U.S.S.R.  | 25  | 26                          | 33  | 16         |
| d. Use "appropriate means," including force against Cuba if it intervenes militarily in other Latin American countries.  | 16  | 22                          | 44  | 18         |
| e. Use "appropriate means," including force, against Cuba if it intervenes in other third-world countries.   | 7   | 18                          | 56  | 19         |

## CHICAGO SUN TIMES ENDORSES HOUSE DEBT COLLECTION BILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois, (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, yesterday I informed my colleagues of the strong endorsement given by the New York Times to the proposed Debt Collection Practices Act, which was passed by the House on April 4 and is now being considered by the Senate. Yet another distinguished newspaper, the Chicago Sun Times, voiced its strong support for this legislation in an editorial in yesterday's edition. Both of these editorials in favor of the proposed Debt Collection Practices Act follow the April 11 endorsement of the legislation by the Chicago Daily News and demonstrate a growing support for the debt collection bill.

The purpose of the debt collection bill is to stop unethical debt collectors from using abusive tactics. In essence, this means that every individual, whether or not he owes a debt, should have the right to be treated in a reasonable and civil manner. The bill is not intended to al-

low people to avoid paying legitimate debts and it will not have that result.

The bill prohibits actions by debt collectors such as falsely representing oneself as an attorney, making harassing or threatening calls to anyone, publishing "deadbeat" lists, impersonating a law enforcement officer, threatening that failure to repay a debt will result in the arrest or imprisonment of any consumer, and misusing postdated checks. The bill also places reasonable limits on a debt collector's communication with a consumer in general, at work, and with third parties such as the consumer's employer.

The Chicago Sun Times editorial correctly points out that one of the major problems in this area is that of interstate debt collection abuse. Without a Federal law, there is little that can be done to protect a consumer when a debt collector makes a harassing telephone call from another State. The editorial makes the point that businesses have legitimate means of collecting bills, and calls attention to the fact that many of those who fall behind in their payments are not "deadbeats" but rather individuals who have suffered temporary setbacks.

The following is the text of the June 1 Chicago Sun Times editorial in support of the proposed Debt Collection Act:

## STOP BILL-COLLECTION ABUSES

Credit is an integral part of modern life, with networks connecting computers across the country. That's why credit collection agencies are beyond the scope of a single state's control.

Thus even though Illinois has a relatively strong bill-connection law, there is little recourse when an abusive collector gets on the long-distance phone from another state.

The director of the Minnesota Office of Consumer Services said a St. Paul man was dunned by a Chicago bill collector who threatened to telephone the man's wife and boss every hour until the debtor was fired.

Businesses that extend credit obviously have a right to expect payment. But many who fall behind in payments aren't deadbeats—they may be temporarily broke. Businesses have legal ways to collect bills, and a measure under consideration by Congress would help see that collectors use these legitimate collection methods. A bill sponsored by Rep. Frank Annunzio (D-Ill.) and passed by the House would make certain kinds of harassment, including late-night phone calls, illegal.

The bill passed the House by the thinnest of margins—one vote. A similar bill passed

the House by a bigger margin last year but was killed in the Senate.

This time the Senate should pass it.

# HOUSE CONCURRENT RESOLUTION 165—CONGRESS BILL ASKS SOVIETS TO "RESURRECT" TWO CHURCHES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. Flood) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, my bill, House Concurrent Resolution 165, which seeks the resurrection of the Ukrainian Catholic and Orthodox Churches in Ukraine, is pending before the Committee on International Relations. These national churches of Ukraine were genocided by Stalin. The impact on the Ukrainian nation has been disintegrative and destructive. As has been recently emphasized by Dr. Lev E. Dobriansky of Georgetown University in statements to both our Commission on Security and Cooperation in Europe, dealing with compliance with the Helsinki Accords, and the Senate Foreign Relations Committee, hearing testimony on the Genocide Convention, this combined case of religious genocide is unequalled anywhere and is a crass violation of human rights—national, civil, and personal.

This case is both unique and outstanding, and poses a real test for our human rights stand both in the Belgrade Conference and in the U.N. and elsewhere. I am hopeful that our Committee on International Relations will act soon on this significant measure.

The distinguished religious writer of the Washington Star, William F. Willoughby, describes most pungently the essence of the bill in his May 28 column on "Congress Bill Asks Soviets to 'Resurrect' Two Churches." I commend this article to the reading of my colleagues and request that it be printed in the RECORD:

[From the Washington Star, May 28, 1977]  
CONGRESS BILL ASKS SOVIETS TO "RESURRECT" TWO CHURCHES

(By William F. Willoughby)

A bill in Congress asks the Soviet Union to allow for the "concrete resurrection" of the Ukrainian Orthodox Church and the Catholic Church which since a purge by Stalin have not been recognized by the government and have been forced to hold clandestine services at great peril.

Rep. Daniel J. Flood, D-Pa., acting in behalf of thousands of persons of Slavic descent in his district in the northeastern part of the state, classified the persecution of these two churches the most severe of any in the world.

It is estimated that there are 7 million Catholics in the Ukraine, but there is only one bishop to serve them. Of 300 clergy, they must "combine their religious work in a surreptitious, underground manner with their normal secular vocations," a major report said.

Lev E. Dobriansky of Georgetown University said that in the mid-1930s when Stalin abolished the big Ukrainian Orthodox Church and sent it underground, its hierarchy and about 20,000 of its priests, deacons and other spiritual functionaries were liquidated or

eliminated. There were more than 3,000 congregations disbanded.

With others deported and thousands of others coerced to join the recognized Russian Orthodox Church, plus the confiscation of church property, the church was obliterated—officially. It still has several million clandestine members.

Dobriansky, writing in the Ukrainian Quarterly, said the government persecutes clergy and laymen who petition the government for concessions, including permission to register local congregations. Only recognized churches such as the Russian Orthodox Church may register congregations.

These "lackeys of American imperialists," "agents of the Pope" and "bourgeois Ukrainian nationalist subversives," as the authorities brand them, "at great risk, congregate in an extensive religious underground" to continue in their faith, Dobriansky said.

Similar conditions exist for those classified as "Baptists" who are not registered with the various Soviet governments—including not only unregistered Baptists, but Pentecostals, Lutherans and others. Many small Protestant groups are registered, however, and do not suffer the same restrictions and harassments as do the unregistered groups.

The Soviet governments consider such a group as the Ukrainian Orthodox Church a split with a recognized church (the Russian Orthodox Church), and on this basis, insist that the former not be recognized and that adherents settle their differences by re-emerging with the parent body. In this sense the Soviet governments consider themselves "protectors" of the registered churches against internal dissent.

The Flood bill asks the Soviet Union to permit the two churches to have legal existence in accord with provisions of the Soviet constitution, the United Nations charter and Declaration of Human Rights and the Helsinki Accord.

Such a measure in the American Congress is unusual, but precedent was set when American Jews pressed Congress to act on behalf of gaining concessions for 3 million Jews in the Soviet Union.

This was before the Helsinki Accord. After the accord, Rep. John Buchanan, R-Ala., and Sen. Henry Jackson, D-Wash., introduced bills which asked for the release from a Siberian forced labor camp of the Rev. Georgi Vins, also of the Ukraine, who had been head of the "dissident" or unregistered Baptists in the Soviet Union.

Despite the measure clearing Congress almost without opposition in either house, there has not been any positive response from the Soviet Union.

There are increasing numbers of articles being written in Soviet periodicals, however, concerning the American "intervention" into Soviet internal affairs, with some of them critical of The Star's stress on the story.

The Ukrainian government contends that Vins is in prison for violating explicit laws. The sponsors of the bills contend that such laws are oppressive and excessive, not in keeping with the general conventions of religious freedom and the right to free assembly.

## SOVIET UNION CHARGES LEADING JEWISH ACTIVIST WITH HIGH TREASON

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. DRINAN) is recognized for 30 minutes.

Mr. DRINAN. Mr. Speaker, yesterday there occurred the most ominous and threatening event for Soviet Jews in

many years. Anatoly Scharansky, one of the leaders of the Soviet Jewish community, was officially charged with the crime of high treason. The New York Times today characterized the charge as "a move by Soviet authorities that has few precedents since the days of Stalin."

The accusation against Mr. Scharansky is by no means an isolated event; rather, it represents the most recent and most serious element in a month-long campaign by Soviet authorities against Jews who wish to emigrate to Israel and others who advocate human rights. In an action which can hardly be a coincidence, Russian authorities yesterday also convicted another Jewish "refusenik," Josef Begun, on the charge of "systematically engaging in vagrancy and begging," commonly known as "parasitism." Mr. Begun received the extraordinarily severe sentence of 2 years in exile in Siberia. Dr. Begun was the victim of a classic Soviet Catch-22: He was fired from his job as a mathematician as a result of his application to emigrate to Israel and then was arrested for not holding a job. His conviction and severe punishment could set a disastrous precedent for the many other Soviet Jews who, like Dr. Begun, have also lost all employment opportunities as a result of their attempt to emigrate.

Just 2 weeks before the commencement of the Belgrade Conference to review compliance with the terms of the Helsinki agreement, the U.S.S.R. is providing the world with a clear signal that it does not intend to honor the freedom of emigration and human rights provisions of the Helsinki accord. The United States ought to make the current crackdown on Soviet Jews, and the plight of Mr. Scharansky in particular, the first order of business on the Belgrade agenda.

Mr. Speaker, I would like to review the harassment which Mr. Scharansky has suffered since he first applied for permission to emigrate to Israel to join his relatives there in 1973. Then 25 years of age, Mr. Scharansky almost immediately lost his job as computer specialist. All subsequent requests to emigrate were denied. The KGB has carried out a campaign of intimidation against him for years; in the past 2 years alone, he has spent over 100 days in prison on a variety of minor charges. He was once arrested and incarcerated for 15 days merely for asking why he could not obtain an exit visa.

Only July 4, 1974, Mr. Scharansky was married. The next day, his wife received an ultimatum from the Soviet authorities: Leave the country that very day or never be allowed to leave in the future. In the hope that her husband would soon be able to join her, Natalia Scharansky left for Israel, and she has been separated from her husband ever since.

Anatoly Scharansky is a leading member of Moscow's "refusenik" community. He has acted as a liaison to the Western press for Jews who wish to emigrate, and he is a founding member of the group of Soviet citizens who organized to monitor the U.S.S.R.'s compliance with the Hel-

sinki Final Act. The recent Soviet crackdown on dissidents has resulted in the arrest of nine of the members of this group and the virtual destruction of the monitoring organization.

During my visit to Moscow in 1975, Anatoly Scharansky acted as my host, introducing me to other members of the Jewish community in Moscow. It is inconceivable that this dedicated man has acted as a spy for American intelligence agencies. Yet this is the charge which has been made against him, and this is the basis for yesterday's accusation that he has violated article 64 of Soviet law: Treason Against the State. The charge was first made in the March 4 issue of the official government newspaper *Izvestia*. The same issue of that newspaper charged Senator Jackson, Representative FASCELL, and myself with some form of undefined "involvement" in Mr. Scharansky's alleged "espionage" activities. In an obvious appeal to anti-Semitism, the *Izvestia* article charged several other prominent Soviet Jews with similar offenses and identified two Jewish members of the U.S. Embassy delegation as "contacts" in the "spy ring."

In the context of growing government pressure on Soviet Jews, including the showing on prime time Soviet television of two blatantly anti-Semitic films, Mr. Scharansky said prophetically just before his arrest:

The atmosphere now smells of a pogrom.

Israeli Foreign Minister Yigal Allon called the espionage charges—

a new dimension in the persecution of the emigrant activist movement, in fact against all Jews—a grave and worrisome development such as we have not known for the last 25 years.

The treason charges brought against Anatoly Scharansky yesterday, with their evocation of the Stalinist "show trials," underscore the validity of Foreign Minister Allon's statement 2 months ago. This is clearly a moment of grave crisis for Mr. Scharansky, for Soviet Jews, and for the human rights advocates in the U.S.S.R. The need for immediate action could hardly be more urgent. Yesterday, 24 Members of the House of Representatives joined in a letter to General Secretary Brezhnev strongly protesting the treason charge and urging the immediate release of Mr. Scharansky. I insert in the RECORD the text of that letter:

CONGRESS OF THE UNITED STATES,  
HOUSE OF REPRESENTATIVES,  
Washington, D.C., June 1, 1977.

HON. LEONID I. BREZHNEV,  
General Secretary, Communist Party of the  
Soviet Union, the Kremlin, Moscow,  
R.S.F.S.R., U.S.S.R.

DEAR MR. SECRETARY:

We protest in the strongest possible terms the charge leveled against Moscow Jew Anatoly Scharansky. His indictment under Article 64 of the Criminal Code of the R.S.F.S.R. of treason constitutes an affront to the signatory nations of the Helsinki final act and to all justice-loving peoples.

Since filing his application to emigrate to Israel in 1973, Mr. Scharansky has been the target of systematic abuse by officials of the Soviet government. He has been held in Lefortova Prison since March 15 on charges which were then, and are still, absurdly and transparently without foundation. His con-

tinued detention without benefit of counsel of choice and isolation from members of his family are in flagrant violation of Soviet and international law.

Failure to release Scharansky immediately and the dropping of all charges will surely engender widespread protest among the American people and their elected representatives in Congress.

Better cooperation between our two governments will be fostered if Mr. Scharansky is given permission to emigrate.

Sincerely yours,

Sidney R. Yates, James J. Blanchard, William M. Brodhead, John Buchanan, William R. Cotter, Christopher J. Dodd, Robert F. Drinan, Joshua Ellberg, Dante B. Fascell, Millicent Fenwick, Hamilton Fish, Jr., Elizabeth Holtzman, Members of Congress.

Edward I. Koch, William Lehman, Elliott H. Levitas, Joe Moakley, Anthony Toby Moffett, Richard L. Ottinger, Claude Pepper, Frederick Richmond, Benjamin S. Rosenthal, Stephen J. Solarz, Newton I. Steers, Jr., Henry A. Waxman, Members of Congress.

Letters of protest are essential, but more is required. The U.S. Government must speak out forcefully and take all appropriate action to bring about the release of Anatoly Scharansky and the reversal of the Soviet Government's new wave of repression. At the present time, I am involved in the formation of the International Committee for the Release of Anatoly Scharansky. This organization will have branches in Canada and Great Britain, and I will be proud to serve as chairman of the American chapter as well as the International Committee. Thirty Members of Congress, six Senators, and many distinguished Americans, including Prof. George Wald, Nobel laureate in biology, Elie Weisel, Clive Barnes of the New York Times, Prof. Alan Dershowitz of the Harvard Law School, and Winthrop Knowlton, president of Harper & Row, will serve on the committee.

In the coming weeks and months, the International Committee for the Release of Anatoly Scharansky will be engaged in a wide range of activities, including petitions to the United Nations, meetings with important government officials, and other activities designed to focus the world's attention on this urgent matter. We must do all we can to halt the wave of repression in the Soviet Union. The U.S.S.R.'s recent actions against would-be emigrants and human rights advocates is a clear challenge to all nations which value justice and basic human rights, and is directed particularly at the United States, which stands as symbol of these values. We must not fail to answer this challenge.

Mr. UDALL. Mr. Speaker, all of us who revere basic human rights are saddened and outraged by the recent action of the Soviet Union in taking ruthless reprisals against two of their citizens who sought to be part of the emigration movement.

The Soviet Union has repeatedly failed to honor its commitments under the Helsinki Agreements, commitments which provide for the free movements of people, ideas and information between East and West. In signing the Helsinki Final Act the Soviet Union pledged to advocate "human rights."

That they have not done so is evidenced by the treatment of Iosif Begun, who on June 1, 1977, was tried, convicted, and sentenced to 2 years exile in Siberia, and Anatoly Scharansky who is currently charged with a crime of high treason, a possible capital offense.

Upon application for an exit visa to Israel, Begun was dismissed as a mathematician in 1971. Begun has always sought a job in his profession but had been refused a job in the field of mathematics. For a period of time, since his denial on grounds of knowing "State secrets," Begun worked in a telephone communication center, and later as a night watchman. Because of his activities on behalf of Soviet Jews attempting to emigrate, and his arrests, he was soon thereafter dismissed from both jobs. In March 1977, Begun was called to the 52d militia branch and questioned about his employment problem. Criminal proceedings opened against Begun and he was subsequently charged with parasitism among other things.

By arresting Scharansky, the Soviets are attempting to kill the emigration movement and the human rights movement in the U.S.S.R. with one stroke. Scharansky was prominent in both. As a committed Jew, he felt the need to help all who came to him for assistance, including those of other religions and nationalities oppressed by the Soviets, such as Germans and Christians. He turned no one away.

He was a leader in the Jewish emigration movement. He was constantly followed and arrested time and time again and imprisoned for short terms. He was also a founding member of the Group to Monitor the Helsinki Agreement in the U.S.S.R., whose chairman Yuri Orlov is also in Lefortovo Prison. The Soviet Union could not tolerate this group which exposed Soviet violations of the Helsinki Agreement to the world. He was the liaison to the Western Press, for Jews wishing to emigrate and dissidents seeking publicity.

All of Anatoly Scharansky's daring activities—while an anathema to the authorities—were nonetheless all within Soviet law and international covenants the Soviets have signed.

All people of good will who care about human rights in the world are indebted to Anatoly Scharansky. Because of him we have all been made aware of Jewish emigration and the problems of human rights in the Soviet Union. Surely the present concern over human rights was—in part—stimulated through his efforts. Now we must come to his assistance along with others who have been wrongfully accused.

Mr. EILBERG. Mr. Speaker, I rise to voice the outrage that my constituents and I felt yesterday when we learned that Soviet Jew Anatoly Scharansky has been charged with treason, and that Dr. Josef Begun has been sentenced to 2 years in exile.

Nearly 2 years ago, Mr. Speaker, I met with Anatoly Scharansky in Moscow. At that time, he had been separated from his wife, Natalia, since 1974, when the cruel and arbitrary emigration policy of the Soviet Government denied him the

right to leave Russia but forced her to leave for Israel, where to this day she awaits her husband.

Later, I had an opportunity to meet with Natalia in Israel, and I wish that every one of my colleagues could have shared that deeply moving, personal experience. Having met this young couple, separated for nearly 4 years for the "crime" of wanting to live as free people in the country of their choice, I came away more convinced than ever that we must continue and intensify our efforts in this struggle for basic human rights.

Before being charged yesterday with treason, Mr. Speaker, Scharansky had been held in prison for nearly 3 months without benefit of counsel. This is a flagrant violation of Soviet and international law. In addition, the Soviet Government's refusal to allow Scharansky to emigrate is a violation of the Helsinki Final Act which the Soviets signed and so loudly endorsed.

The Scharanskys and Dr. Begun are just two examples of this cruel policy, Mr. Speaker. Today, as Anatoly Scharansky prepares to face his trial, and as Dr. Begun faces the horrible reality of 2 years in exile, it is critically important that we, as men and women of conscience, make it clear that the U.S. Congress stands squarely on the side of freedom and human rights. We cannot fail to raise our voice at a time when these courageous individuals look to us in the free world as the only hope they have that they can soon enjoy the liberties guaranteed to them by international law.

Mr. KOCH. Mr. Speaker, it was with great sadness that I learned yesterday that the Soviet Government had announced its intention to charge Anatoly Scharansky with treason, a crime punishable by 10 years in prison to death. Mr. Scharansky, along with several other well-known Soviet dissidents, was accused in March in an *Izvestia* article of being an agent for the CIA and was shortly thereafter arrested. His actual crime was his involvement in an informal group of other accused dissidents that monitored Soviet compliance with the human rights provisions of the Helsinki Accord. Since he applied for and was refused permission to emigrate to Israel in 1973, Mr. Scharansky has emerged as a leading spokesman for the Jewish dissident movement in the Soviet Union.

Coming as it does on the eve of the Belgrade Conference which will convene on June 15 to review the progress that has been made in the implementation of the Helsinki Agreement, this action by the Kremlin is clearly a challenge to the emphasis placed by the West on the human-rights provisions contained in Basket Three of the Accord.

In a related action, the Soviet Union yesterday sentenced another "refusnik," Joseph Begun, to 2 years of exile in Siberia for vagrancy. An electrical engineer by training, Mr. Begun has been unable to find work in his field since he applied for an exit visa 6 years ago, but he has been employed privately in Moscow giving Hebrew instruction. This kind of harassment is typical of the treatment

accorded those who apply for permission to emigrate.

From the start of his administration, President Carter has expressed his firm support for the cause of human rights in other countries. These two recent actions by the Soviet Government are clearly part of a hardline Kremlin response to what it views as external interference in its affairs.

The Helsinki Agreement, however, was freely and openly entered into by the Soviet Union, and other signatories have every justification in expecting Moscow to carry out all of its provisions, including those dealing with human rights, and in voicing their concern when Moscow fails to do so. If the Soviet Union continues to flout the Agreement, the United States would be foolish to expect it to honor future agreements such as any that may result from talks on SALT II.

Even if the Soviet Union had not signed the Helsinki Agreement, we would still be justified in protesting the violations of human rights which are commonplace in that nation. All people possess the fundamental rights outlined in the Universal Declaration on Human Rights regardless of where they live; and when those rights are denied, it is the duty of the decent peoples of the world to raise their voices in protest and do everything within their power to see that those rights are restored. The cause of human rights is of a higher moral import than the geographical boundaries that mark off nations and the principles, whatever they may be, that underlie a given nation's sovereignty.

Why the Soviet Union feels compelled to level trumped-up charges at Scharansky and resurrect the show trials of the Stalinist era I am not sure, but I am certain of the proper response. President Carter and the Congress must let the Soviet Union know that the United States will not tolerate the Soviet attitude toward the Helsinki Accord nor the fraudulent charges made against the American diplomatic and press corps in Moscow in connection with Scharansky's supposed treason. The Kremlin leaders must be made to realize that mutual relations and relaxed tensions can only take place in an atmosphere of mutual respect and that no government, regardless of its ideological foundation, has the authority to violate the basic human rights of its inhabitants.

I urge that the Soviet Union immediately release Mr. Scharansky, drop all charges against him, and grant him permission to emigrate to Israel.

Mr. LENT. Mr. Speaker, the report that Anatoly Scharansky has been formally charged with treason by the Soviet Government is a clear indication that the Soviet Union still has no respect for the international accords on human rights to which it is a party. Indeed, this latest action shows that the Soviet Government has regressed to a level of repression not seen since the days of Stalin.

Further, the attempt by the Soviets to link Mr. Scharansky to the U.S. Central Intelligence Agency is a direct slap at this Government, and a setback in United States-Soviet relations.

Within 2 weeks, the Belgrade confer-

ence will convene to examine the effect of the 1975 European Security Act signed at Helsinki. Perhaps it is only coincidence that nine members of an unofficial group established in the Soviet Union to monitor Soviet violations of the Helsinki Accord have been arrested. I think not. Rather, I believe the Soviet Government is systematically trying to undo all the Helsinki Accords were supposed to accomplish. The Helsinki Accords were signed by the United States, the Soviet Union, and most European states. To those people who would say that what the Soviet Government does in internal matters is its own business, I would answer that the fact that both the United States and the Soviet Union are cosignatories of the Helsinki Accord, makes their blatant human rights violations our business.

Some months ago, the Congress went on record to condemn the Soviet Government's harassment of its Jewish minority. I urge my colleagues to renew that commitment by calling upon President Carter to make the Anatoly Scharansky matter the first order of business at the Belgrade conference. His future and that of thousands of others like him is at stake.

Mr. WOLFF. Mr. Speaker, I find that I must speak out today, as I have frequently in the past, on the issue of repression in the Soviet Union. Two developments yesterday make such a statement on my part imperative—the sentencing of Josef Begun to 2 years of exile in a remote part of Russia, and the announcement that treason charges were being prepared against Anatoly Scharansky.

The implications of these latest actions are severe, indeed. The harshness of Begun's sentence and the possible capital penalty associated with a charge of treason cast more than just a cloud over the upcoming Belgrade conference, now only 2 weeks away. The timing of these incidents—Begun's trial was rescheduled several times, and then was suddenly moved ahead—is clearly not coincidental, and we cannot afford to be silent.

The Soviet Union continues to contend—the forcefulness of this contention is apparent from yesterday's disclosures—that its actions with respect to human rights are not subject to international discussion, despite its signature on the Helsinki agreement. Yet it must be clear to all of us in this body that while we live in an imperfect world, the citizens of that world have certain basic rights regardless of the type of government under which they live.

In the United States, we have often spoken of, and been spoken to, concerning the duties and obligations that we as a nation have to the rest of the world. The environment, health, hunger, global economics, as well as the most basic issues of war and peace, all serve to emphasize the theme of interdependence. Basket Three of the Helsinki Accords was significant, however, in that it clearly pointed to an additional theme, that of human rights as opposed to national rights or needs. We must never forget that our world is populated by billions of people, who despite their na-

tionality or form of government share the common heritage and the common rights of humanity. These rights, the subject of Helsinki's Final Act, must be safeguarded vigilantly, and can never be abandoned. If these rights are not protected now, if respect for them is not increased, then all the peoples of the world will ultimately lose.

America certainly does not have a monopoly on morality. But we in the Congress must speak out wherever clear violations of such rights are apparent. In the cases of Mr. Begun and Mr. Scharansky, these violations are not merely apparent, they are being flaunted. Mr. Begun's trial on the charge of "systematically engaging in vagrancy and begging," or "parasitism," is a direct result of his application for permission to emigrate to Israel—an application which should be granted in accordance with the Helsinki Agreement. Begun was fired from his job immediately subsequent to his application; he has been denied employment ever since; and the Soviet Government refuses to recognize either his authorship of numerous papers or his teaching of Hebrew as employment. While the Russians may never have heard of "Catch 22," they are certainly capable of using it effectively. It should be noted, that although Begun is only one of a large number of "refuseniks" who have been fired from their jobs upon applying for emigration visas, he is the first one to be charged with "parasitism" in 3 years.

The charges being prepared against Scharansky—principally that he is an agent of the CIA—are equally spurious, and equally serious. It is now clear that the Soviet Government is prepared to completely destroy the unofficial Moscow group which is monitoring the Helsinki Agreement, and these latest actions must be viewed as a determination on the part of that Government to dismiss their clear obligations under Helsinki. We must do all we can in the Congress to see that these obligations are fulfilled, and I am sure that our representatives to the conference will approach it with the understanding that they have the backing of the Congress, the President, and the American people. The struggle to achieve global respect for basic human rights is perhaps the most crucial, the most serious, and the most difficult struggle we can undertake if we are to insure the long-term health and prosperity of this planet. We certainly cannot afford to sit idly by as the planet's other superpower challenges this basic assumption, and I call upon the leaders of the Soviet Union to reverse their present, dangerous course, not only with respect to Mr. Begun and Mr. Scharansky, but with respect to any of its citizens who wish to emigrate or express their thoughts freely, as provided for in the Helsinki Agreement.

Mr. DOWNEY. Mr. Speaker, last month I brought to the attention of my colleagues the case of Dr. Josef Begun. Dr. Begun was due to stand trial in the Soviet Union May 18 on charges of vagrancy. The trial however, was postponed until June 8. Dr. Begun was unexpectedly brought before the court yesterday, June 1, 7 days prior to the

official date of his trial. Dr. Begun was convicted of vagrancy and sentenced to 2 years in exile.

Anatoly Scharansky, another Soviet Jew who has been imprisoned for wishing to emigrate to Israel, was yesterday officially charged with treason.

Many people familiar with the cases of Dr. Begun and Anatoly Scharansky fear that these trials may be the beginning of a new era of religious persecution in the Soviet Union. These trials are an unpleasant reminder of the "Doctors Plot" in 1952, in which Soviet officials used fear and harassment as a means to dissuade other Soviets who wished to emigrate.

We cannot let up, in light of this information and the upcoming meeting in Belgrade this month to review the results of the Conference on Security and Cooperation in Europe, on our attempts to focus world opinion on the practices of persecution in the Soviet Union.

Mr. STEERS. Mr. Speaker, ever since the Helsinki Declaration was signed in 1975, this legislative body has been concerned with Soviet implementation of the agreement which guarantees certain basic human rights. The Helsinki agreement stipulates,

The participating States will deal in a positive and humanitarian spirit with the applications of persons who wish to be reunited with members of their family.

It is my opinion that the record of Soviet compliance is most unsatisfactory, but it is even more disturbing that the Russians are actively trying to suppress and harass Soviet citizens who try to secure their rights as guaranteed by international agreement.

Yesterday, the world learned that Soviet authorities have brought charges of high treason against Anatoly Scharansky, who applied in 1973 for an emigration visa to join his family in Israel, and was refused and subsequently arrested in March of this year. The Soviet authorities maintain that Mr. Scharansky was working for the CIA. I will admit that our CIA does not have a spotless record in world affairs, but that really does not diminish the absurdity of the charges. It would be ludicrous if it were not for the fact that Mr. Scharansky has the death penalty hanging over his head. The State Department has characterized these charges as "misinformation laced with slander and innuendo."

The question arises: Why have the Soviets gone to so much trouble to bring this Soviet Jew's activities to a halt? Why do they employ the "Big Lie"—a historical precedent for the suppression of human rights—in doing so? The answer may be that Mr. Scharansky is a founding member of The Public Group to Promote the Observance of the Helsinki Agreements in the U.S.S.R. whose stated purpose is to promote observance of the humanitarian provisions of the Final Act of the Conference on Cooperation and Security in Europe. The charter of the group states:

The Group hopes that its information will be taken into account at all official meetings which are provided for in the Final Act under the point Further Steps after Helsinki.

Evidently, the Russians are afraid the truth about their lack of compliance will get out of Russia. They have great reason to be concerned now, and they are willing to go to great lengths to suppress the activities of groups such as Mr. Scharansky's, because of the upcoming conference in Belgrade of the Helsinki signatory nations. This conference will examine the status of the Final Act, scrutinizing the compliance of all the signatory nations. It is obviously the Soviet desire to minimize to the greatest possible extent, charges of their abuses of human rights as guaranteed in the Helsinki agreement. It is ironic that, had the Russians lived up to their obligations in the Final Act, by allowing Scharansky to emigrate and join his family outside Russia, they would not have had this "spy" courageously attempting to monitor Soviet Helsinki compliance within the Soviet Union.

Mr. Speaker, we should recognize this Soviet action for what it is. It is certainly not a question of Soviet national security, but rather an attempt by the U.S.S.R. to suppress critical comments at home before this crucial, upcoming conference on the Helsinki Declaration.

Mr. OTTINGER. Mr. Speaker, I join my colleagues in strong condemnation of yesterday's actions by the Soviet Government against two prominent Russian Jews—Anatoly Scharansky and Josef Begun. Mr. Scharansky has been charged with treason—a crime punishable by death—and Dr. Begun has been sentenced to 2 years in exile on a charge of vagrancy.

Both men had previously filed for exit visas to emigrate to Israel and have been subject to systematic harassment by Soviet authorities, which culminated in the harsh judicial actions of yesterday. The charge of treason against Mr. Scharansky is the first such injunction against a Soviet Jew since 1970, and, prior to that time, such a charge has not been raised since the reign of Josef Stalin.

The Soviet Government has consistently stated that demonstrations like the one we are having today constitute an unwarranted interference in the internal affairs of the Soviet Union. One need only review two important international agreements signed by the U.S.S.R. to refute these allegations. Both the 1948 Universal Declaration of Human Rights and the 1975 Helsinki accords commit the Soviet Government to safeguarding the rights of its citizens. By signing these documents the Soviet leadership agreed that every Soviet citizen possesses the right to freedom of thought, of conscience, of religion, or opinion, and of expression as well as the right to emigrate. In the case of the more recent Helsinki accords, the Soviet delegation agreed not only to permit such rights but to promote them as well.

The persecution of Anatoly Scharansky and Josef Begun clearly violates both international agreements and warrants strong interest of the United States in an area which otherwise might have remained merely a domestic concern. In addition, our interest in this matter and our protest today are firmly rooted in the ideals of this Nation—in the respect

for human decency and in the protection of certain inalienable rights.

Yesterday's actions by the Soviet Government shroud the entire human rights issue, and the rights of Soviet Jews in particular, in a darkness which seems increasingly harder to penetrate. Although the future may look grim, it is critical that we continue our struggle on behalf of Mr. Scharansky, Dr. Begun, and all Russian Jews who are suffering because of their desire to emigrate to Israel.

Western pressure has brought change in the Soviet system in the past, and it is my sincerest hope that our efforts today will prompt the U.S.S.R. to adhere to the basic principles of Basket Three of the Helsinki Final Act, and to immediately curtail its harassment and persecution of Russian Jews.

Mr. SCHEUER. Mr. Speaker, yesterday, we learned that the Soviet Union has arrested and charged Anatoly Scharansky with treason.

This act chills our memories with thoughts of the Stalinist purge trials of the 1930's.

Where is justice in this act? Like so many Jews in the Soviet Union, Scharansky sought an exit visa to Israel. When he made his application, he immediately found himself without a job and under surveillance.

By charging Anatoly Scharansky with treason, the Soviet Union has silenced a leader and a movement. The freedom-loving people of the world are appalled that religious persecution has returned to the Soviet Union. The Helsinki Accords have been reduced to a mockery as the unofficial monitoring group headed by Scharansky has been destroyed through arrest and/or imprisonment.

These acts of intimidation have stifled dissent and crippled the movement for human rights in the Soviet Union. We must remain ever vigilant to discourage further acts which shock the conscience and numb the mind.

Mr. AMBRO. Mr. Speaker, the official Soviet announcement that Anatoly Scharansky, a leader of the Soviet Jewish community, has been charged with the crime of high treason, a capital offense, concurrent with the conviction and sentencing of Josef Begun, also a Jew, to 2 years in exile for "systematically engaging in vagrancy and begging" shocks the conscience of nations everywhere. Not only do the actions represent a gross miscarriage of the Helsinki agreements, but their unjust nature and total disregard of human rights can only serve to outrage all people of the world.

Scharansky has emerged as one of the boldest and most articulate dissident activists as a member of the unofficial group monitoring Soviet compliance with the Helsinki document. Placed under arrest on March 15, 1977, and subsequently questioned as a "traitor to the republic," Scharansky awaits his trial for high treason as an "American spy." Begun, recently convicted and sentenced to 2 years in exile as a "vagrant and a beggar," is a mathematician and graduate of the Radio Technical School of Moscow University. In past years he has ener-

getically pursued his vocation but has been mysteriously refused employment everywhere.

The two cases bear a common link. Not only are Scharansky and Begun Jews, but both have applied for emigration visas. Therein lies their "criminality." The Helsinki agreement contains strong language regarding liberalized traveling privileges and emigration with an emphasis on reuniting families. Since signing the agreement nearly 2 years ago, the Soviets have actually increased their oppression of minorities and have made emigration even more difficult. These actions must be seen as proof of the refusal of Soviet authorities to fulfill their human rights obligations and as a demonstration of readiness to severely punish those Soviet citizens who provide information about such violations. This sorry record not only affects Soviet Jews and other Soviet minorities but is an affront to all of the signatories of the Helsinki agreement.

During the past I have joined my congressional colleagues many times in efforts to promote the cause of basic rights for Soviet Jews. Through our efforts, we have occasionally been able to influence Soviet action in these matters. While unable to completely eliminate the iron hand of tyranny, we have been able to soften the blow. I call on all of my colleagues to join in vigorous protest of the most recent Russian violation of human rights in the hope that we may make the world more aware of the rape of justice taking place in the Soviet Union and enable the Soviet leaders to realize that such actions actually do them the most harm by provoking criticism and embarrassment.

Mr. SOLARZ. Mr. Speaker, I rise to express my sense of moral indignation over the abhorrent treatment of Anatoly Scharansky, by the Soviet authorities, in obvious violation of the Helsinki accords.

Scharansky, a leading "refusenik" has become a symbol of human rights for all the world's citizens. He was placed under arrest on March 15, 1977, and taken to Lefortovo prison, "the KGB's interrogative lockup." Yesterday, nearly 3 months after his arrest, Soviet officials charged Scharansky with the crime of high treason, a capital offense, claiming he was working for the Central Intelligence Agency. His arrest is an attempt by Soviet authorities to deal a severe blow to the human rights movement and to silence the voices of freedom of speech and movement in that land.

Scharansky, a founding member of the group to monitor the Helsinki agreement in the U.S.S.R., also served as a liaison for Jews wishing to emigrate. His various activities have exposed Soviet violations of the Helsinki agreement and has been reviewed as a threat to that government.

Anatoly Scharansky has been heroic in his actions. The Soviet Union must not be allowed to continue their brutal policies of persecution which constitutes the real crime in this case not only against Anatoly Scharansky but against all of humankind.

Mr. MOFFETT. Mr. Speaker, I wish

to add my voice to the growing protest by free people everywhere, by calling upon the conscience of the Soviet leaders to drop the false charges against "refusenik" Anatoly Scharansky.

It has been clear to those of us who have watched this drama develop, that in demanding that the U.S.S.R. uphold the principles it endorsed by signing the Helsinki declaration, Anatoly Scharansky would become a martyr for the cause of freedom of emigration. Scharansky's sole "crime" in his desire to emigrate to Israel. By refusing to allow the harsh measures employed by the Soviet Government against Jews who desire to emigrate to stifle him, Anatoly Scharansky has brought the wrath of the Soviet Government down upon him, complete with the threat of death which accompanies his false charge of high treason.

Now the entire world is watching. The Soviet Union will know, through the pressure of global public opinion, that it cannot make false promises and expect to retain international respect. With the signing of the Helsinki accords, human rights are no longer the internal affairs of one state but rather the legitimate concern of freedom-loving people the world over.

Mr. BADILLO. Mr. Speaker, I am appalled that, with all eyes focused on the Soviet adherence to the Helsinki accords as the September meetings draw closer, Anatoly Scharansky, the young and able physicist who was one of the founders of the Russian Group to Monitor the Helsinki agreement in the U.S.S.R.—it is also almost beyond belief that Dr. Josef Begun, a mathematician, has been convicted of "vagrancy and begging" and sentenced to 2 years in prison, simply because he applied for a visa for Israel and has been unable to obtain work since.

It is clear that the Soviet Union does not take our commitment to the Helsinki accords—or their own—with any degree of seriousness. I have just returned from a meeting of the Inter-American Development Bank in Guatemala, and have seen, through Secretary of the Treasury Blumenthal's hard line on human rights with several Latin American countries, just how seriously we do take that commitment. When I spoke recently about the Helsinki accords before this body, I stated that I was bearing public witness to the fact that the Soviet Union had only 3 months to put its house in order.

It is becoming increasingly clear that the Soviets are attempting to kill the human rights movement in their country. It is clear that they will make no attempt to permit any freedom for its citizens.

One does not have to know that these two men are leaders in the fight for individual dignity in the Soviet Union to be outraged at the blatancy of the false charges that have been levelled at them. The humiliation of being called a beggar, or in Scharansky's case, to be accused of treason in the fight for freedom, does not discredit them, but only their accusers.

Mr. FASCELL. Mr. Speaker, accord-

ing to press reports from Moscow, a decent and courageous man is to be charged with treason. Anatoli Scharansky, a man whose only desire in life is to join his wife in Israel, is being threatened with execution for daring to persevere in a fight for his freedom, for the freedom of other Soviet Jews, and for Soviet compliance with the human rights pledges the U.S.S.R. and 34 other countries gave at the Helsinki summit nearly 2 years ago.

We do not know the precise indictment trumped up against Anatoli Scharansky. We only know that it will be made of whole cloth, threaded with the age-old lies of anti-Semitism and embroidered with fabrications out of dime-store spy thrillers. A former close friend of Scharansky accused him and two other "refuseniks" last March of being agents of the CIA. The charge was printed in the Soviet Government's official newspaper and within a few days Scharansky was under arrest. But the charge is preposterous. No group of Soviet citizens are under more constant KGB surveillance than the Jewish activists. Scharansky used to walk around Moscow with a tail of anywhere from two to eight police shadows at a time. Hiring him to spy on the U.S.S.R. would make as much sense as hiring a burlesque queen to infiltrate a nunnery.

The real crime of Anatoli Scharansky is that he took the 1975 Helsinki accords seriously. As a member of the Public Group to Promote Observance of the Helsinki Agreements in the U.S.S.R., he worked diligently to collect and to disseminate information about the state of human rights in the Soviet Union. As an English speaker, he was the link between the group and the foreign press in Moscow. And as a man, he was an example of consistent energy and unfailing good humor even under continuous, uscrupulous harassment.

Even in the Soviet Union, however, it is impossible to jail people for being decent human beings. And because it is the Soviet Union—a nation prepared to commit itself to international undertakings one day and disregard them the next—the charges against Anatoli Scharansky had to be manufactured out of spurious evidence, but evidence that might just be barely plausible to the poorly informed people of that frightened, closed society. So a Jew is accused of treason, Soviets can say. What would you expect from a Jew?

The real question, however, is what should we expect from the Soviet authorities. Personally, I would hope for reconsideration of their course, for freedom for Anatoli Scharansky. Yuri Orlov, Aleksandr Ginzburg, Mikola Rudenko, Oleksiy Tykhy, Zviad Gamsakhurdia, and Merab Kostava, the seven Helsinki-watchers who have been unjustly imprisoned this year. I would hope that the leaders of the Soviet Union understand the danger to themselves in their persecution of these men, the danger that the world will see the Soviet Union as a lawless nation, whose disregard for law at home endangers the rule of law throughout the world.

But as chairman of the Helsinki Com-

mission which has heard so much testimony this year on the Soviet disregard for human rights, I expect only disappointment of my hopes. The record is plain and ugly, and on it the Scharansky case is just the latest, but not the last, indecent episode. It stamps the Soviet Union—again—as an international outlaw and it raises for us, as American legislators, questions of the gravest sort. The consequences for United States-Soviet relations of continued violation of the Helsinki accords are incalculably high. I do not believe confrontation between the superpowers over the Helsinki issue is necessary or advisable. But Soviet actions, such as the threatened treason charges against Anatoli Scharansky, are provoking just that sort of confrontation. If it comes, Americans will not shrink from the defense of their ideals, the ideals the Helsinki-watchers in the U.S.S.R. are striving to uphold.

Mr. MIKVA. Mr. Speaker, I was shocked and dismayed to hear that the Soviet Union is preparing treason charges against Anatoli Scharansky. Scharansky, a physicist, and a member of a dissident group linked with Andrei Sakharov, was arrested at the beginning of March, and is charged with having "collected on behalf of CIA agents secret intelligence in scientific, technical, military and political fields."

Scharansky applied to go to Israel in 1973, but was refused on grounds that his training had given him access to state secrets. Over the years he emerged as one of the most articulate dissident activists, serving as a spokesman for other Soviet Jews who had been refused permission to emigrate.

He was also a member of an unofficial group monitoring Soviet compliance with the Helsinki accord of European security, especially in regard to its provisions on human rights. Two other members of the group have also been arrested.

The allegations against Scharansky were made by Sanya Lipavsky, a former dissident and medical doctor, who "confessed" that he had been recruited as an agent for American intelligence by the dissidents. *Izvestia* carried the open letter from Lipavsky, in which he accused the three dissidents, of being connected with two American embassy officials who were felt to be CIA agents.

Since the Soviets have not used treason charges against dissidents since 1970, it is feared that the Russian policy of "ignoring" the dissidents is over. It is also feared that a "show" trial will be held, and that Scharansky and others will be used as examples of the threat to Soviet security through the Jewish dissident movement in Russia.

I want to add my protest to the action taken by the Soviets in this case, and urge the Soviet Union to reconsider its motivations in charging this young scientist with such a serious crime as treason against the state. The desire to leave a country cannot be treasonable in the light of world history and the movement of peoples in every era.

Mr. BINGHAM. Mr. Speaker, the charging of Anatoli Scharansky with treason, as well as the sentencing of

Yosef Begun, by Soviet authorities represent an appalling prelude to this month's Belgrade conference.

Two years ago the United States, the Soviet Union, and most European states adopted the Helsinki Final Act which calls for signatories to permit, among other things, the free exchange of people and ideas, and to facilitate the reunification of families separated by international borders. The Soviet Union agreed to these provisions and in Belgrade will, undoubtedly, claim to have adhered to them. Tragically the cases of Scharansky and Begun demonstrate that Soviet compliance with Helsinki is a sham.

The charging of Scharansky is of special significance. Scharansky was the founder of a Soviet group which was set up to monitor Soviet compliance with the Helsinki accords. His own situation is, in itself, an indictment of Soviet compliance. Scharansky applied to immigrate from the Soviet Union to Israel in 1973 and on several subsequent occasions. He has been repeatedly refused. His wife received permission and left for Israel the day after their wedding—3 years ago. While waiting for a visa Scharansky became active in both the emigration and human rights movement in the Soviet Union. As founder of the Helsinki monitoring group he became especially well-known to Members of Congress who have visited the Soviet Union. Members of the U.S. Helsinki Commission have felt special kinship with Scharansky and members of his group.

On March 15 of this year Anatoli Scharansky was placed under arrest and taken to Lefortovo Prison. Yesterday we learned that he has been charged with treason—a sentence which carries a minimum 10-year sentence in jail and a maximum sentence of death. This charge, unprecedented since the days of Stalin, is being brought against a man whose only crime is that he dared to insist that the Soviet Union live up to its international commitments and its own law.

At the same time we hear that Dr. Yosef Begun has been sentenced to 2 years in Siberia for "parasitism." Begun was sentenced on this charge because he has no job. He has no job because he was dismissed after he applied to emigrate. Begun has been active in the Organization Committee of the Symposium on Jewish Culture in the Soviet Union and has fought against official anti-Semitism as expressed in recent Soviet television programs. Begun's only crime was that he wanted to emigrate. Out of his request for a visa came his 2-year sentence in Siberia.

We cannot be silent in the face of these Soviet violations of the letter and spirit of Helsinki. The Soviet Union cannot come to Belgrade and claim compliance with Helsinki while Scharansky and Begun are incarcerated. The Soviet Union has to understand that President Carter is serious about human rights and that the Congress is behind him. Human rights is not just a phrase on a piece of paper. It is not a mere chit to be haggled over the process of trade negotiations. Human rights means Anatoli Scharansky who, because he wants to live in Israel, faces years

in prison and a possible death sentence. It means Natalia Scharansky who has not seen her husband since their wedding day 3 years ago. It means Yosef Begun whose dedication to his peoples' culture lands him in prison and sentenced to Siberia. We cannot sit still and watch these travesties take place. We shall raise the cry to release Scharansky and Begun in every appropriate forum. The release of these men is a precondition for a successful Belgrade conference. In the name of Helsinki, these men must be set free.

#### ANNOUNCEMENT OF HEARINGS ON THE ADMINISTRATION'S DISCHARGE REVIEW PROGRAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas, (Mr. ROBERTS) is recognized for 5 minutes.

Mr. ROBERTS. Mr. Speaker, on Friday, May 27, I announced the establishment of a special oversight subcommittee of the Committee on Veterans' Affairs to hold hearings on the discharge review program announced by Secretary of Defense Harold Brown on March 28, 1977, as well as the discharge recharacterization program for certain Vietnam era service members announced by former President Gerald Ford on January 19, 1977.

The purpose of the hearings will be to receive testimony from the Department of Defense, the Veterans' Administration, and other appropriate responsible witnesses concerning details of the announced programs, including, but not limited to, procedures established by DOD and VA for implementation of such programs; program costs; number of potential eligibles involved; response to date by those affected; and status of applications received to date, et cetera.

The initial hearing will be held Monday, June 20, at 10 a.m. in room 334 of the Cannon House Office Building. The Secretary of Defense has been invited to appear on that date. On Tuesday, June 21, at 10 a.m., the Administrator of Veterans' Affairs, Max Cleland, has been invited to appear. In addition, the subcommittee plans to hear from the various veterans' organizations and others interested in the announced programs.

#### PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. CARR) is recognized for 5 minutes.

Mr. CARR. Mr. Speaker, I regret that I was detained in traffic this morning on the way to the House Chamber and was unable to cast my vote on House Resolution 603, the rule to the Energy Organization Act. Had I been present I would have voted "aye" on this rollcall, No. 297.

#### GRADUATING SENIOR PAGES

The SPEAKER pro tempore. Under a previous order of the House the gentleman from Indiana (Mr. CORNWELL) is recognized for 5 minutes.

Mr. CORNWELL. Mr. Speaker, the

U.S. Congress has certainly come a long way since the birth of this Nation. We have survived wars and depressions, assassinations and ill managed administrations. The 95th Congress is well on its way to rewriting the recordbooks not only in quantity of production, but also, and most important, in quality of output. Members of Congress always stand tall in accepting the accolades of progressive and constructive legislative accomplishments. But today I feel strongly compelled to seek recognition on the floor of this hallowed hall to express a much deserved tribute to those persons who have contributed as much as anyone to the success and yes, sometime failure of this august body.

Unless we, the House of Representatives, go into session tomorrow, this will be the final day of work for 29 young men and women who have sacrificed many long hours as well as a traditional secondary education to serve as pages. Capitol Hill pages are perhaps the most "taken for granted" assembly of future leaders anywhere to be found. They have served unselfishly with little praise. But without these outstanding young patriots, the efficiency rating of Congress would drop dramatically. In my brief 6 months career as a Member, I have been greatly impressed with the constructive attitude and undiminished energy of this jovial crew. And they in turn have given me their loyal support, for which I shall always be extremely grateful.

I could go on and on praising the fine job these graduating seniors have done. I know that the examples set by these seniors will remain as tradition to future classes of the Capitol pages. And so, to you upstanding citizens and my good friends, always retain the positive attitude that you have so prevelantly displayed during your tenure as pages. Never forget your educational experience as a page and refer to it often. Go forward in life with God's speed and blessing, and come back to see us whenever you can. We will miss you all.

This is the list of graduating seniors: Kent Markus, Maura Connelly, Steve Abraham, Cathy Chromulak, Fritz Neil, Marion Elliott, Ron Jolly, Amy Eskin.

Bobby Blackstock, Sara Crowe, Mark Kobolinski, Annette Maglione, Peter Schupp, Norma Siegert, John Ghrist, Ellen Kerley.

Peter Bell, Sharon Williams, Mike Thorson, Lindlee Baker, John Russell, Margie Berg, Kirk Harness.

Ruth Duranczyk, Steve Wolfe, Tim Riffe, Byron Galle, Mike Fanning, and Ken Johnson.

#### THE UNITED STATES RECOMMITS ITSELF TO IMPROVING THE WORLD ENVIRONMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BROWN) is recognized for 10 minutes.

Mr. BROWN of California. Mr. Speaker, under a 1972 United Nations General Assembly Resolution, June 5 of each year is to be honored as World Environment Day. This year, in his first year as President, President Carter and key

members of his administration have very forcefully and thoroughly recommitted themselves to the goal of protecting and enhancing the environment of "Space-ship Earth" in a meeting at the State Department.

Since many of my colleagues may not have had the opportunity to review all of the aspects and ramifications of a global environmental policy, I would like to excerpt parts of the statements given by the chief U.S. environment specialists at the U.S. observance of World Environment Day.

President Carter, who has demonstrated his own deep concern about domestic environmental issues in a recent message to Congress said, in part:

In the five years since the United Nations Conference on Human Environment, the peoples of the world have proceeded with remarkable unanimity to prevent further damage to our common life-support system. Rivers polluted by decades of industrial and human wastes are being brought back to life; emissions once freely poured into air are increasingly being restricted; scientists and senior officials from nations of sharply divergent social and political views work together to develop international agreement on issues ranging from ocean dumping to the protection of wildlife. Since the Conference at Stockholm, most governments have incorporated mechanisms for environmental protection into their operations. Perhaps most significant and hopeful of all, growing millions of individuals throughout the world have adopted an environmental conscience to test and guide public and private actions.

I have directed officials of the U.S. Government to respond promptly to all appeals for assistance in population and health care programs; to review all requests for developmental aid from the perspective of environmental soundness; to extend to developing countries assistance in environmental and natural resources management; to seek timely international agreement on conventions to protect shared living and other natural resources; and to prepare a study of probable changes in the world's population, natural resources and environment through the end of this century as a basis for long-term planning.

Our former colleague, Patsy Mink, made her formal remarks as Assistant Secretary for Oceans and International Environmental and Scientific Affairs of the Department of State. While the entire statement would be of interest to this body, I will only excerpt here those parts which demonstrate the broader aspects of environmental issues.

#### EXCERPTS FROM REMARKS BY PATSY T. MINK ON ENVIRONMENT AND FOREIGN POLICY

World Environment Day was established by the United Nations five years ago to ensure that, annually, the world community would take time to reflect on the health of the global environment, and renew the commitment made in Stockholm to preserve and protect it. That is our purpose in assembling here today. I hope that in the next two hours we can share views on the state of the environment, the challenge before us, and—in particular—consider the role of the United States in the international environmental field in the years immediately ahead.

Last month I had the opportunity to head the U.S. Delegation to the annual session of the Governing Council of the UN Environment Program ("UNEP"). In his report on the state of the world environment, UNEP Executive Director Mostafa Tolba, highlighted two major areas of concern that are

shaping the character of the UNEP Program. He described the first as the area of "outer limits" . . . created by the earth's limited capacity to provide the resources required to sustain a growing, industrializing world population. The second involves the "inner limits" imposed on the individual citizen because of the inability of society to meet fundamental human needs for food, clothing, and shelter . . . and to protect the individual from environmental pollution which endangers his health.

This allusion to mankind's "outer" and "inner" limits graphically portrays the dimensions of our challenge. In my remarks to the UNEP Governing Council, I pledged continued U.S. support for an international program of environmental action that addresses both of these areas of need. First we must accelerate our collective efforts to protect the physical environment from further degradation . . . by curbing pollution, guarding against irreversible resource depletion, and halting the reckless despoliation of our land, our forests, our water and our atmosphere. Second, the international community must vigorously pursue measures in support of national efforts to improve the quality of human existence everywhere, so that all peoples can share the bounty of the earth . . . and enjoy good nutrition, safe water and a healthy environment in which to live.

I also used the opportunity to call for reaffirmation by the world community of its commitment to improving the status of women. This recognizes that women suffer the worst malnutrition and are in the poorest health as they struggle to keep their children alive. Not only does this situation severely diminish individual creativity and self-esteem, but it also stifles the vitality and capacity of the community to pursue economic, social and environmental goals.

President Carter, in his Environmental Message, has presented an action program which addresses both the need to safeguard the physical environment as well as the requirement to protect and enhance the quality of life of the individual citizen. My colleague, Charles Warren, will have more to say on this. The point I wish to make here is that this Administration intends to pursue that program internationally as well as at home. As key elements of our foreign policy, we intend to work aggressively to prevent pollution and encourage resource conservation, and to propose and support initiatives to meet basic human needs. The latter is also tied directly to our human rights policy. Speaking at a recent Law Day ceremony at the University of Georgia, Secretary Vance described, as one of three aspects of "human rights" . . . the "right to the fulfillment of such vital needs as food, shelter, health care and education."

At the UNEP Governing Council meeting, our Delegation highlighted the energy area as especially important for close cooperation between developed and developing countries. If the poorer nations, assisted by the rest of the international community, can develop safe, clean energy sources . . . solar, wind, bio-gas, etc., . . . they will be able to avoid many of the environmental problems now plaguing the industrialized nations and at the same time achieve economic and social objectives.

If environmentally-sound development is to occur, if global pollution is to be curtailed, and if the quality of human existence is to be uplifted—then it is vital that this Nation lead by example. This means demonstrating leadership and success in addressing our own domestic problems of air and water pollution, land degradation and urban decay—and, in particular, by reconciling environmental and economic goals. It also requires paying greater attention to our activities conducted overseas or those which have trans-boundary impact potential.

It is appropriate and useful that we gather on World Environment Day to commemorate, re-commit and look ahead. Our continued goal must be, however, to so ingrain and institutionalize environmental concerns in the behavior and activities of people and organizations around the globe that a special day for the "environment" is finally deemed unnecessary.

The Chairman of the Council on Environmental Quality, who happens to be a distinguished former State legislator from California, addressed the topic of the "Environment and the Future." It is especially noteworthy that Charles Warren recognized the impact of global climate change upon world food production as a major environmental issue. The remarks by Charles Warren follow:

In his commencement speech at Notre Dame University, President Carter set forth his foreign policy based on five cardinal premises. One such premise was the encouragement of "all countries to rise above narrow national interests and work together to solve such formidable global problems as the threat of nuclear war, racial hatred, the arms race, environmental damage, hunger and disease."

Thus, the President stressed the international importance and urgency of remedying and preventing environmental damage throughout the world.

In addition, in his environmental message to Congress, the President commented at length on the global environment and subjects ranging from wildlife habitat to toxic chemicals, from solid waste to tanker safety, from the quality of our habitation to the management of our forests.

These and other Presidential expressions have been welcomed by environmentally aware observers throughout the world. They perceive that the United States is beginning, more sensitively, to consider man's relationship with his earth.

First, it is perceived we are beginning to redirect technology away from ingenious consumption to ingenious conservation. For decades, our economy has thrived on clever new ways to use up more energy, more minerals, and more natural resources of every sort. One-car families became two-car families. Electrical power replaced manual power for purposes ranging from brushing teeth to slicing the Sunday ham. Throw-away containers and TV dinners reduced much kitchen labor, while adding mightily to the American community's waste-disposal problems. Prosperity and the automobile paved the country with expressways and far-flung shopping centers.

For reasons understandable, while I do not see the United States or other industrialized nations embracing a Spartan way of life, nor rejecting labor-saving devices in favor of the drudgery that often characterized our parents' lives, I do see a new age of resource conservation and the application of scientific research to new, environment-related goals. Prime among these goals will be the search for renewable, environmentally acceptable sources of energy and more efficient pollution abatement technologies. Perhaps most difficult, we must find ways to conserve energy, minerals, and natural resources without dislocating an economy so heavily based on resource consumption. We cannot solve our environmental problems through bankruptcy.

Another role for the United States must be the provision of financial and technical assistance to developing countries for population control and family planning. Though virtually all Third and Fourth World nations now agree on the necessity for controlling population growth, many have a built-in momentum toward further growth

that cannot be halted for decades. Barring some worldwide catastrophe, global population will certainly double to eight billion people in the next 35 years and will continue to grow thereafter.

Such rates of increase will unquestionably cause local and perhaps regional famines—in a world where millions are already malnourished. The desperate quest for more food may well lead to further environmental degradation, as more forests are cleared for agriculture, aquifers are exhausted, and soil-stabilizing cover is removed from lands prone to erosion.
